

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

---

THIS volume comprises the **SECOND PART** of the **PARLIAMENTARY HISTORY and REVIEW**, for 1826 ; and forms the Sequel to the **FIRST PART**, already published, containing the Debates, &c. of the last Session of Parliament. That Volume is referred to, in this Part, by the word *ante*, and the paging is continued throughout from the figure 1 to 802.

---

The design of this work is to afford an annual record of the proceedings of the British Parliament, together with an examination of the principal topics discussed in that assembly, and of the manner in which its functions are performed.

The wealth and power of Great Britain—the rank which she holds in the scale of national intelligence—and the freedom of speech for which her legislative assemblies have been so long celebrated,—render British history a matter of no ordinary interest and importance ; and for this history the two Houses of Parliament must supply the most authentic as well as the most instructive materials.

It is surprising, therefore, that the debates of the British Parliament have never, before the commencement of the present work, in the last year, been arranged for the purpose of examination or reference ;—that they are only to be found in the chaotic miscellany of daily reports ;—and that they have been subjected to no periodical comment more systematic or accurate than the brief and hurried remarks of a newspaper editor.

The conductors of the present work have endeavoured to supply this remarkable deficiency in our periodical literature, and if they have only in a moderate degree succeeded in carrying their design into execution, they will have produced a work as novel as it is important. Some now living remember the sensation produced by the first appearance of the **ANNUAL REGISTER** ; and if that work was deemed to have formed an epoch in the annals of literature, it is hoped that the present will be esteemed at least as striking an accession to the means of diffusing political knowledge.

In the present part, all the debates on a given subject, after having been carefully revised and collated, have been collected under the general head to which they respectively belong ; nothing being omitted but mere conversations, of no interest except at the moment of utterance ; such as discussions regarding the day

#### ADVERTISEMENT.

or hour at which a given debate should be entered on, questions of order, and the like.

After the debates will follow, in a separate part, a careful examination, as well of the measures discussed, as of the arguments adduced on both sides of the question, and of the conduct of Parliament with reference to the matter in hand.

Of these critical essays it is not for the conductors of the work to say much; but they can safely affirm, that they have been and will be exempt from vehemence or invective, and impartially directed to what ought to be the only end of legislation—not the predominance of a particular party, sect, or portion of the community—but the greatest happiness of the greatest number.

Next to the Debates of the Parliament itself, the most interesting and instructive documents, as well for the man of business of the present day as for the historian of future times, are the papers annually presented to both Houses in the shape of Reports of Committees, Minutes of Evidence received by them, and Returns made on official authority.

These form annually nearly twenty thick folio volumes, which are printed solely for the use of members; and whether we consider the expence, the labour, or the space required to render them available to public use, they may be said to have been hitherto almost inaccessible.

The substance of all these which possess any general interest, as well as the whole of the more important Reports of Committees, have been condensed and arranged in a separate volume, which will be presented to the public, printed uniformly with the Debates and Review contained in the first. To the merchant, the manufacturer, the lawyer, the statesman, and the man of letters, these documents are now rendered accessible at a small expence, and are so arranged that they may be referred to almost without the aid of an index.

To foreign nations, particularly France and the United States of America, the whole will afford a view of British affairs, more clear, comprehensive, and authentic, than any which can be obtained elsewhere.

Such is the present work, and such its claims to public favor.

Even if feebly executed, it cannot be a mean assistance to the progress of knowledge and improvement;—but as neither expence nor labour have been spared to its completion, the conductors are not without hopes that the execution may in some degree correspond with the design.

The Review appears on the first of January in every year; the Debates, and Abstracts, as soon after the close of each Session, as a due attention to correctness will admit; and each part may be had separately.

# PARLIAMENTARY HISTORY.

SESSION OF 1826:—7 GEO. IV.

On THURSDAY, Feb. 2d, the Session of Parliament was opened  
by Commission from HIS MAJESTY.

## THE KING'S SPEECH.

The Commons being summoned to the House of Lords in the usual form, and the commission being read, Lord Gifford (the Lord Chancellor being absent from indisposition) read His Majesty's Speech as follows:—

*My Lords and Gentlemen,*

"We are commanded by His Majesty to inform you, that His Majesty has seen with regret the embarrassment which has occurred in the pecuniary transactions of the country since the close of the last session of Parliament.

"This embarrassment did not arise from any political events, either at home or abroad: it was not produced by any unexpected demand upon the public resources, nor by the apprehension of any interruption to the general tranquillity.

"Some of the causes to which this evil must be attributed lie without the reach of direct Parliamentary interposition, nor can a security against the recurrence of them be found, unless in the experience of the sufferings which they have occasioned.

"But to a certain portion of this evil, correctives at least, if not effectual remedies, may be applied; and His Majesty relies upon your wisdom to devise such measures as may tend to protect both private and public interests against the like sudden and violent fluctuations, by placing on a more firm foundation the currency and circulating credit of the country.

"His Majesty continues to receive from his Allies, and generally from all Foreign Princes and States, the strongest assurances of their friendly disposition towards His Majesty. His Majesty on his part is constant and unwearied in his endeavours to reconcile conflicting interests, and to recommend and cultivate peace both in the Old World and in the New.

"His Majesty commands us to inform you, that, in pursuance of this policy, His Majesty's mediation has been successfully employed in the conclusion of a treaty between the Crowns of Portugal and Brazil, by which the relations of

friendly intercourse, long interrupted between two kindred nations, have been restored, and the independence of the Brazilian empire has been formally acknowledged.

"His Majesty loses no opportunity of giving effect to the principles of trade and navigation, which have received the sanction of Parliament, and of establishing them, as far as possible, by engagements with foreign powers.

"His Majesty has directed to be laid before you a copy of a Convention, framed on these principles, which has recently been concluded between His Majesty and the King of France; and of a similar Convention, with the free Hanseatic cities of Lubeck, Bremen, and Hamburg.

"His Majesty has likewise directed to be laid before you a copy of a treaty of amity, commerce, and navigation, concluded between His Majesty and the Republic of Colombia, the ratifications of which have been exchanged since the close of the last session. For the carrying into effect some of the stipulations of this treaty, His Majesty will have need of your assistance.

"His Majesty regrets that he has not to announce to you the termination of hostilities in India; but the operations of the last campaign, through the bravery of the forces of His Majesty, and of the East India Company, and the skill and perseverance of their commanders, have been attended with uniform success; and His Majesty trusts that a continuance of the same exertions may lead, at no distant period, to an honourable and satisfactory pacification.

"His Majesty's attention has been directed to the consideration of several measures, recommended in the last session of Parliament, for improving the condition of Ireland.

"The industry of that part of the United Kingdom, His Majesty has the satisfaction of acquainting you, is in a course of gradual and general advancement—an advancement mainly to be attributed to that state of tranquillity which now happily prevails throughout all the provinces of Ireland.

"Gentlemen of the House of Commons,

"His Majesty has directed the estimates for the year to be prepared and laid before you.

"They have been framed with an anxious desire to avoid every expenditure beyond what the necessary demands of the public service may require.

"His Majesty has the satisfaction of informing you, that the produce of the revenue, in the last year, has fully justified the expectations entertained at the commencement of it.

"My Lords and Gentlemen,

"His Majesty deeply laments the injurious effects which the late pecuniary crisis must have entailed upon many branches of the commerce and manufactures of the United Kingdom; but His Majesty confidently believes, that the temporary check which commerce and manufactures may at this moment experience, will, under the blessing of Divine Providence, neither impair the great sources of our wealth, nor impede the growth of national prosperity."

The Commons then withdrew, and the Lords Commissioners retired to disrobe.

#### THE ADDRESS.

(The debate on the Address, forms, properly speaking, the commencement of the debates on the Paper Currency and Commercial Distress, for which the reader is referred to the head of FINANCE AND TRADE: but from the desultory nature of the discussion on the Address, it is thought expedient to preserve it in the present place, as it is assignable, with strict propriety, to no general head.)

The Speech having been again read:—

The Earl of Verulam, in rising to move the address, observed, that on all material points, the state of the nation afforded sufficient grounds for congratulation. Whatever unfavourable circumstances he had to notice, were of a temporary nature: he had no long series of national calamities to deplore, no protracted war to lament. But it was not to be expected that there should be no disagreeable feature in the picture. "Man is born to trouble as the sparks fly upward," and every state of things was liable to uncertainty and change. Accordingly, the first topic of the Speech, and the first to which he should allude, related to the late extraordinary and unexpected panic, which had occurred in the pecuniary transactions of the country. It was the more unexpected, because it occurred at a moment when the prosperity of the country appeared at its height, and when money abounded to an uncommon extent. It seemed easy to obtain money for any purpose, and he believed it was the difficulty which capitalists experienced in obtaining adequate interest for their money, which had led to the wild speculations which had taken place. This over-speculation was the main cause of the distress which had been felt in the commercial world; but it was one which would cure itself, and which, therefore, ought not to be the object of Parliamentary interposition. As to other circumstances connected with the late pecuniary embarrassments, he was confident the evils were not irremediable. The way in which the panic had been met by merchants, bankers, and individuals of property, was a circumstance of great congratulation, and must induce their lordships to turn their attention speedily to the great ob-

jects recommended by His Majesty—the placing the credit of the country on a more firm foundation. It was to be hoped that adventurers and speculators would take warning from the past, and in future be guided by more wisdom and moderation in their schemes.—Their lordships would perceive from His Majesty's speech, that the termination of hostilities in India could not be announced, although the military operations had hitherto been attended with success. This war had not for its object any extension of our empire in India; its only purpose was to obtain secure and honourable peace. The improving state of Ireland offered a further topic for congratulation, as did also His Majesty's assurance, that His Majesty continued to receive from his allies, and generally from all foreign powers, assurances of a friendly disposition.—The noble earl concluded by moving an address, congratulating His Majesty on the statements contained in his Speech.

Lord Sheffield rose to second the address. He regretted the ruinous course which speculation had lately taken, but he believed that the solid commerce and manufactures of the country remained uninjured by any thing that had happened. Many branches of trade had not been affected. Paper-makers, he understood, had been very little injured; and the woollen-trade had not suffered much. He was also happy to say, that the situation of landed proprietors was very favourable. Even in those districts where the late panic had been most felt, they had experienced no inconvenience from it. After calling their lordships to concur in those parts of the address which congratulated His Majesty on the friendly disposition of Foreign Powers, and the treaties concluded with Brazil and other states, he adverted to the war in India, which, he said, had been carried on with great ability, and so as to meet the approbation of the highest military authorities in this country. He concluded by seconding the address.

The address having been read from the woolsack,

Lord King observed that the causes of the present embarrassments were in some degree to be attributed to the Government, in a greater degree to the Country Banks, and in a still greater to the Bank of England. He blamed the Government for having by their measures extended the circulation of 11. and 21. notes; he blamed them for listening to the bankers, and acceding to the Small Note bill; but the Bank of England was most to blame. The whole object of the Government had been the reduction of interest. They had reduced the interest on Exchequer-bills so as to bear on the whole operation of the funds. This was the great object of ministers, and in anticipation of that great operation all their absurd measures had been adopted. Their lordships, no doubt, remembered the memorable speech of a memorable ex-Chancellor of the Exchequer, who said that if a man rose in the morning and found a guinea in his pocket, that circumstance would be of no importance; but if he rose and found the rate of interest reduced, that would be something indeed—that would be of great use to him. Ministers had by their measures protected the projectors of schemes, who had taken the guineas out of the people's pockets, and left them nothing but scrip in its stead, with which they might now subscribe for a monument to that ex-Chancellor with whom this transfer of property had originated. The state of the

currency of the Bank of England aggravated the disorder; and under the present system the Bank was a machine, the effects of which must necessarily be mischievous. If their lordships wished to create a machine of that nature, incapable of doing good, and which must do mischief, they would begin by giving it a monopoly, and relieving it from all rivalry and competition. They would next give the Government and the Directors not an interest of profit and loss in the fair money transactions of the Bank, but an interest in the misconduct and mismanagement of its affairs. It was impossible but that the Directors must have a very strong interest in mismanagement, and nothing could give them an interest in right management but their having an immense stake in the results of profit and loss. The Bank was much too vast to be rightly conducted. If their lordships looked back to what had happened, they would find that the Bank had been, if not principals, accessories in every pecuniary embarrassment. At the end of 1824, and the beginning of 1825, the Bank very considerably increased their issues. For this he had the authority of one of the most eminent merchants in London, Mr. Tooke, as given in the book lately published by that gentleman. The average of the weekly returns for each of the three years, ending in April, 1825, were there stated as follows:—

|                   |              |
|-------------------|--------------|
| April, 1823 . . . | £ 17,750,473 |
| April, 1824 . . . | 19,011,575   |
| April, 1825 . . . | 20,881,123   |

It thus appeared "that an increase in the banking circulation of 3 millions had taken place in the year ending in April 1825, as compared with the circulation in the year ending April 1823." He believed the noble lord (Liverpool) would very willingly put down this system, which was the cause of the panic and the embarrassments which had happened; but the fact was, the Bank was too strong for him. He believed, also, that the noble lord would not have put out the 11. and 21. notes if he could have helped it; but the country banks and the country gentlemen were too strong for him. The country gentlemen wished to keep up their rents and prices, but they could not do this without the small notes, and these the noble lord durst not refuse to them. Would the noble lord be so good as answer him one question? Did he mean to make any alteration in the corn laws, and at what time would he venture to bring forward this proposition—in this session or any other?

Lord Liverpool:—"I will answer that by and by."

Lord King was afraid, from the noble lord's look, that nothing was intended to be done, and that the time for altering the corn laws would never come. This subject brought to his mind the disgraceful defeat of the Government on a measure of the last session,—he meant the Canada Corn bill. When that measure passed the House of Commons, and was brought before their lordships, the noble earl endeavoured, but in vain, to get it through their lordships' house. He asked them to let it pass for only two years. No. Would they let it pass for only a year and a half? The answer still was no. He then begged hard for one year, and for one year he was allowed to take it. The fact was, the present ministers did not possess the power and vigour of the man in whose footsteps they pretended to follow. The situation of the noble lord reminded him of the answer given by the

Dutch ambassador to Charles II. The king having complained that more respect was paid to the remonstrances of Cromwell's government than to those of his own, the Dutch minister answered, with great sincerity, "Ah! but your Majesty will recollect that Cromwell was a very different man from your Majesty." So he must say of the noble lord opposite, that he was a very different person from Mr. Pitt or Lord Grenville. The corn laws were, however, a subject which sooner or later must come under the consideration of their lordships. The subject could not be avoided. At the same time he was convinced that it was only by repeated discussion that any alteration could be produced. They had heard much of jobs, but this was the most enormous job in the whole history of misrule. There was the West India job, but that only made sugar dearer. Then there was the East India job, which once monopolized all the trade of the Indian and Chinese seas. But neither of those jobs equalled this. The Bourbons had always been famed for their monopolies, particularly the Bourbons of Spain—the most foolish of all God's viceregerents on earth. These Bourbons had granted a monopoly of the hides of Buenos Ayres to an individual; a monopoly of the trade of Mexico, and Peru, to a single city. For this they were held up, living or dead—he believed they were of more use when dead—as political scarecrows to bad governments. But all their monopolies were as nothing to the monopoly of the landed interest of England. It was a monopoly in food, of all monopolies the most infamous. He believed there was no other assembly in Europe wherein it would be thought necessary to endeavour to prove the advantage of cheap food. It was worth while, however, to observe, that the government of this country and their lordships were never slow in punishing the breakers of machines. Why were they so ready to protect machinery? Because they knew that machines rendered labour cheap. But if it were good to have machines for that purpose, it was also good to have cheap food; for without cheap food they could not have cheap labour. It was said that our agriculture required a protecting duty, in consequence of the low price of corn upon the continent. But let their lordships look at the effect of this argument; for in proportion as the difference of price here and on the continent was productive of gain to them, it was productive of loss to the consumer. If they showed that corn only sold for two shillings there, at the same time that it sold for ten shillings here, they proclaimed their own avarice, and the injustice that was done to the consumer. When the celebrated voyager, Mr. Lemuel Gulliver, gave an account of that august assembly to the king of Brobdignag, and told him how they were all constantly employed for the good of their country—if he had added they were always occupied in contriving to keep up the price of corn, his Brobdignagian majesty would have been well justified in answering as he did, that they were the most contemptible race of little reptiles in the world, and their rulers the most selfish and unjust. In his opinion nothing but a revision of the corn laws could extend and perpetuate the prosperity of the country; and he should, therefore, move an amendment, pledging the house to that effect, as he was not satisfied to leave it depending upon the promise of ministers.—His lordship concluded by mov-

ing, that a paragraph be added to the address, pledging the house to revise the present corn laws, as the best means of extending the commerce and prosperity of the kingdom.

Earl Grosvenor saw nothing in the state of the country to encourage the hope which the Speech held out, although its general tone was most humble. He thought, however, that that humble tone was creditable to ministers; he had always regretted the fallacious prospects and groundless hopes which had usually been introduced into documents of this description, even in the most disastrous periods, for the purpose of throwing a mask over the state of affairs. It was said that the produce of the revenue had answered the expectations which had been entertained of it. They all knew that there had been no addition to the revenue in the last year; but then his Majesty's ministers might not have anticipated any, on account of certain duties having been taken off. But he contended that a failure in the duties was occasioned by the embarrassments produced throughout the country by the panic which prevailed last year, and he would therefore enforce upon ministers the necessity of adopting measures of economy, which were the only means of preserving the prosperity of the country. He maintained that at the time of the peace no reason whatever existed for the non-reduction of the army. At one period, indeed, it was urged that it was necessary to retain a large military establishment to keep down the radicals; but the largest assemblage of radicals which had ever taken place, took place at Manchester, when the magistrates having recourse to a very ill advised measure, the radicals were dispersed,—and by whom? By a handful of volunteer yeomanry. This, therefore, was no pretext for not reducing the army. Now they would be told to look at the state of India; but if ministers had husbanded their resources this way in time past, they would have been better enabled to meet the present disastrous war in that country; he called it disastrous, because of the great expenditure of life which attended it; and whoever had sanctioned or approved of the commencement of that war, had a great deal to answer for, unless they could make out a strong case of necessity. Then the state of things in Ireland—and that was a subject upon which he could not speak without feelings of great regret—rendered it necessary, it was said, to maintain three-fourths of the army in that country alone. But their lordships knew why; they had last session rejected the bill which would have removed the great source of discord in that country. The people of Ireland must have the feelings of men; but if once that measure were adopted, the necessity of keeping an army in Ireland would be removed, and a great expense saved to the nation. He concluded by pressing upon Ministers the necessity of adopting a system of economy, at the same time declining to support the amendment.

Lord Teynham opposed the amendment. This country was not like other corn countries, and was, therefore, necessarily placed upon a different footing. Every thing had been done that was possible, to serve every other class as well as the agriculturists, and to lighten that distress which was attributable, not to the price of corn, but to the rage for mad speculations on which people flung away their money, in consequence of that diminution of interest to which

ministers had recourse in order to reduce the burdens of the country. This was the cause of the gold being carried out of the country, and hence the panic which had taken place; it was, therefore, not to be attributed to the price of corn.

The Marquis of Lansdowne did not rise for the purpose of discussing the unfortunate topic which formed so prominent a part of the Speech, for it would be impossible for the house to enter upon that topic now, without having received any information respecting the nature of the views or intentions of Government. It was a subject upon which he could not say any thing, without saying a great deal; he would not, therefore, now attempt to inquire how far that measure would be obliged to receive reconsideration, which authorized the issuing of 11, and 21. notes; or how far the present embarrassments were owing to that measure, and the other laws relating to banks, and to the monopoly of the Bank of England; or how far any of these causes had produced a considerable part of the evil now admitted to exist. All he meant to do at present, was to claim a complete reserve on the part of himself and of the house as to their opinion respecting the possibility of the application of any corrective, or of that in particular which seemed to be contemplated by Government. He did not even wish to call on the noble earl (Liverpool) to state more particularly at present the nature of his proposed corrective, because he did not think that the address pledged the house to any thing upon that subject. The case was the same with respect to the corn laws; not that he did not think it would be incumbent on their lordships, and the members of the other house, to express their opinions upon these subjects; but that they were not called on to do so in the absence of that information which he believed his Majesty's Government had been endeavouring to procure. The same observation applied to the state of the currency, as well as of prices in this country, because he believed it would be impossible to separate these questions from each other, and also from the question of free trade. Having said this, he trusted he had said enough to preclude himself, and he hoped others, from entering upon the discussion of these topics at present, leaving it to the noble earl, if so disposed, but not at all pressing him, to state more particularly the nature of his intentions upon the subject; and also whether he had any measure in view respecting the state of Ireland.

The Earl of Liverpool said, that after the statement made by the noble marquis, he did not conceive himself called upon to enter upon the consideration of the important points alluded to in his Majesty's Speech. At the same time he should exhibit no reserve—not as to details, for it would be impossible to treat of them with effect at that moment—but as to the general nature of the measures which it might be the disposition of Government to propose. He would there trouble their lordships with a short statement. In the first place, however, he would call their attention to this circumstance, that the convulsions in the pecuniary transactions of the country were not attributable to him or the other members of Government. Their lordships might recollect that in March last, he would not say he took, he created almost, an occasion of stating to their lordships what, sooner or later, would be the effect of the rash spirit of speculation which then existed in the

country, and of giving notice, in a few words, to their lordships and to those persons who, by rash speculation, might become involved in distress and ruin, that they must abide by the consequences of their own acts, and that they would have no right to expect from Government and Parliament that relief which had been afforded on some former occasions. Something had been said as to the causes of recent events. There was one cause so prominent, so great in magnitude, that even if he were disposed to allow that other circumstances might have acted in the way of aggravation,—and he would not deny that they had done so, because it was almost impossible to say that any great national embarrassment arose from only one cause,—yet this cause was so complete in itself, that it was sufficient to account for all that had happened. Their lordships knew the general spirit of mad speculation which had prevailed in the country during the last two years, and they would at the same time recollect his having stated, on the occasion to which he had before referred, that this spirit was not confined to the metropolis, but was extending itself over all the country through the medium of public banks. It must be evident that, from the peculiar nature of the circulation of country bank notes, it was extremely difficult to state precisely what was the amount of that circulation at any particular period. But there was a document which showed the progressive state of the country bank circulation with sufficient accuracy to serve the purposes of general reasoning. All country bank notes must be stamped; and it appeared from a return, from the Stamp Office, that in the years 1821, 1822, and 1823, the average number of notes stamped in each year was four millions and one or two hundred thousand. He spoke of their value, not of their numerical amount. The difference between particular years within that period never amounted to more than one or two hundred thousand pounds;—a difference which might easily be accounted for by incidental circumstances. In 1824, when the spirit of mad speculation to which he had referred first began to prevail, the amount of country bank notes increased to about 6,000,000*l.*; and in 1825 it increased to about 8,000,000*l.*, being double what it was in 1821, 1822, 1823. Was it not sufficient to state that fact to their lordships—to show the progressive increase of the country circulation during the two last years—to account completely for all the effects of over-trading and rash speculation upon the general interests of the country? He did not deny that, during the same period, there had been some increase of the Bank of England paper; but it bore no proportion to the increase in the circulation of the country banks. He had stated this fact as a circumstance which was alone sufficient to account for all the consequences which had operated upon the pecuniary transactions of the country. The noble lord who commenced the debate had accused ministers of having participated in causing the existing embarrassments, by endeavouring to lower the rate of interest. If ministers had introduced any forced measures which could operate to lower the rate of interest, he should agree with the noble lord in thinking that such conduct would have been highly blameable; but what were the facts? There was a rise in the price of public securities, and a lower rate of interest, the consequences of continued peace and the pros-

perity of the country. Government would have been highly blameable, if they had not taken advantage of those favourable circumstances in order to reduce the burdens of the people. By the measures which Government adopted, they had been able to take off 1,800,000*l.* of taxes, and to reduce the interest of the national debt, 1,400,000*l.* a year. He hailed those measures as most auspicious circumstances for the interest of the country, and he considered that ministers were bound by the most solemn duty to effect the object which the noble lord had condemned, not certainly by any forced or extraordinary measures, but by taking advantage of the natural course of events. He agreed with that part of his Majesty's Speech which stated, that for the effects of over-trading, and rash speculation growing out of the prosperity of the country, no cure could be found in legislation, and that it was only to be found in individuals having a sense of the danger and inconvenience to which they exposed themselves by such acts. But undoubtedly he likewise concurred with the declaration in the Royal Speech, that correctives and palliatives might and ought to be applied to present distress. The measures which would be brought forward were none which had not been proposed before. From what causes they had failed, was a question which at that moment it was not necessary to discuss. It was sufficient for him to show that they were not new ideas drawn out for the first time by present circumstances. The putting of some check, in one way or other, on the issue of small notes, was a plan suggested by his noble friend (Lord Bexley); so likewise was an arrangement with the Bank of England, having for its object to alter the situation in which that establishment stood with the public. One of the measures which Government would submit for the consideration of parliament, was a regulation by which the one and two pound bank-notes would be gradually withdrawn from circulation, and a metallic currency substituted for them. Another measure related to the Bank of England. He was perfectly satisfied—and those who knew his opinions were aware that he had entertained the conviction for years—that the country had grown too large, that its concerns were too extensive, to allow of the exclusive privilege of the Bank of England. The privilege of the Bank might have been highly useful in the early period of the history of our commercial transactions, but he was convinced that the country was now too large for any one such exclusive establishment (hear). The Bank privilege operated in a most extraordinary, and, he thought, a most unfortunate manner for the country. Any low person, any small tradesman, a cheesemonger, a butcher, or a shoemaker, might open a country bank; but a set of persons with fortunes sufficient to carry on the concern with security, were not permitted to do so. That was its actual operation. He was old enough to remember the time when there was scarcely such an institution as a country bank, except in great commercial towns; and when the transactions of the country were carried on in Bank of England notes and money obtained from London. But now, when such a mode of conducting the transactions of the country was no longer practicable, it ought to be the policy of parliament to place all country banks on a solid foundation, and to amend a state of law which he would not say allowed of

the establishment only of banks which were not solid, because he believed the greater proportion of the country banks were substantial, but which certainly prevented the establishment of those which, from the nature of their constitution, must be most solid. It was, however, necessary to deal with the existing charter of the Bank of England, which would not expire till 1833. But if the Bank could be induced to give up so much of their exclusive privilege as related to country banks, and if they would accompany that surrender by a measure which he thought would be desirable for their own sakes, namely, the establishment in some parts of the country of branches of their own institution, the effect on the general circulation of the country would be most beneficial (hear, hear). Such was the general nature of the measure which Government would feel it necessary to propose at the present moment.—With respect to the question put to him by the noble baron, on the subject of the corn laws, he had no difficulty in repeating what he had stated last session; namely, that his opinion was, that sooner or later it would be highly desirable to revise the general system of those laws. There was, however, a variety of circumstances to be taken into consideration with regard to time. He had no difficulty in stating, that it was not his intention, nor that of any member of his Majesty's Government, to bring forward any proposition with regard to the general question during the present session. He saw no circumstances connected with the present situation of the country which rendered it the imperative duty of Government to bring that question under consideration. He spoke particularly of the general question; because it might be necessary to re-consider a detached measure with respect to Canada corn, which was passed last year, and would expire in 1827, in the course of the present or of the next session.

The Earl of Caernarvon doubted whether the gradual withdrawal of the one and two pound bank-notes would have all the beneficial effect which the noble earl anticipated. He had never concurred with the opinion which many had entertained of the difficulties of the country having terminated with the resumption of cash payments. It was impossible to pay in gold a debt contracted in paper. He hoped that parliament would take the whole of the question into consideration, and not confine its attention to particular branches.—He supposed that it was intended to place country banks generally on the same footing with those in the northern part of the island. Previous to the last war, the greater portion of the currency of those banks was paper. Under that currency Scotland had flourished, and had not experienced those convulsions which this part of the country had felt under the restrictive system. It was, therefore, highly desirable that parliament should consider the question in all its parts, and establish a permanent system, instead of vacillating from year to year, and constantly changing measures. The temporizing measures adopted with respect to the silk-manufacture, had greatly aggravated, if not entirely caused the distress under which that trade was at present suffering. The introduction of foreign silks was postponed for two years, and the consequence was, that the manufacturers entered into extensive speculations, and overstocked the market during the period allowed for the continuance of their monopoly. If they had

been allowed only a few months to dispose of their stock on hand, the existing distress would not have prevailed. Under these circumstances, he was desirous that their lordships should fully consider the whole question, and adopt decisive measures.

The Earl of Lauderdale said, that from the time when he had first thought upon the subject of the currency, he had always been of opinion that a paper currency, convertible into gold on demand, was that which was best adapted for the transaction of the business of a country. A currency of that description at present existed in this country. He challenged any of their lordships to state an instance since the resumption of cash payments in which gold had not been given in exchange for paper when demanded. In his opinion it was not to the currency that it was necessary to look for the origin of the existing embarrassments. In the course of the last year, there had been a demand on the capital and labour of the country to the extent of 17,000,000*l.* Let any man consider whether the country was capable of answering that demand. The distress which was caused at the commencement of the late war, by the raising of a loan of only four millions, was nearly as great as that which at present existed. Could the present state of the country, then, be matter of surprise, when a demand was made on its labour and capital to the amount of seventeen millions? The evil had arisen from unwise speculation, and would cease when the cause no longer operated.

The amendment was then negatived, and the address agreed to without a division.

COMMONS.—The Speaker having read the Speech,

Mr. J. Stuart Wortley rose to move the address. In adverting to the Speech, the first subject that arrested his attention was the great shock which the country had lately sustained in its mercantile transactions. But he would ask if there was, especially at the present moment, any reason for alarm? In his conscience he believed not: the crisis seemed now to have passed. The present was not the only period in which mercantile affairs had been disordered. Similar difficulties had occurred in 1793 and 1798. But at the former of these periods, the country was on the eve of a tremendous war—a war through which no person could clearly see his way. Again, in 1798, when a still greater commercial calamity had prevailed, the national resources had been largely drawn upon to support the war, and the country was surrounded by accumulated difficulties, the natural consequence of its continuance. The causes in which the distress then originated, might, perhaps, be in some degree charged on Government, who had entered into and promoted the war; but now, not only did the same causes not exist, but those in which the distress originated were such as Government could not possibly control (hear, hear). The present evil was a temporary and a transient one. The former could not be regarded so, as it arose out of a war, at the time of entering into which, it was impossible to calculate either the period of its termination or the amount of its cost (hear, hear). Now there was no war—no alarm from foreign nations—nor apprehension from domestic disturbance. The causes were altogether different. At the commencement of the last year, there was an apparent redundancy

of capital, which induced the employment of it in speculative loans, and in schemes of remote and uncertain profit; this was a great and a leading cause of the recent commercial calamity (hear, hear). Another cause was to be found in the circumstance of many of the foreign exchanges being against this country. To these causes was to be added another and a proximate one, namely, the failure of several country banks. All these were temporary, and a corrective might be found for them, in giving up those plans of wild and extravagant speculation in which they originated. With respect to the other part of the subject, that which related to the currency, from whatever cause the present state of the currency arose, it required some alteration, and strongly called for the interposition of parliament. In those periods of commercial distress to which he had before alluded, 1793 and 1798, parliament did interfere, and interfered with effect (hear, hear). And what parliament had done before so much for the public advantage, it might surely do again. A principal part of the distress had been owing to the apprehension of a deficiency of gold to meet the demand for it. This apprehension arose from a belief that prevailed that gold was exported out of this country to meet some of those demands which were occasioned by those foreign loans and speculations to which he had alluded; and the consequence was, that there was thereby encouraged in this country a morbid paper circulation (hear, hear). The manner in which country bankers issued their notes called strongly for the attention of the house. It was, in his opinion, little less than a fraud to issue notes without having a security equal to the amount of the issue. It was not right that a business, on which the welfare and very existence of the country depended, should be undertaken by persons who had not the means of giving security to meet the demands for which they became responsible. The subject was one surrounded with great difficulties, and he would leave it to his Majesty's ministers to suggest what alterations in the present state of our currency it would be advisable to adopt. He could not forbear expressing on this occasion, the great gratitude which the country owed to the Bank of England for the manner in which they acted on the late crisis. By their conduct they had raised themselves in character, and deserved to be raised also in the confidence of the country. That he (Mr. W.) was correct in stating that one of the present causes of the distress mainly originated in the wild spirit of extravagant speculation that lately raged, he would refer to a Report of the Committee of the house in 1811, which stated, among other causes of the distress that prevailed at that time, "that it was a result of the too great freedom of commerce which had been indulged in since the commencement of our intercourse with the South American market." An immoderate indulgence in such visionary undertakings as had been lately engaged in, could not fail in being ruinous, and it became the British merchant to discountenance schemes of extravagant speculation. In reviewing the causes in which the distress originated, he should not omit to notice the effect of the repeal of the Combination Laws. The combination among the workmen which had reached so alarming an extent, had now subsided. In Bedford, among the clothiers, their conduct had for weeks assumed quite a formidable appearance, but he was happy to learn that a better spirit now prevailed amongst them, and that these differences throughout the country had nearly all terminated in an amicable reconciliation. Because these distresses and excesses consequent on the change of our commercial policy, and of the repeal of the Combination Laws had taken place, did he mean to condemn that policy, or to desire that the combination laws should be re-enacted? By no means. The removal of restraints on uneducated minds was calculated to lead to violence; but as the principles on which these restraints were removed were sound and good, the evil would be only temporary, whilst the advantages would be permanent (hear, hear). The commercial regulations which had been formed with foreign nations were most creditable to this country, and likely to confer great and general blessings. The commercial treaty with France was highly calculated to give effect to those principles of trade and navigation which Parliament had previously sanctioned. That Convention, as well as the Treaty of Amity, between this country and Colombia, was equally creditable and beneficial, not so much for the stipulations it contained, as for the enlarged principles of policy in which it was conceived and executed. In the amicable relations subsisting between this country and the other free provinces of South America, no blame can be attached to England for the part she acted in promoting these arrangements. It was now 15 years ago since the first effort was made in South America to throw off the authority of Spain. During all that period, and during the various stages of this progress of her struggle, Spain had an opportunity of entering into an amicable reconciliation with her Colonies. And she could not now with propriety censure us for having preceded her in the recognition which we found to exist independent of her, and from the recognition of which such important benefits were to flow. In effecting this plan of amicable equity, we left her no cause of complaint. We took no advantage of her, nor made use of any artifice against her. Another topic of congratulation in the Speech, was the mediation successfully employed in the conclusion of a treaty between the Crowns of Portugal and Brazil. A similar mediation might have been happily employed in restoring the relations of friendly intercourse, which had been so long interrupted between the South American Colonies, and their Mother Country. He was happy to state to the house, that Europe was in a state of almost perfect tranquillity, for she was disturbed only in one quarter, and he was not without hopes that even in that direction, all sources of dispute might be brought to an adjustment, and that the present contest might be settled to the general advantage of the contending parties, and to the satisfaction of the other kingdoms of Europe. With reference to the war that we had been carrying on in the East, the disadvantages to which we had been exposed, had originated principally from the climate. He had great pleasure in referring the house to another part of his Majesty's Speech, by which they would find that the revenue of the country answered the expectations of ministers. Although the receipt of the last quarter varied from the average receipts of the year, yet the result of the whole year would be found to be highly satisfactory.—He would now refer to a subject which never failed to excite the liveliest feel-

ings in the house—he alluded to the state of Ireland. From every report received from that country, it appeared that she was disengaging herself from the evils under which she had laboured, industry was diffusing itself throughout all her provinces, and he need not state, that industry was the never-failing precursor of tranquillity. The house would recollect, that the committee which had sat last year upon the state of Ireland, had made several Reports, containing a mass of the most valuable information, and it likewise recommended several salutary measures, which experience would prove to have been productive of advantageous results.—Reviewing, therefore, the general state of the empire, and the public transactions of the preceding year, he did not hesitate to call upon the house for its Address to the Throne—not in any spirit of servility, but in a spirit of pure loyalty, and with reference to the satisfactory state of the country.

Mr. Green in speaking of the duty which devolved upon Parliament, of examining into the causes which might have produced the late commercial shocks, as also to take such measures as it should deem fit and convenient to prevent the recurrence of similar calamities,—in touching upon these points, as well as upon several others, he could only again go over the ground which had already been so ably taken by the hon. mover; but the subjects were of such deep and paramount importance, that he should feel it compromising his duty to be wholly silent upon them in seconding the motion for the address; looking first, then, at the subject of the late distresses, it was not unnatural to go back to the events—somewhat similar—of 1793 and 1797; but upon a slight examination, it would appear that the distress at those periods had fallen out under circumstances widely different from the circumstances of the present day. The distress in 1793 had arisen at the outset of a war: that of the present day in a period of profound peace, without the slightest apprehension of war; after a harvest full and abundant; our commerce and our manufactures prosperous. But with all this difference between the state of things at present, and in 1793, there was one point of strong similarity: it would be remembered that both in 1792, and in the year now last past, the interest of money had been unusually low. In 1792 the manufactures of the country had been rapidly advancing; and the general prosperity was such as induced many individuals to trade beyond their capital. The country banks at that time had not the power of issuing small notes, but those which they were empowered to issue they had sent out to a vast and dangerous excess. The consequence was, that the country was glutted with paper. A slight apprehension produced immediate pressure upon those who were believed least able to sustain it; and the stoppage of these pulled down others who were solvent, but who were unprovided, nevertheless, to meet so large and sudden a demand. The failure of one man, of necessity, led, on and on, to the failure of some other; there was a demand for cash very far beyond the possible supply; and out of a mischief in many cases imaginary, real mischief was created, until the most serious, as well as general, distress and difficulty was the result. Now let the house observe how nearly this state of things in 1792 tallied with the state of affairs perceptible at the opening of the last

session of parliament. Capital was so abundant, that the merest adventurer might go into the money-market; and let his scheme be the wildest that human fancy could suggest, he would find people to subscribe to, and support it. Then was it now to be a matter of astonishment that if the bubble of credit had burst, a void was left behind? or that, at the present moment, instead of a mass of capital floating through the country, we had a scarcity of it? With this part of the general question, there was connected one point which he could not forbear noticing, although it had been alluded to by the hon. mover;—he meant the conduct of the Bank of England during the late troubles. That body was justly entitled to the thanks of the country at large, for the prompt and liberal manner in which it had rendered all the assistance in its power. The sudden issue of their small notes had been a measure called for by the sudden withdrawal of local small notes from circulation, owing to the failure or caution of so many provincial establishments. The house would also feel, that although during the last year there had been a vast imaginary capital floating in the country, at the present time the real capital available was cramped, in consequence of many bankers still keeping large sums of ready money by them, to meet any sudden emergency. Whatever might be done, however, to prevent, as far as possible, the recurrence of such convulsions as the country had just suffered under, parliament would recollect that it was one of its first duties to leave the freedom of trade untouched, as far as was consistent with the common safety. To avoid a temporary and an occasional evil, we were not to give up a constant good. From time to time, under the best government, popular riots and tumults would arise; but no one thought of getting rid of those by cutting off, or even abridging the liberty of the subject. Means might be found to prevent anarchy and mischief, without striking at the root of constitutional freedom; and remedies might be discovered for occasional commercial evils, without weakening, by fettering it, that great system upon which the wealth and power of the nation depended. With the immediate nature of such remedies he would not then busy himself: but the house would recollect that the same remedies were not now likely to be applicable which had been resorted to in 1793. We were not now in a state of war, and Government had not, as in the year 1793, called upon the Bank for a large portion of the gold in its possession—a measure which had led, and necessarily, to the Bank restriction. This being a period of peace, too, in another sense it would neither be fair nor consistent with the interests of the country to take the course which had been taken formerly. We had now full leisure and opportunity; we might go into the system thoroughly, and put an end to the evil whatever it was; and certainly, as far as his opinion went, it was no less the bounden duty than the policy of the house to do so. For himself, he thought it would be a great boon on the part of the Bank, and one for which the country would be grateful, if that body should waive some portion of its charter, and permit the formation of joint-stock banking companies. The advantages to the public likely to accrue from such a system, were too obvious and well understood to be dwelt upon. The vast property which would then be contained in every banking establishment would

be sufficient security against the present danger of over issues. The business would be carried on by persons conversant with the true principles of the banking trade; and not, as now, by individuals often wholly ignorant of those principles, and who left the control and management of their establishments to needy adventurers, or wild and unprincipled speculators. Scotland already afforded us an example of the safety and convenience of this system. Scotland had a large paper currency; and neither felt difficulty nor experienced apprehension. Although no man could feel more anxious than he did to afford every possible facility and liberty to trade, yet it did seem to him that some restriction might be beneficially devised to keep within due limits the issues of the Bank. As regarded the issue of local notes, there could be no doubt that some immediate measure was imperatively called for. Parliament would grossly neglect its duty, if a course was not taken to relieve the country from future apprehension of much of the misfortune which it had lately been suffering; if it permitted the labourer any longer to have the whole means which were to sustain his family, and what had been acquired by his labour, placed in jeopardy by the extravagance or speculation of a trader; or if it upheld the existence of a system under which the same man, without fault or improvidence of his own, might one day be comparatively rich, and the next want the means of common existence. It was needless, however, to detain the house with long comments upon the performance of its duty; and he should therefore turn from the consideration, to a subject which all would agree afforded matter for unmixed congratulation.—If there had been some distress felt during the last year in England, in Ireland—for which every member, he was sure, felt as warmly as for England—in Ireland, at least there was every token of material improvement. The house last session, had entered deeply, not merely into great and general questions, but into the detail of her grievances, and into that of all measures which might be devised for her advantage. The arrangement of tithes had been rendered less irksome than before. Education was making rapid progress. The various recommendations which committees of both houses of parliament had submitted to Government had been acted upon; there had been nothing but a wish to do all that seemed possible; and where any scheme had failed, there was every readiness to change, to remove, or to review it. The house, moreover, had the happiness of finding that manufacturers were readily carrying their raw material to Ireland. Capital was flowing into the country, and employment—which was all that Ireland wanted; nor did he (Mr. Green) despair to find, in a short time, the landholders finding it their happiness, as well as their interest, to establish themselves on their estates; and Ireland, as well as England, enjoying the advantage of a resident gentry.—To touch for a moment on the foreign relations of the country:—he would not go at length into the question; but he could not feel otherwise than highly satisfied with the manner in which the alliance had been cemented between South America and England. We had been the first to lay before the world our broad, plain, common sense opinion, that the independence of the States of South America was not a question of opinion, but of fact—the facts had been established;

and, as it became us to do, we had acknowledged them. England had taken, upon that question, from beginning to end, that tone which was calculated to make her respected, and had made her respected, by the continental powers. She had shewn that she was not to be intimidated; that she had never held back from apprehension; but that she had prudence enough not to involve herself by haste and rashness, when her ends might be secured by safe and steady measures. As Englishmen, the house and the Government must have rejoiced to see the South American States relieved from thralldom. They must have felt the warmest satisfaction at seeing liberty—that right which they so highly prized themselves—extending her blessings over the face of that vast continent. Nations, however, were not entitled to be led away by their feelings. They were bound to act upon principles of justice and policy; upon these principles we had acted, and success had been our reward. It was true that Spain had interfered between us and our American colonies; but that act, if it was contrary to international law, would have formed no excuse for similar retaliation on our part. Such a system was one upon which no man of honour, in a private transaction, would have held himself allowed to act; and one which he should have been extremely sorry to have seen adopted, or even hesitated upon, by this country.—He would conclude with a single remark upon the subject of finance. It had been expected that, during the last quarter, there would be a considerable diminution of the revenue. This had been the case; but it was satisfactory to see that the calculation of the Chancellor of the Exchequer was not at all impeached by it. When the existing difficulties were over, there could be no doubt that, in many branches, the revenue would increase. From our trade, too, it was to be remembered, those shackles now were falling off, in spite of which, rather than by their assistance, it had succeeded in former times: no person who entered fairly into the question of free trade, but must see that the greatest advantages were to be expected from it; and he believed that, England having once set the example, all Europe would soon see the advantage of adopting the same proceeding. Thus then, seeing our finance on the way to mending—trade likely to increase; Ireland prosperous, South America affording a market for our produce, and our arms flourishing in the east—was it possible to believe, under such circumstances, that our national resources had failed, or our prosperity gone back? Peculiar and unfortunate events might for a moment have checked the flow of that prosperity; but as soon as the storm was over, it would return. Britain, in spite of all that was feared, would still continue to hold her high station among the nations of the globe; and the history of future ages would record the present distresses as the passing events of the day, and not as a permanent evil. He concluded by seconding the address.

Mr. Brougham professed that if, in the course of his parliamentary experience, he had ever been led to regret the disuse of the ancient practice which placed the Royal Speech in the hands of members some short time before they were called upon to give their opinions upon it, he doubly regretted the disuse of that custom, so fitting, as it seemed to him, when he looked at the variety of important topics which were touched upon by the Speech at present before

the house, and considered the difficulty, at a moment's notice, of giving an answer to them. As this old practice, however, was now departed from, and it had become customary for parliament to discuss the royal speeches without so much as having an hour, or indeed any time at all, for thinking about, or making up their minds upon them—as he was called upon, subject to this arrangement, at once to assent to, or dissent from, the address, or to move an adjournment—which, let it be understood, he did not mean to do—he rose merely to guard himself against its being assumed, only because he did not dissent from the address, that he therefore assented to any of the statements, or concurred in any of the doctrines laid down in it; and reserved to himself the right of discussing all those statements and principles hereafter. As such was his intention, therefore, it might, perhaps, seem a waste of time that he should occupy the attention of the house, by making any observations upon the address, or its contents, at all; but, though the document was in fact in the house little else than matter of form, yet it certainly always went forth to the public as if supported by a great deal more of the concurrence of parliament than it actually enjoyed; and he was inclined to think that the country would be very little satisfied to find the distresses under which it laboured treated so lightly, as, in the address now proposed, and apparently assented to by the house, they would appear to be. The distress under which the country was suffering, was only mentioned in any way once or twice in the course of the address, and then in terms not at all suited to its greatness or extent. It was mentioned as something not universal—not very serious; and confined pretty nearly to one branch of the commercial interests of England; whereas he believed that it was most serious, widely spread, and not confined to any single branch of trade, but extending over a very great many, if not over all the most important trading relations of the kingdom. Yet, notwithstanding the great pain with which all men must hear accounts of distress pervading the most populous and industrious districts of the country—and believing that that distress had by no means yet reached its height, but would yet spread much wider, and rise much higher than was supposed,—in the midst of all these calamitous circumstances, there was one fact which pleased him, as it shewed clearly, if any argument were wanting to shew that truth, that the distress, whatever might be the cause of it, was in no way owing to that more liberal, and he should say wise and just system of commercial policy which had lately received the approbation of parliament (hear, hear). If the distress under which the country suffered had been confined to the silk trade, some argument might have been raised—it would have been a chimerical argument, an argument void of reason or foundation;—but some argument might have been set up, that the new regulations in that trade had produced it: but as cotton, wool, linen, and various other branches of trade in the country, were suffering in an equal, some in a greater degree than silk, it would be quite in vain to charge the new law (which, moreover, had not yet come into operation) with having had any share in creating the calamity. Independent of his belief that the distress in the silk trade was referable to causes entirely distinct from the late measures touching that trade sanctioned by

parliament, those who set up the contrary opinion attempted to sustain it by arguments, or rather by assertions, which had no foundation in fact. They said, “the experiment has been tried; it has failed; and distress is the result.” This was not true; for the experiment had not been tried, but remained to be tried; and therefore it was impossible that the distress could be the result of it. For those who were loudest in complaining of the late alteration would find, that if any part of the new system had done harm, it was that of which they themselves would be the last to complain—the diminution of the import duties, and returning of the money; and that there had been no change yet whatever in that part of the arrangement, which kept upon the foreign manufactured silk, for the next six months, a heavy protecting duty. In the midst of all that suffering, it was a most painful thing, and it might seem an indelicate one—at all events it was always a thankless task—to tell people that their distresses were in any degree to be imputed to themselves; but it was his duty to say, that in his opinion, the root of the distress in the silk trade, as well as most other trades, arose from over-trading (hear, hear). He would not go back to the years 1793 or 1797, because he thought periods more analogous to the present might be found nearer at hand; and, to select two examples at once—he would take the first opening of the new branches of trade to South America; and the opening of the continent afterwards, in 1814. The last of these transactions had led to such an excess of exportation, that merchants had actually re-imported their own goods from Holland to this country, as a measure of less loss than the selling them abroad. And, in the former, iron, saddles, skates, and hardware of every description, had been sent over, until, in many cases, the proceeds scarcely had paid shipping charges and insurance. Now, if it was to be complained that the change of system had led to these distresses, it might be as well argued at once, that we should never alter any system that was objectionable, or, indeed, ever open any new market, for fear of the consequences of over-trading. But he trusted that, upon this subject, there would be no difference of opinion in the house. He might have been inclined to say, looking to what had occurred, that it would have been as well, perhaps, if some difference had been made in the mode in which the new measures had been brought into operation; but such a suggestion would now amount to being wise after the event; and, after all, the manner of the thing was of far less importance than the principle.—Apart, however, from the question of trade, there were certain other topics, touched upon in the Speech and Address, which he found it necessary very shortly to notice. At that time last year, when the aspect of foreign affairs had seemed to render it just possible that England might again be involved in war, there had been three circumstances which induced thinking persons to deprecate any disturbance of peace as far as possible: these circumstances were—her debt—her currency—and the state of Ireland. The debt was out of our reach; but the other two evils—the currency and Ireland—were not so. To these two evils, then, it behoved the house to pay immediate attention, and not wait, before they acted, for the day when a war should be necessary, and of necessity, must come. Now, when he heard it said that Ireland had been per-

fectly quiet and prosperous, he rejoiced to hear it, and did not question it; but yet he thought that the cause of the tranquillity of Ireland lay in her expectation that something would be done for her: and he trusted, that, at a fit and convenient season, she would find that she had not waited patiently in vain (hear, hear). If Ireland did look in vain to us for justice, in the proper season, we should soon again look in vain to her for tranquillity; for of this the house might rest assured, that the tranquillity of Ireland was founded upon hope. He believed that the tranquillity of Ireland was mainly attributable to the measures of the Catholic Association; and he did still believe, as well as hope, that so long as the Catholic body continued firm and united among themselves, it was impossible that, in proper time and season, they should fail of attaining the object which they sought, and which was their due.—He had listened with pleasure to that portion of the Address which referred to South America. It was matter of pride and pleasure to reflect on the glory achieved by the inhabitants of those Republics—men who, unaided, had the good fortune to succeed in establishing their independence, and freeing themselves, at once and for ever, from the detestable yoke which had so long and so ignominiously galled them (hear, hear). Those States were now at peace, their independence was recognized, and we were on friendly terms with them; that those friendly relations might remain unbroken—and that we should soon have united to us, by treaties similar to that with Colombia, all the other great Republics in that part of the new world, who had achieved their liberties, was his most sincere and ardent wish, as their independence must afford matter of pure and sincere delight to every friend of freedom (hear, hear). There was another point, while he was upon the subject of South America, to which he thought it necessary to allude—namely, the treaty pending between this country and the empire of Brazil. He was glad to hear that this treaty was not ratified; and most devoutly hoped that it never would be, for if there were no other reason against it, it contained one clause to which it was impossible in terms too decided to object. By this treaty, the contracting parties bound themselves to give up to each other, not merely felons, as persons guilty of coining, fraudulent bankruptcy, or murder, but also, what was a widely different and a new stipulation, to shelter no persons accused of high treason. Now this undertaking would not only compel us to retain upon our statute-book, the alien law, which of all the laws which appeared upon it was one of the most dangerous and offensive, but it might also bind us to execute it against an individual who should be accused of the slightest political offence, or who might only be politically obnoxious. For it would not lie with us to decide what did or did not constitute treason; and we might be made the instruments of aiding in, or inflicting, punishment for that offence, although the charge should be as capricious, or as morally groundless, as some of those set up by our own Harry the Eighth.—Much had been said upon the proceedings of the Bank of England during the late agitations in the various classes of property in the country. Without wishing to throw blame upon the conduct of that body, he could not help expressing his conviction that an end must come to that system which excited so powerful an influence at present, not only on the money market, but on the

whole trade of the country. Some change must be effected, or at any rate attempted, by which the interests of the whole empire, together with the fortunes and welfare of every family in it, should be drawn from under the absolute control and direction of four and twenty men: be they bankers, or be they merchants, whether they were to be looked up to as a political corporation, or a powerful commercial company, it was too much to trust the whole property of the country to the absolute good-will or caprice of a few men, left in the exercise of a power which was constantly changing all the relations of that property—sometimes increasing their issues and raising its value; then as suddenly contracting them and leaving commercial transactions in a state of corresponding embarrassment—now restricting their discounts, and now enlarging them—again restricting their issues, and raising the rate of interest—and again suddenly enlarging their issues, and lowering the rate of interest. Just such as they had lately witnessed were the fearful consequences of that system upon all the property of the country—such were the confusion and disorder which must continually prevail in all its concerns, so long as the influence of that system was allowed to prevail. No men could be safely trusted with that power. Had they the greatest stretch of wisdom, the sharpest foresight, the gift of prophecy itself, it would be utterly impossible to trust them with the exercise of it without adequate check and control. Check and control there could be none, unless through the establishment of other companies like their own. The competition of the money-market, could alone give the public proper security against the recurrence of the evil, by enabling other companies to rise up and restrain the undue influence of their monopoly by the danger of seeing their rivals rise above them. It might easily be gathered from certain passages in the Speech, that it was in the contemplation of Government to submit some decisive propositions upon that subject to the house. It was not his intention now to go into any discussion of it; he only wished to state his opinion upon the principle which would be then brought into question.

Mr. Robertson considered the present embarrassments in the several interests as so many unavoidable consequences of that policy which had directed the public counsels, and which was now of ten years' duration. Should the Government persevere in it, the existing calamities would be no more than a gradual approach to the crisis—they had gone but a step only in the ways of adversity, unless they recurred to a different line of policy. The house was bound to step in and rescue the manufacturing and landed interests from ruin. The present difficulties would pass away; but greater remained behind, unless an end were brought to that speculative and gambling scheme of commerce which had produced it. Before he went into the subject, he would take leave to read a passage out of an excellent pamphlet, the last edition of which was published in 1819, though the work itself appeared in print full 15 years ago. It was written by the *rt. hon.* President of the Board of Trade. From this pamphlet he drew the following proposition—that the excess of the exports over the imports of a country is no necessary proof of the prosperity of that country. It was only an indication that such a portion of the wealth of the country might be spared; it amounted, in the first instance, to no more than a proof of the capacity of the country

to endure that expenditure and absence of surplus capital. It did not follow, according to the author, that that exported wealth or expenditure must be beneficial to the country; on the contrary, he was prepared to prove that it was absolutely pernicious; that in the case of this country it was the direct cause of all the distress which had prevailed. He admitted that this view of the subject had not, to the best of his knowledge, been taken before in parliament, and, as it was new to the house, he hoped for their attention while explaining it. He took the excess of the exports over the imports, since the peace, at 189,000,000*l.*, for which no return had been made to this country to compensate the loss endured. And yet this was but a gradual advance to what must be expected from perseverance in the same system. At the close of the war, and in the first year of the peace, the excess of exports above imports was only 13,000,000*l.*; last year it was 24,000,000*l.* Could any country live and thrive under this annual expenditure? When Mr. Pitt governed the country the state of things was something like this:—From the American peace to the French war, the excess of exports was about 600,000*l.* a year. This expenditure was readily accounted for by the pay of ambassadors, and other functionaries, together with the expense of establishments abroad; so that it would be readily shown that not a single pound sterling left the country, for which another pound did not come in. From 1797 to 1805, the excess of expenditure amounted altogether to about five millions and a half. In the continuation of the war, this expenditure continued to increase, but in a proportion which might at once be accounted for by the expense of extensive fleets, and garrisons abroad. The expenses of our armies in the Spanish war alone would account for more than ten millions of the excess. At the peace, and ever since, the system had changed to an excess of this expenditure, which was continually increasing without bringing back to the country any adequate returns—until it had reached the sum of 189,000,000*l.* He would now show how this excess of 24,000,000*l.* of foreign expenditure worked among the various classes and interests of the country—how it injured them from the lowest to the highest. There being clearly that surplus of capital, its natural employment would be the application of it to the wages of labour among the increasing population of the country: for if the capital left the country in larger proportions than before, and the population continued to increase, the supply of labour must soon far exceed the employment given by the capital remaining—the labourers must be depressed, and the country impoverished. On this account, he could not but deplore that pernicious and pestilent doctrine which had obtained, that capital from England spent on the Continent, or capital from Ireland spent on the Continent or in England, was equally useful as the same capital spent in Ireland or in England. True it was that such excess of expenditure abroad might have the appearance of prosperity; but it was only a speculative prosperity, big with national impoverishment. The house might ask how the surplus wealth was to be kept in the country? The question was not difficult to answer. Give such capital protection, and then it will stay at home; and it will create a real prosperity, by bettering the wages of labour, and increasing the productive powers of

the national industry. An absolutely free trade would let in foreign commodities. What would be the effect? The home manufacturers must be pressed down by competition; and capital, instead of being employed in compensating our own labourers, would be drawn in greater and greater quantities abroad, to bring in the supplies of foreign industry. He considered the doctrine of absolute free trade, as applied to this country, as the most vicious principle which had ever been adopted by thinking men. He begged pardon of the house for thus addressing them; but his feelings upon the subject were strong, and he could not repress them; so grievous were the results which he anticipated from the adoption of that principle. He supposed that the argument urged by Government in support of that system, was the usefulness of competition in restraining monopoly. Nothing could be so absurd. Competition with other countries was utterly impossible—circumstances were not the same; and unless circumstances were exactly equal, what competition could there be? No man could foresee the circumstances which might throw the advantage of foreign competition into the hands of France, and, once lost, it could never be recovered. He would now advert to a transaction which was utterly at variance with the principles of free trade, so loudly promulgated, and which appeared to him to be one of the vilest amongst all the schemes with which the country had overflowed. Since the house had last met, a charter had been granted by the Crown, similar to that upon which the monopoly of the East India Company was originally founded; by which charter a new company had been authorised to vest a million of money in an exclusive scheme for the growth of silk in Great Britain and Ireland. The capital embarked, as he said before, was a million. Here was a million of money to be applied—a sum more than sufficient for three times the trade which this country would ever have to carry on in the growth and throwing of silk. The natural effect must be, that the company would ruin all minor competition, and then raise their prices, to the inevitable injury, perhaps the destruction, of our silk manufactures. It grieved him to be obliged to give out the names of peers and hon. gentlemen who were implicated; but he could not, in a case like this, refrain from doing his duty. The President, according to the prospectus, was the Marquis of Lansdowne; vice-president, the Earl of Liverpool. What would Mr. Pitt say, did he but know that his great disciple was to be found in such a list? Among the directors were, the Right Hon. W. Huskisson; Henry Brougham, Esq.; Wilmot Horton, Esq.; Pascoe Grenfell, Esq. How different were the sentiments of the right hon. gent. (Mr. Huskisson) when commenting in his pamphlet upon a similar project adopted by the French government, to force the cultivation of cotton. "Such is the barbarous ignorance and detestable policy which sways some of the powers of Europe, that we are boastingly told of whole districts of otherwise fertile territory being forcibly destined to a particular cultivation, and of the French government raising, at a ruinous expense, a little bad cotton." How soon the rt. hon. gent. forgot his own principle in favour of a similar cultivation of a little bad silk!—while the produce of India was secured to the country on terms which made competition utterly impossible. Such was the incon-

sistency of the advocates of free trade, and of the government which had adopted their principles. He disagreed with that part of the Speech which stated the pecuniary difficulties of the country to be without any remedy. The remedy was within the reach of the house. The remedy was to keep capital at home, to encourage productive industry, raise the demand for labour, and increase the internal trade of the country. Foreign trade was a thing utterly insignificant in amount and importance when compared with this. He had no interested motive in the view of the question which he had taken. Every word he uttered was opposed to his own particular interests as a foreign merchant. He was sure to be benefited by free trade. But when the landed and manufacturing interests were depressed by that freedom of trade, it must be injurious to the country at large, and an evil sign it was of the general policy of the country wherever the agricultural and manufacturing interests were seen to decay. Differing as he did so far from the Speech, he exhorted the house to relieve the country from evils which it was so fully in their power to remedy.

The *Chancellor of the Exchequer* confessed that he did not clearly comprehend the speech of his hon. friend (Mr. Robertson), which seemed, however, to contain some propositions of rather a startling nature; for if he understood him rightly, his argument was, that the greater part of the distresses of the country was to be attributed to the excess of its exports,—and then again, his greatest dread seemed to be the excess of its imports. How to reconcile such seeming contradictions, he must leave to the ingenious and speculative mind of his hon. friend. As to the facts produced, and the crimes alleged against the Government, he felt at first astounded,—he could not conceive what he himself, or his rt. hon. friend had been about, to deserve that denunciation, and he trembled at the consequences which were to follow. But lo! some distinguished persons had lent their names to a speculation the most innocent which had ever been set on foot. He himself was not a member of the association; but what harm could there be in it? The growth of silk in this country was a desirable object if it could be accomplished, and in no degree similar to the monopoly of the East India Company. His rt. hon. friend had suffered his name to be inserted in the list of directors, not for the purposes of profit, but as an honorary title; and then the hon. member (Mr. Robertson), taunting him with an alleged inconsistency in the principles of free trade which he had so successfully advocated, referred to some passage in a very able pamphlet written during the bullion controversy, which pointed out the absurdity of the French government endeavouring to force the cultivation of very indifferent coffee, and to manufacture beet-root into sugar. But this silk company did not propose to force either the growth or importation of silk. There was not a sentence in their charter to compel the hon. gent. to grow a single mulberry on his estate. In what respect did an association for the voluntary cultivation of silk resemble a restrictive monopoly, or a compulsory appropriation of good corn lands to the production of coffee and sugar? But Buonaparte was absurd enough to pass a law, compelling his subjects to resort to miserable, futile, and ill-contrived attempts to produce the articles, which his own measures prevented him from

obtaining in the more natural way. Thus far he had remarked, in reply to the hon. gent.'s speech; but he would take this opportunity of explaining, in a general way, the views of his Majesty's Government respecting the more important parts of the Speech. And here he would say, that the learned gent. (Mr. Brougham)—with whatever candour he had commented on some parts of the Speech,—might have forbore from making one or two observations which had escaped from him. Undoubtedly the matters on which the learned gent. had touched, were calculated to excite the strongest feelings of the country, in the distress which now prevailed; and he owed his thanks to the learned gent. for the moderate and candid way in which he had explained his opinions upon many of these points. He was not, however, quite justified in one of the comments which he had made, imputing to ministers a charge of treating too lightly the distresses which so unfortunately prevailed. This imputation might have been spared, for he could solemnly assure the house, that nothing was farther from the feelings or intentions of his Majesty's advisers, when they suggested the insertion of that paragraph in the King's speech, than to treat the subject lightly. Indeed, he knew not what materials men could be made of, if they could have so treated the sufferings of a large portion of their fellow-countrymen with levity, and sported with afflictions which they must lament, if they could not save (hear, hear). He should have thought that the best proof of a contrary sentiment pervading the breasts of ministers, was to be found in the fact of their placing that topic in the very front of the Royal Speech; thereby showing the country how strongly the King and his Government felt the necessity,—nay, the imperative duty, of calling the immediate attention of Parliament to the consideration of so painful a subject, if not to avert or mitigate its present evils, at least to prevent its recurrence, so far as human wisdom could be said to have the means of preventing, which to a certain degree it undoubtedly had, the repetition of such disasters (hear, hear). When he talked, however, of such a precaution, it was in vain for any man who had observed the progress of late events, to deny, that, looking at the cause of the late shock in the pecuniary transactions of the country, and the event, when the bursting of the bubble displayed and dispelled the delusion, there were no legislative precautions that could have averted the mischief. It was impossible for public enactments to control the speculations of individuals in so great a commercial country as this, when such temptations were held out for enterprise,—when so much skill and industry, and, he would add, honesty, were displayed in the conduct and extension of mercantile affairs. It was impossible to apply laws, as some people heedlessly imagined, to govern the speculations of individuals, without doing far more mischief than good, by an attempt so inconsistent with the habits and practical details of business. There was, however, no ground for despondency, notwithstanding the present condition of the country. If they referred to the distresses which prevailed in 1816, they would see how soon the country arose out of them in the following year; the extreme pressure in the one year was followed in the other by a rapid re-action of a contrary kind; and this occurred without laws, or violence of any kind, from the very

nature of the thing itself. It was, he thought, clear to any reflecting and intelligent person, that the great proportion of all the public difficulties had arisen from causes out of human control; and he was satisfied that the man who would legislate on a different assumption, would find himself miserably disappointed when he beheld the effect of his interference in the concerns of private management. When he said this, he begged it at the same time to be understood, that undoubtedly there were cases in which it was competent for Parliament to interpose, and where it was necessary and useful to call for that interposition. Amongst these cases was that of a currency, so mixed as that the part of it consisting of paper greatly exceeded the amount of specie. Under such circumstances, it was clear that the tendency of the paper portion of the circulating medium was to increase, and that without reference to consequences, and when the state of commerce did not necessarily require that increase. This was precisely what had happened in this country, more particularly with regard to the circulation of the country banks, the increase of which within the last three or four years had been of a most extraordinary description. Of the actual state of the circulation of the country banks it was difficult to form an accurate estimate; and this difficulty was in itself a great evil, because it left both the Bank of England and the Government in comparative ignorance upon a matter which it was essential for them to know. They had, however, the means of approximating to something like an estimate, by a reference to the amount of stamps issued within a given time to these banks. It was usually considered that the average circulation of country bank paper lasted about three years; and therefore, if he multiplied each year's issue of stamps by three, he arrived at a probable test, for the purpose of his argument. Judging in this manner, he found that in 1820 the issue of the country banks had been three millions and a half; in 1821, it was four millions and a half; and, in 1825, it had arisen to no less a sum than eight millions and a half. During this progressive operation of the country banks, there was no excess of circulation apprehended, and the affairs of the country were generally in a rapidly increasing state of prosperity. But, the inevitable result of this operation must be to produce a rise in prices, which naturally extended a spirit of speculation, where men struggled who should get most money for articles in demand. But this was not all the evil which this system of circulation produced; a great deal of difficulty arose from the one pound notes, and notes of small denomination, which, from the smallness of their amount, circulated among the poorer classes, upon whom they entailed the heaviest affliction when the time of revulsion or stoppage arrived. When one of these banks broke, thousands of poor people lost their all, and were visited with the most heart-rending affliction. A great deal was said of the benefit to trade, from the circulation of these banks; but he would boldly ask, what advantage had been conferred on agriculture, what advantage on commerce, what benefit, in fact, upon the community at large, allowing the summing up of all its alleged advantages, which could at all be compared to the ruin of its reaction at a moment of panic, and the widespread evils which its sudden depreciation inflicted (hear, hear)? What real or ap-

parent benefit (and it was more apparent than real), could compensate for the poverty and misery to which it thus ultimately consigned so large a portion of the honest working classes of the community, who possessed nothing for their labour or their sustenance besides the worthless piece of paper bearing the impress of the local bank? Who, with a heart to feel, could refrain from saying that these evils did not far, very far outweigh all the reported and exaggerated advantages of the circulation of this mass of country paper? Upon the fullest consideration which he had been able to give to the matter, he came to the conclusion, that it was indispensably necessary to apply an immediate and effectual remedy to that great source of public mischief (hear, hear). And it was to him a source of regret, that in the arrangements respecting the currency in 1822, the original intention of putting an end to the indulgence in 1825 had been abandoned; but what had passed since had more fully confirmed him in the opinion that they must now have recourse to a firm and decided measure, for the purpose of placing the currency and credit of the country upon a solid and durable basis (hear, hear). This still would not have the effect of preventing a recurrence of the evil, without another measure, which was at least equally important,—he alluded to the exclusive privileges of the Bank of England, as their charter now stood. It was impossible for any man who considered the extent of the public transactions of this great kingdom, not to see that a single chartered banking company, however well constituted, was inadequate to execute all the functions of banker for the state. The town business—that immediately on the spot—they could conduct, undoubtedly, in the present manner; but not so throughout the country. That the Bank of England was at the outset perfectly sufficient for all purposes, he readily admitted; but the immense growth of the wants of the country for banking aid had become since so extended, that a change to meet this varied aspect was unavoidably brought about. Country banks had become necessary, in consequence of the exclusive privileges of the Bank of England and the growing wants of the public. And from these very circumstances the country banks had been so constituted, that they were deprived of much of the solidity of what ought to belong to a banking system; and, in fact, the effect of the exclusive privileges had been, to foster every species of country banks, save those of the most solid and durably beneficial character (hear, hear). This state of things at length required a better remedy than it had hitherto received. Indeed, for some time, it had attracted the attentive consideration of Government. Two years back they had commenced a negotiation with the Bank, with a view of inducing that company to forego a part of their privileges. Their charter would expire in 1833, and the Bank offered to relinquish some of its privileges, provided the charter were extended to 1843. They agreed to allow other chartered companies, within the present prohibited distance, at once, provided the extension of the charter was conceded. This, however, the Government refused to call upon Parliament to grant, but rather pressed upon the Bank the greater advantage which the company would obtain in the administration of their own affairs, by the increased safety and security which would generally result from the adoption of the

plan then under contemplation. The Government had lately again pressed this matter upon the consideration of the Bank, and submitted the benefit which both the company and the public would derive from its execution, accompanied, at the same time, with a direct and unequivocal statement, that there was no intention of extending the present period of their charter. The manner in which the Bank Directors had met this proposition deserved the highest credit. The Directors had acquiesced in the proposition made by ministers, which they intended immediately to submit to the consideration of a court of proprietors, whose co-operation was necessary for its completion. The plan, if carried into effect, would place the banking system of this country upon the same footing as in Ireland, where companies were allowed to establish banks, with any number of partners, fifty miles from the capital. The distance would be sixty-five miles in England; and, at that distance, it would be competent to establish banking companies with an unlimited number of partners. When he alluded to the reluctance of the Bank to abandon all at once rights which they felt were secured to them by charter, it was, he repeated, too much to complain of them for such hesitation. They were charged with the protection of particular interests; and though it was the purpose of the Government, in their communications with the Directors, to make out to them, by reason, that the rights they were charged to cherish would not be prejudiced by the concession required from their hands, still it was not to be wondered that men held tenaciously to the maintenance of exclusive enjoyments intrusted to their protection. Throughout his intercourse with the Bank of England, he had found the Directors uniformly manifest the most anxious and sincere desire to promote the general interests of the country (hear, hear). He might differ from them occasionally upon points of general policy, as well as on particular principles, by which they thought proper to regulate the conduct of their business; yet he felt he had no right to find fault with their mode of managing the affairs entrusted to their guidance; and sure he was, that none were to be found more ready than the Bank of England had been, to throw itself into the breach, when the country required a great saving effort; at the risk even of their own interests—at the risk, too, of their own security—they had often come forward, and saved the country, by their timely aid, from greater evils than any it now laboured under. With this experience of the value of the services performed by that great corporation, it would, indeed, be monstrous injustice not to treat with proper consideration the opinions of such a body. They had now, as he had before mentioned, agreed to relinquish that part of their exclusive privileges which restricted the number of partners in banking concerns, and had refrained from requiring the condition of a ten years' extension of their charter, which, on the former occasion, they had declared to be a *sine qua non* of this concession.—He had now stated, in general terms, the outline of his plan respecting the banking system, and this was not the convenient time for further explanation as to the details. On a very early day, however, he would submit a distinct proposition on the subject, when it could be fully discussed in all its parts. But he could not refrain, on the present occasion, from stating at once what were

SESS. 1825.

the general views of Government—what they felt to be the main causes of the existing difficulties of the country, and the measures which they thought best calculated to obviate their recurrence, or mitigate their injurious effects; not, indeed, in the shape of a nostrum or specific against disease, but as a means of escaping from similar evils, if they again occurred and bore heavily upon the community. There were only two other points within the sphere of his immediate department, on which he would at present touch. His Majesty's speech stated, that the revenue of last year had fully equalled his own expectations at the commencement of it. Those words were not only literally true, but rather below the mark; for it would be more accurate to have said, that the last year's revenue had more than exceeded the most sanguine expectations of the Treasury. He had himself assumed that the revenue of 1825 would be 500,000*l.* or 600,000*l.* less than that of 1824, and he had proposed a repeal of 650,000*l.* worth of taxes in the current year; so that his calculation would have held good, if the receipts at the end of the year 1825, as compared with those of 1824, shewed a diminution of 1,200,000*l.* In addition to that reduction from the source he had named, another important defalcation of revenue had arisen out of the alteration in the duties on wines, and the repayment or allowance of 1,050,000*l.* upon that account; so that if the latter cause had not existed, the revenue of 1825 would have exceeded by the same amount that of 1824. However, notwithstanding all these reductions, the revenue of 1825 shewed an excess above the preceding year of 200,000*l.* The terms, then, in which the subject was mentioned in the King's speech, conveyed at least no exaggeration (hear, hear). He thanked the learned gent. (Mr. Brougham) for the frank and uncompromising manner in which he spoke out, respecting commercial principles of great importance to the well-being of the country, and had asserted that if the Government remained true to the real interests of the community, and consistent with itself, it would not be diverted from that system of policy in matters of commerce which was founded and justified by the wisest principles. He entirely concurred with the learned gent. And though he and his colleagues in the Government were taunted by the hon. gent. (Mr. Robertson) with having lost the countenance of some of their oldest friends, and being cast for support upon their usual opponents on the other side of the house, still he should say that they were cheered by an honest and effective co-operation (cheers). Nor would the hon. member's taunt drive him to reject the assistance of hon. gents. opposite, who had the generosity and candour to give him their aid in this branch of his policy, and who could have no imaginable motive for taking such a part, save disinterested attachment to the true interests and welfare of their country (hear, hear). It was, then, with the highest satisfaction that he found the principal men of every party in politics ready to give him their support in this branch of the public policy. He knew that he carried with him, in his steadfast adherence to it, the concurring opinions of all the best-informed men in the country; and he would add, were he not himself one of its most zealous advocates, of all the wisest persons who took a part in public affairs (cheers).

Mr. Ellice did not intend to object to the plan

D

of the *rt. hon. gent.* for establishing chartered banks similar to those in Scotland, but he would content himself with cautioning him that those very banks, if not kept within proper limits, would go on increasing the paper currency, and so add fresh difficulties to the present ones (hear, hear). It would not be amiss if the *rt. hon. gent.* would take a hint from the United States of America. At one time, almost every town of those States had its bank, in which every trader was, more or less, engaged in carrying on the system of discounting; the end of which was a scene of ruin such as had scarcely ever before been witnessed. Another disadvantage of this extension of the banking system, would be the introduction of paper where, as yet, there was none issued; and he therefore trusted that means would be adopted to regulate the issues of all banks. But the most serious omission on the part of the Government, appeared to him to be, that while they were forcing these and other measures on the people against their consent, they did not even so much as approach the question of the Corn Trade (hear, hear). How could the *rt. hon. gent.* reconcile it to himself to press upon the country measures that were generally deemed injurious, and to tell them at the same time, that the only trade to which he would not extend the freedom he proposed to all others, was the trade that embraced the principal means of life? It was said, that there must be a standard price for corn; and all that would be well and good, so long as there was likewise a standard price for silk (hear, hear). But if the one were to be elevated, and the other to be depressed, it would be impossible for the English workmen to compete with the foreign manufacturer. For supposing that in a piece of French silk worth 15s., the labour were 11s. and the material 4s., it was clear that, in order to put our workmen on an equal footing with the continental ones in their work, they must be on an equal footing with them in their means of living. He had said thus much, having had occasion to transmit several Memorials on the subject to the Board of Trade; and it certainly appeared strange, that the *rt. hon. gent.* could pass over such a question in the Speech, without seizing on the opportunity to press such an important subject on the attention of the house (hear, hear).

*Mr. Hume*, although he approved of many of the general principles of the speakers who had preceded him, must at the same time protest against the praise which had been so lavishly bestowed upon the Bank of England. As soon would he join in commending the activity of an incendiary for assisting in extinguishing the conflagration which he had himself caused, as in praising the Bank, to which he attributed the existence of so much of the public calamity. If that corporation had profited by their experience in 1797, they would not, as they had done, have allowed the foreign exchanges to have run for seven months against this country. As to the proposed chartered banking companies, he thought that they were not more necessary in the country than in London, where they were wanted as a check on the Bank of England.—The *rt. hon. gent.* had taken great credit to himself for the prescience with which he had predicted the state of the revenue, but he had taken care not to go back to that period when Government had been so lavish in their promises of reducing taxation. The great affliction of the country arose from

the enormous and unnecessary expense of the Government establishments. The whole amount of the military peace establishment of 1793 had not exceeded 4,500,000*l.*, and it now amounted to between 9,000,000*l.* and 10,000,000*l.* In 1793, 18,000,000*l.* was the whole amount drawn from the people, and 2,000,000*l.* in poor rates. In the year just past, the people paid 55,000,000*l.* in taxes, and 6,000,000*l.* or 7,000,000*l.* in poor rates. Thus, after ten years of peace, the hopes which had been held out to the country of a reduction of our immense taxation were frustrated. Was he, then, to blame, under these circumstances, if he accused his Majesty's ministers for advising such a Speech as that which they had heard from the throne? He did not wish to make comparisons, but if a comparison were to be made of the present Speech with the elaborate detail contained in the late address of the President of America to Congress, at its opening, our Speech would appear a farce. However, as perhaps *rt. hon. gents.* would not wish to have examples drawn from republics, he would mention one from a monarchical government—that of Bavaria, in which the sovereign told his people, at the meeting of the states, that he was anxious for their assistance in reducing the public expenditure to the lowest possible scale, consistent with the safety of the government. There was in the conduct of that sovereign an example well worthy of imitation. Instead, however, of a disposition to imitate examples of that kind, we were going back to the parade, frippery, and expenditure of the time of Louis XIV. Could that be called a happy state of the country in which our officers and drummers were strutting about covered with gold lace at the public expense, while our working population was depending for subsistence on the charity of the more wealthy parts of the community? Could we be said to be flourishing, while so large a portion of the public income was absorbed in half-pay and pensions; so that there was scarcely a respectable family in the kingdom who had not some one of its members depending on the public purse? It was, he would contend, a farce to talk of bank-suspensions and commercial failures as the cause of our distress, or to think of applying a remedy to those partial evils, while we left untouched the great evil of all—our enormous expenditure on such objects as he had mentioned. The *rt. hon. gent.* had not taken this view of the question. In his view of the case, that expenditure had nothing to do with our present embarrassments, and in this of course he was safe, for he had friends whose votes would back his statement; but he (*Mr. Hume*) was prepared to contend, that unless the many useless parts of that expenditure were cut down, it would be in vain to talk of a prosperous state of the country. He would undertake on some future occasion to prove, that in the last year of our struggle on the Continent, the year 1815, when the whole amount of the expenditure of this country was not less than seventy-two millions, it was not greater than that which we were this year called upon to pay, taking the difference of gold and paper at the two periods. It was said that our immense military establishments were rendered necessary by the extent of our colonies; but he denied that our colonies required such expensive establishments, if they were managed as they ought to be. Ireland, he supposed, was looked upon as a colony which called for a large establishment. But why should that be

necessary? Why not put Ireland in that condition in which she could support herself? The system pursued with respect to our foreign colonies was not less extravagant. The people of England, under the present system of management, were, year after year, called upon to pay large sums on account of most of our colonies, which were not repaid with any advantage to us. On the contrary, they heard of nothing from the colonies but continual complaints of mismanagement from January to December. Nor was the prospect any better in the East. Last year, the war in India was spoken of in the Speech as a necessary measure to check the insolent aggressions of the Burmese, and an expectation was held out that it would be brought to a speedy termination. Since then, however, what had been done? The East India Company were prosecuting the war without success, at a most enormous expense, and that expense, though it might at first sight appear to be that of the Company, was in fact a matter in which every man in the country was interested; for it was probable, that at some period the country would take the government of India into its own hands; and whenever she did, there was no doubt she would have to take the Company's debt along with it. It was, therefore, the business of that house to look with great jealousy at the continuance of any system, with respect to India, which might have the effect hereafter of adding a heavy load to the already enormous debt of the country. The Burmese war was still carried on; and we not only had not heard of victories, but we had scarcely any mention of engagements. The Burmese, instead of fighting, kept aloof, and left nothing for our troops but a country already rendered desolate. Instead of advancing to conquest, our troops were wasted in a climate far more deadly and destructive than Walcheren. This disastrous state of affairs was the consequence of having an incompetent man at the head of the Indian Government. He had heard it said that the present Governor-General had not the confidence of the Court of Directors: if so, he would ask what should induce his Majesty's ministers to continue him in that command? Ministers were responsible in this instance, and he hoped that the right hon. gent. at the head of the Board of Control would not allow the present discussion to close without giving the house some explanation on the subject (hear, hear).

Mr. T. Wilson said, that he was a friend to the general principle of free trade, but that he thought the silk-trade, under present circumstances, ought to be made an exception, or at least that the principle should not be extended to that branch, while the monopoly of the corn trade was allowed to exist at its present height. Unless ministers felt it their duty to revise their measures on this question, he should feel it necessary to call the particular attention of the house to the subject.

Mr. John Smith entirely concurred with the right hon. gent. in most of his observations on the injurious effects of the issue of small notes by private banks; but let him remind the right hon. gent. that the undefined manner in which he had alluded to the intention of allowing joint stock company banks, with a greater number of partners, and with of course a very large capital, might have an injurious effect on many banks within sixty-five miles of the city, unless he explained immediately the time when this proposition was to be carried into effect. With-

out such explanation, his proposition might create an alarm greater than the panic, the recurrence of which they were all anxious to prevent. Upon the general principle of the proposed measure he would not now enter, but he hoped that when the details of the plan came to be considered, we should not do what was done in Scotland, where the issue of the one pound notes had driven every sovereign out of the country (hear, hear). It was chiefly with the view of requesting this explanation from the rt. hon. gent. that he had risen, but he could not sit down without adverting to that part of the speech which alluded to the state of Ireland. The tranquillity of that part of the kingdom must be a source of gratification to every man who had the general prosperity of the empire at heart. With a view of furthering inquiry into the state of Ireland, he should suggest that the committee which had sat last session should be re-appointed. The labours of that committee had been invaluable. They had opened to Englishmen the nakedness of the land; they had contributed to give a just view of the real state of the country, and of course a nearer approach to a knowledge of the remedies by which the many evils which afflicted her could be removed. But though much had been done in this way, a great deal more remained to be done, and he trusted that the committee, which had shown itself so well qualified for the task, would be allowed to resume its labours, and to pursue those inquiries which were not yet half gone through.

Mr. Cripps admitted that there might have been some evils from the banking system; but they were the result of individual bad management. As a general system, he would contend that great good had arisen from the establishment of country banks. The accommodation which they were enabled to afford was of vast importance to the country, and he hoped that the system might not be altered without due consideration, as it might be productive of extensive injury. He would not say that money was not sometimes advanced without sufficient security; but if the banks were obliged greatly to contract their issues, the consequence might be extremely injurious. If some of the banks had a short time ago been ruined from an inability to convert their parchments into gold at twenty-four hours' warning, what might not be expected from such a sudden alteration of the system as that now proposed? He hoped, therefore, that if a new system of banks were established, it would not be allowed to affect those banks which had stood the recent shock, and which were still in existence, and that these latter would not be driven to take a course which should be so injurious to the country.

Mr. Maberly thought that great praise was due to the Bank of England for its energy and activity in endeavouring to diminish the effects of the late panic in the commercial world. It had on that occasion been greatly serviceable to the country, and the thanks to which it was entitled ought to be the greater, as it went on that occasion in opposition to some of its former principles. He would admit that the Bank was wrong in advancing to such an extent on mortgages as it had done (hear, hear). But let it not be said that the country had been brought into its recent state by the country banks only. The conduct of his Majesty's ministers had contributed in no slight degree to produce the effects they had witnessed, by the extravagant

issue of their promissory notes, or Exchequer bills, which they had allowed to go forth to the amount of thirty millions. This was a most improvident course, and he was convinced that if the Bank had not taken up a large quantity of those bills, the dividends of October or January last could not have been paid. Great credit was due to the Bank on this account, which had thus relieved the country from some of the consequences of the error into which Government had fallen. Evils had arisen, and must arise, from the extensive issue of Exchequer-bills which Government had made, and he had no doubt that if the hon. Bank Director (Mr. Pearce) opposite were to speak out and declare his sentiments on this occasion, he would inform the house as to the evil effects of those over-issues.

Mr. Pearce said that the advances which the Bank had made upon stock, and also those which it had made upon mortgages, had been made with a view of alleviating the embarrassments of the commercial and the agricultural interests, and not with any view of beating down the rate of interest. The Bank had acted with the utmost prudence and consideration in the whole of the late tremendous convulsions, and he thought that the house would agree with him, that the public had never been brought into any difficulties by its proceedings, or when it had got into difficulty by other means, had never been unassisted by the Bank with the means of getting out of it. He had been connected with the Bank for the last 40 years—a period as eventful as any that had ever been known in the annals of the world, and he would now solemnly say, with all that experience before him, that he never saw the Directors influenced by unworthy motives. In all questions that came before them, they considered the interest of the country as that which was paramount to all others, being well aware, that when that interest was secured, their own profits would follow as a matter of course.

Mr. Canning:—Though he had not expected any difference of opinion would have been excited by the speech of his rt. hon. friend, still, as some strange misconception had arisen upon several of the topics contained in it, he was anxious to state to the house the manner in which he had himself understood them. The hon. gent. (Mr. J. Smith) seemed to apprehend that his rt. hon. friend had a plan for erecting joint stock banking companies throughout the country, which would swallow up all the existing establishments. Now the plan of his rt. hon. friend went no farther than to take off, with the consent of the Bank, a few years sooner than it would necessarily expire, a prohibition of which the effect, by the concurrent opinion of all who had yet spoken upon the subject, was to make weakness, instead of strength, an inherent quality in the system of country banking. Let the house consider the state of things, as it stood at present. On the one hand the privilege of the Bank of England, which prevented the spreading of a wider basis for the transactions of country banks, would continue to exist till 1833, and on the other there was by law in the country banks, an unlimited power to issue small notes up to precisely the same period. His rt. hon. friend had two objects in view in the measure he proposed. The first was to accelerate the period at which the prohibition was to be removed, which, as he had before said, entailed weakness upon the country banks; and the second was, by limiting the issues of

those banks, to make the new power given to them operate with less suddenness upon the existing establishments. Whether the consequence of withdrawing the privilege of the Bank of England would be that new banks would be created all over the country, or that the established ones would widen their foundations by coalescing with new partners, he could not pretend to decide positively at present. The hon. gent. assumed that the latter consequence would take place, but, as it appeared to him, without sufficient reason. He could see no reason why, when the power of widening the basis of country banks was given, it should not operate to add a seventh, or an eighth, or even a tenth partner to the existing establishments, rather than to create new establishments all over the country, to rival and extinguish the old ones. As to the charge of his rt. hon. friend's pressing his measure unawares upon the country, he must say that nothing had fallen from him which indicated any such intention; and if his rt. hon. friend did not dwell much at large upon the details of his measure, it was that it had been so often before Parliament, or at least so long before the public, that it was only necessary to refer to it to bring it to the minds of all. But in point of fact, the evil (if it were one) which the hon. gent. complained of, was one that the Bank could create at present on any day in the week; for it could create branch banks in all parts of the country; and if there were a necessity for a more solid system of banking, the alteration was either that the Bank of England should establish branch banks throughout the country, or that power should be given to other parties to establish banks for themselves. Now, if the establishment of either were likely to be ruinous to the existing establishments, which he denied, that ruin was equally inevitable, whichever side of the alternative were taken, whether the Bank of England should establish such branch establishments, or whether advantage were taken of the Bank of England withdrawing its privilege for the purpose of allowing others to establish banks, taking in and absorbing the old banks, or coming into collision with them, if so it turned out, which he for one considered very unlikely. The country was in this situation, that one of these measures it must embrace—either it must permit the Bank of England to exercise its privilege of establishing branch banks all over the country—which would be equally fatal, if the competition of confidence and capital can be fatal, to the old establishments with the creation of new banking corporations,—or it must adopt the plan of his rt. hon. friend for taking advantage of the Bank of England's surrender of its privilege to establish new banks, on a wider basis, not so formidable as rivals as the Bank of England, nor possessing the same quality of repulsion to existing establishments;—or thirdly, the country must remain in its present situation, with its present insecure and insufficient system of banking. Between these three alternatives, if he might be permitted to use such a solecism, the house and the country had now to choose. As to the last of them, he believed that there would be no difference of opinion; the house seemed inclined to agree that that was not the measure to which it would resort. As to the other two, it was clear that the latter—he meant that of incorporating more than six partners into each establishment—would, even on the principles avowed by the hon. gent. himself, be the more

effectual for the purpose which it was intended to answer, would be established with the least shock, and would be well calculated to save the interest of existing establishments. It was impossible to discuss this subject without adding to the praises which had been bestowed on the Bank of England for its conduct in the administration of its affairs, that nothing became it more than the grace with which it had consented to strip itself of this part of its privileges. It was idle to say that the privilege was odious—it was idle to say that it was a monopoly: it might be both odious and a monopoly; still it was an inherent privilege of the establishment. By law they had it, and not even the omnipotence of Parliament could deprive them of it. It was an unfair view of human nature to treat such a sacrifice with levity. Such a rare occurrence as the voluntary abandonment of a possession, which if it were not a grace or ornament, was still valuable as a source of profit, deserved the highest panegyric. The Bank of England might have kept it in order to make a bargain with the public for some other consideration. The Bank of England might have kept it in order to prevent the rivalry of the country banks, which they might apprehend in those parts of England of which they had hitherto had the exclusive possession. They might have kept it without assigning any cause for so doing, except their own will; but they had yielded it up to the public for reasons which did them immortal honour. If they had yielded it unwillingly, their conduct was the more laudable; if willingly, still credit was due to them, because they had studied the public interest first, and had seen that their own individual profit was ultimately involved in it. They had consented, for reasons with which the house had nothing to do, to a measure to which they had formerly refused their consent, unblameably he had no doubt. They had now done that which they had long been solicited to do; and having done so, his right hon. friend meant to draw from it an advantage—not unkindly, not ungenerously, not in a spirit of triumph over the Bank. An hon. gent. who had spoken early in the debate (Mr. Robertson) had made, among a variety of remarks, one which he could not allow to remain unnoticed. He thought that ministers were extremely culpable for not discouraging the wild spirit of speculation which had contributed so much to the present crisis, and that they were wanting in their duty, because, when the various schemes of last year were discussed, they did not attend in their places to give a detailed opposition to every one of them. It appeared to him to be a convenient and seemingly rule that those whose duty it was to attend to the public business of the country, should abstain from taking an active part in the consideration of any measure which merely affected individual interests. He would say for himself that he had always endeavoured to act by that rule—that he had never given a vote on any private business since he had become a minister—and he believed that the same rule was followed by all his colleagues in administration. It appeared to him, that such was the safe and seemingly rule of conduct, because, if he could renounce it to his sense of duty to break through it in one instance, he might be induced to break through it in more; and a practice might thus grow up from which many suspicions might arise, unjust and unfounded as they would be at present, but still

impossible to be entirely avoided. But he would ask, had there been no warning given to the country on the part of ministers? Had there been no opportunity, during the fever which existed last year in the public mind, in which Government had declared that they would not advance a farthing to the aid of any difficulties which might ensue from excessive speculation? He might here, as to a matter of history, allude to what had occurred on a former occasion in another place. One of his Majesty's ministers (Lord Liverpool) speaking as the organ of the Treasury department, and in his capacity as a member of the Government, had taken an opportunity early in March last, not five weeks after the commencement of the session, and before a single bill had passed, to hold out to all who were engaged in those speculations, that they were running wildly into them—that it was the essence of a free government not to interpose any legislative let or hindrance to the current of individual enterprise and industry—that those who entered wildly into extravagant speculations, did so upon their own risk and responsibility—and that it was the fixed resolution of Government to extend no pecuniary assistance to the difficulties which were likely to arise out of them. As far as the voice of Government could be heard, it was heard through the country clearly and intelligibly, and the more clearly and intelligibly, because the declaration did not grow out of any measure in which the Government took a part, but was fastened accidentally on a measure with which it had nothing to do, and was not therefore made to be treasured up for such a crisis as had now occurred, but to prevent its occurrence. Unfortunately, that warning had been disregarded; the difficulties which had been anticipated had arisen; and it was a little too hard for the Government to be taunted now for a want of caution on that very topic on which it had spoken so explicitly. Ministers were aware that the present topic was one to which the minds of men were now intensely directed, and to which the consideration of Parliament must naturally be called on its assembling. There was no want of attention to that topic in the Speech from the Throne. If the house should measure it even by its proportion to the whole Speech they would find that it occupied the greater part of it, and that it threw every other topic into the shade—first, by its coming in the outset of the Speech, and then by its winding up the conclusion of it. He trusted that it would be thought that he had now gone far enough in his observations upon this subject; because, if he went further, he must be carried into a wide field of observation, into which he had neither the inclination nor the power to enter at that moment.—An hon. gent. (Mr. Hume,) who had addressed them on the third bench, had left untouched no topic which had been agitated either during the last war or the present peace. But as the hon. member would have an opportunity, which he had no doubt he would gladly embrace, of bringing all the subjects which he had that night mentioned, regularly under their notice in the course of the session, he hoped that the hon. member would not think him uncourteous if he passed them by at present without remark. The hon. member had told them that the Speech of last year was contrary to the truth, and that the Speech of this year was inconsistent with facts. What nice metaphysical distinction there might be between

"contrary to the truth," and "inconsistent with facts," he for one could not see. Perhaps the hon. member, as Lord Rector of a learned Scotch university, was gifted with acuter perception, and could enlighten the house upon this distinction without a difference (a laugh). There were, however, some propositions in the speech of the hon. member himself upon which he should venture to retort the hon. member's own expressions. The hon. member said that there had been no reduction of taxation since the war. This assertion he would venture to say was "contrary to the truth," as all the world, with the exception of the hon. gent., knew that there had been a reduction of taxes to the amount of 27,000,000*l.* The hon. member then proceeded to say, that although no reduction of taxation had taken place during the ten years since the war, the reductions during the last five years had been fewer than before; in other words, connecting his first statement with his second, the reductions had been fewer than none—an assertion which was "inconsistent with fact" (loud laughter). He took these assertions as fair specimens of the other topics mentioned in the hon. member's speech—topics, which he supposed were only mentioned as preludes to future debates, on which, when they should arise, he would endeavour to set the hon. member as right with regard to his argument, as he had now set him right with regard to his facts (hear, hear).—He had been asked by a learned gent. whether the treaty between this country and Brazil had been ratified? He agreed with the learned gent. as to the character of the stipulation to which reference had been particularly made. Nothing could be more objectionable, or more impossible for his Majesty's Government to adopt (hear, hear). There were likewise other stipulations in that treaty to which he should be equally unwilling to give his assent. The fact was, that the treaty had been negotiated without any instructions, and even contrary to the views which the English Government entertained upon those subjects. Yet though it had been negotiated without instructions, if it had been unexceptionable, it would have been ratified by this Government; but objectionable as it now was, he had no hesitation in saying that it never had been and never would be ratified (hear, hear). He had only another observation to make before he concluded, which was, that under the pressure now existing in the country, he did not think it advisable that the state of the corn laws should be brought under consideration during the present session (hear, hear).

Mr. Calcraft contended that the misery under which the commercial world was now labouring had not been entirely occasioned by excessive speculation and over-trading. The Government and the Bank, by contriving to beat down the rate of interest, had done far more mischief than the country banks, against which they had heard so much that night. With respect to country banks, it was mere matter of option whether a man took their notes or not. If he took them and did not like them, he might carry them back and compel the issuers to pay him in specie. What objection was there to this part of the system? Of the whole number of country banks, not one-tenth had stopped; and of those which had thus been compelled to suspend payment, many had paid, or would be enabled to pay, in full, all demands upon them. He would be the last man to allude unneces-

sarily to distresses which all must deplore; but when so much had been said respecting the failures of the banks, he might be permitted to remind the house that there had been other failures with which the country banks had no connexion, and which had involved more persons, and been the occasion of infinitely greater distress, than all the country banks put together. The system which the Bank of England had adopted, of lending money on mortgages, and on the security of stock, was the beginning of the distress. This indiscriminate lending was now all over, it was true; but still that was the beginning and the cause of the distress. When they found that owing to the state of the money market people could get money at so moderate a rate of interest, that the Bank could not make that profit by their notes to which they thought they were entitled, then it was that they placed themselves in competition with the other bankers who were lending money at a smaller discount. He did not wish to detract from the respect which was fairly due to the Bank of England, but he felt it his duty to animadvert thus freely upon what he took to be a principal cause of the existing distress; and he thought it not less incumbent upon him to do so, from the pain which he was sure the turn the debate had taken must inflict upon many very honourable and respectable persons who were concerned in country banks.

Mr. P. Grenfell felt it due to the Bank of England to say, that when the evil which had been alluded to was at its height, the Directors had come forward in the most liberal manner, and, to use the expression of the *rt. hon. gent.*, threw themselves into the breach, to avert, as far as they could, the threatened danger. Yet he could not but say that they had in some measure occasioned that danger, by the facility they had offered to speculation, by the great issues of their paper.

Mr. Baring said, that the Chancellor of the Exchequer, in omitting to state at what time he intended to carry the measure he had proposed into effect, had prevented the house from judging of its expediency. It would make a great difference whether it was intended to take effect within two years or six months from the present time; and as it must necessarily make a great impression on persons out of the house, whose interests it would affect, he thought it very advisable that the *rt. hon. gent.* should explain himself more fully on that head. He had no hesitation in attributing the present distress to the extent to which the circulation of paper money had been pushed, and for which the country banks, and, he was sorry to say, the Bank of England, were answerable. The Bank had been the authors of that dangerous redundancy of money which had given rise to the wild speculations abounding in every part of the country. The country banks had added to this redundancy in a much more mischievous manner. The Bank of England exercised some discretion in the quantity of paper-money which it put out; but the very business of a country bank was to put out all the paper it could, and this every gentleman acquainted with country banks well knew was their constant practice. On market-days they employed persons to go about, and not only to put out as much paper of their own as they could, but to withdraw from circulation all the paper of the Bank of England, and to substitute their own for it. By these means the country was saturated with paper-

money, which had been the parent of the existing distress. And all this had been done without the least reference to the effect which it must naturally have upon the rate of exchange, which, as persons best acquainted with the nature of such things well knew, should be the regulation for the issues of paper-money. It would ill become him to reflect with severity upon persons who had made adventurous speculations in commerce, because, if they were sins, he should perhaps have as much to answer for as any body; but little as he was disposed to look too strictly at such hazardous undertakings, he must say, that neither in this or in any other country, had enterprises so rash and ridiculous entered the minds of men, as many of those which had been produced in London during the last year. It seemed as if all Bedlam had broken loose on the Royal Exchange; the same frantic spirit overran the country, and extended itself, like an epidemic disease. He did not mean to say that this was not far beyond any such cause as the redundancy of money he had alluded to; but it was, nevertheless, true, that this fictitious surplus was the fuel by which the fire was fed. The greatest exertions were made by every body to get rid of their capital. The bankers in London, their agents in the country, and the customers of both, were actuated by the same universal desire to put out their money in whatever way they could. Then all on a sudden the very reverse of this system took place. In a moment, confidence was at an end, and every man said to his neighbour "pay me what thou owest." Men of undoubted wealth and real capital were seen walking about the streets of London, not knowing whether they should be able to meet their engagements for the next day. It was impossible that any thing could be more liberal or sensible than the conduct which the Bank of England displayed at this juncture; but the causes lay too deep to be removed by any thing that the Bank could do: their assistance might, and did in a great measure, relieve the distress; but they could not cure it. The over-issue by the country banks was the main cause by which the distress had been so widely spread; and as every body in the country was deeply concerned in the subject, he thought that the more this cause was investigated and explained, the more it would be likely to be remedied. If this crisis were allowed to pass without speaking the truth, it would be only laying the foundation for future evils. This feeling it was that induced him to say what he had said respecting the Bank of England, and while he bore testimony to the promptitude with which they did all in their power to alleviate the distress, he did not hesitate to censure them for the share which their conduct had had in producing it. With respect to the remedy which was to be now applied, there must be in the first place great caution in the manner of its application. If ministers should announce that they meant to contract the powers of country bankers, every man who had capital invested in those banks would draw it out, because he would not know how long he should be permitted to keep it on the same terms as at present. This made it also necessary that some further explanation should be given respecting the proposed measure. He did not mean to press for that explanation now, but he hoped that it would be afforded at some early opportunity. He had always considered the one-pound country bank

notes as a great nuisance, and the cause of frequent distress, which they were now as likely as ever to produce. He thought that before the rt. hon. gent. proceeded with the measure he contemplated, he must be furnished with the exact amount to which the issues of these 11. notes had arrived; and he would suggest that a bill should be passed, calling upon bankers to make returns of the amount of all their notes issued within the last three years. The reduction of these notes, necessary as it was, could not begin until the present state of excitement had passed over. It would rather be wise in the Parliament to afford to the country bankers every facility, as far as was prudent, in conducting their affairs. As a skilful surgeon, who was desirous of replacing a dislocated limb, would not apply his apparatus, however necessary that operation might be, until the fever had passed, so in the present state of things, however desirable it might be that the system of issuing one-pound notes by the country bankers should be restrained, this was not the time in which the operation could be safely performed. The amount of those issues might be taken, more or less correctly, at 18 millions: these, it would be remembered, must be replaced by gold. It would not do to go to the Bank of England for notes to replace this sum; but gold, and nothing but gold, could be substituted for it. He had heard frequent allusions made to the charter of the Bank of England, and to the terms on which it should be renewed when the time had arrived for its renewal. He was of opinion that it was for the real benefit of the country that the dignity of the Bank should at all events be kept up, investing it at the same time with only such power as might be thought safe, because unless this was done, it would be impossible, in the event of a war, to go on; and to make this assistance available the means of the Bank must be considerably enlarged. Praise had been claimed by Government for disavowing the intention of renewing the Bank Suspension Act. They could never either hasten or avoid that event—they might throw a cloak over it when it was about to fall, but they could do no more. Whoever might be the Chancellor of the Exchequer when that event should happen, must come down to the house with a long face, and, as the late Mr. Pitt did, say he was very sorry that the Bank had gone, but that the Government and the currency of the country could not stand still. He hoped that we should long continue to live in peace; but he was not the less convinced that it would be impossible to get through two campaigns in a time of war, without this being the result, unless the Bank system should be built upon a much broader basis. Upon this subject he wished to draw the attention of the house to the marked difference between the individuals with whom that institution had to deal at the time of its commencement, and those who at present stood in the same relation to it. At the period he alluded to, the Bank stood like a sovereign surrounded by little dependencies: now some of the persons who had dealings with it possessed capitals themselves to an amount which then had never been heard of as being possessed by one man. Another alteration which he believed must of necessity be adopted, was to make the circulating medium here, as in other countries, silver as well as gold. Without this, the Bank even might be put in danger. There was a great quantity of silver

sent to England from the Spanish colonies. This must now be sent over to France or Holland for the purpose of buying gold, which was then only an article of merchandise, subject to the same accidents as all other merchandise, sometimes to be obtained, and sometimes not, and which it was always in the power of speculators—nay, of one man—he need hardly name him (Mr. Rothschild)—to prevent from coming to this country at all, if it should suit their purpose to do so. Unless this measure should be adopted, he was convinced the currency of the country must be always in an insecure state, and the probability was, that great inconvenience and loss would at some time or other be the result. With regard to the proposed extinction of the present system of country banking, he could not but agree, that it was desirable, although he was not prepared to say that the country would experience any great relief from the new establishments which had been proposed to supply their place. Country gentlemen would not, after what they had seen and suffered, be such fools as to risk their fortune, and their families' fortune, in the new concerns: they had seen enough to grow wise upon the subject of sleeping partners in a country bank. He had himself seen instances in every department of trade, of the total ruin attending those speculations where a man embarks his capital without personal superintendence—without, in fact, having his eyes constantly upon what was going forward. In fact, a man as a sleeping partner, should, as some people are represented, sleep with his eyes open (a laugh). If they wanted to form banks in the great commercial towns, such as Manchester, Bristol, and York, which would be perfectly in possession of public confidence, it should be done either by the means of branch banks from the Bank of England—a plan which, however, from its interfering with the present provincial interests embarked in that business, might not prove very palatable to the country—or they should by an act of incorporation, allow a number of gentlemen to embark certain portions of their capital, say 10,000*l.*, in a joint banking company. That sum from ten men would be 100,000*l.*; an amount, in his opinion, quite adequate to support the respectability of the ordinary run of such concerns. There were very few men of capital who would not, he apprehended, be induced by the ordinary gains of such establishments to become one of a company of such a kind as he described, but no prudent man would or ought, after what had taken place in the last few months, risk his whole property in becoming a sleeping or acting partner in the ordinary mode. He was not prepared to say that a rule of that kind, exempting the property of the individuals composing a company, from all liability beyond their subscribed capital, would be equally proper for the ordinary purposes of trade; but for banks, it was his opinion, that under all the circumstances, it would be found both to confer an adequate respectability, and insure a sufficient confidence.—One word as to the silk trade: the *rt. hon. gent.* to-night had declared, that it was the firm determination of ministers to adhere to the principles which had regulated their conduct with regard to that trade; that declaration had been received with considerable cheering, and he was not one of those who at the present moment felt any disposition to find fault with its candour and firmness, because he thought, that if such were the deter-

mination of Government, the sooner it was known the better. But he was of opinion when that measure was first proposed, and he had seen nothing since to alter it, that we never could compete with the French in that branch of manufacture. Whether he should feel it necessary to oppose the continuance of the principle which had been adopted, he did not feel it necessary now to say, because, as those concerned in the silk trade, and most likely to suffer by these regulations, were very soon to bring the question before the house upon petition, there would be ample opportunity for discussion hereafter, although he must express a hope, that whatever question might arise upon it, would be, for the sake of all parties, early decided.—In alluding to that part of the speech which related to foreign affairs, he could not avoid expressing his admiration of the way in which the business of that department had been conducted. However slow the *rt. hon. Sec.* (Canning) might have been supposed in obeying the unanimous feeling of the country, with regard to the South American states, that very slowness had been an additional security to the country, and a means of arriving at the surest possible conclusion. In our present state, when the *rt. hon. gent.* (Mr. Huskisson) had been defeated in his views of reciprocal treaties with France and the continent, nothing could be more important to England, than the cultivation of connexions with the states of the New World; and nothing, he was convinced, could be more conducive to that end, or more likely to give these relations permanence, than the firm, honourable, and candid declarations of the *rt. hon. gent.* (Mr. Canning). What he wished particularly to call to the attention of the house was, the treaty mentioned in the Speech, as concluded between Brazil and Portugal, under the mediation of this country; that treaty he took to be objectionable, in so far as it was concluded between two contracting parties, separate at present, but likely at some period to become one; for although there was an Emperor in Brazil and a King in Portugal, still there was no provision against the son succeeding his father upon the throne of Portugal. It appeared to him, therefore, that we had mixed ourselves up with an uncertain contingency, with a something which might, after all, be rendered nugatory by this very succession (hear, hear).

*Mr. Huskisson:*—Although he had listened to the observations of the *hon. member* (Mr. Baring) with all the attention so justly due to his knowledge and experience, yet, as so many opportunities would occur for a better examination of the various topics touched upon in the course of his address, he would not go further than to reiterate the determination expressed by his *rt. hon. friend*, of not going into any details until the house was more fully in possession of the nature of the measures which it had been resolved at the present crisis to adopt. His *rt. hon. friend* would bring his propositions under their consideration at the earliest possible moment. The house would recollect that the plan adopted by the Bank Directors, at the suggestion of ministers, must be first submitted to the approbation of the proprietors, whose trustees the Directors were, and without whose sanction no measures could be resolved upon, strictly speaking, between Government and the Bank, so as to be submitted with proper authority to parliament. It was impossible, therefore, to

lay any proposals before the house until the Directors had obtained that favourable decision from the proprietors, which was anticipated by them and the Government. His *rt. hon. friend* had, however, stated very clearly that methods would be adopted, which he trusted would have the effect of preventing a recurrence of those disasters which had recently convulsed the commercial world, or, at all events, of obviating, in a great measure, the consequences of any similar panic. He fully agreed with his *hon. friend* (Mr. Baring) as to the necessity of caution in the prosecution of any plan which would interfere with long established interests, or which might have the effect of shaking the credit of those by whom a great portion of the present provincial currency was supplied. His *hon. friend* had very properly said, that it would be extremely improvident to withdraw so large a portion of the circulating medium at the present moment, particularly when it had been tried and purified by the recent ordeal; he agreed with the *hon. gent.* on that point, as on others, and the more so, that the quantity of that medium was much short of what had been represented. The *hon. gent.* said something about eighteen millions; now he knew that in the years 1821 and 1822, it did not amount to more than seven or eight millions, and after recent circumstances, when all prudent bankers, even of the greatest respectability, had thought fit to limit their circulation, he took it that it did not amount to much more than two-thirds of that amount, but even with that amount it was his *rt. hon. friend's* intention to deal with caution and care; indeed he proposed to allow those notes to wear themselves out, guarding, however, against the possibility of any fresh issues (*hear, hear*); a plan by which they would gradually disappear from circulation, without any sudden limitation of the current medium of the provincial towns. As to the period in which the change of the constitution of the banks was to take place, by permission of the Bank of England, he apprehended no difficulty from its happening in a very short time. He could see no well-founded alarm as to the interference with country banking interests in the project of allowing the establishments which had held good against the late pressure to add an additional number of partners to the existing firms; but, in order to guard against all possible ill consequences, it was proposed, in order to allow gentlemen to wind up their concerns, to receive and pay their debts, or, as it might happen in some cases, to make preparations for retiring altogether, to postpone the operation of the law for six months. He could not conclude without expressing, in common with others, his strong feeling upon the subject of the liberal conduct of the Bank of England, which, while it had, by its generous advances, and, he might say, its unsparing sacrifices, saved many banking establishments from imminent danger, had, at the same time, he would not shrink from asserting, perhaps saved itself (*hear, hear*).—One word on the subject of the silk company. Some time last year, a few persons, who thought that the cultivation of the mulberry-tree and the propagation of the silkworm might be successfully attempted in Ireland and the colonies, applied to a noble marquis, to the noble lord at the head of the Treasury, and to himself, for their approbation of the plan. He (Mr. Huskisson), thinking that they might make the attempt, and that, although it might be advantageous in Ire-

Jan. 1826.

land, which some gentlemen seemed most anxious about, yet that, in the colonies especially, if introduced in the place of that description of labour which was performed by the slaves, it would be a means of improving the condition of that unhappy race, as well as of forwarding the progress of their emancipation, recommended the granting them a charter, and advised them not to commit themselves by attempting too much at first. Upon the same principle, he afterwards accepted the office of honorary president. Now it happened by some mistake, he supposed of the secretary, that his noble friend (Lord Liverpool) and himself were both written to upon the subject of the number of shares they would like to have at their disposal (*a laugh*); and, as he had since learned, they both returned nearly the same answer—that they never anticipated any other connexion with the company, than the advice and assistance which they had already afforded it, from an idea of the benefit likely to accrue by a trial of the experiment; but that as to a participation in any proposed profits, they positively declined them. This was the whole history of the case, and while he begged pardon for troubling the house, he thought it necessary to say thus much to remove all misapprehension.

Sir *M. W. Ridley* approved of the principle of letting the notes wear out, but thought that a bill ought to be passed immediately to prevent the bankers from taking out and keeping a large quantity of stamps on hand, and thereby prolonging the time of their circulation. He was of opinion that much of the late mischief had arisen from the Bank not withdrawing the sums from circulation which had been vested in their one and two pound notes. When the country passed to a metallic currency, they advanced the sums which had been in circulation in small notes by way of mortgage, and thus added to the evil.

Mr. *Hudson Gurney* could not let the debate close without remarking, that the *rt. hon. gent.* and all those who had followed him, utterly blinked the main question, which was entirely a question of prices. He (Mr. Gurney) had always disliked the country bankers' circulation, and more particularly their one pound notes. He had always been convinced, that it was their bidding against each other in credits, which had reduced the banking business to the minimum of profits on the operations performed; and if the *rt. hon. gent.* could place the circulation of the country on a better footing, there was no class which would be so greatly benefited as the bankers themselves. But how the proposed changes could be carried into effect, and sovereigns at 3*l.* 17*s.* 10*d.* an ounce could be substituted for the present paper issues, was to him totally incomprehensible. The very endeavour to do it (for it never had been effected) occasioned all the pressure of 1821-2; and, under the existing mass of public and private engagements, if that substitution could be accomplished, it would occasion a greater and more general ruin than had ever been witnessed in this, or perhaps any other country.

Mr. *Denman* said, the Bank of England stood precisely in the same situation with regard to the country as any other bank. How far the Bank might limit its issues, or what remedies might be safely applied to avoid a recurrence of late evils, was matter of future deliberation; but he could not consistently with his duty to the country and his constituents, avoid protest-

15

ing against the total omission of the subject of the Corn Laws in the Speech, or refrain from expressing his surprise, that while ministers so stoutly upheld the principles of free trade on every question, they should determine to continue the restrictions upon that. The distress in the manufacturing district with which he was connected, was very great; greater, he believed, than ministers were aware of. A man in full employment, a skilful man, could not, in many trades, earn more than 6s., 7s., or 8s. a week, and this was all he had for the maintenance of himself and family. And this was the time, and under these circumstances, that the produce of his labour was to be exposed to the competition of other people; and yet the Corn Laws were not to be repealed. The distress was not merely a fall from greater to less opulence—it was not a question of more or less, as the petitions on the table would hereafter shew; it was the distress of people who were absolutely perishing for want of bread, which they were unable to earn. The people too, the house must remember, who were in this condition, were acquiring more and correct knowledge; they were persons of good information, who could argue soundly, and whose statements of their sufferings were both eloquent and heart-rending. This question was one regarding their own salvation; and they would find themselves compelled by their dearest interests to examine the matter: they would discover the incongruity and cruelty of those measures which set the produce of their labour open to competition—which sent the produce of their taxed looms into the market in competition with the produce of people who were not so oppressed with taxation, while the trade in all the necessities of life was not set free. He, for one, was not willing to go back from the principles of free trade, which he had supported in that house; but the house ought to follow up these principles, and not make the most important of all commodities an exception to the rule. He was aware that ministers were surrounded with difficulties in the shape of friends, which would not allow them to act, in all cases, on the same salutary principles.—It seemed to him, that so much had been said of the Bank failures causing distress, as a sort of decoy, to lead the people from examining its true cause. He could hardly think, from the quantity of country bank notes in circulation, that they had been the cause of the distress. The one and two-pound notes, so long as there was no compulsion to take them, could not differ very much in value from the metallic currency. There might be some doubts, whether no compulsion had been used—whether no manœuvring had been employed, to keep the people in ignorance that the notes might be changed for gold; but as long as there was no compulsion, no manœuvring, he could not see why bank notes were not as valuable as gold. Neither did he see what difference the amount of the notes made—whether it was a ten pound or a one pound note, it was the same thing, though it might be more agreeable to have one ten pound note than ten one pound. If either paper or gold might be had at option, and the people preferred paper, he could see no valid reason for interfering with the banking system; though, if that interference went to protect, from loss, those who, by their situation, were least able to bear it, he might think it would be useful. There was one thing in the Speech which struck him almost with dismay. This

period of distress was particularly distinguished from every other period of distress, by there having been no great national calamity; there was no war, no injurious regulations, and therefore it was to be inferred that the Government had no share in producing the distress, and that it must be attributed to some other cause. Nothing could be more alarming in his mind, or more unfounded. Whether the fault were in any recent measure of Government, or in any measure of thirty years since—and he believed the fault was in measures taken thirty years ago;—still the fault was in the measures of Government; it resulted from some acts of man, and was not, as had been insinuated, a visitation of Providence. The fault was in some cursed acts of parliament; and it was by abolishing them, or some better enactments, that the fault was to be remedied. Much of it was to be attributed to that detestable measure, the Bank Restriction Act, and if it did not wholly cause, it augmented the evil. He highly approved of the measure in 1819, for doing away that act; but he could not go along with those who had abolished it in adding the three millions of taxes they had at the same time imposed on the people. He sighed over every guinea that had been thrown away—corruptly thrown away—in those seasons of fallacious prosperity, that were like the dreams of the man in the fable, and had no other existence but as they were shadowed out by paper representations. He could not help wishing that every guinea had been kept back from the Duke of Cumberland; he regretted that the grant had been made to the Judges, who did not need it; and he regretted particularly the 2,000,000*l.* which had been given to build new churches, when the people were wanting bread. It was the exorbitant taxes which pressed down this country, and every remedy for their distress was sheer quackery, which had not for its object to diminish the public expenditure, and lessen taxation. He hoped, therefore, that his hon. friend (Mr. Hume) would steadily persevere in those motions which he had brought forward year after year for reducing the public expenditure. The house must not content itself with brushing away some trifles of corruption; it must take a wider range, and be more unsparing of its reforms, in order to prevent greater mischief. While the poor suffered from a tax on corn—while the whole population of some populous districts were all paupers—the Government must take care, or that property, which was so much cherished, would be found not very secure. The Corn Laws were enacted for the benefit of the richer classes, by taxing the poor; and he hoped that the subject would not be allowed to rest, either by those who suffered from them, or by the Government.

Mr. Alderman Wood rose to say a few words in behalf of a large number of his constituents, who were suffering under great distress—he meant the silk-weavers. Government had been liberal in its subscription to these people, but the subscription did not amount to the produce of one week's labour. They had to manufacture an article, two-thirds of the value of which consisted in the labour bestowed on it, and they were to compete with the workmen of other countries, who were labouring under a less burden of taxation, and where corn was not above half its price here. He did not wish to see the old restrictions revived, but he wished to see the restrictions removed from the Corn trade,

and he knew that these people would not be afraid of any competition if the Corn Laws were repealed.

The motion for an Address was then agreed to, and some members appointed to prepare it.

FRIDAY, FEB. 3.—On the question for bringing up the report on the address,

Mr. W. Whitmore said that he regretted that the question of the corn-laws was not to be brought forward by ministers in the present session. He had much confidence in the sincerity and good intentions of Government; but, looking at that question as that which must form the ground-work of every thing like a system of free trade, he could not help fearing that some unfortunate influence was operating to postpone and avoid its discussion. So satisfied was he, that, without a proper settlement of the corn question, all attempts to establish a scheme of free trade must be ineffectual—that as ministers had professed they did not mean to bring it forward, he certainly should feel it his duty to bring it on himself. He was glad to hear the hon. gents. opposite declare, that the present distresses (which he trusted would be merely transitory) would make no difference in the views which they had acted upon during the last session. The stoppage in the silk trade, he believed, arose in a great degree from the apprehension of masters as to the effects of the new measures, which would be entirely removed when those measures came into operation.—For the change which was proposed to be made in the system of our currency, the course proposed by ministers, as far as it was developed, had his approbation.

Sir Charles Forbes reminded the house that with regard to the affairs of India, the observations of his hon. friend (Mr. Hume) on the preceding evening, were still unanswered. The state in which we were now placed in India was extremely critical, and he thought that there could be but one opinion upon the Burmese war—to wit, that it should be ended as speedily as possible. The war had now lasted two years; it had assumed the character of a war of extermination; and was no nearer to a conclusion, as far as he saw, than when it began. We might perhaps force our way, by the blood and valour of our soldiers, to the Burmese capital; but when we got there, we should find ourselves as far from a termination of the contest as ever. The Speech of last session speaking of the contest with the Burmese, had told the house that none of the other native powers were inimically disposed towards us; the Speech that was delivered from the throne this session did not venture to tell us so much now. He thought the administration of affairs in India injudicious and inefficient. The war was one which we had erred in undertaking, and in the prosecution of which we gained neither credit nor advantage.

Mr. Curzon said that the manufacturers of England were grossly mistaken, if they attributed any part of their distress to the operation of the corn laws. The present moment was not at all adapted to an impartial consideration of that question.

Mr. W. Wynn proceeded to defend both the principle and the conduct of the Burmese war. Was there any one who could deny, not merely that actual aggression had been committed by the Burmese, but that an evident disposition to aggression had for a long time been manifested? For the conduct of our troops, and the success

of our arms in India, who was there that could impeach either? If an enemy constantly flying before us, did not bear some testimony to the strength and valour of our troops, he did not know what hon. gents. would desire. For any unfriendly disposition among the native powers of India towards us, he denied its existence. It was true that our army, or a portion of it, in India, had suffered severely from sickness. This did not arise, however, from any peculiar unhealthiness in the climate in the country in which it had been engaged. By the last accounts, however, he was happy to say that the sickness, from whatever cause it had proceeded, was diminishing; and by the next, he hoped it would be lessened in a still more considerable degree. He had not the slightest doubt that the valour of our soldiers, and the ability of their directors, would still bring the contest with the Burmese to an honourable and fortunate conclusion. He should hear of such a termination, and a speedy one, with as much pleasure as any man; because, situated as we were in India, every war we had to engage in must be a subject of regret. But though this was his opinion as to the policy of avoiding war as long as it could safely be avoided, it was impossible for us to overlook repeated insults, or to shrink from entering into a contest, where it was obstinately and intentionally presented to us.

Mr. C. H. Hutchinson complained that the Speech contained no reference to the affairs of Ireland. They were given to understand by the Speech, and the explanations of ministers, that the exertions of his Majesty were unceasing to preserve peace throughout the world. He applauded that disposition: it was wise, it was humane. But then it would have gladdened him to hear of the unsparing exertions of the King and Government to do for Ireland that which was so anxiously attempted on behalf of all other nations. He had hoped, as an Irish member, to have heard of some attempts to secure peace and concord for his country. But he discovered no pledge in the Speech that any specific exertions would be so applied. It was true, that some indications of a favourable change were perceivable. That industry which was so justly vaunted in the Speech, was on the increase in Ireland; and he believed that there was a general tranquillity there at present, as well as increasing industry. But how were the people of Ireland to be secured in the enjoyment of their present tranquillity, unless they saw a ruling spirit in the cabinet ready at all times to exert itself for their relief? And how could they feel this, while on almost every page of the statute-book they could read the causes of their insecurity and degradation, while nothing was attempted to remove their oppressions? We were at present on good terms with France. We had no jealousy of her growing greatness, though she was moving forward in a splendid career. She was increasing in resources, her trade was prosperous, and her revenues abundant. We might not remain on terms so pacific as at present, and her resources might be powerfully turned against us, as they had been by her former master, Napoleon. Should that period ever arrive, this country ought to be in a situation which would render all her power available. But that could not be with respect to Ireland, unless means were applied to include her in the general system of amity and co-operation, which was the distinguishing character of the counsels of Government at

present adopted. Approving of much of the Speech, he thought it necessary to say thus much on behalf of Ireland, as there seemed to be little or nothing wanting to complete the arrangements of ministers, and to entitle them to the ready support and the cordial praise of all parties, but the extension of their own principles to the interests of that country (hear, hear).

Mr. Lockhart did not feel so much apprehension as had been expressed by many hon. members, at the late agitations in the commercial affairs of the country, because he considered occasional paroxysms of that nature as concomitant, and nearly inseparable from the enlarged and growing trade and resources of this great nation. He could not agree in attributing any of the distress which had prevailed to the Bank of England, though he was not prepared to oppose the measures which were likely to be proposed for opening the banking business. He considered it, however, very questionable whether the mere allowance by law to form banking establishments of more than the statutable number of partners, would be sufficient. As to improving the business of banking by enlarging the number in the firm, let it be observed, that though the existing law limited it to six persons, it was seldom found that a country banking establishment contained so many as the law allowed. He believed that the average would not exceed three to a firm in all the existing establishments. But suppose it otherwise, and that an alteration of the law should enable bankers to enlarge the numbers of their firms indefinitely, were they sure that persons of good property and respectable character would come in, and by placing their disposable funds in a banking stock, subject themselves to all the hazards of trade, and the probable visitation of the bankrupt laws? It was clear to him that they would not—at least they would not in any considerable proportion. But what if they would? Would that produce the security so much desired? What was there in a bare increase of numbers to assure the owners of deposits against insolvency? On the contrary, were not the mere chances of insolvency increased by the addition of every new partner to the concern, which must be answerable in its whole amount of property for every imprudent member who might happen to join the firm? The law contained a maxim—*testes ponderentur non numerentur*, which was equally applicable to bankers. It was not their wealth, nor their probity which could give the proper security. Had he to choose a person with whom to confide the management of his pecuniary affairs, he would not be guided merely by the integrity and property of the individual, but also by his firmness, by his acquaintance with the world, and by his accurate knowledge of mankind. Ask practical men about the causes of the late distress and agitation—question them as to the general nature of the cases of those banks which had failed—he would venture to say, that they would agree that the greater part of those cases were attributable, not to deficient property, or want of moral character in the parties, but to their want of firmness and skill, and of general knowledge of the world. The securities which were likely to be proposed would bring no relief to those cases. Lands could not be easily made available to the purposes of such securities. So exceedingly complex and difficult had the sys-

tem of conveyancing become—most unnecessarily so, he admitted,—so numerous and perplexing were the decisions in equity upon the subject, that it was next to impossible to make lands available to the security of debts, though contracted for the most just and proper purposes. Another objection to an increase of the number of partners as a ground of security was, that according to established experience it was likely to have a contrary effect, and to gather into a firm a number of specious and designing men, who would be mistaken for an opulent and respectable body, until their schemes of speculation should prove by their failure how utterly undeserving they had been of public credit. He approved of much that had been advanced on this subject by his hon. friend (Mr. Baring) who had pointed out to the house the defect of such supposed securities, and had directed the attention of the house to the practice in France. There, it appeared, that private individuals might invest limited sums of money in banks, without rendering themselves or their property liable for the debts of the firm, beyond the amount of those sums. In this practice the public had what had proved to have been a full and sufficient security, without extending in any alarming degree the responsibility of the firm to each obscure or unknown individual. This was a scheme which would be particularly inviting to gentlemen of property in this country, many of whom would have no objection to embark portions of their property thus far, though they would feel the utmost repugnance to subject themselves and all their family affairs to the researches of a commission of bankruptcy.—He approved of the resolution of ministers to persevere in establishing the principles of free trade, and had no other objections to urge to the measures about to be proposed but those which he had now expressed.

Sir T. Lethbridge thought that the Speech was highly satisfactory. The subject of the present difficulties was treated in a manly way: the remedies proposed promised to prevent them in future, by removing the tendency to a redundancy of money, and were entitled to their confidence.—He could by no means concur with his hon. friend (Mr. Whitmore), in condemning administration for their resolution not to agitate the subject of the corn laws in the present session. He thought that resolution entitled to the greatest praise. The question of the corn laws was the most difficult, intricate, important question which could be agitated in that house. It was clearly improper to bring it forward at a time when the attention of parliament was likely to be taken up with an important alteration in the currency. The question of the currency most naturally went first, and must be set at rest before they could undertake that of the corn laws. He believed that the public coincided in the views of ministers, and that there was no anxiety prevailing out of doors to have the subject agitated at all; much less was there any earnest desire to see the corn laws altered. He believed that a great change had taken place in the public sentiment upon the subject, and that they took a very different view of it now from that which had guided them heretofore. He was fortified in this opinion by recent and frequent intercourse with the silk-throwsters of the county which he had the honour to represent. He was rejoiced to discover from his communications with them, that the manufac-

lurers, though pressed of late with severe distress, took a completely different and more chaotic view of the subject of the corn laws. They now clearly apprehended the difficulty of treating that question, and he believed that they were by no means dissatisfied with the prices of agricultural produce. It would be his duty in a few days to urge their earnest application to the house, and especially to the President of the Board of Trade, that they would not persevere in enforcing the principles of free trade, to the imminent destruction and certain injury of that numerous class of manufacturers. For his own part, he had but faint hopes of succeeding, after what had fallen last evening from the Chancellor of the Exchequer, as to the resolution of Government to follow up those principles in the fullest practicable latitude. He, for one, confessed he doubted the propriety and wisdom of that resolution, though he admitted that the doctrine was upheld by persons of great rank and exalted abilities on both sides of the house. If the constitution were in its infancy—if other nations surrounding us were about to begin their career along with us, and those principles were admitted and adopted generally—if matters could be so arranged that the nations could all begin *de novo*, and start upon equal terms—then there could be no doubt as to the propriety of a free trade. But we were an ancient nation—our monarchy was one of the oldest in the world—our commercial system was closely connected with the frame-work of the civil government and constitution. He dreaded any formidable attempts at alteration, for fear that in touching the frame-work of society they might destroy the fences of the constitution. British manufactures would be subjected to great danger by a competition with the fabrics of France. He had been assured by a gentleman whose veracity he could not question, that at Lyons he was offered silks at 17 per cent. lower than the British price. He believed that the opinions of the people on the continent had already undergone considerable alteration. He believed that if the *rt. hon. gent.* (Mr. Huskisson) would state to the house what he had seen in the course of his late trip on the continent, he would furnish to the house the picture of a strange turn of mind which he must have observed in the breasts of the people there.—He highly approved of the resolution of ministers with respect to the currency. What was wanted was a security against fluctuations of price: it was not high prices which they ought to dread, so much as fluctuation. He did not mean to argue in favour of high prices: but they wanted steady prices, neither so high as to distress the manufacturers, nor so ruinously low as those of 1821 and 1822.—With regard to the idea of recalling the one and two pound notes, it appeared to him that such a step would be most inconvenient. If they were taken away, what did they mean to substitute in their stead? Their place, it might be said, would be supplied by gold and silver. This, however, would expose the people to as much, if not more, risk than they ran with the notes; for the state of the exchange might so alter, that in a very short time every coin would be conveyed abroad; and how were the people then to carry on their transactions? Of course it would be proper to give every possible security to the holders of small notes; but he was satisfied that it would be injurious to the community if they were altogether withdrawn from circulation.—He

would conclude by repeating, that the manner in which ministers had faced the difficulties of the present crisis did them great credit.

Mr. Hume was surprised at the course of argument pursued by the *hon. bart.* who had just sat down. The *hon. bart.* had contended that the corn laws should be considered as part of the currency question. By what process of reasoning that position could be made out, he was at a loss to guess. As well might he call the East India Company's monopoly of tea a part of the currency question. There was no connexion whatever between the subjects. The *hon. bart.* had stated that the sentiments of the great body of the manufacturers, were altered on the subject of the corn laws, and that they now regarded them in a favourable point of view. He (Mr. Hume) would not deny, since the *hon. bart.* had stated the fact, that there were some manufacturers in Somersetshire who would rather pay 1s. for the quarter loaf than 6d.; but this he would take upon him to say, without risk of contradiction, that the sentiments of these men were not in unison with those of the great body of manufacturers throughout the kingdom. And in the name of that large body—in the name of every class and description of persons in the country, the land-owners excepted—he begged to protest against such a misrepresentation of their opinions. The general feeling of the country was opposed to all kinds of monopolies—to the East India monopoly and the Bank monopoly, as well as to that of the landed interest—because it was now pretty well and generally understood that the payment of all those monopolies came out of the pockets of the people. He had opportunities of knowing the sentiments of the manufacturers as well, perhaps, as the *hon. bart.*; and he could take it on him to say, that they were not afraid of an extension of the principles of free trade, provided no reserve was made, and that those principles were applied to corn as well as to all other things. The silk trade, in particular, he could state, did not fear a competition with the manufacturers of France, if the corn trade were thrown open, except, perhaps, in a few fancy articles. But in the general run of plain goods they were willing, under the circumstances he had mentioned, to compete with their neighbours. He, therefore, for one, had no wish that ministers should recede from the principles that they had already avowed, with, however, a relaxation for a short time—a year or two—in favour of the fancy articles, until a better season might arrive. He believed that ministers were well inclined to carry their principles of free trade to every article—to corn as well as all others; but that they feared the influence which might be opposed to them on the corn trade, and from what had occurred in another place with respect to the Canada Corn bill, there was no doubt that influence was considerable. But, notwithstanding the existence of that influence, let ministers, if they thought right, as he believed they did on the subject, propose the measure, and do it with all their influence: it would, he little doubted, be carried in that house; and then, if it failed in another place, let the country see where the blame lay.—He now came to the observations of the *rt. hon. gent.* (Mr. Wynn), and contended that they had not answered his questions. He regretted extremely that the question involving the interest of millions of people should be considered an episode scarcely worth answering.

This indifference on so important a subject was the more to be lamented, as there was not a free press in India. That had been put down by the most arbitrary, and, as he would contend, illegal proceedings. It was no defence to say that the Governor had a power of acting according to what he judged best for the interests of the country. He had undoubtedly a great discretionary power, but he was not to use it in a manner inconsistent with the laws of England; and he was prepared to contend that the laws of England did not sanction such proceedings as those to which he had alluded. With respect to the Burmese war, the *rt. hon. gent.* had said, that he (*Mr. Hume*) was bound to prove the assertion that it had been wantonly commenced. The present was, he knew, not the proper time for entering into a discussion on that point; but he would at the proper time be prepared to contend, that there was not in all the papers which had been or could be produced on that subject, any one document which could show that the Burmese nation had shown a disposition to commence the war. It was true that a man, a subject of ours, had been murdered in their territory; but they admitted the fact, and said that as far as they could they would punish the murderer. "The man," said they, "by whom it was committed, is a bandit; if you can take him, we will hang him for you with the greatest pleasure" (a laugh). They could not do more, for they had not the means of reaching that individual; and he had no doubt, that had the Company had an efficient man at the head of their affairs, the war might have been avoided, and a great waste of the blood and treasure of the country prevented. But the inefficiency of the Governor-General was not denied even by the Court of Directors. It was publicly stated that he did not possess the confidence of that body, and yet he was maintained at the head of the Indian Government. The feeling on this subject was general. He could quote many documents which would put that fact beyond doubt, but he would refrain from it at the present moment. He could not, however, refrain from reading one extract from a letter which an hon. friend of his in that house had received from a highly respectable and intelligent military officer in Calcutta; and here let him observe, that the sentiments contained in this letter were the same as those of every letter which he had seen on this subject. They all concurred in representing Lord Amherst as an excellent man in his private character—how far that would be borne out by his attachment to private interests, and his abuse of patronage, would remain to be seen;—but as a public man, as a Governor-General, the general opinion was that he was altogether inefficient. The letter to which he alluded contained these words:—"There was never a more inefficient Governor. He is imbecile in the extreme." The *rt. hon. gent.* incurred a most serious responsibility on this subject, unless he could show that there was even one man in England who concurred with him in the fitness of the noble Governor for his present situation.

*Mr. Fremantle*, in allusion to the reports said to have reached England, on the state of our affairs on the Burmese frontier, could assure the house that every one of the public letters which had recently been received, held out the most confident hopes of a prosperous termination of hostilities. The *hon. gent.* (*Mr. Hume*) had said that the Court of Directors had no

confidence in the government of Lord Amherst. This statement, he must take leave to say, was altogether without foundation, and was disproved by the fact, that the Directors, if they wanted such confidence in their Governor-General, had, if they chose to exercise it, the power of recalling him; which, it was unnecessary to state, they had not done. As to the authority of letters from India, on which the *hon. member* seemed to place so much reliance, he would observe, that he also had seen many letters from that country, from persons equally intelligent and respectable as those to whom the *hon. member* had alluded, and they gave a very different account of the state of feeling in India from that which the *hon. gent.* had described. But he begged to ask, would it be satisfactory to the house or the country, or to any reasonable man, to have the character of a high public officer tried by extracts of reports in private letters? If there were any ground for accusing him in any part of his public conduct, let it be stated, and there would be no indisposition on the part of the house to inquire into it; but let not any man be tried on the reports of private letters.

*Sir C. Forbes*:—With respect to the melancholy affair at Barrackpore, it should be stated, in justice to Lord Amherst, that he was not in any degree implicated in that occurrence. He therefore hoped that, in justice to the noble lord, all papers relating to that transaction would be laid before the house.

*Mr. W. Wynn* could not see on what ground it should ever have been asserted that Lord Amherst was implicated in the affair of Barrackpore. He was in possession of a variety of documents on this subject, which would remove any such opinion, if it had ever been seriously entertained; but he did not think it necessary to lay these papers before the house, because he thought their production would not be attended with benefit to our interests in India. Equally unfounded were most of the reports of which they daily heard, as extracts from private letters from India. It seemed to him, that most of the writers of those letters filled them with idle gossip, as if they wished to ascertain how far the credulity of some of their friends in England would go.

*Mr. Hume* defended the authenticity of the information contained in the letters to which he had referred, and observed that many of them came from parties as respectable as any from whom the *rt. hon. gent.* received his accounts from India. As to the affair at Barrackpore, the conduct of Government was blameable, in neglecting to give any answer to the applications made to them on the part of the troops which had refused to march. He understood that a communication was made on their part full ten days before the melancholy affair in which the transaction ended, and that it was suffered to lie in the office without any answer being given to it. He understood that the then Adjutant-General was now in London, and the truth of the circumstance to which he alluded might be easily ascertained. Another ground on which he objected to the conduct of the Indian Government on that occasion, arose from the manner in which it had behaved towards the native officers of the refractory troops. It was admitted on all hands that they had remained faithful to their engagement to the Company, and refused to join their mutinous troops; yet, after this, and because they had not foreseen or

prevented what had happened, every one of them were dismissed the service, as no longer worthy of the confidence of the Company. Was this a just or reasonable course towards men who had acted with such fidelity, or was it any encouragement to officers who might be placed in similar situations? Again he asked, what was the conduct of Government towards the unfortunate men, 200 or 160, he could not exactly state the number, who had been convicted of mutiny? They were (many of them men of high caste) condemned to work in irons on the public roads. It was true this was a commutation of the punishment of death at first passed against them; but he believed there was not one of them who would not prefer being shot to dragging out an existence in that degraded situation. Was the conduct of the Indian Government approved here at home on this point? On the contrary, was it not a fact, that the moment the circumstance became known here, the Court of Directors, and the Board of Control, concurred in sending out orders for the immediate and unconditional discharge of the unfortunate men? Could that be said to be an approval of the Government? All he wished was correct information on this subject. If he should find, on examining the documents for which he asked, that he was in error on any of the points to which he referred, he should be most happy to retract what he had said.

Mr. *Fremantle* observed, that the hon. member was greatly misled, if he believed that no communication was made to the refractory troops for ten days before it was found necessary to resort to force. The very reverse was the fact: for from the time when they first objected to march, up to the period when the fatal termination of the affair occurred, communications were, he might say, hourly made to them from Government, and no pacific effort was left untried. An officer was made on the part of the general officer in command, to refer the case to a Court of Inquiry, and the troops were told to send those of their body in whom they could most confide, to attend that court, and to explain fully the nature of their complaints; and that, if found reasonable, they should be immediately redressed. This, however, though repeatedly pressed up to the last moment, was not attended to, and they refused to listen to any terms of accommodation.—He would now mention, as a farther illustration of the little reliance which could be placed on the reports so frequently circulated in private letters, that one account was communicated and published here, that such was the extent of disease among our troops on the Burmese frontier, that the 13th King's regiment could not muster one man fit for duty; whereas, from the returns from that regiment, they had at that very time 300 men doing daily duty.

The address was then agreed to.

#### IRELAND.

##### *General Improvements.*

LORDS, THURSDAY, FEB. 9.—The Marquis of *Lansdowne* inquired how far the suggestions for the improvement of Ireland, thrown out in the report of the committee of the house, laid before Parliament at the end of the last session, and referred to in a paragraph of his Majesty's speech, had been acted upon. A great many suggestions of importance had been thrown out on the subject of education and other matters

connected with the state of Ireland; and he supposed that Government had acted upon those suggestions as far as was found practicable.

The Earl of *Liverpool* professed himself ready to give every information in his power on the subject to which he had been referred. In doing this, he would take the report of the committee for the basis of his explanation, and would go over the points suggested one by one. The first suggestion related to an alteration of the law of landlord and tenant. The subject had been referred to the law-officers of the Crown, and a bill, he believed, was drawn up. What he had to say on the next point was not quite so satisfactory. The subject of grand jury presentment had been, and still was, under the anxious consideration of Government; but he could not say that it was in such a state that any measure upon it could soon be submitted to the consideration of Parliament. The next point was the criminal and civil business of the quarter sessions; on which it had been recommended and agreed to, that the assistant barristers should not act as counsellors. The next points were the constitution of civil and criminal courts, the process of *custodiam*, the summary regulations of sheriffs and substitute sheriffs. Upon these a report would hereafter be made. On the subject of the administration of justice by magistrates in corporate towns, a bill was prepared. The next subject related to fictitious forty-shilling freeholders; but on this he was not prepared to say that any measure was in progress for the consideration of Parliament. Among other points suggested were the extension of public works, additional measures for lunatics, and regulations of manor courts; with regard to which latter, nothing particular had been done. But the two most important suggestions related to tithes and education. Upon the first of these topics, he could assert that the measure which had been adopted by Parliament had been most successful; so successful as to exceed the expectations of himself, the original proposer. Returns on the operation of the act had been received from all the dioceses of Ireland, with the exception of two. From these returns, it appeared that the act had been carried into execution, with success, in at least one-fourth of the parishes in Ireland. But these returns did not afford evidence of all the advantages which were derived from the measure. The agreements which were made in other parishes, in consequence of the act, and which rendered its operations unnecessary, were to be reckoned among its most beneficial effects. The operation of the act had been found most beneficial in the south and west of Ireland; and in the important county of Cork, the business of the assistant barristers had been reduced one half in consequence of the absence of tithe causes. With regard to education, that was a subject on which he entertained fully as much anxiety as the noble lord (*Lansdowne*). It was wished to act on the system that had been suggested, but many difficulties had been experienced. In Ireland, prejudices were very strong with regard to education, both among Catholics and Protestants. The commissioners, therefore, were requested to try an experiment in some place where it was not likely any resistance would be made to their plan; and this they readily undertook. If the experiment were once fairly tried, he had no doubt that it would succeed.

Lord Ellenborough had heard, with great regret, what the noble lord had said about grand jury presentments. He was exceedingly sorry that no measure was in preparation on that subject. There certainly were not too few, but too many roads in Ireland. These roads were so many jobs, and were managed in such a way that the grand juries had not the means of doing justice. He was convinced that most of the money raised for making roads in Ireland was thrown away, as far as regarded the interest of the public. Part of a road was made one year, and part another; but the benefit which the public was to derive from it was postponed till the whole was completed, after a period, perhaps, of twenty years; and till that period he considered the money completely thrown away. In a part where a gentleman resided, the roads were kept in very good order; but it often happened that where the country was populous, they were in very bad condition.—With regard to the corporations, he believed the administration of justice in them was sometimes corrupt; and he thought that inquiry ought to be made into the mode of admitting persons to their freedom.—He did not know how far the attention of Government had been directed to the question of relief to the poor. His opinion was very decided against doing any thing in that way.—With regard to the question of education, it was his firm conviction, that until the Catholics gained their rights, they would never agree to any system which had been suggested. Every one who knew any thing of Ireland must be sensible that the public mind was at present greatly exasperated in consequence of the rejection of the measure of last session; and that therefore any suggestions on the subject were not likely to be listened to.

The Earl of Liverpool said, that whatever evils there might be to complain of with regard to the administration of justice in corporate towns, they could not be with propriety corrected by any general laws, because the rights of corporations were secured by charter. In the matter of relief for the poor, he was extremely anxious to see something done on that subject, if it were practicable. At the same time he was not prepared to say that any thing was practicable. He did not see his way so far as to be able to say that he could submit any proposition on this subject to Parliament in the present session.

Lord Ellenborough said, that he should not be satisfied with any alteration on the subject of grand jury presentments on the subject of roads, unless it were provided that no road should be undertaken except upon the report of a sworn surveyor; and that report not confined to a part of the road, but to extend to the whole. He also thought that no road should be undertaken without the sanction of Government.

The Earl of Darnley concurred with the noble lord who had stated that no agreement on the subject of education could be expected in Ireland, so long as the Catholics were deprived of their rights. The discontent produced by that denial of justice prevented every plan of reform from succeeding. Let the anxiety of the noble earl (Liverpool) to benefit that country, be as strong as he asserted it to be, still, so long as the principles he avowed last session were acted upon, it was impossible there could be any thing like tranquillity in Ireland. On the

subject of education, an opportunity had occurred before the rejection of the Catholic bill to do much. There was an appearance of increasing cordiality in all parties; and a disposition on the part both of Catholics and Protestants to give way to each other; but the extinguisher which was put on the question of emancipation had put an end to all hope of conciliation, and consequently of tranquillity. With regard to what had been said on the subject of a provision for the poor, he did not think that a system of poor laws ought to be established in Ireland.

COMMONS, THURSDAY, FEBRUARY 16.—During the discussion on Sir J. Newport's resolutions respecting the Irish Church rates (*post*, 43.)

Sir H. Parnell, adverting to the reformation which had been made under the present Irish Government with respect to the Irish magistracy, thought it might be carried farther. He had in a former session thrown out a suggestion, which, if adopted, would, he thought, have a good effect in Ireland. He meant, that of appointing Lords-lieutenants of counties, in the same manner as they were appointed in England. This suggestion had met the approval of the late Lord Londonderry; but he regretted that nothing had been since done with respect to it. The evidence before the committee of last year went to prove that great abuses existed in the appointment of corporation magistrates, and he hoped that some regulations would be made on this subject. He understood, that some alteration was intended with respect to the office of under-sheriff, by the appointment of an officer in each county, to whom was to be entrusted the service of writs. This he thought unnecessary, and he hoped the house would pause before they adopted any measure interfering with the office of sheriff. He was glad to hear that some amendment was intended in the laws respecting landlord and tenant, and he hoped that the amendment would extend to remove the evil of sub-letting, and also to the system of levying distress, and of ejectment, in which great abuses existed. He wished to know, whether it was intended to extend to Ireland the provisions of the bill passed last session for the regulation of juries. That was an excellent measure, and he did not see why Ireland should not have the benefit of it. He wished also to know, whether the bankrupt laws, as they existed in this country, were to be made applicable to Ireland? The trade of the two countries was now placed on the same footing, and he thought the same system of bankrupt laws might be made applicable to both. There were also some acts of George II. on the subject of banking, the repeal of which would be considered of service to Ireland.

Mr. Phunkett:—With respect to the bankrupt laws, he had consulted with the courts in Ireland, with the Lord Chancellor, and the Master of the Rolls there, and the result was, a conviction that it would be inexpedient to apply the bankrupt laws, as they now existed in this country, to Ireland. A bill, however, had been prepared for extending to that country some of the most salutary provisions of the new law. As to the bill for regulating juries in this country, it would be sufficient to say, that the basis of that bill consisted of returns of jurors made by overseers of the poor and churchwardens. Now, in Ire-

land they had no overseers of the poor, and he hoped they would long continue without them (hear, hear); and as to the returns made by churchwardens, he thought that the hon. bart. himself would not like to see returns of jurors made by men holding an office from which Roman Catholics were excluded. There were other parts of the details of the bill which he also thought would be inapplicable to Ireland at present. It would, therefore, be better to watch the operation of the bill here, and then see what part of it could be made applicable to Ireland. On the subject of reforms in the magistracy, he was not prepared to say that any new measure was in the contemplation of the Irish Government. Complaints had been made on the subject, which on inquiry proved to be unfounded. There was one complaint that a learned lord had neglected to attend to a very serious charge against a magistrate, alleged to have been guilty of most oppressive and illegal conduct. The facts of the case were, that an inquiry had been instituted into the conduct of the magistrate, and that the whole charge against him was without foundation (hear, hear). He was preparing a bill relating to the law of landlord and tenant in Ireland, which would, he conceived, remedy several abuses, especially that of double distress.

Mr. *Abercrombie* did not mean to say that the new bankrupt act might not contain some useful provisions, but he believed it had been most useful to members of the profession, who had most profited by it. It had also been useful, for a similar reason, to the commissioners of bankrupts; but he considered it much more calculated to cause useless expense than to promote the interests of those who might have the misfortune to come under its operation; indeed, he was somewhat surprised that no notice had as yet been given of bringing in a bill to remedy the defects which it had been found to contain; and he hoped the learned gent. (Mr. Plunkett) would not think of extending it to Ireland till he had well considered the nature of its operation. He did not consider the objection which had been raised by the learned gent. to introducing the jury-bill into Ireland—viz. that there were no overseers of the poor in that country—at all tenable, for there was no necessity that this measure should be carried into effect in Ireland in the same way in which it was carried into effect in England: there could be no objection to conferring on Ireland what was good in that measure, though it might have to flow through a different channel.

Mr. *Peel* saw no objection to extending the jury-bill to Ireland. It was not necessary that it should, in every particular, agree with the bill for England. But the experience of an assizes might suggest improvements in the bill, so that a little delay might be not inexpedient. In his opinion it would be extremely beneficial to Ireland, if some officers were appointed there to correspond with our lord-lieutenants. It might not indeed be quite so easy to meet with these officers in Ireland as in England, on account of the latter being the seat of the legislature, and the consequent absence from Ireland of those who were best fitted for such situations; but still he trusted that by degrees this object might be effected. He should propose that the bill for the consolidation of the laws relating to debt should also be extended to Ireland.

SESS. 1826.

### *Peace-preservation Act.*

LORDS, THURSDAY, MARCH 9.—The Earl of *Kingston* moved for the production of the information against Patrick Hogan and William Murphy, who had been taken into custody by the Mayor of the police on a charge of having been implicated in the murder of the family of the Franks. His object in making this motion was to show their lordships how much better the peace of the country might be preserved by the local magistracy than by the constabulary force appointed under the Peace-preservation act; and thereby to prove that that bill ought to be withdrawn. The Lord Lieutenant of Ireland had the power of increasing that constabulary, and in consequence of the two bodies conflicting with each other in the discharge of their duty, the inhabitants were the sufferers. For two years they had had a land-tax of 10*l.* a year to pay, in a district where there had not been the slightest disturbance. An order came down from Government, directing the chief constable not to allow any of his men to attend at fairs for the preservation of the peace, unless accompanied by one or more magistrates. This order had been productive of great disturbance. A great riot having occurred at the fair of Cabir between two associations, denominating themselves "Three year olds," and "Four year olds," whereby a considerable loss was sustained, in consequence of the fair being spoiled, although there was a police station quite near, yet the constables refused to interfere to prevent the riot, but allowed the combatants to fight it out, and the consequence was, that one or two individuals were killed—a circumstance which never would have occurred, had the preservation of the peace been confined to the local magistracy. His lordship then stated the fact of his having sent to the police in the month of January to make inquiries respecting the character of a certain public-house in his neighbourhood, when he was informed that they could give him no information on the subject, as they were desired not to interfere with public-houses; the magistrates must, therefore, visit them themselves. So that a constable was not to go where he would be exposed to the risk of having his head broken, but a magistrate might.

The Earl of *Liverpool* said, it was impossible for him to be able to go into an explanation as to all the particulars stated by the noble lord, whom he reminded that a committee had been sitting during the last session to inquire into this as well as other subjects connected with Ireland. If the noble lord had any complaint to make with respect to the police, and had addressed it to the Lord Lieutenant, or the rt. hon. Secretary for Ireland, he was sure it would have been attended to. As regarded the noble lord's present motion, he (Lord *Liverpool*) could not understand his motives in bringing it forward. If these parties were aggrieved, they might obtain redress by appealing to a court of law. Unless the grievance complained of were on a subject which could not be brought before the courts of law, it was not one with which Parliament would interfere. In his opinion, the noble lord had laid no ground for supporting his motion.

The Earl of *Limrick* rose to explain some of the facts to which the noble lord had alluded,

F

and which afforded a curious illustration of the state of Ireland. The associations denominated the "three year olds" and "four year olds" were not formed for seditious purposes, but to prove their superiority in fighting; and a member of one party bound himself, wherever he met a member of the other party, to attack and beat him. However, no serious harm resulted. With respect to the police, in consequence of each party being obliged to remain in their own district, they (not being very numerous) were sometimes overpowered. When the Government, however, found that the system which they first adopted did not answer, the police were ordered to go wherever there was a riot, and they were sometimes assisted by parties of the military.

The Earl of Kingston said, that if whenever any of his tenants suffered an injury he were to appeal on his behalf to a court of law, his property would soon be insufficient for that purpose; for injuries of this kind were so numerous that he would be at law every day in the year. His reason for moving for these informations was because he believed there never were any. Nevertheless, the parties had been taken up without the slightest grounds of accusation, and kept in a military gaol for five months. He had offered bail for them; but it was refused, as they were stated to be murderers.

The Earl of Liverpool observed, that the facts were simply these:—An atrocious murder was committed, and certain persons were taken up on suspicion of having been concerned in it. If they had been improperly taken up, they had their remedy by applying to a court of law. He did not ask the noble lord to prosecute every case of alleged grievance, but if this were so gross a one as he seemed to consider it, he might make it the foundation of legal proceedings.—The motion was put, and negatived without a division.

### *Expences of Prosecutions.*

COMMONS, THURSDAY, MARCH 23.—In the Committee of Supply.

Mr. Hume said, that 35,935l. the sum proposed for criminal prosecutions, was enormous. He wished to know the way in which those prosecutions were conducted in Ireland, and the description of trials in which it was necessary to put the country to such expense. He also wished to know what portion of the sum which the house was called on to grant went to the Irish Attorney-General. The fees of that officer he understood were enormous.

Mr. Goulburn:—In Ireland, the Crown paid the expenses of all criminal prosecutions, the circumstances of which were distinguished by any peculiar features of depravity. Another expense which it was requisite to meet was that of securing the attendance of witnesses whose evidence might be essential to the ends of justice. It was necessary that those persons should be protected against the violence of those who might conspire against them through revenge. With regard to the fees attached to the office of Attorney-General, 1000l. a-year was given by the Lord Lieutenant to that officer for examining the calendar at each assizes, in order to ascertain what cases it might be advisable to prosecute. The entire emoluments of the Irish Attorney-General did

not exceed, yearly, the sum of 4000l., and he felt satisfied, when the house considered the vast importance, the heavy responsibility, and the great labours of that appointment—held, as it at present was, by a person of such high endowments (hear)—that the income which he named was not disproportioned.

Mr. Alderman Wood put a question respecting the number of counsel employed in criminal prosecutions.

Mr. Goulburn replied, that in no case, excepting, perhaps, in some important trials in Dublin, had the number of King's counsel amounted to five.

### *Inspectors' Salaries.*

FRIDAY, MAY 5.—On the motion for the third reading of the Prison Laws' bill,

Mr. Spring Rice objected to the clause granting an increase of salary to the two inspectors-general of prisons, and he moved as an amendment that 600l. per annum be substituted in the bill for 900l.

Mr. Hume deprecated any increase of salaries to those officers; he could not see the utility of their appointment, and he thought it a waste of the public money to vote sums away in this useless manner. He wished to know from the rt. hon. Secretary (Goulburn) whether he could not find persons who would undertake to perform the duties of those offices on the former salaries?

Mr. Goulburn said, that in Ireland the situations of Inspectors-General of prisons were required, from the peculiar state of the country. The office should be filled by gentlemen of some consequence, and he would not consent to the amendment.

Mr. Hume wished to ask the rt. hon. gent. whether it was intended to appoint new officers to those situations? If not, he could not see why the house should be called upon to grant them an increased allowance without a single attempt being made to show the propriety of such a measure. He thought this was a most unjustifiable job.

Mr. Goulburn said, that the real salary of the office of Inspector-General of Prisons was only 800l. per annum. The difference proposed to be given was in lieu of stationary and travelling expenses.

On a division, the numbers were—For the amendment, 13—For the original motion, 33—Majority, 20.

Mr. Hume objecting to the original vote,

Mr. Peel said, that it was desirable to have one uniform system of prison discipline in Ireland. It was therefore that those officers were appointed; and knowing something of the state of Ireland from his former connexion with that country, he thought that their control over the several prisons there was attended with benefit.

Mr. C. Grant said that it was essential either to abolish the situation altogether, or make it respectable. The present officers had objected to the smallness of their salary.

The bill was read a third time, and passed.

### *Lord Norbury.*

FRIDAY, MAY 5.—Mr. Scarlett rose to present a petition from an eminent barrister of the

Irish bar. Before he adverted to its prayer, he would observe, that the petition was committed to his care in the last session, and he had hoped that between that time and the present, the learned lord to whom it referred would have been induced, by the advice of his friends, to take that step which would have prevented the necessity of the present petition. Of the facts stated in the petition he had no personal knowledge; but he took them on the credit of the highly respectable individual by whom the petition was signed. It was, however, a great satisfaction, in introducing the subject to the house, that the matter of the petition did not and was not intended to convey the slightest imputation upon the honour and integrity of the learned lord whom it concerned. The petition was from Mr. Daniel O'Connell, a member of the Irish bar; and it called the attention of the house to the facts, that Lord Norbury, the present Chief Justice of the Common Pleas in Ireland, was in a very advanced state of age—now 85. That from physical infirmities incidental to that period of life, he had become utterly unfit to discharge efficiently the high and important duties of his judicial situation; and was so deaf, that he heard with great difficulty, unless he was addressed in a tone unusually loud. It was also stated, that he was frequently affected with a lethargic stupor, which caused him to fall asleep while in the performance of some of his most important judicial duties. One instance was mentioned in which this occurred on a very important trial, in the course of which the learned lord fell asleep, and one of the barristers employed felt it necessary to request the jury to take notes of what was passing, that they might be able to inform his lordship when he awoke. On another occasion his lordship fell asleep on the trial of a prisoner for murder, who having been convicted, was afterwards pardoned on account of this irregularity. The petitioner added, that should he be called upon to offer proofs in support of his allegations, he would confidently appeal to the other judges of Ireland, as well as to the whole Irish bar; and if any one practising barrister were found who would declare on his honour that he considered the learned lord competent to the discharge of his official duties, he (the petitioner) would give up the question (hear, hear). The petitioner added, that public motives alone had induced him to bring this subject forward—that his private feeling and personal interest were opposed to it; but that still he felt himself bound, though alone, to lay the facts before the house. The learned gent. (Mr. Scarlett) added, that it was not his intention to found any motion on the petition. If such a course should be found necessary, he thought the task would be better undertaken by some member belonging to Ireland. On the general principle involved in the petition, he would state his opinion, that infirmity, caused by old age, producing incapacity, would be a fair ground for the removal of a Judge from his office. The complaint of the petitioner was not that the learned Judge had been originally unfit for his office, but that time, that great innovator, had disqualified him from any further adaptation to business.

On the question that the petition be brought up. Mr. Goulburn said, that as the learned gent. had declared that he did not intend to found any motion on the petition, it would not

be necessary for him to enter into any detailed explanation; but the case was of such a nature as rendered it imperative on him to say a few words, for the purpose of calling the attention of the house to the situation in which this petition placed the learned lord and his friends. The petition was signed by only one individual, and adverted chiefly to the learned lord's age as the cause of his incapacity. He (Mr. Goulburn) would not say, that age might not incapacitate a man from the discharge of important duties—but Lord Norbury was not older than other judges who had discharged the duties of their office with ability and advantage to the public. He had had frequent intercourse with that learned lord, and in the course of it he had not found in him any unfitness for the duties of his situation. There was one case of recent occurrence in the Court of Common Pleas, in which the learned lord presided, where he differed on a point of law from his three colleagues on the bench. From that decision an appeal was made, and it was decided by the twelve judges that the learned lord was right. Taking this fact into his consideration, he would contend, that whatever authority might attach to the statement of the petitioner, there was not in it enough to satisfy the house of the incompetency of the learned judge. It might, perhaps, be right for Parliament to interfere and make a general regulation by which the services of the Judges, after a certain age, would be dispensed with, in order to guard against the chance of inefficiency on that ground, but until that was done, he thought it would be invidious to remove a judge solely on account of his age.

Mr. North said, that without adverting to any of the other circumstances stated in the petition, he would concur in that which stated the learned lord's age to be 85—an age at which he believed no other judge in this country or Ireland had continued on the bench. As the question was now introduced, he would, with every respect for the learned lord, say that he would have consulted his own ease, his dignity, the wishes of his friends, and the administration of justice, if he had retired from the bench long since (hear, hear). But whenever he retired from the bench, he would leave behind him an impression of kindness, which would be remembered long after his infirmities were forgotten (hear, hear). He had felt it his duty to state this, though he would not for worlds have introduced the subject.

Mr. Peel said he was confident that the learned lord, whom he was proud to call his friend, would have retired from the bench before now, but for the intimation that a petition of this nature was intended. The high sense of honour, for which he was ever distinguished, made him unwilling to resign while there was an appearance of his having acted under the influence of a menace. He was pleased at the temperate tone in which this subject had been introduced to the house. He was satisfied that there was no intention of casting any imputation on the learned lord. He would convey to him an account of the manner in which the subject had been noticed, and intimate that it would be competent to him to retire from office without the slightest imputation on his integrity.—The petition was ordered to lie on the table.

*Catholic Claims.*

LORDS, THURSDAY, MARCH 9.—The Earl of Dornley presented a petition from the inhabitants of Drogheda in favour of the Roman Catholic claims. He had witholden the petition for some time, because the attention of Parliament had been so much directed to the commercial distresses and the condition of negro slaves. He thought, however, that the condition of the slaves was not so bad as that of the lowest peasantry in Ireland; and he could not help observing, that the very persons who called upon Parliament to precipitate the question for the emancipation of slaves, were the same who advised Parliament to deny the application of a similar benefit to Ireland, by which measure alone that country could be kept for any length of time in tranquillity. The petitioners prayed their lordships to restore them to their just rights; but their prayers had been refused under false pretences. He could not forget the argument of the noble lord (Liverpool). His speech, he thought, was the most acrimonious, excepting that of a rt. rev. prelate (the Bishop of Chester). The noble lord stated that he would not treat the question as a theological one; but all his arguments went to confute what he regarded as a mischievous absurdity in the Catholic faith—namely, the exposure to a divided allegiance. However, notwithstanding this notion of divided allegiance, the command of fleets and armies was intrusted to Catholics, though they were not allowed to sit in Parliament. But the Catholics disclaimed this doctrine of divided allegiance, and declared that to his Majesty alone they owed allegiance. The noble earl requested the particular attention of their lordships to this passage in the petition:—"That your petitioners beg leave to impress on the consideration of your right hon. house, that the charge of a divided allegiance is utterly devoid of foundation: and that a credence of such a calumny amounts to a charge of perjury on your petitioners, when, in their oath of allegiance to their sovereign, they have sworn in the most solemn and distinct manner, 'that no foreign prince, prelate, state, or potentate, hath, or ought to have, any temporal or civil jurisdiction, power, superiority, or pre-eminence, within these realms.' The faithful observance of oaths by your petitioners, notwithstanding all the tempting inducements for their violation, should screen them from such a calumny; but it is the misfortune of your petitioners to find their claims successfully opposed on grounds equally untenable."

The Earl of Liverpool:—With regard to what he had formerly said on the question to which the petition related, he should never shrink from giving his opinion when the subject was brought regularly forward; but he did not conceive that he was called upon so to do on the present occasion. With respect to what was stated in the petition on the subject of divided allegiance, he must disclaim ever having made such an accusation as amounted to a charge of perjury. The Catholics declared, that in taking the oath of allegiance to his Majesty, they disclaimed any divided allegiance, and he was convinced that in swearing allegiance they swore what they conscientiously believed to be true. But they also acknowledged a spiritual

allegiance to the Pope, and the real question was, how far that spiritual allegiance was reconcilable with their civil allegiance. That was fair matter of argument. He had already stated his opinion on the question, with the grounds on which his opinion was founded. That opinion was before the house and the public, and he should never shrink from its avowal; but all that he wished now to say was, that in stating his opinion he did not accuse the Roman Catholics of perjury, or of swearing to any thing which they did not believe to be strictly true.

MONDAY, APRIL 17.—The Marquis of Lansdowne rose to present a petition from the Roman Catholics of Ireland. Although the petition which he then had to ask their lordships' permission to lay before them, was similar to those which had on other occasions been submitted to their consideration, he could not place it on the table without saying a few words in reference to it. Notwithstanding that the grave had closed over that noble lord (Donoughmore) whose services had long been devoted to the cause of the petitioners, and many more devoted to the support of the same cause, who had, like him, been compelled to transmit to others their unfinished task—as it also had closed over millions of the people whose just claims had thus unsuccessfully been advocated, those claims would never fail to be renewed, as long as there continued among the people of Ireland a just sense of the rights which they ought, in common with their fellow-subjects, to enjoy—as long as the Catholics continued to feel, and God forbid they should ever cease to feel, the disadvantage of their exclusion from the privileges of their Protestant countrymen, and which they would not experience if they lived under any other Protestant Government. The petitioners had with great propriety abstained from any thing like polemical discussion. They had introduced into their petition none of those theological questions which, however proper in the pulpit, or in learned dissertations from the press, he never wished to see agitated within the walls of that house. They had, with great propriety, confined themselves to answering the allegation that they were unfit to enjoy the same privileges as the other subjects of his Majesty—he meant the allegation that they could not give an undivided allegiance. This incapacity they solemnly disclaimed. To the pledge thus given, he trusted their lordships would pay that attention which it deserved at their hands.

Earl Grey had to call their lordships' attention to a petition from the same body as that which had been presented by his noble friend, and which could not have been entrusted to the care of a more zealous and able advocate. His noble friend had that day shewn that his zeal for the cause which he espoused was tempered by the soundest discretion, in refraining from doing any thing more than to make the usual motion for laying the petition on the table. It was his intention to follow the same course; but in doing this he also wished in common with his noble friend to express his opinion, that civil disqualification on religious grounds, if not founded on a paramount public necessity, could not be maintained on any principle of policy or justice; and that upon the accomplishment of the object of the petitioners, the peace and prosper-

city of Ireland, and therewith the security and power of the British empire, depended. He therefore looked forward with an anxious hope to a time, and that not distant, when, under his auspices, this question would be taken up and pursued to a successful issue. Having said thus much, it was now his duty to advert to the particular object of the petition which he had the honour to present to their lordships. The petitioners expressed their deep sense of the injury they suffered from the disqualifications under which they laboured on account of their religious opinions. They stated that they had endeavoured at various times, and through various channels, to remove the unfavourable and unjust impressions which existed against them. With this view they had associated and formed that body which was called the Catholic Association—an association formed on sound and constitutional principles, and in the institution of which they were warranted by the precedents and practice of the best times of British history. They complained, that against this association a bill had been introduced. The allegations of that bill they offered to refute, and prayed to be heard at the bar for that purpose, but their prayer was refused, and they therefore complained, that, without examination or inquiry, that bill had passed into a law. They concluded their petition by praying their lordships to repeal the law. After this statement, it only remained for him to fulfil his duty by moving that the petition be laid on the table. Before he made that motion, however, he begged leave to present another petition, which was from the Catholic inhabitants of the parish of St. Audeon, in Dublin. These petitioners requested their lordships' attention to a particular point—to those proposed measures which were known by the name of wings, but which, he concurred with the petitioners, did not assist the cause in its upward flight: for, instead of enabling it to soar, they clogged and impeded it. To these measures he had strong objections, particularly to that one which went to disfranchise a large body of electors, the 40s. freeholders, without a single allegation of abuse—to deprive them of the right to elect representatives—a right which they held under the same sanction of British law by which all other rights and property were protected. He agreed with the sentiments expressed in the petition on this point, as well as in the disapprobation expressed at the intended public provision for the Roman Catholic priesthood. There was no question, the consideration of which was so essential to the peace and security of this empire as that of the continuance of those laws, as unjust as they were unwise, which excluded Roman Catholics from the privileges enjoyed by other British subjects.

The petitions were read and laid on the table.

COMMONS, TUESDAY, APRIL 25.—Sir Francis Burdett said, that in rising to present the petition of the Catholics of Ireland, praying relief from the political disabilities under which they so unjustly laboured, he felt he was not justified, under existing circumstances, in going at any length, or indeed at all, into the merits of the general question itself, the principle of which had so often received the sanction of that house. At the same time he was anxious to avail himself of this opportunity to entreat

the house to consider once more the interest which this subject was calculated to excite—to assure them of his own deep and unalterable sense of the justice of the claims of these petitioners, and not only of their justice, but also of the sound policy, and wisdom, of attending to them (hear). As it was not his intention to bring on any formal discussion upon the prayer of this petition, it would not perhaps be altogether fair in him, were he, on the present occasion, to use the indulgence usually shown to the presenter of a petition, for the purpose of saying more upon the general view of the case, than that he seriously recommended the house to consider what reception they ought to give to claims like these so founded on reason and truth—claims, too, which never could be laid at rest until they were satisfied—claims which all who spoke with proper opportunities of knowing the real state of Ireland concurred in describing as interwoven with the best interests of six millions of people, whose national character stood so high for honour, energy, and virtue, that they were described by the first minister of the Crown (the Earl of Liverpool) as being as honest and praiseworthy a people as any under the sun. And yet must not these have felt themselves degraded to the last degree, when they were compelled at the same time, and from the same lips, to hear, that they were unfit to be admitted within the pale of the British constitution? When he recollected that some of the most ancient and respectable of the English nobility, as well as a large portion of the people of this country, were placed in the same situation as the petitioners; when he considered the additional claim that Ireland had, since the Union, he hoped the house would forget their worn-out prejudices. It was time that this question should be settled, when its policy and necessity were so strong, that they could not hope for the peace of Ireland until that consummation was attained, or indeed take the sense of the house upon other measures which were upon all hands admitted to be essential for the welfare of Ireland, and of the kingdom generally; for all who were conversant with the affairs of Ireland admitted that these measures could hardly be brought forward till this great stumbling-block, in the way of all improvement, were removed. He hoped that, under all these urgent circumstances, the house would speedily feel convinced of the reason, justice, and propriety of conceding to six millions of their fellow-subjects, an eligibility to civil rights, without which they must continue as it were aliens in their native land. Until this question was finally settled, and in the only way in which it could be justly determined, namely, by conceding these claims,—they could not hope for concord or satisfaction in their government of Ireland (hear). There never could, nor ought to be satisfaction among the Catholics of Ireland, or of England, until justice were done them; they would not deserve the privileges which they sought, were they unmindful of the exclusion of which they now complained.

Mr. Brougham, in seconding this motion, declared his cordial concurrence with the hon. bart. in every thing which he had said upon the policy, expediency, justice, and necessity, of conceding these claims.

Mr. W. J. Bankes felt it due to the consistency of those who thought with him upon this

subject, also to declare that their opinions were unalterable upon it. And he regretted exceedingly that no convenient means had been afforded in the present session, of fully discussing the petitioners' claims; for he was satisfied that the public feeling, or rather the public opinion, would then have been unequivocally expressed against the proposed concession. Had this course been taken on the eve of the general election, the public would have known how to choose their representatives for the new Parliament, and he confidently anticipated the result. It had been sometimes said, that the Catholics of this day were not the same as those of the past; there was, however, one expression in this petition which set that matter entirely at rest, for the petitioners avowed the unaltered state of the Catholic religion. He believed that avowal, and gave firm credence to those who uttered it; and it was upon that fact he had always founded one of his great objections to these claims. He could not see either the reason, or the policy, still less the justice, of committing the care of a Protestant established church to Catholic members of Parliament. Indeed, human nature must make Catholics who were sincere believers of the principles of their religion decidedly hostile to a church which they must feel was an innovation upon their own system, which they always deemed to be infallible. As to the church of Ireland, he was quite satisfied it would not stand for two sessions in an unchanged state, were Catholics admitted into Parliament. Some hon. members might perhaps think such a change would be beneficial; he was, however, of a contrary opinion, and thought it would inflict a fatal injury. He should only further say, that the experience of the two last years—all the acts, speeches, and publications of the Catholic body—convinced him more strongly than ever of the unaltered and unalterable principles of the Roman Catholic church and of the danger of granting these claims.

Mr. W. Smith could not refrain from saying, that such a concession was what he did not expect to have heard from the hon. member; and he only lamented that a convenient opportunity could not now be afforded, to permit the hon. member to show such an effect would follow from the introduction of a few Catholic members.

The petition was then ordered to be printed.

Mr. Brougham said, he had to present a petition from the same body, complaining of the act of a former session, which had suppressed the meetings of the Catholic Association. It was unnecessary for him to add, that he entirely agreed in its prayer, because at the time of the passing of the act alluded to, he had opposed it most strenuously; and whenever the repeal of it was brought forward, he should be found one of its most staunch advocates.

The petition was brought up and read.

FRIDAY, APRIL 28.—Mr. Spring Rice presented two petitions from the late Catholic Association, signed by upwards of 100,000 Catholics. The first petition complained of the law of Corporations in Ireland, as it affected Roman Catholics; and the second complained that the conditions of the treaty of Limerick had not been complied with. All parties, whether for or against the question of Catholic emancipation, seemed to concur in

thinking that the present time was not the most favourable for the agitation of that question; in compliance with which feeling, he would not at present enter into any discussion on those petitions, as they necessarily involved the general question of Catholic emancipation. He could, however, if necessary, prove the injustice and impolicy of continuing those religious disabilities to which the Catholic population of Ireland were subjected; and if it were necessary, he could also show that the complaints embodied in those petitions were founded on truth and justice.

Mr. G. R. Dawson said that the present petitions had occasioned in Ireland the greatest anxiety and excitement; and emanating as they did from a body which certainly were not entitled either to the approbation or protection of the House of Commons—a body of men who were by no means important in themselves, and whose only distinction was derived from the mischief of their measures, and their attempt to evade the law—he thought it right to oppose their introduction. The complaint was, that the treaty of Limerick had been violated, and that the British Parliament, in not recognizing that treaty, and in continuing Catholic disabilities, were equally, if not more blameable than the immediate violators of the treaty. Now, in order to prove the grievance complained of, it would be necessary to inquire what privileges the Irish Catholics enjoyed at the time of that treaty. In the reign of Charles II. they were excluded from every office connected with the state, and in consequence of the oath of supremacy they could not sit in Parliament. On the 21st of June, 1642, the house adopted a resolution to this effect—"The house, taking into consideration the wicked and abominable doctrines of Popery, it is ordered that all persons professing those doctrines shall take the oath of supremacy." Besides these authorities, there was an order of the Irish House of Commons, directing a new writ for Drogheda, in the room of Mr. Brick, who had refused to take the oath of supremacy. At the time of the treaty of Limerick, all members of Parliament were indispensably obliged to take that oath before they were qualified to sit as members of the legislature. The Parliament of 1661 sat until the first year of Charles II., and the first thing done after the restoration was, to renew a resolution, *nemine contradicente*, for the purpose of rigidly enforcing the old practice of taking the oath of supremacy. This was an incontrovertible proof that Catholics could not sit in Parliament in the reign of Charles II. But it might be said, that these were mere resolutions, not having the force of law. They, however, showed the disposition of the legislature on this subject, and entirely negatived the supposition that the Catholics had then these privileges. The treaty of Limerick was signed on the 3d of October, 1691; but the ratification, so far as it went, did not take place by King William until the 5th of April, 1692. In the meantime, Parliament had been assembled, and their first act, which received the royal assent on the 22d of December, 1691, was to exclude all Catholics from eligibility to a seat in the legislature. Why, then, did not the Roman Catholics remonstrate against the violation of the article in the treaty of Limerick, if they thought themselves aggrieved in the manner in which it was now contended they had been? All the contem-

porary authorities were silent upon that treaty as a particular grievance affecting the Catholics. Mr. Moliseux mentioned it as an act of injustice, inasmuch as an attempt was made, in consequence of it, to bind Ireland by an act of the British legislature, but he had never pressed it as a violation of faith to the Catholics. It was, therefore, nugatory to raise an argument founded upon such a position.

Mr. S. Rice wished to see the issue put upon the construction of the treaty of Limerick, with reference to the case of the Catholics (hear). He must at the outset deny the assumed authority of the English Parliament to bind the legislature of Ireland: it was an unjustifiable usurpation, which had subsequently been abandoned, and he was surprised to have heard the patriot Molineux quoted as an authority for the view taken by his hon. friend, which was contrary to every deduction that could be drawn from historical facts. So far from the oath of supremacy being an indispensable obligation for Catholics before they were competent to sit in Parliament, he need only to state the conclusive fact, that although that oath was in force in England from the time of Queen Elizabeth, there were no less than ninety-eight Roman Catholics, in the reign of James the First, sitting in the Irish House of Commons,—a large proportion, when the whole number of members was only 220; nor were they excluded until the end of the reign of Charles II., and then by an act which never had operation in Ireland. To say that the acquiescence of Ireland, in such times and under such circumstances, was to be taken as a proof that the Catholics were unconscious of having any claims of the nature now set up, was to overlook the weakness and dependance of the conquered party, and their helplessness under the rule of those who had triumphed. It was singular enough that his hon. friend should have confined his observations to the 1st article of the treaty of Limerick, and that he should have prudently abstained from touching upon the 9th article, which declared that no other test should be required from Catholics but the oath of allegiance, and expressly exempted them from the oath of supremacy. So that if the latter were ever in force against them, which he denied, it was expressly barred by this 9th article. But upon this subject of the treaty of Limerick he would quote authority, which was beyond all question. It was not the authority of Catholics, or their advocates, but of no less a personage than Bishop Burnett, who, when summing up the effects of the treaty, distinctly admitted that the Catholics were to possess the same privileges as other subjects, upon taking the oath of allegiance, and without the oath of supremacy (hear, hear).

Sir John Newport said, that attacks upon the Irish Catholics for intemperance came with the worst possible grace from the hon. gent. (Mr. Dawson) considering the official station which he filled. Equally singular was it, that, of all men, the hon. member should have revived the worn-out and abrogated attempt to bind Ireland by resolutions of a British House of Commons, when his constituents had eminently signalized themselves at the time of the establishment of Irish independence, in 1780, in resisting that usurpation, and had sent forth their volunteers to assert the case of their country. He (Sir John Newport)

had, however, lived to see a member for Derry re-assert and venture to justify that abominable, gross, and nefarious usurpation, long after the resistance made to it by Ireland, and after the formal abandonment of the principle by England herself.

Mr. Dawson, in explanation, disclaimed having asserted any such principle; he had merely quoted resolutions of a former House of Commons in illustration of his argument.

The Solicitor-General said, that the hon. member (Mr. Rice) had certainly taken a wrong view of the effect of the treaty of Limerick.

Mr. Peel by no means acquiesced in the view, that the privileges now withheld from the Catholics were so withheld in violation of the treaty of Limerick. It would be time enough when that argument was finally urged, to combat it, which he should certainly be prepared to do; retaining as he did his original opinion respecting that treaty, and not concurring in the assertion that the admissibility of the Catholics to political power had been withheld in consequence of its operation. The petitioners themselves seemed doubtful of the extent to which they meant to press their argument founded upon the treaty of Limerick, or on that particular article of it which was framed to secure them in the exercise of their religion, so far as was consistent with the laws of Ireland. Did they mean, by this provision, that they were to be free from molestation in the exercise of their religion, or did they construe it into an admission of their claim to equal eligibility to civil office? He thought that they confounded both senses in their construction.

Mr. S. Rice, in reply, said that this construction had been put on the treaty of Limerick by some of the most eminent crown lawyers in Ireland. He would be most willing to argue the question on this ground with the right hon. gent.

The petition was ordered to be printed.

LORDS, MONDAY, MAY 8.—Lord Dudley and Ward presented a petition from the Roman Catholic inhabitants of Roscommon, praying to be relieved from the disqualifications under which they laboured. However erroneous their faith might be, the Roman Catholics had an excuse for not abandoning it; for too few steps had been taken to convince them of their error either by the Government or by the clergy. They had been released by the bounty and wisdom of Parliament from all those penalties and the greater part of those disqualifications, and they prayed to be exempted from the remainder. He was not disposed to violate that sort of tacit convention, by which it was understood this subject was to be allowed to rest undisturbed during the present session of Parliament; and, if he had any influence with the Roman Catholics, he would advise them to refer their case to those persons who had so ably advanced their cause. The Roman Catholics, as far as Parliament was concerned, were in very good hands. They would do well to recollect the difficulties they had to encounter from the opinion—and he believed it to be a sincere opinion—which prevailed of the great danger that would attend the granting of their claims both to the constitution and the state; and also to consider that their best method of obtaining

their object was to remain tranquil under the trying, and, he might say, provoking state, in which they were placed.

FRIDAY, MAY 26.—The Marquis of Londonderry presented a petition from the Roman Catholics of the County of Monaghan, praying to be relieved from the disqualifications under which they laboured. The longer he lived in Ireland, the more convinced he was that country never would enjoy tranquillity until the Catholic claims were conceded. Those who favoured free trade, should extend their liberal policy to Ireland. If they began their operations there, they would be the better able to accomplish their object.

### *First Fruits.*

COMMONS, TUESDAY, MARCH 21.—Sir John Newport rose to call the attention of the house to the state of the first-fruits' fund in Ireland, with a view to improve and render it more effectual.—The rt. hon. bart. proceeded to give a history of the establishment of the first-fruits' fund, and of the uses to which it was intended to be applied. The act of Queen Anne declared that the first fruits were to be appropriated to the purposes of building and repairing churches, providing glebes wherever they were wanting, and also for the more liberal support of the clergy. At the period when this fund was formed, there was also collected, in Ireland, from the different benefices, one-twentieth, and from the different benefices in England, one-tenth of their valuation, to be applied to the same purposes. The valuation of that period, with respect to Ireland, had remained the same ever since, although it was manifest that the real value of livings must have been greatly increased. The consequence was, that the sums which the clergy ought to pay for the building and repair of churches were obliged to be supplied by the state at large. In the act of Parliament which related to England, a clause was inserted, with respect to the propriety of having new valuations, at particular periods, which had not found its way into the Irish statute on the same subject; the consequence of which was, that no new valuation had been made in that country. It appeared to him that, from time to time, as the value of the living increased, the amount of the first fruits should be increased also. It was a grant of the property of the Crown, made by the Crown for the better support of the church and of the church establishment, and not for the private benefit of individuals. He believed that one-fourth of these benefices in Ireland had not been valued at all; and of those which had been valued, the valuation was not, at the present day, a just and efficient one. He pointed out the difference between the valuation of the benefices in the English and Irish Church. During seven years, ending 1824, the Archbishoprics and Bishoprics of Ireland contributed 910l. 10s. 11d. to the first fruits. During the same period, the Archbishoprics and Bishoprics of England yielded to the first fruits' fund 5,419l. 9s. 10d., and for the twentieth-parts the sum of 8,511. 4s. 6d., making in the whole 14,270l. and upwards. It should be observed, that the collection of one-twentieth on the valuation of the Irish benefices had been long since removed;

and therefore they were more able to pay an additional sum to the first-fruits' fund. However, it appeared that in seven years Irish livings had paid only 910l., while the England paid, under the two heads he had mentioned, 14,270l. (hear, hear). Since he had addressed the house on this subject, the composition act had taken effect in many parts in Ireland; and the proceedings under that act proved how different in point of fact was the action by which the contribution to the first-fruits fund was regulated, and that at which livings ought really to be rated. In the diocese of Cloyne, 95 livings were valued at 258l. and 25 of these which had compounded for tithes, produced no less than 10,590l. A large sum, not less than 600,000l., sufficient to meet every object for which these first fruits were intended, was thus diverted from its legitimate channel. Was it to be allowed that clergy should put so much wealth in pockets, when it ought to be applied, as a bounty, to the building and repairing of churches, &c.? Were the first fruits to be permitted to remain thus unproductive, while Roman Catholic peasantry were obliged to contribute to the repairing and building of places of worship which they did not attend? the Crown expressly said, "this fund was appropriated to certain purposes," it being highly fitting that the intention of the Crown should be strictly observed. It could not be doubted, that if this property had remained the hands of the Crown, the Crown could have commanded a valuation at any time; and Parliament, because the Crown had divested itself of its right for the benefit of the church, allow its gift to remain unproductive, so the object of the Crown was concerned? Primate Boulter, shortly after his arrival in Ireland, wrote to the Archbishop of Canterbury stating that he hoped to induce his brethren to consent to a larger payment on account of these first fruits. He (Primate Boulter) thought it was right that the clergy should make their own especial fund productive for the benefit of the state to assist them in building and repairing churches. His proposition was, however, ungraciously received and produced no good effect. An effort was made early in his late Majesty's reign, to institute an inquiry as to the best means of making the first fruits more productive; but, perhaps the same causes which operated against Primate Boulter's attempt, it also was dropped. The bishops' lands and glebe-lands, in Ireland amounted to no less than 700,000 acres—nearly equal to the plantation acres—which was nearly equal to 1,000,000 English acres; but the produce of the first fruit fund was, as he had already shown, scarcely any thing. He would now very briefly show, from a return which had been laid before the house, the difference of the produce of the first fruits in England and Ireland. The livings within the jurisdiction of the primate of England yielded 200l. while those within the jurisdiction of the Archbishop of Canterbury produced 2680l. The diocese of Clogher, which was worth at least 10,000 years, paid 300l. The entire of the bishoprics and bishoprics in Ireland were valued at 3177l., while the archbishoprics and bishoprics in England were valued, for the first time only, at 21,325l., exclusive of the valuation of their tenths, amounting to 8861l. Under the circumstances, he certainly should place

their journals—if he could not succeed in carrying it—a resolution, commencing with a statement of what the nature of the first fruits' fund was, pointing out the manner in which Queen Anne intended they should be applied; showing that it was nothing more than just and equitable that grants made by the Crown for specific objects ought to be rendered efficient for the purposes of those objects; declaring that the house would no longer allow grants to be charged on particular classes of people, by parochial taxation, or on the great body of the nation, by Parliamentary votes, for purposes that ought to be met by the first-fruits' fund; and calling for a committee to inquire into the whole subject, and to report its opinion thereon to the house.—He concluded by moving a resolution, stating these different points in detail.

Mr. *Goulburn* opposed the motion. The principle laid down by the rt. hon. bart. was one of the most dangerous that could be conceived. It involved not merely the interests of the clergy of Ireland and of England; it went much farther—it involved the interests of many other orders in the state. What the rt. hon. bart. contended for was, that the clergy should build and repair churches out of those funds which they received as a reward for the due performance of their sacred duties. The rt. hon. bart. found that a larger sum was paid by the English than by the Irish Church, and therefore he wished the house to go into a committee, to make a law, by which funds were to be wrung from the latter establishment, to defray the building and repairing of churches. This, he (Mr. *Goulburn*) contended, was an attack on the church in the first instance, and, if successful, would lead to an attack on other interests. The facts of the rt. hon. bart. were inaccurate, his law was incorrect, and therefore his deductions were unsound. In looking at this question, they must go back to the period when the first fruits were granted by the Pope. All the legal authorities of that day spoke of the grant as a grant that ought never to be calculated upon the ratio of the real value of the land, or any thing near it. It had been long held, that the incumbent should only pay according to the value computed in early times. This doctrine was never disputed, when the right which the Pope had enjoyed became legally vested in the Crown. His learned friend, (Mr. *Plunkett*), whose absence he much regretted, had showed on a former occasion that the rt. hon. bart. was wrong in his interpretation of the act of the 28th Henry VIII. The words with which that statute concluded, were those on which the rt. hon. bart. founded his argument. It was there set forth, "that the Lord Chancellor, the Master of the Rolls, and the Lord Treasurer, should compound for the first fruits, and settle the amount;" that was, at that time, for the statute said nothing about subsequent valuations. In an earlier statute, the 26th Henry VIII., the same principle was laid down, with this difference, that if the Pope did not compound for a reasonable rate, the King himself was to take the matter into his own hands, and order a fair valuation. The statute of Henry VIII. gave to no party a right to revise or make a new valuation with respect to benefices; and therefore there was an end of the rt. hon. bart.'s argument. It was notorious that the first fruits

never were calculated on the whole and immediate value of the living, but were settled by the old valuation. The question was, whether the house was prepared to affirm the proposition that the income of the clergyman was to be taxed for the purpose of building or repairing churches? He admitted the composition or valuation had taken place so early as the reign of Henry VIII., and had received no alteration since. But were there no other charges of the same description? Were there no rents in this country held under feudal tenures, which stood at a very early valuation, and which, according to the reasoning of the rt. hon. bart., must also require revision and alteration? Could the rt. hon. bart. think of proposing this change in the valuation of the first fruits, without calling to mind that the head-rents remained without increase? It was very true that the twentieths had been remitted to the Irish church, while the collection of tenths had been continued in England. But this only proved the necessity which existed for extending indulgence to the former establishment. He would never admit that the clergy were the only persons who derived benefit from the church, and that, therefore, they alone were to pay for building and repairing places of worship. The maintenance of the church was essential to the support of religion; and, as religion contributed to the well-being of all, the charges connected with upholding it should bear equally on all. The rt. hon. bart., however, would not do this. He would support religious establishments by imposing a tax on the clergy alone. The rt. hon. bart. might as well maintain, that the great public functionaries should pay for the erection of public offices, or that soldiers should defray the expense of building and repairing the barracks in which they were quartered. He would never consent that the clergy should be called on to build the churches, or that the usurpation of the church property, in the time of Henry VIII., should be carried to its extreme point in these days. He was convinced that such a measure, if successful, would reduce the clergy to the condition of debtors and paupers, and destroy their respectability and usefulness.

Mr. *S. Rice* observed, that in reference to what were called the usurpations of the older times, no notice was taken of the usurpations by the clergy of those divisions of the tithes which were appropriated to the building and repair of the churches.

Mr. *Dawson* said that the proposition of the right hon. bart. was equally opposed to law and justice. He had read the statutes over, and though he did not presume upon giving a competent opinion, it appeared to him that they bore no construction like that put upon them by the right hon. bart. It was never the intention of the legislature to impose frequent valuations of livings upon the clergy. There had in fact been no more than four valuations of livings from the time of Henry VIII. down to this hour, and all those valuations were of livings which had never been valued before. The commission in the time of James I. contained positive directions not to touch the livings which were valued before, and not to go beyond a just valuation of any livings. There was no question but that the right to the first fruits was the settled possession of the crown, and being then so settled, it was equally plain

from those instructions, that the King only wished to have the sums fixed which were to be paid into the Exchequer, and that those were to be the sums to be paid in from that time for ever after. Moreover a great portion of the livings at the time of the valuations taken under Queen Elizabeth were under 6l. value, and these were excepted by law from valuation. The proposition was founded on injustice. But if it had justice on its side, it must be as applicable to the property of the English as of the Irish church; and to lay impropriations as well as ecclesiastical. There was nothing in the question of the first fruits of one church which was not as applicable to the first fruits of the other. It would not be possible, however, for any member of that house to proceed in the same manner against the property of the English church.—He eulogized the spirit and conduct, the piety, liberality, and Christian-mindedness of the clergy of the Irish church, and rejoiced that the senseless cry, which had been raised against it, was at an end. He deprecated the tendency of the motion as it regarded other property. The usurpations of the Pope had been resumed by Henry VIII., who took with them not only the first fruits of the church, but of abbeys, monasteries, deaneries, and all other religious establishments. A great part of them was bestowed upon his servants and favourites, and still remained in the possession of their descendants. He could see no reason why the first fruits of abbeys and monasteries should not be resumed for the building and repair of churches, if the remaining church property were to be taxed to so considerable amount for that purpose.

Mr. Lockhart had expected the right hon. bart. to make out a very strong case, and was now prepared to say, that from the weight of argument on the other side, he felt convinced that the proposition could not be adopted. Why should they seek for a principle to justify them in that which was on every side called the usurpation of the Pope? If the Pope had usurped any portion of the property of the church, the Crown did right in resuming it; but then it ought to be given back to the church. And it was upon this feeling that the Crown seemed to have acted upon the subject of valuation. It would, indeed, be taking a heavy stride now to revive the claim of the Crown to the utmost amount of valuations to be taken in the present day. Reference had been made by an hon. member (Mr. S. Rice) to what he called other usurpations by the clergy upon the four-fold division of the tithes. But then the law and the circumstances of society had materially altered. The poor were entitled to the *quarta pars* of tithes; and he was aware that the statute of Richard II. sought to secure the appropriation of the fourth part to that object: but that law had long since fallen into disuse. The poor were maintained by the poor-rates; to the payments of which the agricultural property and the tithes were mainly chargeable. But if the law had not fallen into disuse by this method, the claim of the poor to the fourth must have been void, because the Reformation brought with it to the clergy the right of marrying; and that implied *ex necessitate* the duty of providing for their families. Upon the whole, therefore he could not think it safe to entertain this proposition.

Mr. Hume said, that the two Secretaries of

State had not treated this subject with their usual candour. They had each of them treated the proposition of his right hon. friend as one equally inconsistent with law and justice. But instead of going on to prove so serious an allegation, they attempted to bewilder the house with fears of innovation and infringement on property generally. Now, according to the law and the general practice of the constitution, the right to the first fruits was perfect in Henry VIII. He gave away a portion of them to laymen, and he retained another portion which was to be administered by others for him, in the fulfilment of a certain ascertained purpose. The question of right then was reduced to this—Had the crown in any subsequent reign surrendered this right to the clergy? If that had not taken place in any instance, had not parliament a right to inquire whether the conditions of building and repairing churches, and the other services to which first fruits were then made applicable, had been observed or not? It appeared that there had been valuations from the year 1609 almost to the present time. If certain funds had been appropriated and set apart for the purpose of erecting churches, and if those funds had been applied to other purposes, should not the house interfere to effect a proper application of the public money? It was quite clear to every impartial man who heard the statement of the hon. bart. who introduced the motion, that the funds arising from the first fruits in Ireland had not been applied to their original purpose. The house was told that the motion of the right hon. bart. was an attack on the church property of Ireland. It was true that such was the case; but the attack was fair, because the funds in the control of that church, and which were given for useful purposes, had not been applied according to those purposes for which they were originally granted. The right hon. Secretary (Goulburn) had stated, that this principle would apply equally to the church property of England. If it did, that church should be dealt with accordingly; but surely a more preposterous defence had never been attempted. The right hon. gent.'s speech was merely an attempt to protect the church property of Ireland, and to continue and uphold the abuses which at present existed. It was certainly true, that within the last three or four years the character of the Irish clergy had been considerably improved; but it was owing to the discussions in that house; and much more remained to be done, before the Church of Ireland would be on a proper footing. With respect to the argument, that it might as well be said, that soldiers should build and repair their barracks, as that the clergy should be required to repair and build their churches, there was no similitude between the two cases: was any part of the pay of soldiers given them for any such purpose? In the case of the clergy, nothing more was asked than that a fund set apart for a certain purpose should be applied to that purpose. The hon. gent. here quoted several opinions in support of the view which he had taken of the question; and he also read passages from the correspondence of the late and present Secretary for Ireland on the subject of first fruits. It had been stated by Mr. Alley that the power of making a new valuation rested with the crown; and if that opinion were to be relied upon, there could not be a better opportunity than the present for exercising that power; for he

was certain that there never was a case so clear and satisfactory as that which was laid before the house, this night, by the right hon. bart. who introduced the present motion. It was deeply to be regretted that the same liberal line of policy which had marked the proceedings of his Majesty's ministers on other occasions was not visible on the present question.

Sir J. Newport replied. The question, he said, had come to this—was the house prepared to add to the revenues of the Irish church, by permitting it to apportion to its uses a fund which had been granted by the state for other purposes? He would always stand up in support of the Irish church; he would protect its interests to the last, although he feared he should not always be seconded by his brethren around him. He had proved his sincerity to the Irish church by wishing to have it cleared of its abuses (hear, hear). Had the Irish Clergy done their duty by repairing from time to time the several churches within their jurisdiction, they need not have called upon their parishioners and persons of a different persuasion to defray those expenses which should be paid by the fund originally granted for the purpose.—He concluded by stating his determination, if he failed in carrying the present motion, of bringing forward the question again and again.

The house then divided, when there appeared—For the motion, 21—Against it, 48—Majority, 27.

### Church-Rates.

THURSDAY, FEB. 16.—Sir John Newport rose to propose a series of resolutions regarding the levy of church-rates in Ireland. He said it was in the recollection of the house that he had last year called their attention to the manner in which the Irish parochial rates were collected, and to the abuses which were so apparent in every part of their details. Having been on that occasion so fortunate as to obtain almost the unanimous assent of the house to the bill he had introduced, he was afterwards much surprised to find, that in another house the principal clauses which regulated the adequate control of the local expenditure were struck out. It was doubly incumbent upon the house to guard the Irish public from the great abuses of this system, because a very considerable portion of the persons who had to pay these church-rates, were by law disentitled from taking any part in the proceedings of the vestries in which they were imposed. Besides this, payments were made out of these rates, not only without the authority of law, but in a direct defiance of it: for instance, salaries were augmented contrary to the statutory provisions, which controlled and limited their amount in the most specific manner. The object of his bill was to provide that when any parishioner had just reason to complain of the injustice and inequality of the rate levied upon him, he was not to be left, as he now was, without a remedy; but was to have the power of appeal to the next quarter-sessions. This redress was easy and simple, as well as quite analogous to the general practice in similar cases. In order that the house might understand the manner in which the power of raising sums for the uses of religion was diverted from its legitimate purposes.

he would state a few examples of the abuses which prevailed on this subject. The law had expressly provided a particular sum for the salary of the parish-clerk; where his attendance was only required one day in the week, his remuneration was not to exceed 10*l.* a year. But in two-thirds of the parishes throughout Ireland, more than 20*l.* or 30*l.* was the salary paid to the clerk, and often much higher sums. Every species of extravagant expenditure was supported out of these rates. In one parish 430*l.* was paid to build a house for the parish-clerk and sexton (hear). No parish in England would, he was convinced, have tolerated so scandalous an exaction (hear). And yet this was done in Ireland, where the great bulk of the people were not of the established church, and could not take the least part in the vestries which taxed them. In some parishes places were contrived which ought never to have been sanctioned. There was, for instance, the organist's attendant (a laugh), and the tuner of the organ. In others there were people anxious to promote the Hibernian Bible Society, and in Raphoe they voted 10*l.* for this purpose; and this, be it remembered, was to come out of the pockets of the Catholic peasantry, for the use of a society avowedly established to make proselytes to the Protestant faith. In one place—and he regretted the circumstance, because it reflected on high dignitaries of the church—a tax was made to repair the bishop's throne, to provide a clothes-horse for his closet, and brushes, and indeed every species of article for the toilette of a finished gentleman (a laugh). In another parish, in Dublin, a sum of 100 guineas was voted out of the rates, to purchase a piece of plate for the curate. Fifty pounds was also voted to the parish-clerk, and the same to the vestry-clerk, which was more than double the amount authorized by law. In one parish, in the course of 10 years, the organist received more than 850*l.*, and the bellows-blower was also a pensioner: he had 15*l.* a-year; and there was a vestry-maid at 20*l.* besides three servants to attend the church. In one of the returns there was a remarkable *nota bene*, which he would read to the house. It was this:—“*Nota bene*, no access to the church or churchyard, for man or horse, but by climbing over two or three walls.” From this it appeared that access to the church was not considered at all material: so the money was levied, the only object in view was attained. In many instances, palpable modes were taken to evade the law which limited the amount of salary to the clerk; he was first paid for his clerkship 20*l.* then they gave him 20 guineas for singing, 30 guineas for instructing the boys, 20 guineas for teaching the girls, and 20 guineas more for extra services (a laugh). So that the salary was raised to 120*l.* and 140*l.* a-year. Then large sums were required for the use of pews. In one instance, a lady had paid 14*l.* or 15*l.*, and in another, seven guineas. He understood the Government meant to bring forward some corrective: if so, he should gladly leave the matter in their hands. It was but justice to some parties to state, that in two or three parishes so sensible were respectable members of the established church of the injustice of taxing the Catholic population in this way, that they defrayed themselves the salary of the clerk; and a rector and his incumbent were considerate enough to defray the charge of the sacramental

bread and wine, instead of taxing their Catholic parishioners for such a purpose.—He concluded by moving a series of resolutions, declaratory of the prevailing abuses in levying church-rates in Ireland, and proposing the remedy of appeal to the quarter-sessions.

Lord Althorp was anxious, before the subject was further discussed, to obtain some information from the *rt. hon. gent.* (Mr. Goulburn) respecting the intended measures of the Government touching Irish affairs. It was stated in the King's speech, that measures were under consideration, arising out of the inquiry which had been conducted last session into the state of Ireland. He now wished to know what were those measures.

Mr. Goulburn professed his readiness to give the information required by the noble lord, before he made any observations upon the speech of the *rt. hon. bart.* (hear). He would state generally the measures which he intended to introduce in the course of the present session, arising out of the labours of last year's committee; and, perhaps, it would be convenient were he to state them in the order in which they had been noticed by the committee. With respect to the first question he had the satisfaction to communicate, that the Tithe Composition bill had been, within the last year, brought into general operation in Ireland, and had produced effects not only equal, but far surpassing his most sanguine anticipations (hear, hear). It was, therefore, most desirable not to interfere with that measure. A year ago there had been effected only 259 tithe compositions; but since the last session he was happy to say, the number had increased to 676, more than a fourth of all the parishes in the country (hear, hear). One fact would show strongly the operation of the bill, and it was this—that the assistant barrister for the county of Cork had informed him that the business of his court had declined one-half, owing to the absence of tithe causes (hear). The next measure in order, but he would revert to it last, was the mode of collecting and applying the church-rates; and the constitution of the vestries. Then followed the constitution and proceedings of the manorial courts. This subject had been under the consideration of the Lord Lieutenant, and a measure was about to be introduced, to remedy and correct the practices of these courts, and obviate their abuses. The next matter was the legal right of admission to the freedom of corporations; and he meant to propose a measure to remove the delays, which at present occurred in establishing these corporate rights. Respecting the laws which related to grand juries, and the manner of levying their presentments, he could not say that he was at this moment prepared with any measure; at the same time that it was to be understood the attention of the Irish government was not withdrawn from that subject. But the very great magnitude of the question—the difficulties with which it was beset—the long period of existence of the present practice, such as it was, rendered it most difficult to grapple with the subject, and he thought it much better not to tamper partially with it. On the relation of landlord and tenant, it was his intention to submit in an amended form the bill which he had introduced in the last session. As to the church-rates, the chief object of the Irish Government was to ascertain what the law was, and to collect and consolidate the whole of the acts on this subject into one, and in that

one to introduce clauses for the removal of many of the grievances complained of. It was his wish that this measure should have been introduced at an earlier period; but the pressure of other and more important affairs had rendered it necessary to postpone it for some time. He could assure the *rt. hon. bart.* that he did not mean to defend the abuses which were exhibited in the local returns respecting church-rates, some of which had almost unavoidably grown out of the system on which public business had been carried on for a long time past. But in looking at the irregular charges which it appeared had been made in vestries, it would be found that they did not all bear against the Roman Catholics. On the contrary, many of those charges were made for the benefit of the Roman Catholics themselves. Some charges were for building, or assisting to build, Roman Catholic chapels, and for other purposes connected with the Catholics; which showed, that though many of the items of these assessments were irregular, they were not voted with any feeling hostile to the interests of the Roman Catholics. He would agree that the assessments in future should be limited. He intended to introduce a bill on this subject in a short time, and he therefore hoped the *rt. hon. bart.* would withdraw his motion and give him an opportunity of submitting the bill.—Observing that the *right hon. bart.* did not seem disposed to withdraw his motion, he moved as an amendment to it, “That leave be given to bring in a bill to consolidate and amend the laws which regulate the levy and application of church-rates in Ireland.”

Sir R. Inglis supported the amendment. He concurred in believing that irregularities existed in the mode of assessing church-rates in Ireland, and in their application in many instances; but he thought it was unfair to say that all such had been oppressive to the Roman Catholic inhabitants. He proceeded to cite a variety of cases, in which various sums had been voted in vestries for the building and repairing of Roman Catholic chapels, and for assistance to Roman Catholic priests. In one of the returns, there was an item of a certain sum in the church-rate, which it was stated had been applied as rewards for killing foxes. This, to be sure, was rather curious as a church-rate; but after it had continued four or five years, it was changed for another, by which £2l. 15s. was voted for adding a gallery to a Roman Catholic chapel. There had also been very large subscriptions for similar purposes from several Protestant noblemen and gentlemen in different parts of Ireland. It was not correct to say that Roman Catholics were in all cases excluded from vestries; for in one parish, where the number who generally attended the vestry was from 60 to 100, it consisted of Catholics as well as Protestants. It did not appear that the votes were counted, because (as the return stated) they were so unanimous that they had never come to a division on any subject. As to the amount of the assessments for church-rates, the house would judge of its pressure when he said that in some places it amounted to one farthing per acre, in others to 3d., and from that to 6d. per acre; and in no case (except one, in which it was 1s. 3d.) had he known it to exceed 8d. Let this rate be compared with that to which in some instances the building of Roman Catholic chapels amount-

rd. It appeared from the testimony of a highly respectable Roman Catholic priest, that in one case the building of a Catholic chapel had come to 6s. an acre, and in another to 12s. Looking at the whole of the evidence before them, he thought there was no ground for saying that the irregularities of the vestry assessments always pressed with severity on the Roman Catholics; at the same time he would willingly give his support to any measure by which those irregularities might be corrected; and he hoped the bill to be introduced by his rt. hon. friend would have that effect.—After some further conversation, which see *ante* (p. 32), the amendment was carried.

FRIDAY, APRIL 21.—Mr. Goulburn having moved that the Church-Rates' bill be re-committed,

Mr. Spring Rice proposed, that it be an instruction to the committee to receive a clause, empowering the Protestant parishioners in vestry assembled, to assess their respective parishes, in certain limited sums, towards building, enlarging, and repairing Presbyterian Meeting Houses and Roman Catholic Chapels. In asking for this power, he was requiring nothing new. His object was to introduce a legal mode of procedure in vestries, and to authorise the distribution of sums which were not allowed to be distributed now. As a proof that his proposition was not a novelty, he might state, that assistance had been afforded to the Roman Catholics by individual subscription; and not only so, but that even local assessments had been, in some instances, imposed for the same purpose. Among the entries of the proceedings of a vestry in the diocese of Dromore, was one to the following effect:—"That a sum of 130l. was mentioned as a contribution voted at a vestry in aid of the Roman Catholics of the parish, without a dissentient voice, and agreed to by the churchwardens and others, as an acknowledgment of the liberality of the Roman Catholic parishioners towards defraying the expenses of repairing the Protestant church." That entry was made by Protestants themselves. If the committee had the same feeling which was expressed in that entry, they would adopt the clause he now proposed; the more especially, as it introduced no new practice, but merely went to legalise one which had long been known and introduced into that country, and from which nothing but benefit could result. No one could doubt that religion was not confined to one sect. For himself, he wished that the state of society was such, that one place of worship and one ritual were agreed on by all men; but as that could not be the case, he thought it must be the interest of society at large that every body should have some religion. Those who had seen what he had in Ireland—the numerous churches of the Protestants—and had compared them with the wretched hovels in which the Catholics were compelled to assemble, or around which they were often obliged to meet, exposed to all the inclemencies of the weather, would allow that such a system ought not to continue. He was glad to say, that, with regard to the Catholics, the Presbyterians of the north entertained this feeling. He had in his possession a letter from them, in which they expressed a wish that they might not be deprived of the benefits of

the present good-will existing among the religious sects of their country, but that the spirit of universal good fellowship might be encouraged. This proposition would not give the Roman Catholics the right of voting away money; the control of which would still be vested in the Protestant vestries. If the clause he now proposed was rejected, he should certainly propose another; the effect of which would be to throw the burden of the church-rates on the lessors of land, in the same manner as the tithes.

Mr. Goulburn said, that he could not see the propriety of directing the assessment required in favour of the Catholic churches, unless the house were to be consistent, and to adopt the same principle with respect to Methodist chapels and meeting-houses. He would pass over all arguments relating to the compelling of the State to maintain any other religious meeting-houses than those established by law. He objected to the measure, on the ground of the impropriety of compelling Protestant vestries not to assess themselves, but to assess their parishioners in favour of an opposite sect. The former practice of vestries to make such assessments had been illegal, and their conduct had been often questioned. It was to correct the evil, which had grown to a great extent, that the present bill had been introduced; and it had proceeded with the concurrence of all who had ever taken any interest in the discussions upon the subject. The present bill took away no legal power whatever from the vestries—it deprived them only of a power which they had formerly assumed in violation of the law; but it left it to the discretion of individuals to subscribe what they might please for the purpose of building or repairing Catholic places of worship. The proposition of the hon. gent. (Mr. S. Rice) was unintelligible, and he should oppose the motion upon this ground, as the hon. gent.'s views could be better answered by the introduction of other words into the bill. The assessments by vestries for the support of the established church were compulsory; but there was a legal appeal against the rate in favour of those who thought themselves aggrieved by the imposition. The proposition of the hon. gent. was, to make the assessment voluntary on the part of vestries; and it would be impossible to give any right of legal appeal against the degree of charity or liberality which a vestry might think itself bound to bestow upon their Catholic neighbours. There could be no legal appeal against a voluntary assessment.

Sir John Newport said, that he was always in favour of a reciprocity of benevolence. The Catholics were called upon to contribute to the support of the churches of the establishment; and if the present proposition were to be acceded to, it would be only giving them back a part of their own. The Protestant vestries in Ireland now assessed the Catholics, in order to make presentations of plate, and sums of money, to persons connected with the establishment and to juries; and where could be the evil of their taxing their Protestant brethren, in order to bestow the benefit of places of worship upon the Catholics? The rt. hon. Sec. (Goulburn) objected to the vestries taxing the majority of their fellow-parishioners in favour of the Catholics, but did he object to the vestries taxing the majority of the Catholics in favour of the

Protestants? In Drogheda, the Catholics had been taxed by a Protestant vestry, for the object of procuring a house for a Protestant clerk and sexton. If the present proposition were not acceded to, he should give his support to what his hon. friend had pledged himself to bring forward—to make the present tax obligatory on the proprietors of land, and not upon their tenants (hear, hear).

Mr. Peel agreed, as fully as any man in the house could do, that it was a monstrous abuse that any Protestant vestry should have the power of taxing a Catholic parish one jot beyond the limit which was strictly legal and necessary. The cases of charges for wine, houses provided for parish clerks and sextons, &c. were impositions of the most gross and unjustifiable description. At the same time, he took it to be a feature most essential in a measure like the present, that it should define, as precisely as possible, the charges which might properly be made. This was a course which would be desirable in any country; but in Ireland there would be no getting on without it. Nor would he agree for a moment in the propriety of empowering any vestry to assess a parish for the maintenance of Catholic, or any other modes or places of worship, which were contrary to the established church. The fact was, that this proposition was meant for the benefit of the Catholics; and the including the Presbyterians in it, was little else than colourable. It was well known that the Presbyterians wanted no such assistance as this; that they were in the habit of supporting the forms and charges of their own modes of worship, and that they were competent to do so; and besides—why were the Presbyterians to be provided for rather than any other class of the dissenters from the established church? Why were the Presbyterians to have an advantage which was not given the Quakers or the Wesleyan Methodists? Those sects, which already maintained their own places of worship, and contributed to those of the established church, would think it somewhat unjust if they were called upon to pay for a third system, and one directly opposed to that which they professed.

After a few words from Mr. S. Rice, the house divided; when the numbers were—

For the motion, 25—Against it, 60—Majority, 35.

The house then went into a committee on the bill, when

Sir John Newport moved a clause, repealing so much of the act of the 4th Geo. IV. as related to the repairs of the church of an adjoining parish, where two parishes were united; the one having a parish church, the other being without one. When this was the case, it could easily be conceived that the parish in which the church had been suffered to fall into decay, had few if any Protestant inhabitants; and it was a great hardship to call on the Roman Catholic population to contribute to the repairs of the church in the adjoining parish.

Mr. Peel observed, that it would be a much greater hardship on the Catholic population, if, when a church had fallen into decay, the diocesan directed a new church to be built, instead of having the necessary repairs done to a church in the adjoining parish, that church being sufficient for the accommodation of both parishes.

Mr. S. Rice observed, that if the diocesan had such a power, then the question was at an

end; but he denied that any such power existed.

Sir J. Newport said, the evil was one of very great magnitude. He knew an instance where two parishes were united, in one of which there were no Protestants, except those who lived at the police station; and yet the Roman Catholic inhabitants were called on to pay for the repairs of the church in the adjoining parish, though it was five miles distant. The whole of this evil arose out of the conduct of the Protestant hierarchy of Ireland, who, in the course of 200 years, had allowed all the churches to tumble down; and they now called on the Roman Catholics to make good those dilapidations which their own neglect had occasioned. He very much regretted to see a question of such importance as the church-rates of Ireland treated with so much indifference by the house.

The clause was negatived without a division.

On the clause in the bill, which gave power to vestries to assess the different parishes for the sum necessary to defray various expenses connected with Protestant churches,

Sir J. Newport rose, and objected to the power thus given. So long as the Protestant corporations were obliged to find the necessary funds, the charge had been comparatively moderate; but when that charge was extended to the Catholic population, it had been increased. He would ask, whether it was just that the Catholic population should be called on to pay for the sacramental bread and wine used in the Protestant church, at the very same time that their dissent from the doctrines of that church occasioned their exclusion from political rights?

The clause was then agreed to, and the report ordered to be brought up on Tuesday.

THURSDAY, APRIL 27.—The report of the Irish Church-rate bill was brought up, read, and the amendments agreed to.

Mr. Grattan proposed a clause for authorizing an assessment for the benefit of the poor and infirm in Ireland.

Mr. J. Smith complained of the want of attention to the people of Ireland. Not only had nothing been done for Ireland, but nothing had been attempted to be done. The distress of the lower classes in Ireland had driven shoals of them to this country, to the prejudice of the working classes here. Some of those Irish had perished, and he had witnessed the misery of others.

Mr. Goulburn opposed the clause, on the ground that it was impolitic to introduce a system of poor-rates in Ireland. With respect to the remarks of the hon. member (Mr. S. Rice) he would recommend him to look at the conduct of the Irish Government; at its efforts to relieve the pressure of temporary distress, and the general administration of the country.

Mr. Monck thought the clause to be of great importance to the Irish people. There was nothing new in its principle, for the acts of the 11th and 12th Geo. III. did make a compulsory provision for the poor of Ireland. In Ireland, without general poor laws, there was not only extensive poverty, but a more dense population. In England, where poor-laws existed, there was not the same injurious proportion of either.

Mr. Dawson opposed the clause, believing it

of vital importance to prevent the introduction of the principle of the poor-laws into Ireland.

The clause was rejected, and the bill ordered to be read a third time on Monday next.

### *Episcopal Unions.*

LORDS, THURSDAY, MARCH 9.—The Earl of Kingston had hoped that this subject would have been taken up by one of the learned prelates, to whose province it more particularly belonged. From the reports upon their lordships' table it appeared that a vast number of unions of parishes had taken place in the province of Munster, not such unions as that of seven religious houses in the city of Cork, which altogether did not extend over half a mile; but of large parishes, extending to a distance of fifteen miles. In one large union, there was only one church, and that same church had been built by a private individual, the ancestor of the present Lord Masey, by whom it was now supported. In the province of Munster, their lordships would find instances of six, seven, and eight parishes united together, with but one church amongst them. Now it was impossible for people to remain of the Protestant religion in a place where they had no church to attend, and where they could not even procure the attendance of a clergyman in cases of emergency. He had been told, that no curate had been seen in the parish of Kilbennie for several years, and the inhabitants were therefore obliged, when they required the performance of any religious office, to send to the rector of another parish five or six miles off. He did not mean by making these observations, to say any thing disrespectful of the clergy. Undoubtedly they had done much: many churches had been built, but they had not funds to build all that were necessary. In moving, therefore, for a committee to consider the present state of the church in Munster, he was rather addressing himself to his Majesty's ministers for the purpose of calling their attention to the subject, and in the hope of inducing them to furnish the clergy with the means of building churches, and perpetuating the established religion. The piety and zeal of the Roman Catholic clergymen in that part of the country were truly praiseworthy; they attended their flocks with the most exemplary attention, while the Protestant inhabitants had no person to attend to their spiritual wants. The noble earl, after referring to the reports before the house, for the number of unions in the dioceses of Cashel, and Limerick, Ardfert, and Aghadoe, concluded by moving for a committee to inquire into the state of the Protestant church in Munster: in Ulster, he said, there was a church in every parish.

The Earl of Harrowby said, that the noble lord had no grounds for inducing the house to accede to his motion. In the report which he held in his hand, he had a complete answer to his observations. He (Lord Harrowby) admitted that the union of parishes was sometimes productive of inconvenience: but not where they had been effected under episcopal authority. Government, however, had not been inensible of the evils complained of by the noble lord. In the twenty years preceding 1822, 170 churches and 102 glebe-houses were built in the province of Munster. In the absence,

therefore, of all information which would justify them in so doing, the house ought not to agree to a motion which was calculated to throw a slur on the bishops of that part of the country to which it referred.

The Bishop of Ferns bespoke the indulgence of the house (as he was unaccustomed to deliver his sentiments in public) whilst he said a few words, as the clerical representative of that part of the kingdom alluded to. As he had none of his brethren to assist him, and the notice of the motion had been so short, he hoped the house would treat the cause with indulgence, in consideration of the weakness of the advocate. He believed that the report before the house contained returns of all the unions in Ireland, with the authorities by which they had been formed. The actual shape and extent of the different parishes were also proved by the documents upon the table. Now the number of acres which a parish contained was by no means an accurate criterion for measuring the difficulties which the clergyman had to contend with in the discharge of his duty. As, for instance, a parish containing 1000 acres might not oblige him to travel more than two miles to see the most remote inhabitant of it; whilst another parish of a much less number of acres might be so shaped as to occasion him to go three or four times that distance. One parish, he knew, was several miles in length and only three quarters of a mile in breadth. His lordship instanced several cases to show that some of the united parishes were extremely poor, and returned nothing to the rectors after paying their curates. He contended that in consequence of the poverty of some of the parishes, the dissolution of the unions would be attended with the greatest inconvenience, and that the better mode of remedying the evils complained of would be by building chapels of ease in those places where churches were wanting. His lordship concluded by expressing his conviction that the survey at present going on in Ireland would furnish his Majesty's Government with the best information as to what measures they ought to adopt with regard to this subject.

The Earl of Kingston, in reply, insisted that he had made out a case in support of his motion, and that the circumstances stated by the right rev. prelate proved it. He mentioned a district in the south of Ireland through which one might travel along the high-road for a distance of 22 miles without seeing a single church. Although, however, he was satisfied that he had fully made out a case, yet as his object in bringing forward his motion was merely to point the attention of the learned prelates to the subject, he was willing to abstain from pressing it.

His lordship accordingly withdrew his motion.

COMMONS. — Sir John Newport moved for leave to bring in a bill to prevent episcopal unions, and to restrain the power of granting dispensations for non-residence to clergymen in Ireland. The bill, he observed, would secure to the Irish people the residence of their clergy in the parishes to which they were attached, and would restrain archbishops and bishops from making unions of parishes for the purpose of providing for some of their friends in the church. The extent to

which this power was carried would surprise the house. There was one instance in which a bishop had united six parishes in one county with one situated in another, so that it was certain the clergyman could not be a resident where the might be most required. He would mention only another case, that a parish producing an income of 500*l.* a year, had been united to another of 288*l.*, and these two to a third of 271*l.*, and these three to a fourth of 720*l.*, and these four to a fifth, the income of which was not specified, but which was said to be equal in amount to the largest of the others (hear). Was it, he would ask, right that such a power should be allowed to be exercised without restraint? Was it right that church property to such an amount should be accumulated in the person of one clergyman, while so many excellent and deserving curates were left without that fair provision to which they were entitled? The bill which he proposed to introduce would also go to prevent clergymen having the cure of souls, and deriving an income of 300*l.* a year and upwards from the living, from holding any other living at the same time; and further it would enact, that any person already holding such living, and being presented to another of higher value, should give up the former.

Mr. Goulburn said, that he had prepared a measure on the subject, to which the *rt. hon. bart.* referred; and was glad to find that in some of the points he had the concurrence of the *rt. hon. bart.* But he did not wish to be understood as intending to support the proposition which related to pluralities.

Leave was given to bring in the bill.

**LORDS, FRIDAY, MAY 17.**—The Bishop of Ferns moved for a return of the value of parochial livings in Ireland. The object of making this motion was for the purpose of showing that the incomes of the Irish clergy had been grossly overrated; for, from a calculation he had made, he found that they did not exceed on the average 258*l.* per annum.

Lord Clifden recommended to the *rt. rev.* prelate to include in his motion a return of the number of Protestants in each parish. By doing so, the house would be made at once acquainted with the revenue of the church, and the amount of its flock.

The Bishop of Ferns was not aware of any means by which such a return could be made.

Lord Clifden thought it might be obtained from the same persons who made returns of the number of Catholics. At any rate, it would not be a very laborious task for any person to make out a return of the number of Protestants in each parish of Ireland, especially in the provinces of Connaught, Leinster, and Munster; and it even would not be found very difficult to make out a list of all the Church of Ireland Protestants in the Presbyterian provinces of Ulster.

The motion was agreed to.

### Education.

**COMMONS, FRIDAY, APRIL 14.**—Mr. J. Smith presented a petition from the Catholics of Ireland, which was adopted at a large aggregate meeting, and he must conclude that it represented the opinions of that

body of the people, because the meeting was attended by several thousands. The petitioners complained that the education of the poor was not attended to of late years. Before the reformation, the lands of the clergy were chargeable with the expense of educating the poor. Since that time a portion of them had been partially educated at the expense of the Catholic body, the rest not at all. The petitioners objected to the course recommended by the commissioners of Irish education, namely, that Catholics and Protestants should be educated in the same schools, and that the schoolmaster should be chosen from the religion professed by the majority. The Catholics could not teach from any book unless approved of by their bishops, and it was certainly improper to force on them books to which they objected. The petitioners, indeed, complained that the house granted money to societies whose views were not those of education but of proselytism, and he was of opinion that some of those societies were particularly obnoxious to that charge. In France much less intolerance was exhibited, and by an edict of Louis XVIII. it had been directed, that no Jewish child should be compelled to read any book not approved of by the Jewish consistory. He lamented as much as any man the credulity and ignorance in which the greater part of the Catholic world was held; yet he contended that it was contrary to common sense and toleration to compel them to read the Scriptures. The education of the Irish poor ought to be allowed to proceed, if not in the way most pleasing to Parliament, in their own way. Something else, however, was wanting. Those who went upon religious missions into the utmost bounds of the East and West, took another course. They began by teaching civilization. They showed the savage how to plant corn and to breed poultry, and to secure the return of the fruits in their season. After conciliating them by kindness, they were able to go on prosperously with the culture of religion. The effect was, that they brought men of a rude and savage nature at their feet. In like manner, if we would convert Ireland, we must first subdue her by kindness. How could the rude and half barbarous people of that country understand the great moralities of a church establishment, to which they had only to contribute rates and pay tithes? They must rather feel exasperated at the riches of the establishment, and the poverty of their own clergy. Unfortunately, all circumstances conspired against the improvement of that people. In the examination instituted by the commissioners of education, a Captain Gordon was asked if he had not been active in proselytism? His answer was, certainly not. He only wished to see established veritable Christianity. He was then asked, concerning this and that particular sect, if he thought their belief veritable Christianity. His reply was, that he believed the Roman Catholic religion to be any thing but veritable Christianity. Thus the cause of religion and education sustained continual injury from the spirit of controversy. The petitioners prayed for a fair division of the money appropriated to Irish education by Parliament, and that they might be allowed to conduct that education in their own way. This he could not but consider as a very reasonable request, and a measure which promised to be safe and beneficial. Nothing was

so deplorable as that the people of Ireland should be educated. All the evils, all the commotions, riot, and bloodshed, which disgraced that country were owing to a deficiency of education. The same thing was observable in London. The outrages in the streets, the savageness and depravity which were so shocking to better informed people, which led the unhappy culprits to forfeit their lives to justice, were perpetrated by wretches who were reared in ignorance, and who never experienced offices of kindness or friendship from any human being. It was matter of authentic history, that religious education in England was once at so low an ebb, that it required assistance from Ireland, as it was most certainly true that Ireland first, of all these islands, received the light of the gospel. He strongly recommended the prayer of the petition to the house.

Mr. *Butterworth* said, that the liberal principles professed by the hon. gent. (Mr. J. Smith) might be applied to the disciples of Tom Paine as well as to the Catholics. Protestantism was interwoven with the frame of the British Constitution, and was inseparable from it. It was not the Irish people, but the Priests, that were adverse to scriptural education. Education was open for them, if they chose to read the Scriptures, and if they refused to send their children to school on these terms, they had no right to complain. Although no money were granted by the house for their education, they might find enough for the purpose among themselves. If they could afford to raise 1000l. per week for seditious purposes, they might easily find a sufficient sum for the education of their own poor. He desired gentlemen to compare the state of the population in Ireland and Scotland, and then consider, that the Scriptures were the basis of education in Scotland. The objection of the Catholics to the Societies was, that they conducted education upon the plan of the Church; but the Catholics had no right to complain of the refusal of money, by the state, to educate them in a religion which was contrary to the principles of Protestantism and the Church. As to proselytism, he knew no reason why the Societies should not openly avow that such was their object. It was a great moral duty to make proselytes to the truth. And with respect to French liberality, what had been the consequence of it? Why the revolution, and the ruin and destruction of the country. Mr. Gordon, who had been alluded to, was a most excellent character, who understood his duty, and acted accordingly. They ought not to allow the Bible to be thus assailed by a side-wind; but should openly avow, and act upon their principles. Popery was a system of errors accumulated on errors, and Parliament ought to do nothing to encourage such a system.

Mr. *W. Smith* differed almost wholly from the last speaker. No man could object more to the doctrines of the Roman Church than he did. He was a friend to truth, and to the inquiry by which alone it could be brought to light: but in selecting it for himself, he must take care not to assume the right of judging for others. It was this error on the part of Popery that led on the reformation, and to that Christian system which he was bound to admit contributed most to the well-being of society. The hon. member (Mr. *Butterworth*) had instanced the case of France as illustrative of the misery of  
 1825. 1826.

infidelity; but the present state of that country afforded any thing but a picture of internal wretchedness. He thought the hon. member was peculiarly unhappy in his illustration, and it was not correct to ascribe the revolution which had taken place in France, to any general feeling of infidelity that influenced the people of that country.

Mr. *G. Bankes* most earnestly desired to see the Scriptures promulgated throughout Ireland. He wished to see the Bible in the hands of the Irish peasant, and he denounced that intolerant spirit by which it was endeavoured to be withheld. The present state of Ireland he considered was owing to the bigotry of the Catholic priests, and the greatest disgrace in consequence was reflected on that body.

Colonel *Trench* said, that the hon. member (Mr. *Butterworth*) and those who advocated his principles had done considerable injury to the cause of truth by their injudicious and mischievous interference. It was wrong to attach to the Irish people a sweeping stigma of bigotry, and it was not true that they blindly followed their priests, for it was well known to those who had intercourse with Ireland, that a spirit of information had gone forth amongst the people; and were it not for priests and enthusiasts who kept down and denounced that spirit, Ireland would now reap the benefit of the increased improvement of her people. But for that mischievous society in Dublin, which took upon itself the government of the Irish people, the children of the peasantry would have had the advantages resulting from a liberal education.

Mr. *Maurice Fitzgerald* saw nothing in the petition under discussion which could at all warrant the extreme rancour displayed by the hon. member (Mr. *Butterworth*). A meddling set of sectarians had established themselves in Ireland, and set up a system of bigotry and intolerance, sowing the seeds of discord wherever they spread themselves, and sounding unnecessary alarm on the most trifling occasions (hear, hear). It was natural that the Catholic clergy should be aroused when they saw their rights invaded, and it was no wonder if they had endeavoured to counteract the influence of that meddling sect. The Catholic clergy, that much calumniated body, with their scanty means, had effected more towards the education of the Catholic population of Ireland than the state, with all its exuberant liberality, had accomplished for the various sects in that country (hear, hear). It was to the sectarians that the religious divisions of Ireland might be traced—those outrageous zealots, who wished to pull down Popery on the one hand, and by opposing episcopacy, the established religion on the other (hear, hear).

On the question that the petition do lie on the table,

Mr. *Butterworth*, after repeating some of his former arguments, observed that as long as the church of Ireland lay dormant, the Catholic priests were satisfied; but the moment it was attempted to give education, the priests rose up to oppose it, and in their efforts to follow up that opposition, they were the cause of all the mischiefs that occurred in Ireland. They intruded themselves into Bible meetings to which they were not invited, and were the occasion of much disturbance, on some occasions attended with no little danger to the promoters of such meetings. He could give one instance in which at a public Bible meeting at Carlow, the priests

attended supported by an immense mob, from whose violence some of the friends of the Bible Society were obliged to fly for their lives; some escaped by getting over walls (cries of no, no).

Mr. *Butterworth* :—" I say, yes, yes; and I can prove the fact, if required."

Sir *J. Newport* stated that the circumstances mentioned by the hon. member as connected with that meeting, were wholly without foundation (hear, hear); and he was enabled to contradict them on most excellent authority—that of Colonel Rochford, who presided at the meeting on the occasion. As to the assertion that the Catholics excluded the reading of the Bible, he confidently stated from his own knowledge that it was utterly destitute of truth. They admitted the reading of the Bible, with the addition of notes and comments; and in this they were borne out by the opinions of some of the most eminent dignitaries of the established church, who held that the Bible ought not to be read unaccompanied with the Catechism (hear, hear).

The petition was then ordered to lie upon the table.

TUESDAY, MARCH 7.—Sir *John Newport* moved for the production of an account of the application of sums granted in the last session for the furtherance of education in Ireland. He called the attention of the house to the extraordinary fact, that while taxes were annually imposed on the people to erect new seminaries of education in Ireland, the existing seminaries in that country were suffered to fall into complete decay. He particularly instanced the case of the school at Middleton, in the county of Cork. In the year 1812 the commission appointed in 1806 to examine into the state of education in Ireland, made a report upon the schools of private endowment. In that report it was stated that the school at Middleton was founded in 1696 by the Countess of Ormond, and that it was endowed by her with an estate of 2000 acres, which, within 20 years after she had made the endowment, was leased out for 200l. a-year by the trustees in whom she had vested it, on a lease of lives renewable for ever, at a fine certain. It was further stated that the estate was worth 2000l. a-year, and that the power of the trustees who had given the leases, to make such leases, appeared to the commissioners very questionable. The hon. bart. then read an extract from the report, in which were described the nature of the master and usher's duty, with the amount of their salaries, and also the number of exhibitions provided for the maintenance of scholars in the University of Dublin. The school, to which was attached a house for the master capable of holding 50 or 60 boarders, had formerly been attended by a large number of scholars, but at present it was without a roof, and in total ruin; the master had retired to Dublin, where he received his salary, and the house which he ought to have occupied was occupied by a sergeant of police. He wished to know how this had come to pass, considering that the endowed schools were placed under the care of the commissioners of education, who were authorized to ask for an advance of money out of the consolidated fund for the repair of such schools as wanted it, upon the security of their surplus rents. He was

greatly surprised at the decay into which this school had fallen, as Middleton was a healthy village, at a considerable distance from any large town, and admirably well adapted for all the purposes of education. He trusted that, whenever the house was called upon in future for grants of money for the furtherance of education in Ireland, it would take care that those grants were made after some settled plan, and would not defeat with one hand the bounty which it dealt out with the other. If it were intended to parcel out the grants in the same manner as they were parcelled out in the last session, he would certainly take the sense of the house on the subject, when the proper season for doing so should arrive. He was now going to move for an account of the application of all the sums granted in the last session. They had all been placed under the control of the Lord Lieutenant, by a clause in the appropriation act. There could therefore be no difficulty in procuring them. He concluded by moving that there be laid on the table of the house, an account of the application of sums in the last session for the furtherance of education in Ireland.

Mr. *Goulburn* was not able to state at that moment the ultimate determination of Government on the subject of education in Ireland. It must necessarily be influenced by the reports which the commissioners might make, and the plans they might recommend. As far as the Irish Government had yet had the plans of the commissioners before it, it had not been backward in carrying them into effect. On this head the house would observe that there was a considerable reduction in the estimates of this year, and he trusted that this reduction would be proceeded with in each succeeding year. With regard to the school at Middleton, he could only say that it never had been under his cognizance, and he could not give the house any further information on the subject. He was aware that at the time the commissioners of education made their report, that school was stated to be in an unsatisfactory condition; but as it was under the direction of private trustees and special governors, they considered it not to fall within the scope of their jurisdiction. With regard to the decay into which the school had fallen, he had to observe that the sum necessary to repair it was 2000l. Now, the surplus of the revenue of the school was 10l. a-year; and how was it possible that an advance of 2000l. out of the consolidated fund could be made upon the security of such a sum? A legal opinion had been taken as to the right of the trustees to grant the lease which they had granted; but it had not been such as to justify any interference to set it aside.

Mr. *F. Lewis* assured the house that the reports of the commissioners of education would all be presented by the time appointed, with the exception of the report on the College of Maynooth, which would be postponed for a year. Great, but, he trusted, not insuperable, difficulties opposed themselves to the plans which the commissioners had hitherto recommended. They had not yet abandoned those plans, and he still entertained hopes that they would be ultimately successful.

Mr. *Plunkett* said, that the Board of Commissioners thought the school of Middleton was not within their jurisdiction, as it was a private foundation, having governors of its own. He had known one master of the school, who was a

gentleman of great ability, and under his direction the school, he understood, was in a very flourishing condition. Since his time, it certainly had fallen into decay.

*Mr. Peel*:—If, as his rt. hon. friend (Mr. Plunkett) asserted, these schools of private foundation, either from the terms of the charter of their incorporation, or from any other cause, did not fall within the operation of the act of 1813, means should be immediately devised for subjecting them to an inquiry as rigid as that which might be extended to any school of public foundation, or under the immediate superintendence of the Government. It never could have been intended by the legislature, at the time that it authorised a commission to inquire into the state of schools of public foundation, that they should totally pass by schools erected by the grants of individuals, when those grants were manifestly intended for the public benefit. Still less could they have intended to pass by private foundations, where the income was stated at £20l. a-year, and leave the whole of that sum to the maintenance of a master, without any attention to the school-house and the scholars. If it was true, as had been stated, that the lands from which such incomes were derived amounted to the number of 2000 acres, which, if properly let, might bring 2000l. a-year, but, from long leases upon lives, produced only £20l. or 200l. a-year, he thought there was an additional reason why the power of inquiry should be immediately extended to schools of every description. And he saw no objection why the present commissioners should not be empowered to pursue that inquiry in the same manner into private schools, as they were already authorised to do in the case of those that were called public.

After a few words of explanation from Mr. Plunkett,

*Sir John Newport* replied, that the person through whose influence these leases had been granted, which cut down properties of 2000l. a-year to less than 200l. was a Mr. Allen Broderick, a distinguished member of both the Irish Houses of Parliament, and a brother of Lord Chancellor Middleton. The state of all the schools ought, in his opinion, to be made a matter of report, which might be laid on the table of the house.

*Mr. Goulburn* begged to observe, that the leases mentioned by the rt. hon. gent. had been made in the year 1710.—The motion was then acceded to.

### *Charter Schools.*

**LORDS, TUESDAY, MARCH 21.**—The Bishop of Ferns moved that there be laid before the house copies of all letters received from charter-schools in Ireland by the Secretary of the Incorporated Society of Dublin, and transmitted by him to the Commissioners of Education, since the year 1824.

*Lord King*:—A complaint had been made of cruelty against an usher of one of those schools. (at Stradbally) the consequence of which was, that he was dismissed from that school. He (Lord King) understood that this person was since promoted to another situation, and with a higher salary.

The Bishop of Ferns said, it was true that the person alluded to had been dismissed on a

charge of cruelty; but he would state the result of that charge. Three indictments had been preferred against him, which were tried the other day in Ireland, the jury being composed both of Catholics and Protestants. The accused was acquitted on the first and second indictments, and the third had been abandoned. With respect to his preferment to another school, he begged to state that there was a school where forty young men were instructed, which had been for some time without an usher. He was sent there, because in point of knowledge he was the most fit person, and where his disposition to cruelty could find no scope, as he was not commanding boys. There was a deadly charge against the managers of these schools for the neglect of religious education. The charge was, that out of a school of 20 boys, none had ever heard of St. Paul. Upon examination, however, these boys were found quite perfect in the Catechism, and in the explanation of it. The Catechism consisted of fifty pages and upwards, and in it there were thirty references to the Epistles of St. Paul by chapter and verse.

*Lord King* said, that as no notice had been given of the rt. rev. prelate's intention of touching on these subjects, he was not prepared to deny his statements. It had, however, been said that at one school of 20 boys, none had ever heard of St. Paul; and but two of Job; and in general they had but a very superficial knowledge of the Scriptures. He wished some day to be named for the discussion of the question\*.

The Bishop of Ferns said, there would be an opportunity for debate, when the report he had moved for was delivered.

**FRIDAY, MAY 5.**—The Bishop of Ferns moved the order of the day for taking the Report on the Chartered Schools of Ireland into consideration. His lordship then went on to give a history of the origin and the constitution of these Schools. The means resorted to for preventing the evils of ignorance were these:—Catechists were appointed to each parish, with power to superintend the schools in all their departments. Books were kept, and the masters entered every thing extraordinary in them. Attested copies of these entries were sent up to the Committee every half year. In these books every casual visitor was requested to write any alteration that might occur to him. If any charge was made against a master, it was examined, and if true, he was dismissed. But these charges were not frequent; and where they had been made, they had not always been supported. On the contrary, their attention was highly praiseworthy; and he had one entry of a visitor, who had given the highest praise to the order and regularity observable among the boys, and to the progress they had made in divine knowledge. Besides these books, there was a half list of the children in the school, headed with the business of each class, and carrying in each column the progress of each child during the preceding half year. There was also a yearly examination of the scholars by the Local Committee, and statements were made to the Secretary of the Incorporated Society of Dublin.—His lordship proceeded to allude to

\* On the several topics alluded to by Lord King and the Bishop of Ferns, see the volume of this work for 1825, pp. 273, 274.

the charge, respecting the treatment of some of the boys in one of the schools. It was stated, that eight boys had been punished in a shocking manner, and left in a lacerated state, and that this punishment had been produced by the malice of an usher. Yet, when these charges were brought before a Jury, out of the three bills presented, two were thrown out, and one was abandoned. The whole of this charge rested on the statement of two boys, one of whom, named Doyle, said, that the boy Best had committed a fault, but it was one that would not have been punished, if the master had not borne him malice, on account of a complaint he had made. Another boy, named Ludden, being asked whether he had heard of any thing which had happened to Best, in consequence of his having complained, answered distinctly, that he had not.—As to the charge of separating children from their parents, he was sorry to say, that that was frequently not an evil, though he might observe, that the majority were not cases of separation, since, out of the 923 petitions for admission into the schools, 662 were from orphans, or from children left only with a father. One-fourth of the children were Roman Catholics, and these were sent voluntarily, since it should be known, that although the doctrine of exclusion was a doctrine of the Roman Catholic Church, it was not a doctrine of all the individuals in that Church, and as they did not think they compromised the eternal safety of their children, they sent them thither.—The next allegation was that of the expence of these schools, which was said to have amounted to 1,000,000*l.*; and it was further said, that about 13,000 apprenticeships were all the advantages which Ireland had derived from that expence. Now that statement was not true, since these children had received the benefits of a religious education, which of course could not have been confined to them, but must have been extended to their families. He trusted he had stated enough to show that the Report of the Commissioners had been hastily drawn up, and that if more time had been devoted to receiving evidence on the subject, there would have been a different Report.

Lord King thought the *rt. rev. prelate* had failed in his vindication, and the rules enjoined the visitation of the schools each week; but it was alleged that that practice had fallen into disuse, and that monthly or quarterly visitations had been adopted. It appeared, however, that this could not be quite correct: for the sum of 2*l.* 10*s.* had been paid to each catechist who made his weekly report so late as 1821. But all the letters referred to by the *rt. rev. prelate* were only occasional. They were written once in nine months, once in ten, and in some cases there was no letter at all. The *rt. rev. prelate* was not satisfied with the report of the commissioners on these schools. He said it was easier to find statements in that report, than proofs in the evidence. The feeling of the *rt. rev. prelate* on this subject perhaps arose from his having spent a great part of his life in Ireland, but after residing some time here he would learn that it was no longer the fashion in this country to defend an extravagant and wasteful expenditure of the public money. More than 1,000,000*l.* had been expended on these schools. There was a very great difference between the church of Ireland and the church of England. The church of Ireland was a missionary church. The clergy of that church were bound by oath

to perform many duties, among which public instruction was a principal. The oath bound them to teach the English tongue, to keep or cause to be kept a school for teaching English to all under their government. It was not more true that the tithe belonged to the clergy, than that instruction belonged to the people. This duty of teaching was, however, attempted to be got rid of by a miserable subterfuge. It was said, that when the schools were founded, masters were to be got for 40*s.*, who could not be got at that rate any longer. But why not increase the salary of the masters in the same proportion as they increased their tithes? Since the schools were established the tithes had gone on increasing, but the wages of the teacher had stood still. This conduct, however, was not confined to the subalterns of the church, but extended to the spiritual staff, though it was more particularly their duty, as *ex-officio* members of the committee of fifteen, to see that the public money was properly applied. Out of thirty-four dioceses there were only ten proper schools. Of the remainder, three were deficient, and twenty-one had no schools at all. It was to be regretted that there appeared in Ireland too strong a disposition to protect all kinds of abuses. Thus, if the master of a school was complained of, it seemed to be considered that he had a vested right in the school, and could not be dispossessed. In some of these schools a sort of slave-labour was established for the benefit of the master. In the Sligo school the scholars were worked, not taught. False returns were also made to disguise the ages of the boys. Thus, it appeared from the report, that boys, stated to be one year fifteen, went back next year to fourteen; one of seventeen became sixteen; one stated to be fourteen became next year thirteen, and in the following year thirteen and a half. Some remained for several years stationary as to age. One boy had gone back from sixteen to fifteen and a half, and finally to fifteen. This was the school of which a *rev. person* spoke in a letter, in which he said, "the healthful appearance of the boys as they went to school on a Sunday morning was grateful to the heart of every one who saw them." In several schools the grossest ignorance prevailed. In one case twenty boys had never heard of St. Paul; others had never heard of Europe. He then alluded to the cruelties at Stradbally school, which had been mentioned on a former occasion. The *rt. rev. prelate* seemed to think that the result of the trial at law had cleared the parties from the imputation. He (*Lord King*) had once heard of a governor having been hanged for cruelty, and but once; but he had often heard of charges of cruelty made against captains of ships and slave-owners, in none of which could it ever be discovered that they were guilty. It was the same with the ushers of these schools; and he must say, that he attached as much credit to one as the other. The usher of Stradbally had been displaced on a charge being made against him, and he had had the unparalleled impudence, in writing to the committee of fifteen, to speak of "a Mr. Leslie Foster," well knowing, no doubt, from the character of that Board, he should be protected, and not punished. What did they do? Why, they actually appointed him to a better situation, and that before the trial; so that they could not have been actuated by the acquittal.

—The condition of the chartered schools had always been in a scandalous state. It appeared that Mr. Howard, in speaking of these charter-schools, talked of his dreadful situation, and that Mr. Disney resigned because he could do no good. The children of Catholics were taken from their parents merely for the purpose of making Protestants of them. That was the motive for delivering them over to these masters. The Irish clergy, who ought to be the guardians of the poor children, not only often neglected their duty, but acted in defiance and in contempt of the law. After the disclosure of so many abuses, he trusted that Parliament would not grant a shilling more for the support of these schools.

The Marquis of *Landowne* said, that it was quite clear that the catechists had grossly neglected their duty. No letters whatever had been received from many of the schools, and only occasional letters from others. The noble marquis read several passages from the papers before him, in support of the charges brought against the schools, and contended that there was not a single letter in those exculpatory documents that did not establish, to the fullest extent, the disgraceful statement of these abuses.

The Earl of *Darnley* (and Lord *Clifden*) strongly objected to the system of these schools, and deprecated the separation of children from their parents, for the purpose of educating them in a different religious persuasion.

The Bishop of *Bath and Wells* allowed that it was impossible to defend the gross abuses which existed in these charter schools. He trusted that the clergy in Ireland, and the guardians of those establishments, would in future look more carefully after their management; but he hoped, at the same time, that what had been proved that night would not be attended with any injury to the cause of education in Ireland; for there was no kingdom on the face of the earth where religious education was more wanted.

The subject was then dropped.

COMMONS, MONDAY, MARCH 20.—On the motion for a Committee on the Irish Estimates, "That the Speaker do leave the chair,"

Mr. *Spring Rice* opposed the motion, and objected to the votes for education in Ireland, upon the ground that they stood in direct opposition to the recommendation of the commissioners' report, and moved as an amendment "That this house concurs in the opinion expressed unanimously by the commissioners of education, appointed in 1826, in their 14th report, signed by the late Archbishops of Armagh, Cashel, the Bishop of Killala, the Provost of Trinity College, now Bishop of Feros, and others, 'that no general plan of education in Ireland, however wisely and unexceptionably contrived in other respects, can be carried into effectual execution, unless it be explicitly avowed and clearly understood as its leading principle, that no attempt shall be made to influence or disturb the peculiar religious tenets of any sect or description of Christian.'"

Mr. *Goulburn* said, that in what Government had done it had merely followed up the suggestions of the Commissioners of Education. The lord lieutenant of Ireland had been most anxious that the experiment pointed out in the report of the Commissioners should be fairly

made; but he did not wish, while such an experiment was in progress, that the whole system of education which had been already acted on in Ireland should be removed; and the Lord Lieutenant's views had received the express sanction of the Commissioners themselves. When he last year brought the vote, for the Society for Educating the Poor in Ireland before the house, he only called for 22,000*l.*, because he thought it was proper not to call for any addition to the grant of the preceding year, until the report of the commissioners was laid before the house. That report was not made until after the period when the sum he had just mentioned was voted, and it then became necessary to supply the defect of that vote. With respect to the Kildare-street association, it was not intended that the expenditure of the present year should exceed that of the year preceding. He proposed to vote a certain estimated sum for that establishment, independent of the sum that would be required to assist, when necessary, in the building of the new schools. That sum was estimated at about 5000*l.*, which might be laid out in building schools, founded on the Kildare-street plan, or on the plan suggested by the commissioners, as might be deemed preferable. Whatever the feelings of the house might be with respect to the Kildare association, it ought not to be forgotten that it had, year after year, received the approbation of Parliament, though not without considerable resistance from some gentlemen who strenuously opposed the proceedings of that body. He could not expect that those gentlemen would agree to the present vote; but if it were rejected by the house generally, such a decision would either stigmatize those who had presided over the affairs of that society, as having neglected their duties, or it would give rise to an opinion, and a most dangerous opinion it would be, that that society was considered as having produced evil instead of good. Now, he would say, that since the Kildare-street Society was formed, its operation had been extremely beneficial, not only to Protestants, but to all classes of the community. Let gentlemen look at the state of education in Ireland before that time, and let them say, taking the whole subject into consideration, whether, since the institution of that association, great and substantial benefits had not been derived to every branch of society? It was not the mere number of children educated by that association that they were to look to; they were to recollect the great moral effects which had been produced all over the country. They ought to remember, that the books now read in the lower class of Irish schools were very different from those that were formerly used in those places. That society, he would also observe, was daily gaining ground, notwithstanding all the opposition which it had met with both here and in Ireland.

Mr. *F. Lewis* thought it right that the usual votes should be complied with, in order to keep the institutions in present operation. It was never the wish of the commissioners that the school establishments in Ireland should be put down; but there was one point connected with the education of the Irish, on which it was impossible to insist too much,—namely, the necessity of destroying the seeds of prejudice and jealousy, in order to induce cordiality and

good feeling between Protestant and Catholic. There was no one point which should be so strongly insisted on as this; and the only way in which that consummation could be effectually obtained was by affording separate religious instruction to the children professing different persuasions (hear, hear). An education which did not embrace religious instruction was of no avail, but it was proper that particular forms of religion should be respected. With this view, it was absurd to place the Bible in the hands of an Irish peasant as a book of instruction. It did nothing but mischief, and tended to defeat the object which it was meant to promote. The Catholic children were taught that the Bible was a Protestant book, and one which they should not read; and, under these circumstances, the forcing it upon them would only create, instead of removing, religious jealousies. Dr. Murray had stated, that the Testament should not be read without proper explanation, in order to explain its meaning; but the Protestant teachers said, "Read it, and take your religion out of it." This plan of forcing the Scriptures on the Catholic pupils must fail, because it was opposed to the feelings and prejudices of the people. Different classes should be selected in the schools, and each class should be instructed by its respective religious teacher (hear, hear). If there could be any means devised by which a proper union of education could be established, he should hail it as a measure of the greatest benefit to Ireland. The way to effect this, was to remove every cause of complaint, and to endeavour to soften the prejudices of the ignorant. The Irish were sore from the recollection of past times, and there were people enough in Ireland who were anxious to keep alive that soreness. The people in that country were suspicious of their neighbours. They herded together, and the animosities of the father was inherited by the son. Was it possible, therefore, that any other feeling but that of distrust should be excited when instruction was offered by those whom they were taught to look on with feelings by no means in unison with that cordial understanding by which all classes and all religions should be influenced? Not that he went the length of some who denied that the sum appropriated to the Kildare-street Society, for the purpose of educating a school of Catholic children, should be transferred, for the same purpose, to a committee of Catholics. Let the system of education be conducted by persons who were not partisans of any sect or creed. He did not say it in disrespect to the Catholics, but he should regret to see any fund placed exclusively in their hands for such a purpose. It would be one means of perpetuating those feelings of distrust and jealousy to which he had already alluded, and which even the heads of the Roman Catholic religion were unable to control.

Mr. M. Fitzgerald contended, that any scheme of education for Ireland must prove abortive if not pursued in accordance with the views of the Catholic clergy, where their flocks were concerned. This was evident from the returns which had been made for where the Kildare-street Society had with the aid of large grants, only educated some 30,000 or 50,000 Catholics, the latter had themselves, without any such grants, educated 340,000 of their community. In the first place, they must not insist upon having the

Scriptures used as a school-book, if they meant to have a union of Catholic and Protestant children in the same school, unless, indeed, they wished to diffuse polemical contention among the people. Besides, it was unnecessary; the Scriptures were not used in this way at the great public seminaries of England, and why should they be so in Ireland, where it was so peculiarly necessary that the religious instruction of children, of every denomination, should be kept as far as possible apart from their ordinary education, and left entirely to be communicated by the parents themselves? As to the general want of education among the lower classes in Ireland, he could assure the house, that in many parts of that country the people had themselves made great progress in acquiring knowledge. With the particular part he knew most of (Kerry), he could assert that the ragged boys who ran over the face of the country, might challenge, he would not say, out of courtesy, that house, but certainly they might the upper ranks of society in England, excluding the learned professions, and the blue stocking ladies, in a knowledge of algebra, Greek, and Latin. These boys he had himself frequently seen with their Homer, Cicero, Horace, and mathematical books, displaying the greatest proficiency. Lord Shelburne had on a former occasion very properly said, that it was not literary education which the people of Ireland wanted, but the diffusion of useful and practical habits.

Mr. Peel:—The real question was, first, under what principles education in Ireland should be superintended; and next, what was to be done with the existing establishments for that purpose, until better were formed? They were all agreed, he apprehended, that the best system would be one which worked under regular, permanent, and responsible parliamentary commissioners. As to the mode of education to be pursued, he was much disposed to agree in the opinion of Dr. Murray (the Catholic Archbishop of Dublin) that Protestants and Catholics might be educated together in one common school, provided each were left to receive religious instruction from their particular pastors. At the same time Dr. Murray very properly admitted, he saw no objection to such a compilation from the Scriptures for school purposes as would embody some of the great principles of their common faith, in which both Catholics and Protestants concurred. Then, as to the existing institutions for purposes of education, imperfect as they were, it would not be politic to take away from them all support before better were established. When he (Mr. Peel) was Secretary in Ireland, he had drawn up a bill to carry into effect a comprehensive system of education in that country under the superintendence of seven or eight able commissioners; and he was only diverted from his purpose by the opinion of other gentlemen connected with Ireland, and who were his political opponents, who dreaded the alarm that might be felt by the people, were their education to be managed by a Government board. Finding, however, that a society (the Kildare-street Society) was in existence composed of persons of all religions upon a comprehensive plan, Government had thought proper to select that society as the instrument for carrying into effect the recommendation in the 14th Report of the Commissioners of Education, which would have been the object of his bill,

had he pursued it. Now, whatever objections might have arisen to the proceedings of this society, it was on all hands admitted, that it had diffused to a great extent useful and valuable books among the community. The number of scholars they educated might be overrated; but there could be no mistake in the information they conveyed through the spreading of valuable books; but even as to the amount of scholars, take it at the *minimum* of Catholics mentioned, and at least to that amount they must be admitted to have done good. From the reports of the society respecting their circulation of books it appeared that in 1818 they had distributed of books, admitted upon all hands to be unobjectionable, 50,000 copies; in 1820, 123,000; in 1821, 153,000; in 1822, 185,000; in 1823, 106,000; in 1824, 191,000; and in the very last year, 172,816. He would implore hon. members therefore not to cast a stigma on a society which had done great service: which stigma, he thought, must be implied by affirming the proposed amendment. He did not know whether he correctly understood the right hon. gent. who spoke last, in supposing him to have expressed a wish that education should be conducted in Ireland without religious instruction. If that were his opinion, he (Mr. Peel) could not concur in it. He had no wish to see, and he hoped he never should see in this country, religious instruction omitted in the education of youth. He had no desire to see a set of young philosophers deriving their morality from any other than a religious source. Neither did he wish to see young ragged Irishmen walking through the country with Ciceros and Virgils under their arms, and studying those authors, when they might be more usefully engaged in acquiring an education more suited to their condition. He begged that the hon. member (Mr. Rice) would not press his amendment; for if that were the case, he had no alternative but to reject it, and he was extremely anxious that there should not appear to be any difference of opinion on this subject.

Sir J. Newport contended, that the amendment would not tend to cast any slur on the Kildare-street Society, because that institution professed not to interfere with the religious opinions of the children. The rt. hon. bart. proceeded to point out the great inconvenience which arose in some of the charity-schools from the want of a proper supply of books. A gentleman who visited one of those schools found a volume of *Roderick Random*, used by one of the boys as a school-book; and on inquiring why such a book was allowed, was told that the boys brought any book they could get, in which to learn to read.—With respect to the system of religious education, he could not see how any difficulty could arise, in allowing one day out of the six, for giving religious instruction to the children separately according to their respective creeds, and leaving them on the other days to receive general education in common. Looking at the principle in this light, he could see no evil as likely to result from the adoption of the amendment.

Mr. Butterworth said, that if the Bible was held to be a bad book, he thought it ought to be excluded from all schools; but if it was admitted to be a work of Divine inspiration, it was too much to assert, that any evil could arise to the country from its circulation. The hon. member proceeded to read a long string of re-

solutions entered into by some Catholic schoolmasters in Armagh and Monaghan, in which they approved of the circulation of the Scriptures among old and young, without note or comment; and mentioned the circulation of such Scriptures (the Roman Catholic version) by the Irish Society as one of the greatest boons which could be conferred on Ireland. These were also the sentiments of a large portion of the people of Ireland, and under those circumstances he thought that every encouragement should be given to those societies by which the Scriptures were so circulated. It was, however, to be regretted, that the Irish priests were opposed to the introduction of the Scriptures without note or comment. The sacred Scriptures—he spoke chiefly of the New Testament—were quite plain and easily understood, and he thought they might be safely intrusted into any hands without note or comment; and without them, it was the opinion of those best acquainted with Ireland, a strong moral feeling could not be impressed on the people of that country. The want of a moral and religious education among the lower orders had been complained of by many of the judicial authorities in Ireland. He would mention the instance of a learned judge, who in his charge to the grand jury of Cork, complained of the general prevalence of crime, and said that he was tired of condemning persons for crimes, without producing the effect of deterring others; but he feared any system of punishment would be ineffectual for that purpose, so long as the moral and religious instruction of the peasantry was neglected.—In conclusion, he observed, that he was sure the nation would never consent to any system of education not founded upon religious instruction; and he therefore would protest against the adoption of the amendment, which would seem to disconnect the two.

Mr. C. H. Hutchinson:—There was no objection on any side to religious instruction; the only objection was, to its being made a part of public education in Ireland, which it was not in England. The system of proselytism, on which it was attempted to conduct education in many instances in Ireland, would not succeed, and to the prevalence of that system might be traced the indisposition of the Catholics in so many cases to send their children to the public schools. As to the general education of the people, he would admit that a large body of them were yet in ignorance; but it was a most gross libel to charge that ignorance upon the Catholic clergy. The ignorance which existed was the effect of the long-continued misgovernment of that country. If the hon. member (Mr. Butterworth) wished to know why education was so much neglected in Ireland, he would refer him to the bloody and dark pages of her history (cheers). If education was deficient, he would ask the hon. member who it was that had impoverished and plundered Ireland, but the same class of persons who now came forward to educate the people under a vicious system (cheers). If he would turn over the records of that country, he would find that formerly it was death to a Catholic parent to send his child abroad to receive that education which was denied him at home (cheers). If the hon. member meant to assert that the Catholic priests neglected the education of their flocks, he would tell him, that it was a gross and scandalous libel. Neither was it true that the Catholic

priests denied their flocks the use of the Bible; but they say that in the Bible there are many things unfit to be put into the hands of youth, and therefore they will not allow them to peruse it without some guiding marks. They therefore put the Bible into the hands of their parishioners, accompanied by notes of the ablest commentators. The hon. member seemed to think that nothing more was necessary than that the Bible should be cast among the people, and that they would work out their own salvation. He held, apparently, every man to be a blockhead who could not do so; and if he found any thing struck a man with horror in the Bible, the hon. member considered him irredeemable. He could tell gentlemen opposite that no possible good could be effected for Ireland by connecting education with religion; and if they thought, by any side wind, that it was possible to undermine the Catholic religion, they would find themselves very much mistaken. The best way was, for the government not to interfere with religion, and allow the people to worship God after their own method.

The amendment was then withdrawn, and the Speaker left the chair.

Mr. Goulburn moved that the sum of 19,500*l.* should be granted to the Protestant charter schools in Ireland, without any fee or deduction whatsoever.

Mr. J. Smith objected to the grant, on account of the abuses which prevailed in the management of those schools.

Mr. Goulburn said that the vote was now reduced in order to provide for the gradual reduction of the number of scholars. Provision would also be made for the reform of abuses. The commissioners had indeed found considerable difficulty in getting rid of them, but it would be hard that the poor children should be turned adrift on this account. Prosecutions had already been instituted, and were now pending against several of the masters, and he conceived that the remedy would be best effected by submitting the conduct of the offenders to the public tribunals. Of course he could not (as the hon. member had called upon him to do) be responsible for the good conduct of all the schoolmasters in Ireland, but he would pledge himself to exert all his vigilance in detecting and bringing to punishment all future misconduct in these individuals.

Sir J. Newport complained of the great inactivity of the local committees, and observed, that during a period of nine months, they had not made a single report to the committee of fifteen. It was now more than seven months since the house had come to its resolutions respecting the abuses in these schools, and still not one single prosecution of any of the offenders had as yet been brought to a close. He could not, therefore, feel any great confidence that these malpractices would be abolished, when he saw those who were charged with having perpetrated them still continued in office.

Mr. Hume said, that this was a pretty specimen of the manner in which Ireland was governed, as also of the manner in which the extravagant grants for that country were applied. They were now called upon to vote grants which amounted altogether to 371,000*l.* for Irish charities. The greater part of these charities were placed under authorities which Government had no means of controlling; and

thus it happened that the grant of money to support them was, in general, a gross abuse of the funds of the public. In 1822 the aggregate of these votes was 322,000*l.*; and it had gone on increasing progressively from year to year, until it amounted at present to 371,000*l.* The amount of money voted to the charter schools in 1800, was taken upon the average vote of the three years preceding the Union. It was then 13,000*l.* In 1807 it had increased to 20,000*l.*; in 1813 to 30,000*l.*; in 1817 to 41,000*l.*; in 1818 it decreased considerably; but it had now raised itself again to 19,000*l.* The aggregate amount of the sums voted for these useless and mischievous schools, since the Union, was 732,568*l.*, independent of the funds which they derived from private estates—which, by the by, were so mismanaged, that they did not produce more at present than they did in 1796, though every man's private estate had trebled in value since that time. Those funds amounted to 183,000*l.*; so that, altogether, 916,000*l.* had been spent, in the course of twenty-five years, upon these idle and mischievous schools.

Mr. Monck could not see why these schools should be provided for out of the public funds, when similar schools in England and Scotland were provided for out of private funds. He would place a land-tax of 6*d.* or 9*d.* in the pound upon Irish landholders, for the purpose of supporting these charities; and he would do this the more readily, as the Irish gentry were less burdened by taxes (having neither poor-rate nor land-tax to pay) than the landholders of any other country.

Sir John Newport, on the suggestion of Mr. Hume, moved, as an amendment, that the money be granted to the Lord-Lieutenant, for the purpose of providing for the maintenance of these children, with due regard to the future reduction of the establishments themselves.

Mr. John Smith:—Conduct had been suffered to pass unnoticed in these schools, which had filled him with disgust and abhorrence. There had been a strange mismanagement of their funds, and gross corruption on the part of one of the secretaries belonging to them. He therefore thought that the house was called upon to mark the behaviour of the commissioners. The amendment just proposed seemed to cast a reflection upon them, which they well deserved; and for that reason he should give it his decided support.

Mr. Goulburn said that the persons employed in these schools had undoubtedly misconducted themselves; but contended that those who had employed them had not participated in that misconduct. He was averse to passing sentence upon the commissioners without giving them a fair trial; and for that reason he should certainly oppose the amendment.

The house then divided. For the original motion, 42—Against it, 19—Majority, 23.

Mr. S. Rice then objected to the grant of 9,000*l.* for the Society for Discountenancing Vice in Ireland.

Mr. Hume said, that since 1801 this vote had increased progressively from 300*l.* to the present amount. He, therefore, moved as an amendment, that 7980*l.* be substituted for the original vote.

The house divided. For the amendment, 11—Against it, 37—Majority, 26.

WEDNESDAY, MARCH 28.—Mr. *Goulburn* moved that the sum of 25,000l. be granted in aid of the society for promoting the education of the poor in Ireland, for 1826.

Mr. *Hume* complained that the committee, comprising several bishops of the Irish church, had allowed themselves to be made parties, at least, to the fabrication of untrue returns. It was not a little remarkable, and it ought to take away the confidence of the house, to observe the manner in which the returns had been made out. From some most unaccountable casualty in the numbers, it happened that in no instance had the scholars been in any proportion less or more than seventy to a school. This was the exact computation throughout the provinces of Ulster, Munster, Leinster, and Connaught. He was now quoting from the returns of 1824, not having those of 1825 in his immediate possession. Of course it was impossible to put any faith in such returns. By the same returns, the whole number of scholars was given at 102,000. By the amended returns, they were found to be no more than 50,000. The number of schools was by the former return 1400; it was now known that they were not 800. He complained of the wild abuse of the money granted in the mode of its application. For a registrar, superintendent, and twelve clerks, 1174l. For ten inspectors, 1122l. For gratuities to teachers who have deserved well of the society, 9400l. This was a system which ought to be stopped without further delay. He did not wish to stop the vote at present; especially as there was a commission now sitting, and in active inquiry into the subject of Irish education. But with the reduced numbers of schools and scholars, there could be no reason for the present sum. He proposed as an amendment, to reduce it from 25,000l. to the amount voted last year, 22,000l.

Lord *Milton* did not know but that the committee could give some explanation of the cause which had brought exactly seventy scholars into every one of these schools; for the calculation of his hon. friend did not apply merely to the division of the provinces, but to the schools of every one of the thirty-four counties. Until the house had some such explanation, it would be utterly disgraceful to continue to vote so large a sum of money, as the returns were, from their very nature, void of credibility.

Mr. *Butterworth* said, that the Kildare-street schools had done more good for Ireland than the hon. member (Mr. *Hume*) was likely to do in 20 years, should his life be spared so long. He could not readily explain how the returns had been made out to tally with a particular number of scholars. Perhaps some general average was taken. At any rate, he was ready to repeat what he had said on a former night,—that it was not possible to conceive that so respectable a body as that committee, would lend themselves to any fabrications, or that they would be parties to telling stories. They were men of the highest character; not clergymen of the church of England only, as the hon. gent. would have the house to believe, but men of many other Christian persuasions. There were several Quakers in it; there was a physician, Dr. *Barroughs*, a man of high and unimpeachable character and eminence in his profession; and Mr. *Jackson*, a respectable barrister, was secretary. Surely he must believe in the honour and integrity of these persons, at least, &c. 1826.

as readily as he could trust to the representations of the hon. gent. Let the hon. member, however, try the matter fairly. Let him put his allegations in black and white, and send them to Dublin, and then, no doubt, they would be sufficiently refuted. As to any sudden diminution of the numbers, that was readily accounted for by those who knew the state of the country. There were continual alterations arising between the Roman Catholic clergy and the managers of the schools, as to the propriety of using the Bible as a school-book. A most respectable friend of his, in Ireland, supported several schools for the education of the children of the Roman Catholic poor, at his own expense. A disagreement took place upon the ordinary subject, and, through the influence of the Catholic priests, there were 500 children withdrawn from them in one week. It was quite possible that 50,000 children might be withdrawn from the Kildare-street schools almost all at one time, so great was the Roman Catholic influence.

Mr. *F. Lewis* said, that the number of pupils returned by the society was made for the year 1824, and although they had stated the number to be 100,000, that calculation had been made with reference, not to the number of pupils at present instructed, but to the number of pupils which appeared upon the rolls of the different schools. Although he admitted that it was wrong to make such a return, he begged to hear testimony to the high respectability of the managers of the Kildare-street Society. The honour and integrity of those gentlemen had been most unfairly attacked, and it was but justice to vindicate their characters from the stigma attempted to be fixed upon them.

Mr. *Hume* did not wish to cast any reflection on those gentlemen individually; but in their collective capacity they had certainly committed errors. How were those errors attempted to be reconciled? According to the report of the society, the number of children educated by them was 100,000, while in point of fact it was little more than half that amount. The report of the managers was, then, at variance with truth. It was in fact an unfounded statement. With respect to the share which the Roman Catholics had in the management of the society, it appeared that there were only two gentlemen of that persuasion who were connected with it, one of whom was dead (a laugh). Was it therefore to be expected that the Catholic population of Ireland would suffer their children to attend those schools, the managers of which were, with one exception, Protestants? An alteration in the system was loudly called for, and he hoped it would take place at no very distant day.

The vote was then put, and carried.

### *Irish Poor.*

LORDS, WEDNESDAY, FEB. 15.—The Earl of *Darnley* wished, before the house rose, to explain something he had said a few days ago relative to a proposed provision for the Irish poor. What he said was, that he should be sorry to see the abuses of the English system of poor-laws applied to Ireland, though he wished it were possible to make some provision for certain cases of distress. It was shocking to learn, that in the present state of civilization, it was possible that in any country of Europe

an individual should be suffered to die of want. He had, however, lately read in the Irish papers an account of an individual dying from actual want in the streets of Dublin. A noble lord had, last session, given notice of his intention to submit to their lordships a proposition for making a provision for the poor in Ireland, and had moved for papers calculated to afford information on the subject. That noble lord (Lord Carbery) he hoped would take a proper opportunity for bringing the question before the house. If, however, the noble lord did not, he should feel it his duty to call their lordships' attention to the subject. He was perfectly aware that no legislative project could cure the evil under which Ireland suffered, and that the only certain means of relief for pauperism were to be found in employing labour. Nevertheless, he thought it might be made a subject of deliberation, whether some modified system ought not to be adopted relative to the poor in Ireland.

The Earl of Limerick expressed his astonishment that any noble lord should think fit to stir a subject fraught with such mischievous consequences as a proposition of introducing the poor laws into Ireland. He was surprised, too, to hear the kind of reason which had been suggested for this extraordinary measure. His noble friend had read in an Irish paper an account of a person having died of want in the streets of Dublin; but in spite of the poor laws of this country he had also read in the English newspapers of persons dying of starvation in London. It was certainly possible, in the present state of society, that individuals might suffer the greatest privations, but was that a reason for introducing into Ireland a system of law which had been found most burdensome, demoralizing, and mischievous in this country? Ireland was now suffering from an overgrown and unemployed population; but if the English poor laws were to be introduced, and the people given to understand that all the children they produced would be provided for by the public, the increase of the population would soon be most alarming. The clergy would profit by it, for there would be a general rush to the priest to get married. It had been said by somebody that Ireland was used to acts of forfeiture, but he could assure their lordships that the introduction of the poor laws would be a general act of forfeiture of all property whatever. Why should the noble lord wish to throw more inflammable materials into the caldron which was now boiling, and might soon boil over?

The Earl of Darnley again explained, that all he meant to state was, that it would perhaps be worth their lordships' while to consider whether some modified provision might not be made for the poor in certain cases.

COMMONS, THURSDAY, MARCH 23.—On the question that the report of the committee of supply be brought up.

Mr. Hume expressed his decided objection to the principle of granting money for the support of charities, and concluded by moving the following resolution as an amendment:—"That when the principle of supporting local charities and other institutions at the public expense is extremely questionable, and the present distressed state of Great Britain is considered, it becomes the imperative duty of this house to institute an inquiry before they proceed further in voting to the amount of 371,589l. for the support of local institutions in Ireland; more

especially so, when no less a sum than 171,261l. is required in the present year for the support of the charitable institutions, for which the Irish Parliament, on an average of the six years from 1794 to 1800, voted only 47,284l."

The Chancellor of the Exchequer said, it never could be pretended that the votes which the hon. gent. opposed were not liable to objection on the score of principle, and if the thing were to be done now, for the first time, he could conceive no process of reasoning which could induce him to agree to it. The hon. gent. should, however, recollect that the maintenance of those charitable institutions was provided for by one of the articles of the Union.

Mr. Hume:—Only for twenty years.

The Chancellor of the Exchequer:—That was true; but it would be unbecoming in the legislature to act so strictly upon the letter of the law as the hon. member wished. It would create great inconvenience and distress if the charitable institutions were to be suddenly abolished. He certainly wished to reduce them gradually, as far as was compatible with the feelings of humanity, which should not be altogether discarded for the purpose of substituting the cold doctrine of strict propriety (hear, hear).

Mr. Hume said, that he placed no confidence in the professions of ministers, because they had done nothing towards the reduction of these establishments for the last six years.

The house then divided.—For the amendment, 6.—Against it, 60.

The report was then brought up.

On the vote for granting 31,000l. for the Foundling Hospital of Dublin.

Mr. Hume protested that he saw no reason why England should pay for the bastards of Ireland. The only effect of this institution was to promote the production of bastards, and the house, in voting money for such a purpose, became *particeps criminis*. Four years ago, the rt. hon. Sec. (Peel) had declared the establishment to be a nuisance; and still the votes for supporting it went on increasing. He concluded by moving, as an amendment, a resolution reprobating the policy of Foundling institutions.

The Speaker said, that the amendment was not admissible in its present form, because it professed to be a resolution of a committee of supply, whereas it was only a resolution for the adoption of the house on the bringing up of the report from a committee of supply. It was quite at the discretion of any member to move an amendment on the bringing up of the report of a committee of supply, and upon the second reading of any resolution contained in that report. But the amendment must be in *pari materia*. There could be no addition in the way of sentences made to the resolution; for if such an amendment could be carried by the house, it would professedly be part of a report of a committee of supply, which in fact it was not.

Mr. Hume then moved that the sum be reduced from 31,000l. to 27,000l.

A division took place.—For the resolution, 32.—For the amendment, 4.—Majority, 28.

### Emigration.

TUESDAY, MARCH 14.—Mr. Wilmot Horton rose to move for a select committee to inquire into the subject of emigration—a subject

which had engaged the attention of a committee during the last session of Parliament, when there had also been a vote of 30,000*l.* for the expenses of transporting emigrants from Ireland. In 1822, 868 persons had been conveyed from Ireland to Canada, averaging about 22*l.* 14*s.* 6*d.* for each emigrant. He was happy to say, that the persons who had been sent out were now in a state of great prosperity, and the experiment of Government had so far answered every expectation. The emigration of 1825 had been on a larger scale. It had consisted of 656 men, 524 women, and 848 children, making altogether 2028 persons. The expenses of this emigration had not exceeded the ratio of the former experiment. Perhaps the expenses might be reduced to 20*l.* per head, and for this sum a person could be placed in Canada in a situation infinitely preferable to that from which he had been removed in Ireland. He begged the house to understand, that in no instance had any person been removed at the public expence, unless he had been found in a state of absolute destitution. The details of the whole of the proceedings would be found in the Appendix to the Report of the Committees of 1823 and 1825, and he should not, therefore, trouble the house at any considerable length. The experiment of 1825 was in a process of success, as far as any calculation could be made. Gross misrepresentations had been made upon the subject, both in this country and in the Canadas; but he was happy to state, that he had received letters from the emigrants, which had totally refuted the mis-statements that had been put in circulation. In a letter dated 22*d.* Jan. of the present year, from the Province of Upper Canada, the writer stated that the emigrants were all settled upon their lands—that they were perfectly contented—that they were making the greatest progress in clearing and cultivating their farms, and that not a single instance of riot or outrage had occurred amongst them. A letter had been inserted in the Canada Papers, by Mr. Fitzgibbon, a gentleman of family and respectability; who, in consequence of the misrepresentations that had been made upon the subject, had had communications with the emigrants; and the result of his inquiries was, that they were going on extremely well. A letter from the Superintendent of the emigrants, dated 13*th.* Jan. gave a very favourable account of their progress in forming their settlement. Col. Talbot, in a letter dated 16*th.* Sept. 1825, represented that the emigrants were making great progress in farming, and that they had already been able to raise a produce beyond their consumption. The state of these settlers presented a most happy contrast to what had been their former conditions in Ireland. It had been given in evidence before a committee of the house, that in Ireland these people had been in a state of the utmost possible human misery, and that they were sunk to the lowest depth of degradation. It was highly gratifying to reflect that they had, at so small a sacrifice on the part of the public, been able to transport these people from such vice and wretchedness, into a state which called forth their industry, and converted them into social and moral beings. He was particular in making this statement, because the hon. members (Mr. Hume and Sir F. Burdett) had predicted, that the plan of sending these emigrants to Canada could never succeed. He wished it, however, to be understood, that the Government had not adopted this plan as a system

which they were to follow; they had only pursued the measure by way of experiment, and in order to create an example which others might follow. But the whole subject could be thoroughly sifted in the committee, and it could there be ascertained whether the Government could persist in this plan of emigration, without any improper sacrifice of the national funds; and whether, by these means, they could remove the redundant population of Ireland, and perhaps of Scotland. The subject was connected with the general question of Colonization. It had been stated, that the exports at present from Great Britain to the United States of America, were seven times as great as they had been immediately before the American War; and an inference was drawn, that we could not do better than get rid of our North American Colonies. He could, however, deny the premises, for our exports were very little more than one half greater than what they had been prior to the American Revolution. The people of the United States, on an average, consumed of the manufactures of this country, at the rate of only twelve shillings per man; whilst the consumption of the inhabitants of our own Colonies was at the rate of two pounds per man. From this it was evident, that we ought to increase the population of our Colonies, as far as it could be done, without encroaching on the interests of the people of England. Mr. M'Culloch had given his evidence in favour of this principle, before the Committee. The question had been put to him in the following words:—“If it be admitted that a man, a woman, and two children, being in a state of hopeless poverty, cannot be sustained in Ireland, on an average at five pounds each person, and that they can be removed to Canada for 22*l.*, and can be settled and provided for there, at four years' purchase (of their support in Ireland), would it not be advantageous to transport them to Canada?” To this question, Mr. M'Culloch had replied, that the money would be judiciously laid out, provided that means were taken to prevent the reproduction of the population in Ireland. Mr. M'Culloch had given it as his opinion, that, under the present circumstances of Ireland, the Government ought to lay out large sums of money in removing the surplus population of Ireland, provided that the landlords gave security to Government that the places of the people removed should not filled up on their estates for a given period of time—about twenty years. The subject of emigration mixed itself up with that of the colonial system; and if it were true that in our trade with our colonies both parties were benefited, it was clear that by means of emigration we should be doubly increasing the aggregate profits of the empire. He threw out this, because there seemed to be a disposition to impeach the present colonial system. He hoped that this question would be brought forward in a distinct shape, in order that it might be ascertained whether the system of our ancestors was to be departed from or not. He put it to the house, whether a measure which seemed to convert a riotous peasantry into a class of industrious farmers and yeomen, was not deserving of consideration at the present moment, when we were devising improvements in our criminal code, and endeavouring to lessen crime. He concluded by moving “that a select committee be appointed to inquire into the expediency of encouraging emigration.”

Mr. Hume would not oppose the motion, for

he thought it highly necessary that a fair inquiry should be instituted upon the subject; as it appeared to him against all principle that the country should be paying at the rate of 100l. per family to transport the peasantry of Ireland to any other part of the world. He thought it would be much better if the Government would give the 100l. to the poor people at once; as it would be sufficient to settle them in a state of comfort and of useful industry at home. The opinions of Mr. McCulloch had been unfairly quoted. The question put to Mr. McCulloch was, "what number do you consider it would do good to remove from Ireland in her present situation—would the removal of 100,000 persons relieve the distresses of that country?" To this the answer was "no, it would be a very inconsiderable relief." On being asked "if the removal of 500,000 persons would produce benefit?" He replied, "that the removal of 500,000 persons might produce an effect on the population of 7,000,000, but the effects would not be very beneficial, for they could not prevent the re-production of a population in Ireland, the number of the people always being in the ratio of the means of subsistence." The sum of 10,000,000l. of money applied in this manner, would produce no benefit beyond a period of one or two years. He thought the proposition altogether absurd, unless the plan was carried to an extent far beyond what the country could support. But the opinions of Mr. McCulloch were at variance with those entertained by persons of the highest authority, and to whom he (Mr. Hume) was disposed to pay the greater deference. He (Mr. Hume) thought, however, that the sending of the emigrants to Canada might be of great benefit to that Colony, and that, under a better and more liberal system, the colonies and the mother country might be of benefit to each other. With respect to the calculation of the exports to America, the hon. member (Mr. W. Horton) was altogether in error. If we exported more in proportion to our own colonies than to the United States of America, it must be taken into consideration that, under our present system of restrictions, we were compelled to take at a high price from our Colonies, worse goods than we could purchase in other markets at a lower rate.

Mr. Spring Rice supported the motion, but reprobated the Government's converting the selection of emigrants into a political job.

Mr. Bernal stated, that in some cases, he understood, emigrants had been loaded with heavy expenses by the local Governments, in addition to the sums paid for their transport and provision. He hoped this would be inquired into and prevented.

Mr. Wilmot Horton replied, that the system, in the respect referred to, had been entirely changed, and the whole subject of those expenses would come before the committee.

Mr. Alderman Wood knew that there were some thousands in the city of London who would be happy to accept of any boon of this kind offered by the hon. gent. He would engage to provide the hon. gent. with ten or twelve applications a day for the next twelve months.

The committee was then appointed.

FRIDAY, MAY 12.—Mr. M. Fitzgerald was anxious to ask the colonial secretary if he was aware of the charges which had been imputed in several public journals against the emigra-

tion committee, now sitting, accusing it of an intention to have recourse to compulsory measures, in order to induce the poorer classes of the community to emigrate. A more false or scandalous imputation, or one likely to have a worse effect, could not be imagined. So far from having any idea of enforcing emigration, the committee never contemplated any plan for emigration, in which the application should not be made by the parties.

Mr. W. Horton had no doubt but that these publications had been issued for the worst of purposes. The fact was, that there were at present above 1000 applications before the committee, of persons who were most anxious to emigrate. But he was happy to say that the report of the committee would be made public shortly, and then a complete refutation would be given to these base and groundless calumnies.

### *Irish Newspapers.*

TUESDAY, MARCH 7.—Mr. Hume rose to move for a return of monies paid for the insertion of proclamations in Irish newspapers. This, which had formerly been a considerable item, he had got reduced to about half; and its present amount was about 7000l. a-year. In 1821, he moved for a return of a similar description, and he now wished to have the account continued to the present time. His object was to shew that this money was chiefly applied for purposes of bribery—he did not use law phrases, but he wished to adopt language so plain that nobody could misunderstand him. By the return of the 7th May, 1821, it appeared that the division of this money was extremely unfair, because the greater part of it was given to papers which had the least circulation; while some papers which had singly a greater circulation than all the others put together, did not receive one shilling. The return which he had, was, however, inaccurate; as it did not shew how much of the money paid by Government was for advertisements, and how much was for proclamations. He, therefore, moved for a return of the number of stamps issued to each newspaper in Ireland during the last five years, with the amount paid to each newspaper for the insertion of advertisements, and the amount paid for proclamations (distinguishing each), out of the money voted by Parliament for publishing proclamations in Ireland.

The motion was agreed to.

FRIDAY, APRIL 21.—On the motion for granting 6000l. for printing proclamations, &c. in the Irish newspapers.

Mr. Hume said that this vote was quite uncalled for, and should not be allowed. He had lately moved for a return of the sums allowed to the different papers in Ireland; and the conclusion might naturally be, that the largest sums for proclamations and advertisements would be allowed to the papers of greatest circulation. No such thing. It appeared that the *Patriot* had been established by Mr. Wellesley Pole, when Irish Secretary, to oppose the *Correspondent*, then an opposition paper; and that 1200l. of this money had been given to the *Patriot*. Soon after, the *Correspondent* turned, and received 7 or 800l. At present, the *Correspondent* and *Patriot* had about 1300l. of this money between them. These and other papers received money, not according to the business

done, but for inserting news from the London papers, and from the *Gazette*. In 1819, 519l. was charged by one paper, for inserting news from the *Gazette*; and in some of the papers, proclamations were inserted twenty-eight, sixteen, and fifteen times. He was, however, informed, that lately they had not been inserted more than three times in any one paper. In looking at the printed papers, it would appear that the sums had been made up to the papers to much the same amount in each year. It appeared that money was paid to papers in the names of members of parliament; for 1801. had been paid to an hon. member for the *Kerry Evening Post*. The regular bargain seemed to be, that as long as the paper supported the Government, the usual sum would be made up to it in some way or another. He then stated several instances in which papers of small circulation had received considerable sums; others, of great circulation, received in some years little, and in other years nothing. The *Athlone Herald*, a paper the circulation of which was limited to a very small number of impressions, barely 1900 stamps in the year, received 113l. for advertisements. The *Patriot* published 84,000 numbers yearly, and received 832l.; while the *Evening Mail*, a paper circulating 360,000 copies, did not receive one farthing of the Government money. Now was this fair: The *Mayo Constitution* published yearly 16,150 stamps, and received from Government 115l. a-year. The *Wexford Herald* used about 1400 stamps annually, and received 10l. for advertisements. But the *Dublin Morning Post*, publishing 202,000, copies, received nothing; and the *Dublin Evening Post*, a paper that used 242,000 stamps annually, received only 13l. of this vote. Then the public boards employed the Government papers for the insertion of their advertisements, and no others. He hoped to be able to prove, if he were allowed to go into a committee on the subject, that the present hon. Sec. for Ireland, on the reduction of the sum allowed for proclamations, had been obliged to apply to the commissioners for widening the streets of Dublin, to make up the usual sums for the papers, according to contract (cries of no, no! and a laugh from the Treasury Bench.) Well, he still thought he should be able to prove it; and he also thought he could prove that the Master in Chancery (Mr. Ellis) behind the Treasury Bench, made it a point to insert his advertisements in the Government papers, although of small circulation, and in no others. He certainly would take the sense of the house on this resolution, unless it could be shewn that there was something particular in the Government of Ireland, and that it could not be carried on without this sort of support.

Sir John Newport suggested that the advertisement duty should be lowered generally, to admit of the insertion gratuitously by the newspapers of the Government proclamations in Ireland. By the present plan, the object of publicity was defeated, for the papers of the greatest circulation had the least of these Government advertisements.

Mr. Goulburn complained of the unfair manner in which the hon. member had brought forward this subject. He had at once imputed to him a charge of bribing the press in Ireland, for the corrupt purposes of Government; and yet, when he attempted to sustain this imputation, he quoted from papers which were laid be-

fore Parliament in 1819, long before he (Mr. Goulburn) had any connexion with the Irish Government. There was another piece of unfairness in the course which the hon. member had thought proper to take: he referred to two sets of accounts, the old and the new; and where a newspaper appeared to have declined in circulation since the former returns, he made use of an argument founded upon that reduction, but still placed exactly next it the larger sum which the same paper had any time received. "Then," said the hon. member, "why not resort to the English economical practice of paying a certain sum for these things?" He would tell him the reason—because the expense would be far greater. The practice, in this country, was to give 50l. for affording publicity to each proclamation. If this sum were in like manner given in Ireland, the expense in that country, for the last year, would have been 9500l. instead of 6000l. (although the hon. member said it amounted to 7000l.); and they should remember that, from this 6000l., 2000l. must be deducted for the expense of the *Dublin Gazette*. So that 4000l. was the whole sum required for the general service alluded to, so far as the newspapers were concerned. Of these newspapers he really knew nothing. Were the hon. member in his situation in Ireland, he would find occupation enough of a more serious nature to fill his attention, than inquiries into the petty squabbles and details of these newspapers. But he repeated that none of these grants had originated with him; they were all in being long before his time; and it was strange that he should have been selected as the responsible person for their origin. For what purpose could he want to corrupt the Irish press? No man, he believed, got less than he did of the favour of these newspapers; indeed he understood that, on the contrary, he was very frequently the object of their severest animadversion. But the most extraordinary charge of all was, when the hon. member insinuated that the money was actually paid to members of Parliament for corrupt purposes, and that Sir Robert Shaw was the receiver, in Dublin, of one of these country newspaper sums. Now the fact was, that Sir Robert Shaw was a banker, and this country paper having some money to receive in Dublin, had the payment made at his bank, in the regular way of account; and this was the corruption which the hon. member was prepared to establish (hear, hear). For his own part, he repelled the charge of corruption, and felt himself as free from such an imputation as the hon. member. And he would add, with reference to the hon. member's sources of information, upon which he thought it right to deal out his charges, that if he (Mr. Goulburn), with his opportunities of official information, were likely to be led into error, how much more so was not the hon. member himself, when his information could only be derived from discarded and unfaithful clerks, who, in violation of their duty, transmitted garbled and imperfect statements for purposes of this kind?

Mr. T. Ellis defended the Masters in Chancery from the hon. member's imputation, and said that whoever had communicated to him the assertion that they advertised in particular newspapers for political motives merely, was guilty, as he could prove, of a wilful misrepresentation. He had himself been twenty years a Master in Chancery; and before his time, an arrangement had been made by four

Masters in Chancery, to govern their advertisements; and a certain number of newspapers were selected, not by any means with reference to their politics, but to their convenient and useful circulation at that time. Some of these papers had certainly declined since: still, however, they were the papers to which suitors resorted for these advertisements; so that they perfectly answered all the purposes of proper publicity. One of these papers was *Saunders's News Letter*, an advertising paper of great circulation, but which was unique in the circumstance of its not interfering in any manner in politics. Another of these papers was the *Correspondent*, which had even changed its politics altogether since the advertisements were first inserted in it. There was, in fact, no ground whatever for the assertion, that particular papers had been selected on account of their politics.

Mr. Hume denied that he had founded his arguments upon anonymous information; he had formed them upon the official documents before the house. He referred to these returns, for the purpose of shewing that no attention was paid to the utility of the circulation of the Irish newspapers, in selecting those for the Government advertisements. As a proof of this, he remarked that the *Dublin Evening Mail*, which circulated, according to the official returns, 360,000 copies in the year, had received only a few pounds for the insertion of proclamations, while the *Correspondent* and *Patriot*, which both together only circulated 135,000 papers in the same year, had received upwards of 1200*l.* from this fund.

The house then divided, when the numbers were—For the grant, 40—Against it, 18—Majority for it, 22.

FRIDAY, MAY 5.—Mr. Hume presented a petition from the proprietor of the *Dublin Weekly Register*, advertising to a statement in that house by an hon. member (Mr. T. Ellis), in which the hon. member denied that there was any partiality in the selection of particular newspapers in Dublin, as the vehicles for communicating official advertisements. The petitioner offered to prove the allegations made on this subject in a former petition.

Mr. Ellis then repeated that there was no partiality. The *Correspondent*, which was at present the paper in which announcement was made of sales under decrees of Chancery, was selected twenty years ago; and it was then an opposition paper, a warm advocate for Catholic emancipation, and under the management of a Catholic editor. It was selected merely because of its extensive circulation. If other papers were not selected, it was not from any party feeling. As to the *Dublin Weekly Register*, it was a paper of recent origin, and was not of that circulation which had occasioned the choice of the *Correspondent* in the first instance. Particular papers were selected, by the Master in Chancery, for advertisements; but only with the view of preventing attorneys from putting suitors to unnecessary expense by sending them to what papers they pleased; but in such selections, party feeling was out of the question.

Here the matter dropped.

### Tolls and Customs.

THURSDAY, FEB. 16.—Mr. S. Rice moved that an address be presented to his Majesty,

praying that he would be graciously pleased to order a commission for inquiring into the amount of all tolls and customs levied in fairs, markets, and sea-ports in Ireland.

Mr. Goulburn:—When the hon. gent. mentioned this subject at the beginning of the present session, he (Mr. Goulburn) had informed him that it had not escaped the attention of ministers, and that the only reason for its not being then entered upon, was the difficulty of providing a satisfactory remedy. In arguing this question, therefore, it must not be assumed that if the evils complained of existed, the Government were indisposed to remedy them. The subject was in itself not one of a simple nature. The greater part of the tolls in markets and fairs in Ireland were collected under patents held by individuals. He was not prepared to deny that they might be, and that they were, an obstruction to the commerce of the country; but did this obstruction apply to Ireland alone? Was not the same system practised in every town in this country where the tolls were collected (as most of them were) under the authority of Royal patents? Within half a mile of the spot in which they were sitting, the same system was in daily operation. The tolls of Covent-Garden market were the property of one noble individual, and it was notorious that their collection gave rise to constant disputes. The effect of those disputes was felt particularly by the lower classes of the people, who brought their commodities to market, and, as far as they went, were an obstruction to the trade of the place. It was true that a committee of the house had on a former occasion pointed out this subject as one for which a remedy ought to be found; and the ground of that recommendation appeared to be chiefly on account of the resistance which was offered to the payment of tolls, and the disorders to which that resistance gave rise. He would not, however, agree that this was a sufficient ground for such a remedy as was now proposed. If this resistance were confined in Ireland to the payment of tolls, then, indeed, some argument might be raised upon it; but when it was found to prevail very generally, and when the same resistance was offered to the payment of rents and of tithes, and all other dues which parties were entitled to receive, and the same disorders were the consequence, he thought it was too much to conclude that the law was therefore deficient. His own opinion, on the contrary, was, that by application to the legal remedies, and by that alone, the evil could be got rid of. If gentlemen resident in the neighbourhood of places where tolls were illegally exacted would do that which he took to be the duty of such gentlemen, by lending their advice and assistance to the parties aggrieved, by pointing out the mode of legally obtaining redress, and, if need were, by leading the way themselves, and making an example of some great offender, there would soon be an end of the illegalities complained of, and the existing laws would be found strong enough for all necessary purposes. The greatest facility was afforded under the present acts to persons who had to complain; redress might be obtained before a single justice of the peace; and although corporation officers were in many instances the parties interested in the receipt of tolls, this difficulty too had been provided for as well by the imposition of a heavy pecuniary fine on justices denying redress, or refusing to act, as by an enactment that all causes relating to corporation rights should be sued out of the jurisdic-

tion. But if the present motion were agreed to, it would afford no farther useful information. There were no less than 2016 patents granting tolls, and in each of them the articles amounted to 15 or 16. It was obvious, therefore, that to investigate this subject properly, the commissioners ought to ascertain, item by item, the legality of those tolls, and to point out accurately whether they were conformable to prescription, patent, or to the peculiar fitness of the thing. The annual amount of these tolls was said to be 1,000,000*l*. It would be necessary to give compensation to the parties at present entitled to the tolls, and he for one would never consent to the government making any bargain so extensive as this must necessarily be. For this reason, as well as on account of the Herculean labour which must be imposed on the commissioners without the probable result of any adequate good, he must oppose the motion. There was another ground, and not a less forcible one, on which that opposition was founded. If this motion were agreed to, the immediate consequence would be, that the people of Ireland would receive it as evidence that parliament had decided on the general illegality of tolls, and there would not be a market or fair in which the people would not set up a general resistance even to that part which might be admitted to be legal. He had been long enough in that country to know how easily erroneous opinions were adopted when they happened to suit the notions of persons who were interested in them. For these reasons, and, above all, because there was already in Ireland a disposition to put by the law, and to resort to extraordinary measures, he was averse to granting the commission. He was sure that nothing could produce a more lasting benefit to that country than to exalt the legal tribunals in the minds of the people, and to teach them to look to them alone for protection and redress on all occasions. He was not disposed to resort to any extraordinary remedy, but if the present law was found inefficient, he would, upon the case being made out, consent to its being remedied.

Mr. D. Browne ridiculed the idea of appointing a commission upon such a subject. Commissions were perpetually being appointed to inquire into subjects connected with Ireland, the persons composing which were very well paid for their labours; and it was singular that their labours never were brought to a conclusion. He trusted, however, that if a commission should be appointed on the present occasion, he should be placed at the head. He had served his country in parliament for 43 years, and was therefore, he thought, entitled to expect some good appointment of that kind (a laugh).

Sir H. Parnell stated, that great abuses were perpetrated under the present system of levying tolls in Ireland, and that it was impossible for the poor peasants to obtain any redress for them. What was most provoking of all, however, was, that the money derived from tolls was not misapplied (a laugh). In most other cases the object in obtaining money improperly was to apply it improperly; but here he must acknowledge that it was honestly applied.

Mr. Peel said, that if it could be shown that the existing law was not sufficient to afford redress to persons who had been improperly assessed for toll, he would admit it would be a fair ground for calling upon parliament to consider the question. But to appoint commis-

sioners to examine whether such a case could be made out, was perfectly absurd. If the principle of purchasing the franchises of individuals were good, why not extend the application of it to England? The toll which the Duke of Bedford collected in Covent-Garden market was, no doubt, considered very oppressive by those who paid it; but nobody could dispute the right of the noble duke to impose it. Unless it could be shown that the present law was defective, parliament could not be called upon to legislate on the subject.

Sir J. Newport supported the motion. The patentees of tolls in Ireland were generally corporate bodies, or rich individuals, and with these it was quite impossible for the poor people who were the objects of their extortion to contend. One of the most objectionable parts of the present system was the administering of illegal oaths by the toll collectors. Those collectors took their station at the "custom-gap" of a fair, with a stick in one hand, and a prayer-book in the other (a laugh). They swore the carters who brought goods to market, as to the amount of their loads, and if they were not satisfied with the accounts rendered, they took summary vengeance with the stick (a laugh).

Mr. Plunkett remarked that the statements which had been made of the abuses of the present system of levying tolls in Ireland must be greatly exaggerated, otherwise the subject must have been brought under his official notice. If the tolls were so extravagantly high as was represented, the country gentlemen out of whose pockets they must principally be paid, would not fail to make the grievance known, so as to reach the ear of Government. The labours of a commission on the subject would be endless. The number of toll franchises in Ireland amounted to 2016, and each of them involved a right to about 20 different kinds of toll. The commissioners, therefore, would have upwards of 40,000 cases to investigate. It would be the work of generations—*filii natorum, et qui nascentur ab illis* (a laugh). He must again express his belief that the charges of abuse under the existing system were too general. Gray's description of

"Some village Hampden, that with dauntless breast  
The little tyrant of his field withstood,"

would not perhaps apply to Ireland. But if that country was without village Hampdens, she was in no want of legal Hampdens (a laugh). The latter were a description of persons who were not likely to acquiesce under any grievance, and to whom the expense of procuring redress would not form a very important objection (a laugh). If the hon. mover could suggest any plan for rendering the mode of granting redress more summary, he would pledge himself to endeavour to carry it into effect. It was suggested that the patents for tolls in Ireland should be purchased by the public. At the lowest estimate the tolls in Ireland were worth 500,000*l*. a year. Parliament could not, surely, think of offering the gentlemen who held the patents less than 20 years' purchase, which would amount to the moderate sum of 10,000,000*l*. He thought that his rt. hon. friends the Chancellor of the Exchequer and the President of the Board of Trade would turn the matter in their minds a long time before they resolved to part with such a

sum for such a purpose (a laugh). With respect to illegal oaths, he pledged himself, that if any case of that nature should be brought under his notice officially, he would direct the Crown solicitor to institute a prosecution.

Mr. M. Fitzgerald said, that nothing could be more deplorable than the ignorance of the learned gent. with respect to the abuses of the system of tolls in Ireland. The existence of those abuses was notorious to every person connected with that part of the empire; and that they had not reached the ear of Government was only a proof of the poverty and wretchedness of those who endured them. The tolls had been proved to have been levied where specific acts of parliament had provided guardians to aid their operation. In the linen-trade there were certain articles exempted from toll, but in most of the markets in the south of Ireland, there was a toll levied on all articles in the trade. What was worse, the power of the toll-gatherer was exercised in a way to promote the frauds in the trade which their office was instituted to check. The toll-gatherer asserted his right to examine the article carried to market; but received a bribe to overlook an article badly manufactured. He knew this to be the fact, in his capacity of magistrate. The extent of the grievance, and the impossibility of at present obtaining a remedy, required that the law should be simplified, and required that some means should be devised for supplying those who were oppressed, with funds for obtaining justice by the ordinary proceedings at law. Perhaps such funds might be supplied by the grand juries; and if suits were prosecuted on this principle, the distinction would be established between legal and illegal tolls. It was ridiculous, it was worse than idle, to tell the house, that men in a worse situation as to wealth than the paupers of England, could obtain a remedy against any oppression practised by wealthy people; and from a contest with them they were wise enough to shrink. He wished his hon. friend (Mr. Rice) could prevail on the rt. hon. gent. to take up the matter sincerely; though he never knew a secretary of Ireland who knew much of that country, nor a great lawyer who knew much of any country (a laugh).

Sir John Brydges denied the insinuation which had been thrown out, that justice was not administered in Ireland equally to the poor as to the rich. Such a statement going forth uncontradicted would do a great deal of mischief.

Sir John Newport had never asserted the contrary. But if the law was so expensive that the poor man could not get its assistance, it was a practical denial of justice to him.

Mr. R. Martin knew that in the county he represented, gross abuses existed in levying tolls, and the greatest abuses of all in the town of Galway itself. They existed to such a degree, that the landholders round Galway found the value of their land reduced two, three, and four shillings an acre, through the exorbitant tolls. He appealed for the truth of his assertion to his hon. colleague, who had been a defendant in a suit, where the corporation had been charged with exaction of illegal tolls, which suit had, been some years in the Court of Chancery. He was disposed to agree with the Attorney-General for Ireland, that remedies did now exist, the greatest abuses being in cases where the toll was exacted against the law. But though the law might be equally administered in Ireland, it was not accessible, any more

than the City of London taverns, to those who had no money.

After some further conversation, Mr. Rice withdrew his motion, with an understanding that a select committee would be acceded to with limited powers to ascertain whether any and what remedy can be applied to the existing laws, without trenching on private rights.

### Rate of Postage.

FRIDAY, APRIL 21.—Mr. S. Rice presented a petition from merchants of Belfast, complaining of the excessive rate of postage for letters in Ireland. A letter rated at 1s. in England, would be 2s. in Ireland. In short, the farther removed from the seat of commerce and the sources of wealth the higher the tax in that country.

Sir J. Newport complained that this was contrary to the articles of the Union, which provided that taxation should be no heavier on Irish commerce than on English. Aberdeen and Kerry might be reckoned at equal distances from London. A letter to the first place was 1s. 2½d., to the latter 2s. 2d.; and what rendered it more objectionable was, that the heavier rate of postage fell upon the poorer country.

Mr. Wallace admitted that the grievance was considerable, and that it ought to be removed, with a view to facilitating and increasing the commercial intercourse between the two countries.

The petition was ordered to be printed.

### Irish Corporations.

LORDS, FRIDAY, APRIL 21.—Lord King had a petition to present from the Catholic Association, complaining of great abuses in the corporate towns of Ireland; and that great abuses did prevail in these corporations he could assert, not merely from what was set forth by the petitioners, but on the authority of evidence given before a committee of their lordships, and printed in the report of that committee. It appeared from evidence given on oath, that in some of those corporations the punishment of grave offences was commuted for 10 guineas, and of minor ones for 5 guineas. It served no purpose to proceed against those corporations by criminal information for such abuses, because if the magistrates were convicted, they could not be dispossessed—they still continued members of the corporation. Catholics were carefully excluded from those corporations. Though permitted, by law, to become members of the corporation of Dublin, they had never yet been admitted. He had last session presented a petition from Mr. Adcock, who, though competent to be a member of the corporation, had been kept out for no other reason than he was a Catholic. Catholics, it appeared, were prevented from holding the offices of sheriff, mayor, alderman, or common councilman, in the towns to which the petition referred.

The Earl of Limerick stated that one of the magistrates of Limerick was a Roman Catholic. He alluded to Mr. Roche, a gentleman of the highest character and respectability. That gentleman, however, was made a magistrate by Government, and not by the corporation.

The Earl of Darnley observed, that in point of fact Roman Catholics were excluded by the corporations regulated by the new rules.

Lord King was aware that in some places

Government interfered, being able to do so under a particular act of Parliament.

Lord Clifden knew of nothing more unjust than the abuses of which the petitioners complained.

FRIDAY, APRIL 28.—Lord King presented a petition from an individual, named Adcock, of Dublin, who had long claimed to be admitted a freeman of that city. The petitioner stated that he had been put to considerable expence in obtaining a *mandamus*, notwithstanding which his admission was opposed by the corporation, on the ground of his being a Catholic. The petitioner prayed that their lordships would introduce into the bill before the house relative to Irish corporations, a clause, giving triple or quadruple damages, when persons were unjustly refused the privileges of freemen.

MONDAY, MAY 1.—Lord King presented a petition from Wm. Curtland, complaining that he was denied admission to the corporation of Dublin, though qualified, and a Protestant. An examination was referred to, from which it appeared that the reason of the petitioner's exclusion was, that he had given proofs of liberality, "which in the eye of the corporation, was as bad as Popery." The noble lord also presented a petition from Edward Adcock, a brother of the person of the same name, from whom he had lately presented a petition, complaining of similar conduct of the corporation of Dublin. The case of the present petitioner was aggravated by the circumstance of his having two children, who in consequence of the exclusion of their father, were also deprived of their right to the privileges of freemen.

TUESDAY, MAY 2.—Earl Grey presented a petition from a person named James Henderson, who stated that he was entitled to the freedom of the city of Dublin. It was necessary, as a first step, to be admitted to a Guild, but admission was refused to him because he was a Catholic. He applied to the Court of King's Bench for a writ of *mandamus*, and thus, with considerable trouble and expence, obtained admission into the Guild. He then claimed to be a member of the corporation, but there again he was opposed, and being unable to defray the expenses of a second application to the Court of King's Bench, he was deprived of his right. The petitioner prayed, that a clause might be introduced into the bill now before the house, subjecting corporations to double or treble costs in case of any vexatious opposition to the just and legal claims of persons to admission.

Lord Clifden considered the conduct of the corporation of Dublin to be most disgraceful. Nothing could be so unwise as such exclusions by corporations, for it tended to augment the number of Catholics, and to keep up the irritations between them and the Protestants.

The Lord Chancellor admitted, that the exclusions, as described, were vexatious; but if such proceedings did take place, every man, as the law now stood, had a remedy in his power.

#### *Forty Shilling Freeholders.*

COMMONS, WEDNESDAY, FEB. 8.—Mr. R. Martin moved for leave to bring in a bill on the subject of the 40s. freeholders of Ireland. At present it was well known that their property was in

danger of being swept away, if they voted contrary to the inclination and bidding of their landlords. The tenants would prove themselves before the world to be much better qualified for the exercising the rights of electors, could they show a full discharge for their rent. By showing the receipt for all rent due up to the time of the election, the 40s. freeholders would be rendered really independent. If they were in arrears, and the landlords wished them to vote independently, they could give them the receipt. No member who wished well to Ireland would be an enemy to giving them this boon which he now proposed. There was one evil more which it was desirable to see corrected. Any one having a majority of the magistracy on his side, might succeed in preventing the adversary from registering a sufficiency of votes to secure his return. In his own country he had been prevented for 12 months from registering a number of freeholders, and in the mean time the election went by. Every gentleman from Ireland would bear witness to the accuracy of this statement. Such a power ought not to be left for any man to abuse. He would propose that the clerk of the peace should have due notice of the approach of the freeholders to be registered, and in failure of his attendance, a person should be sworn in, who should be bound to take names, and hand them over to the clerk for him to register. Leave was given to bring in the bill.

#### *Non-resident Burgesses.*

THURSDAY, MARCH 9.—Sir J. Newport moved for leave to bring in a bill to repeal the 21 Geo. II. c. 10, s. 8, (Irish statute, commonly called the Newtown Act) which respected the rights of burgesses in Ireland. By statute of 10 Henry VII. great care was taken that those who possessed franchises in towns corporate should be resident; but the 21st Geo. II. c. 10, had materially altered this provision; and the 8th section declared that it still continued impracticable, in most of the towns corporate, to find Protestant inhabitants who, on account of their circumstances, were fit to be trusted with such offices: it therefore went on to provide, that no person who has been, or shall be, duly elected or admitted into any such offices, shall be ousted on account of non-residence. The 21st of Geo. II. was passed merely to admit non-residents to vote, where there were not a sufficient number of resident voters. That reason was now quite done away, and therefore the Statute ought no longer to remain on the Statute Book. In Belfast, in Newry, and in other places where this reason had once applied, there were now abundance of residents; and he knew that much inconvenience arose in Ireland in consequence of non-residents being allowed to vote, on which grounds he wished for their exclusion.

Mr. Goulburn:—The proposition of the rt. hon. bart. rested on one single argument,—that the statute sought to be repealed having been passed 80 years ago was unnecessary now, inasmuch as the reasons which were stated in the preamble had ceased to exist, and the act was no longer applicable. But might it not occur that, although the causes which led to an enactment might have ceased, the enactment, being wise and wholesome, should still continue? It was no argument in favour of the abolition of a law that its application was not immediately felt (hear, hear). The simple question was, whe-

K

ther non-resident voters who had for 80 years exercised the right of voting in boroughs and corporate towns, should cease to enjoy that privilege. Now this was a question which involved a great deal, both as to Ireland and England; and was the house prepared to adopt such a change in the elective franchise of this country (hear, hear)? At the time of the passing of this law, persons of the first respectability resided in those places in which the elective franchise was exercised; but, from the change inseparable from the condition of man, it naturally occurred that persons wishing to reside elsewhere betook themselves to distant provinces. The act declared that all non-resident electors should have a vote: now if the majority of persons entitled to vote should happen to be non-residents, what would be the effect of the *rt. hon. bart.*'s proposition? It would be this—that there would scarcely be a single person to vote for the return of members to serve in the next Parliament (hear, hear). Under these circumstances, could there be a more unwise step than to deprive the present non-residents of the privilege which they had heretofore enjoyed?

*Mr. Plunkett* :—The inconvenience of the motion would be this—that the legislature in the reign of Geo. II. having removed the restrictions which at that time affected the elective franchise, as being unconstitutional, the present measure was meant to counteract that decree, by producing the precise effect which it sought to remedy (hear, hear). The act had remained in force for 70 years, and under its authority a number of persons were now enjoying the advantage it presented. The proposed measure would have not only a future operation, but it would have a retrospective effect. If we repealed the act, the election of the persons who had lately been returned under its sanction would be null and void (hear, hear). When Parliament was fast approaching to its final dissolution, it was highly inexpedient to repeal an act of this nature. If the law had existed for 70 years, in God's name give it a little longer to live, and let it exist for 71 years (hear, hear). It would be unjust in the extreme to repeal it, because it would disfranchise a considerable body against whom no specific act of injustice or illegality was advanced. This act had been in existence for 40 years previous to the union of the British and Irish Parliaments. A calculation was at that time made as to the number of electors in each town, and its provisions affected all persons whether resident or non-resident. He objected to the motion, first from its general inexpediency; secondly, from its injustice to individuals; and thirdly, because it interfered with the arrangements made at the Union, by which the elective franchise was controlled and regulated.

*Mr. R. Martin* said, that the *rt. hon. bart.* who introduced the motion was entitled to the thanks of the house. He should not be told that he did wrong to introduce it, because of its retrospective effects. Might not that difficulty be got over by the insertion of a clause to save existing rights? "Let us wait," said the Attorney-General, "until the general election." The act should be repealed now, and the new bill need not come into operation until the election would be over. This course would surely satisfy the learned gent.

*Mr. C. H. Hutchinson* thought that no exist-

ing interests ought to be interfered with, without giving to all the parties concerned the fullest opportunity of being heard on the subject, and he hoped the *rt. hon. bart.* would not persevere in the measure without giving to those parties such opportunity.

The house divided.—For the motion, 38—Against it, 76—Majority against bringing in the bill, 38.

### *Irish Currency.*

(For the proceedings on the subject of the Small Notes in Ireland, see *post*, section *Paper Currency and Commercial Distress*, under the head of FINANCE AND TRADE.)

### SCOTLAND.

#### *Scotch Currency.*

(The debates on the Scotch Currency bill are so intermingled with those on the other bills connected with the great question of Commercial Distress, that it has been deemed inconvenient to place them under this head. We must therefore refer the reader to the section *Paper Currency and Commercial Distress*, under the head of FINANCE AND TRADE.)

#### *Steam Vessels' Regulating Bill.*

THURSDAY, MARCH 9.—The *Lord Advocate* moved for leave to bring in a bill to regulate vessels navigated by steam in Scotland.

*Mr. Hume* objected to any legislation upon such subjects. If they did it in one case they must do it in all; and this, he conceived, would be productive of great inconvenience. It was well known that a strict inquiry as to the state of a vessel, the character of her captain, and the amount of her crew, generally decided persons as to the vessel in which they preferred taking their passage, and this alone was sufficient to induce the owners and masters of vessels to take the necessary precautions (hear, hear).

*Sir H. Parnell* thought such measures unnecessary. He knew a case where a bill was passed to regulate the intercourse between Liverpool and Dublin; the vessels continued to trade under this act, and so little attention was paid to them, that, in a short time, one of them, in a dead calm, struck upon a sunken rock, and went down.

*Sir J. Newport* remarked, that if the people of Scotland were not fit to be trusted with the management of their own steam-boats in their own way, it would be much better to introduce a bill to prevent them from using them altogether.

*Sir C. Cole* wished the bill to be applied to all coasts and countries. The accident (the late loss of the *Comet*) which had produced this bill, would not have happened, if steam-boats were obliged to follow the example of ships at sea, by displaying a signal, to show on which side the vessel meant to pass.

*Mr. Hobhouse* suggested, that it was just as necessary to pass a bill to regulate the manner in which people should walk in the streets. He thought there was a general feeling against the measure of the learned lord.

The house divided.—For bringing in the bill, 70—Against it, 27—Majority, 43.

*Prisons in Scotland.*

TUESDAY, MARCH 21.—The *Lord Advocate* would not offend the house by entering into the unpleasant details of some returns which he had moved for upon this subject; but the whole system of prisons in Scotland required immediate and thorough revision. Criminals of all classes and ages, convicted and under accusation, were crowded together, often in the same apartment with debtors, in the most miserable receptacles that could be conceived. In many prisons the gaolers were non-resident, having other occupations to attend to in the town. In one place, the gaoler did duty as the parish bellman. In another, he officiated as town-crier. In a third establishment, the gaoler was blind, and the prison was managed by his daughter; and in this very gaol there was a crow's debtor confined for no less than 7000*l*. He concluded by moving for a committee "to inquire into the state of Prisons in Scotland."

Mr. *Hume* seconded the motion.

Mr. *Peel* said, that it would be highly convenient if the smaller jurisdictions of Scotland would agree to unite, six or seven of them together, in the erection of one large and convenient gaol. The more extensive a gaol was, the more certain it was to be well managed; both because it could afford to pay proper officers, and because public curiosity was excited, and it was sure to be visited more constantly than a small one. To maintain a sufficient and well-disciplined gaol for each of the small burghs in Scotland was impossible.

The committee was then appointed.

*Scotch Colleges.*

MONDAY, MARCH 13.—Mr. *Herries* moved a grant of 10,000*l*. for works carrying on at the college of Edinburgh.

Mr. *Hume* desired that all the money voted in this way for Scotland should not be given to one college. He thought that an inquiry would be of service, to ascertain the condition of the other Scotch colleges, and to declare how far they were competent to the objects for which they were intended. The act of Union certainly required that five colleges in Scotland should be kept up; but that act was violated every year, and very properly so, when its violation was convenient for the public service. Now, it was well known that the colleges of St. Andrew's and Aberdeen had not the means of supporting themselves; and that, to preserve their existence, they were compelled to have recourse to expedients which would render it much more advisable that they should not exist at all. The professors of the colleges in Scotland were anxious for inquiry, and for such a change as would render those establishments more respectable, and more useful to the public.

The *Chancellor of the Exchequer* said, that the case of Aberdeen was under consideration, and that the Treasury was expecting farther information upon the subject.

*Scotch Representation.*

TUESDAY, MARCH 9.—Mr. *Abercrombie* presented a petition from 7 or 8000 resident householders of Edinburgh, praying for some improvement in what was called the representation of Edinburgh. Every year this petition was pre-

sented, there was some new circumstance which gave additional weight to it. This year, six persons belonging to the town council, who chose the member for Edinburgh, had signed the petition. By so doing, they had shown that their sympathy with the bulk of their fellow-citizens was greater than their sympathy with the members of the corporation of which they formed a part. When he first presented this petition, he had presented it in the firm conviction that it was founded in truth and justice, and nothing had since occurred to alter that conviction. He had presented it, because he believed that the citizens of Edinburgh would prosecute it with prudence, firmness, and perseverance; in that expectation he had not been disappointed. He had presented it, because he was convinced, not only that it would be prudent and just to grant the reform demanded, but that, by widening the basis of the constitution, they would give additional strength and firmness to the superstructure reared upon it. He then moved that the petition be brought up.

Sir *G. Clark* said, there was nothing peculiar in the representation of Edinburgh. The house had no more right to take away the exclusive right of election from the corporation of Edinburgh than from the corporations of Bath and Portsmouth. Such rights were never taken away by the house, unless it was shown that the parties had been guilty of gross corruption in the exercise of them.

Mr. *Hume* observed, that the hon. member argued as if the existence of an abuse in one country was a sufficient excuse for the existence of the same abuse in another country. The Government, which was making wholesome reforms in many of our institutions, could not do better than make a reform here, for no where was it more necessary. If the Government acted upon principle, they would consent to the reform which these petitioners asked for, as it would render the magistrates of Edinburgh more respectable than they were under the present system of self-election and self-control.

Sir *R. Fergusson*:—"The system of Scotch representation, both in boroughs and counties, was highly disgraceful, and required universal and an immediate reform."

Petition brought up\*.

## FOREIGN DEPENDENCIES.

*Canada.*

WEDNESDAY, MARCH 1.—Mr. *Hume* said, he had some time since given notice of a motion relative to Upper and Lower Canada, and he was convinced that if a different policy was pursued with respect to those colonies, we should, instead of spending half a million yearly upon them, put them in a situation to contribute mainly, if not entirely, to their own support. He should, on a future occasion, bring under the consideration of the house a motion for establishing those colonies as independent states, which would relieve us from the burthen of defending them. He should now move, as a preliminary step, for "an abstract of the several sums issued to those colonies since the peace of 1815."

Mr. *W. Horton* said, that the accounts moved

\* See Mr. *Abercrombie's* motion, *post*, under the head of CONSTITUTION.

for by the hon. member formed a part of our general expenditure for the West India colonies, and could not be easily separated from them. But though he did not mean to oppose the motion, he begged to enter his protest against the hon. member's observations relative to a disconnection of this country from Canada; and he thought the hon. member would have acted more wisely, by confining himself to his motion, without throwing out any such observations.

Mr. Hume said, that the Americans had discontinued the expense of keeping a naval force on the Lakes while it was continued in Canada. The motion was then put and carried.

### *New South Wales.*

FRIDAY, APRIL 14.—Mr. J. Smith said, that he had read a paragraph in the *Sydney Gazette*, (New South Wales): from which it appeared, that at the visitation of a prison at Paramatta, by the Grand Jury, there was discovered an order or warrant from a magistrate, authorizing what every one would term the infliction of torture. A prisoner named Paine was confined there, and by this warrant it was ordered that he should receive 25 lashes every morning, until he confessed where he had secreted certain property which it was said he had stolen. The prisoner had received 25 lashes for five mornings successively. On the 6th day he was taken before a magistrate, but was ordered back to prison, and the lashes again inflicted. On the 7th, he was again brought before the magistrate, and (as was stated) banished, without sufficient evidence. Such conduct could not meet with the sanction of the authorities at home, though there was reason to believe that it met no reprehension from the authorities of the colony. Now the information which he wished to obtain was, whether the magistrate who gave such cruel orders, held any situation under Government in the colony,—what that situation was, what was its salary, and whether he was still continued in it?

Mr. W. Horton said that an order such as the hon. member had described was found, but it was not for the infliction of punishment at the discretion of a magistrate. It was the practice there, and had been so for a long period, that when the punishment of flogging by the infliction of a certain number of lashes was ordered, that number was given, not all at once, but by instalments (a laugh). He did not at all mean to defend the practice, but it had long existed, and was not confined to one magistrate, for even the accusers of the magistrate in question had themselves been guilty of it; and every one would admit that from the frequency of crimes in that colony a degree of severity more exemplary than ordinary might on some occasions be practised there. As to the other parts of the hon. member's inquiry, he would state that the magistrate in question held the office of secretary to the council, the emolument of which was £600 a year.

Mr. J. Smith said, he understood that the council of New South Wales had passed an act of indemnity for the conduct of the magistrate.

Mr. W. Horton said it was so; for if they had proceeded against one magistrate, it would be necessary to proceed against all the magistrates by whom the practice had been adopted. To punish the individual magistrate, for doing that which had been constantly done by others, and

which he must have considered he was fully authorised to do, would be an act of injustice.

The petition was then ordered to be printed. This subject was again alluded to, Tuesday, May 2d, when the papers relating to it were ordered to be laid before the house.

### *Slave-Trade in the Mauritius.*

TUESDAY, MAY 9.—Mr. F. Buxton, in rising to make a motion on this subject, reminded the house, in the first instance, of the successive measures that had been adopted in this country for the abolition of the slave-trade. It had been abolished in the year 1807; in 1811, persons engaged in it had been declared guilty of felony, and in 1824 it was declared to be piracy. There had also been treaties with foreign nations, in which it had been necessary for this country to make commercial sacrifices of a very serious nature; but so far were the people of England from being dissatisfied with these sacrifices, that there was no point on which the whole nation was more unanimous than as to the necessity of a total abolition of the slave-trade. Nevertheless, he had to complain that the measures for putting down this odious traffic, had not been carried into full effect in our colonies, and more especially in our colony of the Mauritius. Nor was it that there had been mere occasional violations of the law, that some desperate adventurers had from time to time clandestinely introduced some 50 or 100 slaves; but that the slave-trade was carried on openly, and on a regular system, from the capture of the colony to the present time. It was true that General Hall had succeeded in checking it, during the few months that he had held the government of the island; and the manner in which he had done so reflected the highest credit upon that officer. His efforts had, however, produced no permanent effect, because he was not supported either in that country or in this. There, his proceedings exposed him to all descriptions of persecution; and his important services coming to the knowledge of the Government, he was immediately recalled. In 1822, the trade ceased to be carried on extensively, because the reduced price of colonial produce did away with the advantage of the traffic. With these exceptions, however, the slave-trade existed uninterruptedly in the manner he had mentioned.—He would now proceed to prove the facts. In doing so, he should find it necessary to produce a large body of evidence from various sources; the evidence of a great number of persons who had held official stations in the civil, military, and naval services; which had enabled them to collect the best information, and to form the most accurate judgment on the subject. He would begin with a person who was engaged in the military service from 1810 to 1817 (cries of name, name). He was not at liberty to name the gentleman at present, but he assured the house that he held a high rank. This officer stated, that "the slave-trade was not only tolerated, but encouraged."

Mr. Canning:—"What! encouraged by the Government?"

Mr. Buxton:—He meant to say, that it was carried on to such an extent, and in such a manner, as reflected the greatest possible disgrace upon the persons administering the affairs of the colony. Another officer (a General) had

stated that the landing of Africans in the Mauritius was frequent, and by no means clandestine; that the whole of the white population were engaged in the trade; and in a letter, dated July 1817, the same officer said that 700 slaves had been landed during the last month. Another officer stated, that during the period in which he had been enabled to make observations on this subject, 30,000 new slaves were landed. A gentleman holding the rank of an admiral, gave a public notice to the local government, in 1812, that the slave-trade should not be carried on there, notwithstanding the encouragement which he saw they gave to it. Captain Lynn had stated officially, that upon his having refused permission to remove 400 slaves, belonging to French owners, from Madagascar to the Mauritius, on the capture of Tamatave, the Governor afterwards gave them leave; and under the pretext of transporting those slaves, upwards of 1500 were introduced into the latter island. A captain in the navy also stated, in 1816, that cargoes of slaves were landed in open day at Port Louis. A gentleman who had been on the coast of Africa at the same period, said that 1300 slaves were then waiting there for exportation to the Mauritius, and that 20,000 were expected, for the same destination. At the Seychelles, another officer stated that the slave-trade was carried "on under his nose, and in spite of his teeth." The statements of the acting collector were to a similar effect, as well as those of the chief commissioner of police, from 1812 to 1815, and of his successor from the latter period to 1823; with this additional fact, that whenever any one besetted himself to put it down, the attempt inevitably led to the ruin of the individual who made it. He now came to the evidence furnished by the accounts of the governors; the first of whom was the hon. genl. opposite (Sir Robert Farquhar), the second Gen. Hall, and the third Gen. Darling. Gen. Hall stated that the slave-trade had reached a most daring pitch; that the offenders carried on their practices with the greatest effrontery, owing to the collusion of the authorities, and the readiness with which the criminals were suffered to escape; that the opulent colonists connived at the infraction of the laws, and threatened the destruction of all who attempted to enforce them. As a proof of the great importation of slaves which must have taken place, there was, in 1819, an excess of 40,000 slaves over the number of registered slaves in the island. The testimony of Governor Darling, who succeeded Gen. Hall, was the more valuable, as he went out on the principle of adopting a system in every respect opposite to that of his predecessor—he reversed all his orders, and restored those who had been dismissed from office, and had been engaged in opposition to his measures. Yet he was obliged to admit, in confirmation of the statements of Gen. Hall, that every effort was made in the colony to prevent the practical operation of the laws for putting down the slave-trade. Thus then, in support of his statement, he had the admissions of both these Governors, besides the testimony of the naval, military, and civil officers, all deriving their information from the different sources which the discharge of different duties gave them an opportunity of collecting.—He proceeded to observe, that it was not consistent in us to require of France that she should observe the treaty relative to the slave-trade, which had been agreed upon between

that country and England, unless England herself observed it. In a conversation on this subject, the Duke of Richelieu observed, in reply to the observations of Sir Charles Stuart, complaining of some infraction of the treaty on the part of France in a neighbouring island to the Mauritius (Bourbon), that if the French agents were to direct their attention to what was passing in the Mauritius, they would have at least quite as much ground of complaint for an infraction of the treaty on the part of England.—He would now call the attention of the house to the number of vessels which had been captured, and the returns of the slaves that had been found in them. He should be able to shew that, in many cases, these vessels had been long and regularly engaged in the trade. It was equally capable of proof, that many other vessels had been similarly engaged, which as yet were not seized. But these would be facts rather of detail, to be made out before the committee; and for the present, therefore, he should simply confine himself to the fact, that, up to the period he stated, 44 vessels had been actually taken. As to the actual introduction of slaves into the Mauritius, between the years 1810 and 1824, he had distinct evidence of no less than 99 disembarkations. His evidence he had from persons of all ranks—persons resident in the colony, officers, private soldiers, who had witnessed the transactions of which they spoke. One witness, a soldier, of the name of Higginson, deposed, that, in 1821, he was stationed in the Mauritius, upon the estate of a Mr. Telfair. This Mr. Telfair was a person of consideration in the colony: he was private secretary to Sir R. Farquhar; public secretary of the colony; curator of orphans; and registrar. Higginson's deposition was, that being, in June, 1821, upon this gentleman's estate, he saw a vessel, manœuvring off shore, in such a way as induced him to think she was a slave-trader. She was a vessel belonging to Mr. Telfair, commanded by a man named Lewis, who was Mr. Telfair's servant; and from that vessel he saw a considerable number of slaves disembarked upon Mr. Telfair's estate. This was the deposition of one individual: he (Mr. Buxton) had others in abundance, whose evidence went still farther, to produce before a committee. Several soldiers would be produced, who swore distinctly (so notorious was the practice) that they had received directions from their superiors not to pay any attention to the disembarkation of slaves. One would prove that he had actually gone to his officer to state that he knew where a disembarkation was taking place: the reply was, that he should mind his own business, or he would be punished for interfering in what did not concern him. He (Mr. Buxton) wished to state nothing which he could not fully establish; but it was stated to him that one soldier had actually been flogged for such interference. Gentlemen must not suppose that because he had spoken of private soldiers, his evidence was confined to persons of that rank; but it was necessary to take those who had facts within their knowledge—where witnesses were wanted—without reference to their rank. A colonel in the army, now in this country, would tell the committee—he (Mr. F. Buxton) had it in the witness's own writing—that he had tried every thing in his power to stop the slave-trade whilst he was in the Mauritius, but that he found the attempt only brought down persecution upon him; every thing that he did was looked on

with an evil eye; all authority was against him; until, at length, finding he could do no good, but that the effort would end in his own ruin, he was compelled to desist, and almost to connive at the disembarkations. And the house would observe, he (Mr. Buxton) spoke now only as to the disembarkations which had been noticed; nay more, only of those as to which he believed he had direct and irresistible proof. From the nature of the coast, landings upon landings might always be effected with very little danger of detection; and he had proof which could scarcely be doubted, as to a vast variety of transactions to which he had not adverted. Captain Lynn spoke of the arrival of one brig, with 200 slaves on board, from Madagascar. A general officer, who had commanded in the Mauritius, declared that, on one night, he saw such a multitude of vessels approaching the coast, that he took them to be an invading French fleet, and actually called out the military; this fleet turned out to be a fleet of slave-traders, from which an immense number of slaves were disembarked. A third person, a collector of the customs, wrote in 1814, that in some gales which occurred about that time, seven slave-ships had been lost. Another gentleman, a colonel in the army, being in the Mauritius in 1819, wrote—"Seven vessels have been equipped for the slave-trade from Port Louis this year." As to the fact of the introduction of slaves, there could be no moral doubt. A chief justice of the island had declared that he found the whole population decidedly in favour of the trade; that they considered it meritorious, and assisted, as far as they could, all persons who were concerned in it. Of a great number of soldiers and officers who had witnessed proceedings of this description, some were now dead, others were still in the Mauritius. The finding witnesses as to matters which had taken place at a great distance, either of time or place, was always a matter of difficulty; but dismissing all cases which could not be proved past denial, he might say, as the result of his statements, that twenty persons were now ready, in this country, to be produced, who would prove the fact of 99 disembarkations, and that 44 vessels had been captured actually engaged in the trade. Of these, one had been found with 1000 slaves on board, others with 300 and 400; the number, upon the whole, could hardly have fallen short of 20,000. These facts, as it seemed to him, resting as they did on direct and positive testimony, formed more than each a ground for the appointment of such a committee as he desired.—There were, as hon. gentlemen would know, who had turned their attention to the subject of colonial legislation, certain peculiarities in the state of the settlements in which the slave-trade existed, which were not found in those colonies in which it was at an end. The first point in which the difference was apparent, regarded the number of the two sexes. In a colony where the slave-trade existed, the number of males (Negroes) always greatly exceeded that of females: in colonies, where no new slaves were introduced, the numbers were equal. This was a fact as to which there could be no dispute; the state of our West India islands, at the time of the dissolution of the slave-trade, fully showed it. One of the first arguments of the planters against that measure had been this inequality—the excess of males. They had declared that the population never could be kept up, from the

scarcity of women. The reply of Mr. Pitt, which was fully affirmed in the event, had been—"Get rid of the trade, and your population will speedily become equal." The truth was, that as long as the trade existed, a great excess of males was imported. Now, let the house observe how the shutting out of foreign supplies had operated: of sixteen islands, in twelve the females exceeded the males in number; in four, the males were rather more numerous; but, in the whole, we had a slave-population of 715,385 negroes; 355,949 of which were males, and 359,436 females, giving an excess of women over men of 3487. Now this circumstance alone would afford almost conclusive proof that the slave-trade had been carried on, and to an immense extent, in the Mauritius; for the males there were 41,000, and the females 22,600. In the dependencies of the Mauritius, in the Seychelles, the case went beyond this; there were five males there to one female.—He would now allude to another circumstance. In every colony where the slave-trade had ceased, the majority of the slaves were Creoles—negroes born in the settlement. In the Mauritius, the majority was not of native-born negroes, but of foreigners. The best evidence that might have been had upon this head was certainly wanting. In two of the West India colonies he had got the numbers divided—the Creole slaves from the foreign; but in the Mauritius he had not been able to get this done, because the register was kept imperfectly—fraudently, no doubt, and for the purpose of avoiding investigation. The next best evidence, however, had been obtained; and if not so formal, it was practically perhaps as good as the registry: this was the advertisements of estates for sale, in which the negroes belonging to them were described. No reasonable ground for misrepresentation by the settlers in these advertisements could be supposed; and if there were any deception, it would be likely to be in the calling foreign negroes Creoles, because the native-born were the most valuable; but, taking the mass of advertisements, the number of foreign slaves in the Mauritius seemed to be three to one over the Creoles; while in the West Indies, the proportion was three to one the other way. In the Seychelles, where the registers had been kept separate, this difference was still more extraordinary: in the Seychelles, of 6500 slaves, 5500 were foreign, and 1000 native; while in the two West India colonies which he had mentioned, out of 95,000 negroes, the foreign were only 10,000, and the Creoles 85,000. He was aware that the slave-trade had been abolished in the West Indies earlier than in the Mauritius; but that fact was wholly unequal to account for such an immense difference in the condition of the two settlements. Another circumstance, strongly indicative of a continued importation of slaves, was the increase in the production of sugar. In 1810, there had been hardly any sugar grown in the Mauritius; in 1819, about 500,000 lbs.; but, in 1822—the last year to which his (Mr. Buxton's) returns referred—the exportation had been 30,000,000 lbs. Here was a production—increased more than five times over, since 1819, and all along upon a heavily falling market, and without any diminution in the produce of other articles. This circumstance, coupled with the facts which he had already detailed, became important. But the fact of the seizures at the Mauritius alone

—the absolute seizures—was proof sufficient. How did the West Indies stand—what captures had been made there? At the Bahamas we had had 115 slaves seized; at the Cape of Good Hope, 8; in Jamaica, 40; in Barbadoes, 3; in St. Lucia, 7; in Trinidad, 8; in Grenada, 3; in all the rest of the West India islands not one: while in the Mauritius the seizures had been 2420 up to March 1822; an amount ten times exceeding those of all our other settlements put together. Some of the seizures in the West Indies, too, had not been seizures of imported slaves, but had arisen from mistakes in passports.—The state of the registry, in the Mauritius, was an additional fact, if any farther proof were needful. Not one of the really important regulations of the registry system had been carried into execution in the Mauritius. There was a strict injunction to register the marks by which different slaves were distinguished. The object of the order was, that it should be known from whom slaves were purchased, and from what estate they came. By comparing these marks, the accuracy of the terms and the practices pursued in the acquirement or disposal of slaves might be checked. The returns from the Mauritius had omitted this in 99 cases out of 100, and they consequently afforded no means of discovery whatever. He should produce a register from the Mauritius before a committee of the house, in order that the members might see that such registries were kept only to cover the slave-trade, and were never used for any other purpose. The population of the Mauritius, according to the census taken in 1816, amounted to 87,360 souls. There had been no returns made, according to the orders in council, either for the years 1817 or 1818. In 1819 the returns made the population amount to 20,900. In 1822 the return was only 7000 and odd. There was a penalty of 100*l.* enacted by law, for every case of false return. The extremes of these returns, between 1816 and 1822, were 87,360 and 7000 souls. The difference was consequently 80,000. The penalty of 100*l.* for each error would amount, upon this difference, to no less than 8,000,000*l.* The Government ought at least to recollect, that every slave not correctly returned in the registers, was forfeited. He must also state, that, according to the law, every slave, who had been imported into the island, since 1800, was free. By the laws of England such slaves were emancipated, and, without the grossest violation of that law, they could not be returned to the planters. He believed that there were between forty and fifty thousand slaves of this description. To prove the extent to which slaves had been forfeited, by this violation of the registers, he would refer only to the return from Calthorp. This return, since 1816, had made the slaves amount only to 250. He could produce witnesses to the house to prove that they had seen the introduction of new negroes upon the estate, and others would give evidence to establish the fact, that from eight to twelve hundred negroes had been seen upon the property at a time. For the treatment of the unhappy people in this island, if he forbore from adverting to it, it was only because he wished, in the first instance, to confine himself strictly to the proof that the slave-trade was there broadly and openly carried on. Every state of slavery would necessarily be a state of oppression: but the atrocity of the system was always found to increase where a ready market existed, from

which fresh supplies of the commodity could be procured; and the details of those horrors which were of constant occurrence in the Mauritius, would surprise even those to whom the atrocities of other settlements were familiar. The very private soldiers who had served upon that station, spoke with disgust and indignation of the scenes which they had witnessed; but the depositions of these persons would go before the committee for which he was moving; and in the meantime, therefore, he should confine himself to the fact of the existence and notoriety of the illicit trade. The internal state of the colony showed it in a degree which seemed to make denial almost ridiculous, and showed that the importation must be extensive. The slave population of Port Louis, in 1818, had been returned at 11,000. An officer whose duty it was to keep a register of slave burials, returned, in six years, 6500 dead; rather more than half the whole number: and yet (would the house credit it?) by the last returns the population appeared to have increased. No doubt, it had increased. The only question was, from what quarter had the increase been derived? Again, in the Seychelles, the French accounts, in 1812, made the slave population 1200. Now, in less than eleven years, this population had grown up to 6740. In the interim 2000 had been exported to the Mauritius; and an illicit exportation had been going on, which might at least be calculated at 2000 more. The hon. Governor (Sir R. Farquhar) had stated, that the slave population in the Mauritius had, within a few years, been reduced 25 per cent. But this statement was not borne out by after inquiry. It appeared that, in 1815, the number of slaves registered was 45,000; but when an examination took place in 1818, three years afterwards, the number of slaves in the island was 87,000; being 42,000 more than appeared to have been registered, and who must have been brought in surreptitiously. In the same way the Governor had represented that there were but 3000 slaves in the Seychelles in 1815; but in 1818, when a census was taken of the slaves there, the number was found to be 5500, being an increase of 2500 in the course of three years. It was almost incredible that such things could be done in the present day, and under British officers, but such, nevertheless, was the fact. The hon. Governor said, in one of his despatches to Lord Bathurst, "I am a friend to mankind, and therefore an enemy to the slave trade." Nevertheless, the hon. gent. said, in another despatch, that "the slave trade does not extend to the Mauritius; but if it does, it should be recollected that we have guaranteed to the inhabitants their customs and religion, which customs comprise the slave trade." He farther said, (and here he was mistaken), "we have allowed the slave trade at Trinidad;" and he went on to argue, that as it was allowed at Trinidad, it ought, *a fortiori*, to be permitted at the Mauritius, "where slavery is the very soul of the existence of the people."—After recapitulating the sources of the evidence on which he founded his case, the hon. member observed, that in bringing forward this subject, he had carefully abstained from the slightest attempt to run away with the feelings of the house: he had simply adhered to facts.—With respect to the course pursued in procuring slaves, he had applied to a captain in the British navy, Captain Moresby, for information. That gallant officer declined

giving information on certain points (he hoped it would be the last time such information would be allowed to be refused), on the ground of secrecy; but added, that there were some circumstances within his knowledge which he felt himself at liberty to communicate. The Black traders were in the habit of going up the country with a quantity of trinkets, and stopping at the least suspected point: a village was then marked out for plunder; in the course of the night they surrounded it—set fire to it—attacked the inhabitants, killed some, wounded others, and seized upon the remainder as their prey. They then selected such as were fit for sale, and tying them together, drove them along the road at a pace little short of a run, in order to keep pace with the horseman, who held the cord, by which they were tied together. They were secured with their hands behind their backs, and hurried along like a drove of cattle to Smithfield. One young woman, who had, for the first time, become a mother, had her infant with her, but the brutes finding the child too young to be of use, flung it into the burning cottage from which its unfortunate mother had rescued herself and it, and she was doomed to witness its destruction (hear, hear); but he would not harrow up their feelings by entering into the horrible and disgusting details (hear, hear). The Arab boats were inconvenient and unwieldy; in these boats the negroes were literally stowed in bulk; there was then placed over them, and within two or three inches of their persons, a number of planks, and a second tier of negroes were there stowed in a similar manner, and so on until they were raised above the gunwale of the vessel (hear, hear). According to one account, the unfortunate creatures were huddled together, in a sitting posture, and in this state they were beat with a club until, to use the words of the narrator, they were actually wedged together in one mass of living corruption (hear, hear). Another captain, with whom he had recently conversed, had informed him, "that the stench from a vessel, whose cargo of slaves had been thus stowed, was such that he did not think it safe to breathe the air of the hold, even several days after the slaves had been removed." And the unfortunate slaves were conveyed in this condition—how far did the house think?—a distance of 1500 miles (hear, hear). But this was not the extent of the evil. It should be known, that for every slave brought into the Mauritius, two or three perished in the capture or transit. This was a question deeply affecting the interests of humanity, and not less affecting the national honour; because the conduct of this country, in winking at the slave-trade in the Mauritius, was an apology for that infamous trade all over the world (hear, hear). Five weeks ago, notice was taken in the Chamber of Deputies of a vessel from Nantes having been seized with implements on board, which proved that she was fitted out for the slave-trade; and a report, most favourable to the cause of humanity, was made by the committee to whom the subject was referred. But at the next sitting, Mons. Dudon, a native of Bourbon, rose in his place, and said "It is very true, we do encourage the slave-trade, and we do so in imitation of the English." Let the legislature act in earnest—let them prove to the world that this country did not tolerate the slave-trade—that it was not guilty of that wicked connivance which was charged against it by foreign states.

Let the house investigate the subject, and declare whether the information on which he called upon them to proceed, was true or false. If it were false, he would suffer himself to be branded as the worst libeller in the world; if it were true, let punishment fall on the wretches who had been concerned in the slave-trade, and let it fall more heavily on the more prosperous and more highly-elevated wretches who had connived at such nefarious proceedings (hear, hear). The hon. gent. concluded by moving:—"That a select committee be appointed to inquire whether the slave-trade has prevailed at the Mauritius, and to what extent, and the causes thereof; and to report thereon to the house."

Sir R. Farquhar said, that, until he heard it, he had no idea whatever of the scope, object, and tendency, of the hon. gent.'s speech, or the extent of the facts to which he had thought proper to call the attention of the house. The hon. member had brought forward a motion which included a period of 16 years, taking care, however, to direct the attention of the house to the early period of that space of time, and keeping out of sight the last six years, relative to which he could not bring forward, much less substantiate, a single fact, except the solitary one which was before the house last year. The hon. member professed not to found this motion on papers which he had moved for, and which were not yet before the house; and he (Sir R. Farquhar) would assert that the whole of the hon. member's argument would have fallen to the ground—that he would not have had a leg to stand on—if those papers had been printed. But according to the course usually adopted by those gentlemen who acted with the hon. member, he took that opportunity to rouse the feelings of the house, by bringing charges against the colonies, without allowing gentlemen to have the documents before them which had been moved for. The hon. gent. having failed last year in a similar endeavour—supported as he then was by the West India interest, for the petty consideration of an advantage which such a course seemed to promise in the sale of their sugars—having been at that time completely defeated, now requested that the house would join with him in a voyage of discovery for 16 years back. Charges had that evening been made against him (Sir R. Farquhar), arising out of circumstances (supposing the facts to be correct) that had occurred when he was 4000 miles off, and for which he was neither responsible nor accountable. The attack upon himself he treated with utter disregard. *Tantum imbellis sine letu.* But a gentleman had been alluded to (Mr. Telfair) in whose behalf he would say a few words. The charges brought against that individual, he believed to be totally false. He came to that conclusion from his long experience of that individual, and from the knowledge which his greatest enemies had of all his actions. They had the power, if they thought he was doing wrong, to search all over his estate for the proof of his guilt. They had the opportunity of examining every slave on his plantation. If those persons had not acted in this way, what was the inference? That they had no grounds for accusation or complaint. [The hon. bart. here read an extract of a letter from the Chief-Judge of the Mauritius to General Hall, in support of his position.]—As to what had been said relative to the proceeding of Captain Lynn, at Tamatave, it was very easily explained. When that place

was given up to us, the inhabitants were possessed of a certain number of slaves, who of course proceeded with them to the Mauritius. This point had, however, already been set at rest. In a review which favoured the principles of the hon. member—*The Edinburgh Review*—an apology had been made, and justice had been done to him (Sir R. Farquhar) in consequence of an error which the conductors of that publication had previously fallen into, with respect to this transaction.—Before he proceeded farther, he must protest against confounding (as the hon. member had done) the Seychelles with the Mauritius. The Seychelles consisted of an archipelago of many islands, and were a thousand miles from the Mauritius. Under these circumstances, he could be no more responsible for what was done there, than the British Government could be for any transactions at Gibraltar (hear, hear).—The next observation of the hon. gent. was, that there were 40,000 more slaves in Mauritius than had been registered, and this supposed fact he endeavoured to establish by various proofs. He (Sir R. Farquhar) had never denied, and indeed it was admitted last year, that up to 1820, when he returned from his Government, there had been several extensive debarkations of slaves. When, however, the hon. gent. asserted, that so many as 40,000 slaves had been fraudulently introduced into the Mauritius, he (Sir R. F.) must withhold his belief of it. In the early part of his government, fraudulent importations had been made; but though he had not brought it down with him, he had in his possession a memorandum, in the hand writing of the French General, Decaen, a very able and intelligent officer, in the following terms:—"The Returns of slaves at the Mauritius are 59,000, by the tax-roll, but to my certain knowledge, from information I derive from my Commissaries and others, there are 80,000 slaves in the colony." This was almost decisive upon the point; and it was, besides, to be recollected, that the Law of Registration was very defective, and that, although it might be applicable to other possessions, it was very unfit for the Mauritius: it could no more be applied to all the colonies, than a cobbler could make one last suit the feet of all his customers. Allowance ought besides to be made for between seven and ten thousand slaves carried off in 1819 by the *cholera morbus*.—The hon. gent. had next called the attention of the house to what he termed the appearance of a whole fleet of vessels off the coast, which had induced a Colonel to call out the troops, under the apprehension of an invasion. Afterwards it turned out that the supposed fleet of enemies was only a fleet of slave traders. The fact was, that they were two small vessels, with about 150 slaves, and were seized, prosecuted, and condemned. The hon. gent. said that some vessels engaged in the trade brought a freight of 1000 slaves each to the colony. If he had reduced this calculation, and said a 100, he would have spoken within reason; for the vessels engaged in the slave traffic were chiefly small schooners; and, however closely they might be packed, the largest would not hold more than 150 or 200, and others not more than 75 or 80 slaves. The grossest misrepresentation had been made upon this point on both sides. In the *Morning Chronicle* he had read a paragraph, bearing the stamp of a certain mint, which asserted that 70,000 slaves had been illegally introduced into the Mauritius, and that

Nov. 1826.

they were thrown upon the coast there in the most open way. It went on to add, that the slave trade was carried on from the Seychelles, where the slaves were taught French for six months, after which they were brought to the Mauritius with impunity. The whole was a most incredible story; but both statements could not be true: either the slaves were not thrown upon the coast in the most open way, or, if they were, it could not be necessary to teach them French (hear). With respect to the disproportion of the sexes, it appeared, by a return he had obtained only two days ago, that the annual diminution of 5 per cent. no longer existed, and the disproportion of the sexes was less than it had been. He (Sir R. F.) had himself visited the plantations and habitations of several individuals, and found that the sexes were well paired, and that the population was proceeding in the regular course, so as to enable the colony to flourish without the introduction of fresh slaves. It was impossible to ascertain in what way the problems of the hon. gent. were to be solved. If the population increased, the charge was, that the effect was produced by the illicit introduction of slaves: if, on the other hand, it decreased, then it was owing to the barbarous treatment of the negroes (hear, hear). As to Mr. Higginson's story, it appeared to him (Sir R. Farquhar) that all that individual represented could be most easily and naturally explained. He saw a schooner and blacks going backwards and forwards in boats. The planters were obliged to employ schooners for the transit of their produce, and that produce was conveyed on board by means of slave sailors, who, of course, went to and fro to unload or load the vessels. Nothing better than suspicion had been advanced by the hon. gent.: but the fair inference was, that what Mr. Higginson saw was only the exercise of honest commerce in a legal manner.—With regard to seizures by soldiers, positive orders had been sent out from the Horse Guards that soldiers should not be allowed to seize, as they were not competent to do so, but that they were only to give information to a magistrate, who was to carry the law into effect. Such a decision was founded on wisdom and prudence. He begged also to observe, in allusion to another part of the hon. gent.'s speech, that no comparison could be fairly instituted between the West Indies and the Mauritius. The former had long been prepared for the change in the law by the debates in Parliament, while the inhabitants of the Mauritius were in ignorance upon the subject, and as a conquered French colony it could not be supposed favourable to the abolition of the slave trade. The hon. gent. had given great importance to what was really a very trivial matter—the letter which he (Sir R. F.) had written. When he went to the Mauritius from India, nothing was known regarding the new regulations for slaves, and under such circumstances it was very natural for the inhabitants to ask whether they might be permitted to obtain a proportion of female slaves. He remembered that he had not tolerated it; he felt that the slave trade was abolished in the island the moment the British flag was hoisted in the colony: but he saw no reason why he should not submit the question to Government (hear, hear). It was true that there had been an increase in the planting of sugar; but perhaps the hon. gent. was not aware that this was the only plant which could

L

be propagated with advantage in the Mauritius. The hon. gent. could not have been aware of the dreadful hurricanes and tempests that swept at times through this colony, tearing up the firmest and the loftiest trees, and not leaving a single cocoa or cotton-tree standing. Under these circumstances, it was natural for the colonists to turn to the cultivation of sugar. The hon. gent. brought forward a statement of the number of slaves on whom bounty had been paid, up to the year 1822, but he took care in that statement to omit the two last years, for he no doubt recollected, that since 1822 a number of seizures had been made, but they were chiefly French. The hon. gent. had drawn a very lamentable picture of the slave trade. He (Sir R. Farquhar) hoped the hon. gent. would do him the justice to believe, that he never could bring himself to advocate a slave trade: and as to the Arab hordes, whatever excesses they might have committed, there never was any treaty with them for the removal of slaves. The hon. gent. had avoided to notice the good which he (Sir R. Farquhar) had effected during his stay in the Mauritius, while he, *per contra*, was at all times ready to admit that much was due to the hon. gent. for his unwearied exertions to put down the slave-trade. He (Sir R. Farquhar) had also contributed his best exertions to produce a similar effect; and he was happy to say, that owing to those exertions during his residence in the Mauritius, the French slave-traders were entirely shut out from trafficking on the eastern shores of Africa, where there was no market for slaves, except at the Portuguese settlement of Mosambique. To be sure, the trade was openly carried on by the French, in the Isle of Bourbon; but they were obliged to resort to the West of Africa, the East being shut against them. Every measure of his Government, with respect to the slave traffic, had for its object to put an end to that trade. But he had not thought it expedient to tell those, who had been employed in the trade, that they were mere felons, wishing to avoid irritating the people. His object had been to produce a just moral feeling on the subject, in the minds of the people; and, in point of fact, the principal persons who were engaged in these slave expeditions were renegadoes and pirates. From the anomalous state of the law, he did not think it prudent to proceed with the utmost severity. And yet, when the judges at Bourbon, at the time it was in our possession, refused to recognize the act of parliament, for the Abolition of the Slave Trade, he had suspended the whole bench until he brought them to a better temper. He had done every thing in his power; and as to the abuses which he could not reach, he left them to be corrected by higher authorities as they arose. The hon. bart. then read a letter, the last which he received from Sir Lowry Cole, in which a belief was stated that the people of the Mauritius were not all concerned in the slave traffic; and added, on the authority of Captain Owen, that the slave-trade was at an end, as far as respected the Mauritius and its dependencies. As he had endeavoured to improve the moral feelings of the people, for the purpose of putting an end to the traffic, so he had adopted measures against it, in concert with Radama the King of Madagascar, and the Imaum of Muscat, so as to meet it at its source. Radama had conducted himself in the most admirable manner; and his sound and enlarged views

would do honour to any European monarch. The measures which he had thus adopted had been attended with the most important results, and succeeded much better in checking the slave trade than the schemes of the hon. gent. (Sir R. Farquhar) and his party. The authorities of the eminent officers whom he had mentioned, were certainly as good as any authorities which the hon. gent. could produce; and certainly somewhat better than that of Byam, a farm-servant, whom he had with him at the Mauritius, and who endeavoured to collect accusations against him on behalf of the hon. gent. to be addressed to the hon. gent. at the sign of the Rampant Horse, at Norwich (a laugh). The hon. bart. then read a letter from Sir Robert Barclay, stating that there was not a word of truth in the villainous report about the slave trade being carried on at the Mauritius. Mr. Veitch, an authorized British agent at the island of Bourbon, in a letter, dated Nov. 1825, stated that in that island the slave trade was openly carried on by the French; and that as his (Sir R. F.'s) measures had confined the trade of the east coast to the Portuguese settlement, several ships had brought slaves from the west coast of Africa to the Isle of Bourbon.—From the West coast of Africa to the Isle of Bourbon! In conclusion, he would refer to a letter from his friend Mr. Thomas Clarkson, which, after complaining that Sir Lowry Cole had taken away the pensions from the Missionaries at Madagascar, expressed a hope that the treaty with Radama would be fulfilled, which he considered would be of infinite benefit. He could assure the house, that nothing but this most unexpected attack could have compelled him to trespass upon them so long. He had had so little time to prepare himself, that he had been able to make only pencil notes, which did not always assist him. He relied on the protection and indulgence of the house, and he was perfectly prepared for the fullest inquiry into his conduct (cheers).

Mr. W. Horton could not help regretting that the hon. gent. had not thought proper to refrain from casting imputations upon the hon. bart. until the whole case should be distinctly before the house, when the members of the house would be enabled to judge for themselves. As far as they yet knew, the measures which the hon. bart. had adopted, appeared the best that could be taken, for the purpose of putting down the slave-trade; and he hoped that the house would at least pause, till an inquiry should be made, the papers printed and circulated, and the whole matter thoroughly sifted. Now, in this discussion, a period made a great difference, and, therefore, he requested the hon. gent. to state the period up to which the slave trade had, in his opinion, been carried on at the Mauritius?

Mr. Buxton:—Up to 1824.

Mr. Horton denied that it had been carried on in any general manner there since 1814. All the information supplied by the Governor, or received by the Government, tended to shew that the Slave Trade there was at an end. That the trade had existed there to a great extent, must be admitted; but it was a question, whether it was better to check and destroy it, by encouraging a better feeling among the inhabitants, or by exerting an extraordinary power beyond the laws of the island. As the hon. gent. had brought forward the subject, the inquiry was not limited in time, nor confined to any practical

object; it comprised numerous details, implicated many persons, and embraced a great mass of information; he could wish, therefore, that he should limit it as to time, and state more specifically into what circumstances he meant to inquire.

Mr. *Buxton* had no hesitation in stating that it was his object to get the whole body of evidence on this subject before the house. He contended, that in 1810, 1811, and every subsequent year up to 1824, the slave-trade had prevailed at the Isle of France. He could prove that it existed in 1824.

Mr. *W. Horton* admitted that the papers would prove that the trade had not been extinguished in 1818; but the point was, whether the Government of the Mauritius knew that the trade continued, and the papers must show it. He hoped the hon. member would limit his inquiry, or the time of the house might be wasted to no purpose.

Mr. *Buxton* was surprised at the slight notice taken by his hon. friend of the enormities he had brought under the notice of the house. Was it a waste of the time of the house to inquire whether these enormities existed? The Slave Trade was still carried on, and was it not the duty of the house to put a stop to it?

Mr. *Canning* said that he might have objected to the motion of the hon. gent., on the ground of the want of limitation as to time, and because he called on the house to vote for an inquiry without the papers being before it; he might object, too, on the ground of his statement being so vague, so general, and reflecting upon individual character; but as the grounds upon which he put it were national grounds; as he had understood him to say that the continuance of the slave trade was countenanced by British authorities, when endeavours were making by us to inspire into France and other countries a portion of the spirit which animated Parliament on this subject; after this public accusation against the local government and against the country,—not against the ministers of the Crown (for he admitted their efforts to eradicate the evil), but he charged the country, and undertook to prove that charge;—after this, he thought it would have an ill effect in foreign countries, if Parliament were to show a disposition to refuse inquiry. He should not therefore offer any obstacle to the motion.

Mr. *Brougham* remarked, that if charges were levelled at all, they were levelled at the country, and the authorities in the island. He thought that enough might be seen on the face of the papers they were in possession of, to justify the house in going into an inquiry. He would vote simply on the facts before the house, and on the credit of the evidence which his hon. friend had promised to produce.

The question was put and agreed to, and the committee appointed.

### *Slavery in the West Indies.*

TUESDAY, FEB. 28.—Lord *Palmerston* presented a petition from the University of Cambridge, praying for the gradual abolition of slavery, and observed, that it was gratifying to find that those seats of learning, which formed the nursery of our future statesmen, had felt so acutely on a system totally at variance with the principles of the British constitution, and directly opposed to the spirit of that religion which, as ministers of the Church of England,

they were in the habit of inculcating. He trusted that Parliament would not rest satisfied with what it had already done; but would secure a prospective abolition of this inhuman practice. No one was wild enough to expect that this could be done at once: but if the resolutions of 1823 were carried into full effect, there would be a fair prospect that the object would gradually be attained. It was painful to see the opposition which these resolutions had met with from the colonial legislatures, although their interests had been most tenderly treated; it was, however, to be hoped that they would now duly appreciate the friendly feeling which had been evinced towards them, and no longer attempt to retard a measure which it was not in their power ultimately to defeat.

WEDNESDAY, MARCH 1.—Numerous petitions were presented, praying for an amelioration of the condition of our colonial slaves, and the gradual abolition of slavery. On presenting one from the inhabitants of Tamworth,

Mr. *W. Peel* stated his entire concurrence in the prayer of the petitioners. Some measure for the improvement of the condition of the slaves was necessary in order to a gradual abolition of slavery altogether. Amongst other laws entailing great hardships on the slaves, he thought one peculiarly odious; it was that by which a slave could not be admitted as evidence in capital cases, where the evidence of a white person could be procured; so that, according to this law, if a white man were guilty of murder in the presence of slaves, and only one white person besides the murderer were present, that white man, even though he were the murderer's brother, would be received as a witness, while the testimony of all the slaves present would be excluded. This practice called loudly for redress.

Mr. *F. Buxton* presented a petition from London and its vicinity, which was signed by 72,000 persons; a proof, he said, of the great interest which this subject had excited throughout the country. He should take this opportunity of inquiring what course Government intended to pursue respecting it. The question had been first agitated in 1823: and at that period ministers had stated that it was a subject too delicate to be managed by an individual, and that it had better be placed in their hands. Those, by whom it had been brought forward, consented to this proposal, and it was accordingly, on certain conditions, transferred to the care of Government. On this occasion, the rt. hon. gent. (Mr. *Canning*) had professed views on this subject which did not differ from his own (Mr. *Buxton's*). The rt. hon. gent. concurred in thinking the system a most inhuman one, at variance both with Christianity and the principles of the Constitution, and by moving a series of resolutions, which were adopted by the house, had pledged it to an immediate amelioration, and a gradual abolition of slavery. He must admit that ministers had, in conformity with these resolutions, issued orders in council to the colonies, and done their utmost to secure their adoption; neither could it be denied that these orders contained excellent regulations: they provided for the admission of negro evidence—the legalization of negro marriages—the abolition of Sunday markets—the regulation of the punishment of the whip—that females should be subject to no corporal punishment whatsoever—that slaves should not be sold separately from their families—that manumia-

sion should be rendered more easy—that the property of slaves should be rendered more secure; and that they should have religious instruction. He should be happy to add, that these orders had been as effectually carried into execution as they had been ably devised. When the *rt. hon. gent.* first proposed his resolutions, he seemed to apprehend that he should meet with considerable opposition in reducing them into practice; he then declared that if he found such opposition too formidable for him, he would come down to Parliament for assistance. That the colonial legislatures had totally refused to co-operate in effecting the objects recommended by those orders in council, was now matter of notoriety. In none of the colonies had any thing towards the accomplishing of them been done; in some of them, certainly, something had been attempted, but it had been coupled with other measures so pernicious in themselves that Government had felt it its duty to reject them altogether. In Tobago the law respecting evidence had been a little altered, and the market-day had been changed from Sunday to Thursday. In the Bahamas the sale of negroes apart from their families had been prohibited. But these alterations were accompanied with a re-enactment of measures, wearing all the worst features of the old system. In Barbadoes, the legislature had attempted to alter the law of evidence. In Jamaica, two insignificant acts had been passed of some trifling advantage indeed to the negroes, but of much more immediate advantage to the masters. In Antigua, Dominica, Grenada, Montserrat, Nevis, St. Kitt's, Demerara, St. Lucia, the Virgin Islands, and St. Vincent's, nothing had been either done or attempted. These facts fully convinced him that if any thing was to be effected, it must be effected within the walls of that house, and that Parliament must either take this matter into its own hands, or wholly renounce the pledge it had given. He earnestly wished to avoid any angry expression of his feelings; and the expedient he had hit upon to give utterance to them, without running the risk of exciting irritation, was to conclude by reading an extract from a speech of the *rt. hon. gent.* (Mr. Canning), which far more eloquently explained his sentiments on the subject than he could himself state them. The eloquence of the passage, however, was its least praise. The prophetic spirit by which it was dictated entitled it particularly to the present attention of the house, who would find that every apprehension expressed in it, had unfortunately been realized:—"Trust not the masters of slaves in what concerns legislation for slavery! However specious their laws may appear, depend upon it they must be ineffectual in their application. It is in the nature of things that they should be so. Let, then, the British House of Commons do their part themselves! Let them not delegate the trust of doing it to those who cannot execute that trust fairly. Let the evils of the slave trade be remedied by an assembly of freemen, by the Government of a free people, and not by the masters of slaves!"—That was the language which the *rt. hon. gent.* had, on a former occasion, addressed to the house, and which he (Mr. Buxton) would again address to them on the present occasion, knowing that no language he could use would exercise a more powerful influence over them.

The petition was then read; after which, at the instance of Mr. Canning, the following reso-

lutions passed by the house, on his motion, on the 15th of May, 1823, were read:

"That it is expedient to adopt effectual and decisive measures for meliorating the condition of the slave population in his Majesty's dominions.

"That through a determined and persevering, but at the same time judicious and temperate, enforcement of such measures, this house looks forward to a progressive improvement in the character of the slave population, such as may prepare them for a participation in those civil rights and privileges which are enjoyed by other classes of his Majesty's subjects.

"That this house is anxious for the accomplishment of these purposes, at the earliest period which shall be compatible with the welfare of the slaves themselves, the safety of the colonies, and a fair and equitable consideration of the interests of private property therein.

"That these resolutions be laid before his Majesty."

Afterwards, the Clerk read the resolution originally proposed by Mr. Buxton:

"That the state of slavery is repugnant to the principles of the British Constitution, and of the Christian Religion, and that it ought to be abolished gradually throughout the British colonies, with as much expedition as may be found consistent with a due regard to the well-being of the parties concerned."

Mr. Canning then spoke as follows:—"I wished not only to have the resolutions read which I had the honour of moving, but the resolution which was originally proposed by the *hon. gent.* himself, and by the unanimous voice of the house superseded by mine, because, as the *hon. gent.* has referred to what I said as to the existence of slavery being incompatible with the principles of the British Constitution, and the spirit of the Christian Religion, I am desirous the house should understand in what degree I agree with that proposition, and in what degree I dissent from it. Undoubtedly no man can affirm that the state of slavery is consistent, in the abstract, with the principles of the British Constitution. Still less is it accordant with the mild and benignant spirit of Christianity; but as the resolution was originally moved by the *hon. gent.*, it was an obvious inference, that the incompatibility of slavery with those principles, and with that spirit, was of such a nature as to take away the exercise of all discretion from Parliament, as to the mode of removing the evil. It was to be abated at once as an intolerable nuisance. Gradual means were discarded as unfitted for the occasion, and the whole system of slavery was to be destroyed by the general voice of the community, as a state of things which religion could not endure, nor the Constitution suffer one hour longer to exist. I am exceedingly unwilling to discuss the principles of religion in a place where religion ought rather to be referred to, than directly brought into debate (hear, hear). But I must say, that though the spirit of Christianity, in the course of ages, gradually extirpated the slavery it found every where prevailing, yet, I believe, the precept is no where to be found, which proscribes it as absolutely unlawful. In various countries, it consisted with that state, and never, by its early teachers, was declared to be essentially incompatible with it. If, therefore, the proposition mean any thing beyond an expression of religious feeling, it is not true. So with regard to the British Constitution: if

it be contended that slavery cannot co-exist with it in any part of the king's dominions, the proposition is undoubtedly untrue; but it surely is not untrue, that the freest parliament of the freest country in the world has knowingly, and with its eyes open, tolerated in parts of its dominions the existence of slavery, more or less modified, and for more than a century afforded it both countenance and encouragement. Do I therefore contend, that it is not our duty to make those changes, which are conformable both with the spirit of our religion, and with the principles of our constitution? Certainly not. The difference between the resolution moved by the hon. gent. and that by which it was superseded, was, that his allowed no pause, and admitted of no qualification. The resolutions adopted by the house, on the contrary, recommended gradual measures. They proposed to attain their object by a prudent and cautious advance, and not, by setting up a principle, to overthrow at a blow a system which religion has tolerated, and the Constitution has permitted to grow up under its protection. The house must see that they are pledged not to a course by which they would have to cast aside all consequences, but only to that mode by which they can arrive at their end by the quickest and safest road. They are to aim at their object by practicable measures, and to travel towards it by slow degrees. If the conduct of Government be judged with reference to the resolutions unanimously passed by the house, and not by the spirit and tendency of the resolution which was superseded by them, I hope to satisfy the house, that, going upon the principles laid down in those resolutions, we have not been unsteady in our measures, or unmindful of the cause to which we stand pledged. Those resolutions were passed in May 1823. Copies of them were immediately transmitted to the several colonies in the West Indies, and in the first instance we attempted, by exhortations, to induce them to act upon the principles of the resolutions, leaving to themselves entirely the mode of action. It was undoubtedly most desirable that the colonies should have begun the work of melioration, without the necessity of coercion on the part of government (hear, hear); and I did hope, at that time, that that most desirable result would have been attained, and am now ready to admit that I have been disappointed (hear, hear). The following year I stated to the hon. gent. and to the house, the expedient to which Government had resorted in their first disappointment. That expedient was to embody in an Order in Council those measures which appeared most necessary for the reformation of the negro population. This Order in Council was carried into effect in those colonies in which the Crown had power to act without the concurrence of a local legislature. To the other colonies it was also sent, with an urgent recommendation that its principles and forms should be adopted by the Acts of their own Legislatures. That recommendation, the hon. gent. says, has been totally without effect; nothing has been done any where in pursuance of it; in some places, worse than nothing; and the result shews, he contends, that parliament is compelled to resume the delegation it had made of its powers to the Government, and take steps of its own for the more quick and precipitate accomplishment of its object. On the last occasion, when this question was discussed, it is true that I stated, that if a spirit of con-

tumacy appeared on the part of the colonies in the shape of a determined resistance to the views of Parliament and the recommendations of Government, I would not hesitate to come down to this house, and ask for the powers necessary to quell the opposition. I do not deny, that I meant to imply, that if such a case did arise, I would advise that we should enforce what they contumaciously resisted. The whole question between the hon. gent. and me is, whether that case has arisen, and whether it is now necessary that Parliament should take back the powers they have entrusted to the hands of Government, in order to adopt a new course of a more direct and precipitate nature? Though I see much to blame in the conduct of the colonial legislatures, I am of opinion that the case of contumacy has not arisen. I do not deny that I have seen symptoms which have alarmed me. I do not deny that I have seen indications of a spirit, that may in time become a spirit of contumacy: but I will hope to the last; I will carry my forbearance longer perhaps than reasonably I ought, before I precipitate a step which necessity only can justify, and which must be pregnant with consequences, I should be sorry unnecessarily to bring either on this country, or on the colonies (hear, hear). As to the conduct of Government, the points in the order in council are, I understand, on the whole, those which the most sanguine friends to the abolition of slavery, consider such as it is most prudent and useful, in the first instance, to submit to legislation. I have not heard it intimated that there are any points which even the West India interest consider to have been rashly introduced. On the other hand, I have not heard of any material omission tending to the prejudice of the slave. There may be shades and gradations, which, in a more mature stage of the question, I might be willing to push to a greater extent; but, as to the substantive matter of complaint, nothing, I believe, of importance, was omitted. The order in which the subjects may be stated is this:—In the first place comes the regulation for insuring religious instruction, and keeping hallowed the sabbath; secondly, the admission of negro evidence; thirdly, the legitimization of marriages; fourthly, the security of property; and fifthly, the facilitation of manumissions, as well by the purchase of the slaves themselves, as at the will of the master; sixthly, the prevention of the sale of slaves detached from the estate; seventhly, the non-separation of families; eighthly, the moderation of punishments, and the abolition of flogging, as a stimulus to labour; ninthly, the abolition of flogging altogether in the case of females; and tenthly, the institution of saving banks.—With respect to the regulations recommended in the orders in council, I find, by the latest returns, that the recommendation as to religious instruction, has been modified, more or less, by different colonies; but out of twelve, eight have taken cognizance of it. Respecting the receiving of slave evidence, seven out of twelve have either adopted the recommendation now, or have had such a regulation prevailing. On the subject of marriage, I fear that five only have done any thing towards forwarding the recommendation. As far as regards the security of negro property, eight have taken cognizance of the order in council, or had established some security before. In regard to manumission, seven had either the recommendation carried into a more

or less perfect state before, or have adopted it now. The recommendation respecting the non-separation of families and slaves, I am sorry to say, only four have adopted; but to the adoption of this recommendation, the obstructions which exist are rather of a legal than a moral nature; and the removal of the difficulties does not depend on the colonial legislatures themselves. Eight have adopted the recommendation for mitigating the severity of general punishment; and, with respect to the corporal punishment of females, I am sorry to say, the recommendation has only been listened to by five, although it is by far the simplest and shortest, and cheapest mode, by which a disposition could be implied of complying with the wishes of Parliament, and which I had thought there was but one legislature could have hesitated to adopt (cheers). Of all the cases which can be imagined, this is an instance of refusal which can be explained upon no other ground than a disposition to fly in the face of the legislature (cheers). In the only remaining instance, and the most difficult of execution, that of the establishment of savings banks, the recommendation has been adopted by two only (hear, hear). This is the information which has been received.—The question now before the house for discussion—not indeed before us with a view to any practical effect, however—the question between the hon. member (Mr. Buxton) and myself is, whether the period has arrived when the conduct of the colonial legislatures has assumed a resistance so obstinate as to render it necessary for us to abandon the course we have already pursued, which, to a certain degree, has produced beneficial results; and whether, in fact, we should stir at the present that great question, upon which, if necessity should arise, I shall have no hesitation in expressing my opinions—I mean the question of legislating for our colonies (hear, hear). I cannot pretend to deny that the late proceedings in the principal colonial legislature—the principal, I mean, in point of wealth and extent—have filled me with sentiments which I do not wish to express. I confess, that when I remember the many trials which have taken place in that colony, and the instances in which life has been taken away, justly, so far as the existence of the imputed crime, but on so small a portion of unquestioned evidence—when I contemplate the result of those trials upon such evidence, and see that in Jamaica a Bill for the Admissibility of Slave Evidence was thrown out—a measure in which the question of human life is concerned (cheers)—when I witness resolutions so sanguinary—I cannot refrain from imploring the legislature of Jamaica to wipe away the stain without delay. On private information Parliament could not proceed—but on private information it might become the duty of Government to hesitate in acting on a decisive measure; and from some circumstances which have come to my knowledge, I have the greatest hopes that, in the next session of the colonial legislature, an act will pass to accomplish this object. I cannot pledge myself to the fact, nor can I lay before the house, what, to my mind, appears conclusive of the chance that such an event will take place; but I have seen documents and received information, and have examined an analysis of the division upon which that bill was rejected; all of which lead me to hope, that, in the next session, such a bill will pass (hear, hear). I am anxious to give

them another chance for that desirable consummation, which we all should rejoice to see take place. I am desirous to give space and rest for a fair trial; but I am not at variance with the hon. member (Mr. Buxton), except as to the question of degree. If due advantage be not taken of that space and rest which is permitted them, it may then become the duty, if not of Parliament to take out of the hands of Government that trust which I hope they have not unfaithfully deserted, at least of Government to call upon Parliament to arm them with additional power (cheers). It would not be answering the question of the hon. gent. if I did not state, that during the remaining interval it is the intention of the Government at home to take such steps as will bring the intentions of the colonial legislature to a fair trial—it is the intention of Government to direct the introduction in each legislature of a bill, in the next session, embodying the orders in council, so as to ensure the acceptance, rejection, or modification of the recommendations which they contain.—The house will then understand that there are three gradations in the course which has been pursued. 1st. The vote of this house was sent to the colonial legislatures, coupled with the recommendation of the Government to accede to the principles which that vote comprehended. That having been refused, the Government drew up an enactment of its own, enforcing those points in which it had the power, and recommending those in which it had not the power, at least in which it did not exercise its authority. That having failed, we now propose that a bill, founded on the principles to which this house has acceded, should be sent to each colonial legislature; and upon that bill they must come to some decision, subject to the various modifications which the different circumstances of each colony may require (hear, hear). I should be therefore extremely sorry that the course of experiment should be disturbed, for I am persuaded that there exists in the colonies not only much resistance, but misconception; and if gentlemen will only remember how frequently it has happened that questions most plain to the understanding, and dear to the wishes and best feelings of the country, have taken a series of years to make their way in the British Parliament; they will not consider three experiments too much to influence a colonial legislature to adopt a system, in the resistance to which they feel their personal interests concerned (cheers). In many cases, too, they expect some compensation equivalent to what they consider the deterioration of their property. I am at a loss to know what deterioration can arise, except by withdrawing the service of their slaves by compulsory manumission—their compensation in that case they would find in the appraisement of the slave so withdrawn from their ownership. But in the case of the general amelioration of the condition of the slave, compensation is not to be given (cheers). Their best compensation they would find in the increased value of the slave's labour—in his increased happiness and comfort—in his elevation from the condition of a brute to a state approximating the dignity of man (loud cheers). Many of the objections which now exist may be done away with in time; the experiment is at least worth making; and I should much regret that Parliament should take any step to intercept the chance of a plan, which, if it succeeds, will be much more acceptable than any forcible mea-

sure (hear, hear); and if it should fail, Parliament would at least have the consolation of not having resorted to the ultimate measure until they had exhausted all their expectations of any thing being done by the colonies themselves (hear, hear). The hon. member (Mr. Buxton) has anticipated a part of what I have to say on this subject, by adverting to a speech which I delivered in the last century (a laugh), and has endeavoured to fix me with the opinions of that speech, and to hold me bound to follow them on the present occasion. I own, sir, I have often felt a degree of envy for those men who are not trammelled by responsibility (loud cheers, and laughter), and who can give full scope to the enthusiasm of their nature, throwing upon others the necessity of reducing their feelings within proper limits, and moulding them into the form of political expediency (cheers). I cannot take upon myself to remember all the opinions I delivered at the period referred to. I will not say that I am over prudent now, but I was much less so then; and although I do not quite remember the occasion, I do not mean to shrink from the responsibility; and yet, perhaps, one ought not to be too strictly bound by opinions delivered at so distant a period. I understand that pains have been taken to distribute some extracts from a work of a learned gent. (Mr. Brougham): indeed I have been favoured with an extract from that work, which the learned gent. will, I trust, not be offended by my saying, I have never read until this day (hear, hear); but I think the learned gent. would as little like to stand to some of the opinions contained in it, at the present moment, as I do, to be tied down to sentiments expressed in an early period of youth. Although I cannot recollect the precise period of my ardour, in those early days when I said it would be the duty of the house not to intrust the masters of slaves with the execution of measures for their improvement, I cannot help thinking it must have been on some discussion of the Slave Trade. Then there was no question of emancipation; and as the colonists then maintained, untruly, that the abolition of the slave trade would be injurious to their interests, I rather incline to think it was an answer to some such argument as that, and that I contended, where there was an uncontrolled power, and an unshackled supply, there would be little economy of labour, or of human life. The leader of an army of 100,000 men would be much more likely to rush into inconsiderate enterprises than he who had a little nucleus of 20,000. This, I rather think, was the purport of my argument; but I speak entirely from conjecture. But what I stated then is not inconsistent with what is proposed now. Do I trust to the masters the sole execution of measures for improving their slaves, when I tell them, that if they do not accomplish the object, there are measures behind, which will compel them? Is it not, in fact, trying every thing first, before it becomes necessary to resort to immediate coercion (hear, hear)? Coercion must be applied to confirmed contumacy; but that degree of contumacy has not yet arisen (hear, hear). I do confess, I have seen some symptoms displayed, which the Government would much desire to see done away with. But time may render any extraordinary interference unnecessary; and during the interval which shall be left for the trial of the experiment, I mean to supply an omission, which I am at a loss how it could have occurred at the

Passing of these resolutions; but I mean to propose that these resolutions be communicated to the House of Lords, for their concurrence.—I have now stated the whole amount of what the Government proposes to do. I trust the house will agree with me in thinking that it would be inexpedient to make any attempt at legislating in the present session; but I do so, neither denying the abstract power of parliament, or the possibility of an occasion arising for its exercise; but simply not admitting that a case has arisen to call for its exercise at the present moment (cheers).

Mr. Brougham:—The most important of the instructions contained in the orders in council, without denying the importance of others, was that which related to the manumission of slaves—meaning thereby not the lowering of the duties hitherto paid upon the manumission, but the power of compelling the master to sell the slave his freedom upon an appraisement. The instruction which was next in importance, was that which related to the admissibility of negro evidence in cases where whites were interested. The third in importance was the instruction respecting the whip or driving—meaning thereby not any regulation controlling the power of the driver by limiting the number of lashes to be inflicted at once, but the abolition of the driving system, and the use of the whip as a stimulus to labour. Now, taking manumission, slave evidence, and the whip, in the three significations which he had described, how many of the colonies having legislatures of their own had, up to the present time, passed laws upon these great questions, excepting Tobago and Barbadoes, which had been alluded to by his hon. friend, and which had made regulations concerning them in an act, which was so objectionable on a thousand other scores, that he could almost have wished that it never had been passed. He might also add the same question with respect to the clause in the orders prohibiting the separation of husband and wife, and parent and child, among the slaves.

Mr. Canning, in examining his papers, several times mentioned colonies as having passed laws on the subjects mentioned by Mr. Brougham, and afterwards said that he was mistaken on the point. He was understood ultimately to say, that St. Vincent's, Tobago, St. Kitt's, Dominica, Antigua, Grenada, and St. Lucia, had passed laws permitting the admissibility of negro evidence. With regard to manumission in the sense given to it by the learned gentleman, only one colony had permitted it. The instruction regarding the non-separation of families had been adopted by five of the colonies—by Tobago, St. Kitt's, Grenada, St. Lucia, and Dominica\*.

Mr. Brougham.—But none of them have abolished the whip as part and essence of the driving system?

Mr. Canning.—Yes, in one island, St. Vincent's. In Jamaica the power of taking by bequest, a point of no small importance, had been secured to the slave by the regulations made for the general security of his property.

Mr. W. Smith observed that it was evident to

\* By Parliamentary Paper (214), for which see the volume of *Parliamentary Abstracts* for 1826, it appears that this statement is not given quite correctly. In fact the returns are not quoted with exactness in the right hon. gent.'s speech.

all persons who had read the Duke of Manchester's speech to the Assembly of Jamaica, that it was animated by a spirit of inveterate hostility to any amelioration in the slave system. The Duke of Manchester addressed them thus:—"Another year has been allowed to pass away without your having taken any effectual measure for the improvement of the condition of the negroes. It does not become me to anticipate the result of the disappointment of the British Government, when it learns that the reiterated representations which it has made to you to do that which your own interests require, no less than the comforts of those who depend upon you, have totally failed (hear, hear). In obeying the instructions which I have received from his Majesty's ministers, I earnestly press upon you the necessity of doing something, if not to disarm your enemies, at least to satisfy your friends, and to convince parliament that the urgent representations which the Government, in obedience to its directions, have made to you, have not been entirely disregarded." Had the house, since the arrival of that document, learned that the colonial legislature had shown any symptom of repentance? On the contrary, in that very debate which terminated in the rejection of the instructions contained in the orders of council, by a majority which he would not mention, there was not the slightest symptom of yielding. The contumacy which they then exhibited displayed a spirit which, in his opinion, the *rt. hon. gent.* (Mr. Canning) would find it impossible to subdue by kindness. He might depend upon it that it would only yield to fear or force. If it did not yield to the first, the last must undoubtedly be employed.

Mr. Peel hoped the *hon. member* (Mr. W. Smith) would accept the importance of the interests at issue as an apology, if he considered any apology necessary, for his taking the liberty to caution him against using any language which might throw fresh obstacles in the way of the practical amelioration of the condition of the slaves. If there were any expediency in adopting the course recommended by his *rt. hon. friend*—that of laying before the planters, in mild and moderate, but decided terms, the opinions of Government, and so tempering the measures which they may think proper to adopt, as gradually to bring each West India Planter to the belief that he was advancing his own interests by consenting to improve the condition of his slaves; he thought they should cautiously avoid the use of any language which might irritate the prejudices, or rouse the pride of those from whose benevolent concessions they expected the more readily to carry their intentions into effect (hear, hear). Nothing could be so desirable as to induce the colonists to effect the work of improvement themselves; because their experience and knowledge would enable them to ameliorate the condition of the slaves in a more safe and practical manner than any parliamentary enactments. There were, however, some points upon which he felt much longer delay was impossible, and on which, if something were not done by the colonists, every principle of justice, of common humanity and common sense, would impel the house to interfere (hear, hear). There was one point above all others upon which he could not avoid expressing a decided opinion—the qualification of slaves to give evidence in a court of justice. Of that he would say, that he hoped

not a single session would pass by without the enactment of some regulation. It seemed to him, that any measure through which the courts of justice might be no longer closed against the slave, would ultimately tend to fortify the interests and secure the property of the master. For who were the persons to whom that evidence was to be offered? Why the Whites—a White jury. Could it then be said, in opposition to such a proposal, that those who were to judge of the value of their testimony, were unreasonably prejudiced in favour of the Black population? Quite the contrary: a White jury were in all cases to exercise their judgment as to whether that evidence was or was not admissible (hear, hear). In some colonies the evidence of a slave was already admitted, in cases which did not affect the life or property of his master; and where no White evidence could be procured. But, did the house see the effect of that law? When White evidence could be procured, then the Black evidence was inadmissible; and if that evidence should happen to be in favour of the person accused, then the Black evidence could not be received to prove his guilt, even in the most glaring cases. What he wanted to see was, some principle adopted in their legislation on the subject, so that the responsibility of rejecting a Black man's evidence, should rest, not on the law, but on some known tribunal. Such a measure would be the first step to invest him with those rights which that house considered it right to bestow upon him. And if they were resolved to carry their intentions into execution, and raise the Black population to the rank of human beings—if they were determined to exalt them above the level of brutes—he could not understand any reason why they should delay giving effect to their views, upon the subject of slave testimony, a single moment (hear, hear). The slave was liable to be summoned just in the same manner as an idiot might be in this country; and it should be left to the White jury to determine, when he appeared before them, whether they considered his testimony should or should not be believed; and, for his part, he could not conceive a mind, even the most deeply imbued with West India prejudices, which could see any danger likely to accrue to the life or the property of the White man, by investing the slave with such a privilege (hear, hear).—He would not, at present, go farther into the question: but he thought it necessary to say so much, lest, from the very strong feeling with which *hon. gent.*s seemed to view the proceedings of the colonists, their expressions might have the effect of throwing an obstacle in the way of their attaining the great object which they were all anxious to attain—the practical amelioration of the condition of the Black population (hear, hear).

Mr. Scarlett agreed with the *rt. hon. Sec.* (Peel), that if they were to legislate at all, it would be infinitely better that the colonial legislatures should lead the way. In his earliest years he had imbibed prejudices against the condition of the slave population, and felt the strongest desire to witness their entire emancipation. But he contended, and in doing so he probably differed from the opinions of many of his friends who surrounded him, that they should rather wait even the tardy measures of the colonists, if they could by that means conciliate the masters, than by any language of intimidation, reproach, blame, and more than

all, of threatening, attempt to force a premature and unwilling concession. Such a course would prove an effectual barrier to that object which they had all in view—the permanent amelioration of the condition of the slaves. He would conclude by expressing a hope that the execution of their intentions should be confided still to the hands of Government, who had, it appeared, most worthily fulfilled their trust, and who would, he was convinced, give the most effectual operation to the recommendations of the house, united, as they were, with the desire of the whole kingdom.

Mr. *Phillips* said, he was old enough to recollect a time when the man who hinted at any thing like the abolition of the slave trade, was looked upon as a visionary enthusiast, who proposed plans of ideal happiness for that unhappy race which could never be realized—and yet he had lived to see those very men vote themselves for its abolition, and become zealous in their endeavours to carry their resolutions into effect. So it would be with those who now objected to any further alteration in the condition of the slaves; their prejudices, if not assuaged with too much violence, would gradually yield to the force of reason; and they would see the time when those who now opposed them would return their unmeasured gratitude for their exertions, and call that interference which they now deprecated a great practical benefit. He hoped they would steadily pursue their course, and leave the execution of their intentions in the hands of the Government, who had gone on so prosperously to the consummation of their wishes.

Mr. *W. Horton* said, that if any man gave himself the trouble to examine the protests which had issued from the colonial legislatures, he would find that they all rested their objections to the measures of Government, upon the conviction that their property might be endangered, and their authority over their slaves weakened, by the effect of the new regulations. In proportion as that fear faded away, he was convinced their opposition would abate; as it seemed to him certain, that no abstract love of slavery influenced their actions, either at this time or any other (hear, hear). How far the principles they were adopting had begun to produce the effect anticipated might be, perhaps, best shewn to the house by reading an extract from a letter, dated Jan. 9th, which he had received that morning from Demerara. He should observe, that the writer was one of the most violent opposers of what were called the orders in council, and had predicted the most calamitous consequences as likely to ensue from their execution. These orders, after being tried in Trinidad, came into operation in Demerara, according to the desire of parliament, in Jan. (1826). The letter stated, that after the writer and others had contemplated the approaching change in the treatment of the slaves with great alarm, he was happy to say, that although the whole of the regulations had been carried into effect, there had not been a single instance of any abuse of the liberty bestowed upon the slaves. The writer went on to say, that he had assembled the slaves on his estate, and informed them of the alteration in their condition, declaring at the same time, that all punishments would be entered in the Black Book—that the new stocks should not be used—and that the money which had been destined for the new jail, should be devoted to

the improvement of their cottages. The slaves had promised to conduct themselves, in consequence of these alterations, with propriety and decorum, and he was glad to be able to say that they had not, as yet, in any instance, forfeited their word. He did not mean to say there had been any very long time for trial, but still the letter was interesting as an indication of improved feeling on the part of the planter, and of a disposition to good faith upon the part of the negro. In Trinidad a system of task-work had been introduced, by which the labour which the slave ought to do in a day was calculated; and when he had performed the task thus allotted him, he had all the remainder of his time at his own service. These were gradual steps to the full completion of their wishes; and in proportion as the planter became convinced that the negro might be trusted with more liberty, whilst his own interests remained unaffected, so they had with the progress of that conviction a right to demand an implicit compliance with their commands from the colonial legislature. In Jamaica, where the principal opposition had been made, the protests of the assembly plainly proved, and indeed expressed, that if they could be satisfied their properties would remain unaffected, they had not the slightest disposition to oppose the measures proposed. The house was not, however, to suppose, that because Jamaica was adverse, nothing had been done elsewhere. In St. Vincent's, the Sunday markets were ordered to cease at an early hour in the morning, slave evidence was accepted, marriages legalized, and all punishments for offences registered for the inspection of a magistrate. In Dominica a bill had been proposed, and he had reason to believe would be passed, in which Sunday labour was forbidden and slave evidence received where it was not against the owners. He did not mean to say that such a measure was by any means sufficient; but he mentioned it to shew that there was a disposition to alter the system of treating the slaves, and that if Government were permitted to watch and direct its efforts, the whole of the good they contemplated would in time be effected, without the coercion which some gentlemen deemed necessary.

Mr. *Douglas*, Mr. *Sykes*, and Sir *F. Blake*, supported the prayer of the petition.

Mr. *T. Wilson* was not inimical to the abolition of slavery, but he was not friendly to a measure which would make the slave free at the expense of the master (hear, hear). There were other interests as well as the comforts of the slave population, which it was the duty of the house to consider—long established rights of property, which should be protected. Some hon. gents. were of opinion—an opinion, however, in which he did not concur—that the free labour of the negroes would be as available for the production of the colonies as slave labour. As an example upon this subject, they might refer to what had taken place in St. Domingo, which was formerly a colony very rich in sugar plantations; but, since the change that had taken place in the state of the population there, although the island now produced molasses sufficient for its own consumption, yet the valuable sugar plantations were totally lost. It would be well for the house to consider how the compulsory manumission of slaves would have the effect of injuring the property of the masters. If a person, enlisted into the militia

or army, might, upon payment of twenty guineas, and with the acquiescence of the Commander-in-Chief, procure his discharge, no inconvenience was here felt, as a substitute was found in his stead; but, in the case of a slave obtaining his manumission, the master was left without the means of procuring another. In this event, therefore, his property must suffer a manifest injury. He was, therefore, averse to any compulsory proceeding whatever in any change it might be intended to introduce; or if a compulsory proceeding were resorted to, those who petitioned in favour of it should be ready, as the persons who signed the petition from London were, to defray their proportion of expence to indemnify the proprietors for the loss to which such a proceeding might subject them.

Mr. Grossett having expressed his surprise that the condition of slaves in the East Indies had not excited the attention of those who were so deeply interested in the condition of the slaves in the West Indies.

Mr. Hume said, that the only slaves within the Company's territories in India were dancing girls, who were bought when young for the amusement of rich persons. If, however, any of these slaves ran away from their masters, there was no power in India by which they could be compelled to return. There was, therefore, a great distinction between the state of slavery in the East and that in the West Indies. With respect to the question before the house, there was no man more anxious to see slavery abolished than himself; but he thought that great injury would be done to property, and very little to promote the real welfare and comfort of the slaves themselves, by any precipitate measure. The *rt. hon. gent.* (Mr. Canning) was perfectly right not to pledge himself to any particular time, either at the end of this year, or at the end of the next. It was enough that certain modifications in the system of slavery were taking place, that regulations were gradually introduced, and that there was reason to hope that these regulations would be carried into effect with the concurrence and support of those who might be opposed to any hasty measure. An opinion was entertained, that free labour was more profitable than slave labour; but, as far as the experiments made in the last twenty-three years went, they did not support the doctrine. The slaves who had been brought from America, and located in Trinidad, and to whom money and land were given, did not, by the success of that experiment, induce him to give the preference to free over slave labour. There were also 39,000 slaves, who had been located in Sierra Leone, under somewhat similar circumstances. They would shortly have an estimate of 27,000*l.* laid before them for the erection of a barrack there. In this building, the free negroes were employed at first, but it was said that the *Gov.-Gen.* Turner was soon obliged to dismiss them, as they would not work. If this were the fact, it certainly did not go to recommend the introduction of free labour by any precipitate measure. He was compelled to acknowledge that the zeal of some of the friends of emancipation had led them to commit acts of indiscretion. Prints, calculated to excite the feelings of the multitude, had been put forth (*hear, hear*). One of these prints represented the flogging of females, in the manner in which they were flogged in 1782. He also condemned the habit in which some *hon. gents.*

indulged, of reviling the proprietors of West India property. They were the holders of property, and as such were entitled to protection; but they ought rather to be pitied than reviled; for he owned he considered it a misfortune to possess such a property. It was true, that regulations which might be adopted for ameliorating the condition of the slaves, formed no ground whatever for compensation; but he was decidedly of opinion that compensation would be due to the planters, if parliament should at once take away their slaves.

Mr. Brougham:—It had been said, that charges should not be brought against the West India proprietors. He admitted this, and thought also that we should be cautious of bringing charges against our fellow-countrymen at home. The petitioners had approached the house in the mildest and most temperate language. He had examined, if not the whole, at least most of the petitions on this subject, all of which impressed him with the belief that they touched only upon what could not be doubted—the enormous practical abuses of the slave-system. If he was to single out the strongest cases, he would not resort to the enemies of colonial slavery and those called abolitionists, but to the speeches in the colonial legislatures—to the reports of the commissioners of inquiry. It was there he would find the strongest and most appalling. He did not advocate immediate emancipation, and as to compulsory manumission, he must correct the false impression entertained by an *hon. member* (Mr. T. Wilson); for he merely meant that when the slave was in a condition to purchase his freedom, the master should be required to manumit him, at a price fixed by appraisement. Something had been said respecting his (Mr. Brougham's) inconsistency in advocating, in a work written a quarter of a century ago, opinions which he now opposed. He could only say, that he had not examined the work referred to for some years, and could not, therefore, be sure as to the opinions there expressed; but he would, rather than expose himself to a charge of inconsistency, avow his change of opinion. He still thought that the ameliorating process would be better done by the local authorities; but when so many years had elapsed, when so many pledges had been given to no purpose, it was time to show that this country was to be trifled with no longer. He was decidedly averse to irritating language; and more especially since we possessed the power, and the colonial legislatures were subordinate. Still, he must say, that all that had been promised had ended in nothing. In Jamaica and Barbadoes, if not resistance, at least marked contempt, had been manifested towards the wishes of Parliament. It had been said that we held the language of menace; the term could not be used in the offensive sense; for we merely intimated to the colonists, that if the measures recommended for their adoption did not appear to them fit to be adopted, the house must, as it had the right to do, exert the power of legislating for the colonies. Whilst we were quiet they would be quiet, and years would pass away without any thing being effected; but if they found that ministers, though they would not pledge themselves to any specific measures, would not be unfriendly to plans for doing here what would not be done there, he hoped some benefit might accrue.

Mr. R. Gordon concurred entirely in what

had fallen from the right hon. gent. (Mr. Canning), respecting his intention of trying what further effect the representations of ministers would have on the colonies. In the event of their declining to adopt such measures as were recommended, he, for one, should be ready to concur in any additional measure which might be called for by Government (hear, hear).

Mr. F. Buxton, in reply, said, that satisfied as many gentlemen seemed to be with the declaration of ministers, he could not help being entirely disappointed with it. Delay, while it produced no good, was likely to cause extensive injury. An hon. member (Mr. Hume) had stated, that the advocates for the abolition of slavery had used every effort to prejudice the public mind against the existing system, and had adverted to a print of the flogging of female slaves. He (Mr. Buxton) assured the house, that neither he nor any friends with whom he acted, had the slightest knowledge of that picture; and further, that they could not allow themselves to resort to any such unworthy acts in furtherance of their objects. But if they wished to bring before the public acts of cruelty and oppression suffered by negroes, he assured the hon. member, that they need not refer so far back as the year 1782. They had, in the reports from Berbice and other islands, acts of cruelty which would far exceed any thing described in the hon. member's picture.

The petition was ordered to be printed.

### *Rebel Slaves in Jamaica.*

THURSDAY, MARCH 2.—Mr. Denman rose, in conformity to a notice which he had given on the first day of the present session, to call the attention of the house to certain judicial proceedings which had taken place relative to the trial and punishment of slaves in the island of Jamaica, in 1823, for a supposed rebellion and conspiracy. Although the papers upon which the motion was founded had been ordered on the 1st day of March last year, they had not been laid upon the table until a late period of the session, and he had not had an opportunity of reading them, until some time in the recess. He was well aware how difficult it was to arrest the attention of the house at the present moment of danger and alarm, upon any question not connected with commercial distress, or the state of the currency; but he thought that the subject to which he was about to implore their consideration, was one in which they could do more good than they had been able to effect in all the protracted discussions upon that truly important, but unfortunately ill-understood, matter of inquiry. For as, in the one case, it was difficult to trace the causes of the evils all felt and acknowledged, and still more difficult to apply a remedy to misfortunes which each succeeding discussion seemed to prove more and more beyond their reach or control; in the other he would be able to shew, that they themselves had been the causes of the commission of great crimes, for which they were deeply responsible, and to which it was in their power to apply an instantaneous and effectual remedy. In the one case, they were engaged night after night in discussions, which, from their ignorance of the disease or the remedy, could hardly turn to any practical benefit; while, in the other, they could immediately make themselves acquainted with all the circumstances of the case,

and see that it was in their power to make that knowledge a means of preventing the further commission of deeds disgraceful to the character of the country. If they should shut their eyes to this painful subject, they would be unfaithful representatives of the people of England; who, notwithstanding the distress which afflicted them on every side, had never lost sight of the miseries of the slave population, but had expressed, in numerous petitions, their sense of the necessity of ameliorating the condition of their unfortunate fellow-subjects on the other side of the Atlantic.—The events to which he had to allude, and which took place in December 1823, were detailed in papers which lay on the table of the house. The first instance was that of a trial which had taken place at the parish of St. Mary, on the 19th December, 1823. The circumstance on which this trial was founded was nothing more than that a Mr. Roberts, a butcher, at Kingston, in Jamaica, having occasion to reprove his negro-boy, for carelessness with respect to his person and wearing apparel, a conversation ensued, in consequence of which eight negroes were tried, and afterwards sentenced to be hanged, for a conspiracy; and this sentence was executed four days after it was pronounced. Every one of those negroes died with the most solemn protestations of their innocence, and refused to purchase any mitigation of their sentence by accusing others. The mode in which the conspiracy was said to be discovered, was this—On Monday, the 16th Dec., the butcher, Roberts, scolded his negro boy, William Sterling, for not getting his frocks, and asked him how he would appear to follow him about at Christmas? William said, 'Mussa, you will have had Christmas.' Witness said, 'For what? are the negroes going to rise?' The boy, having an excuse thus put into his mouth, answered, 'Yes,' and by way of keeping up the lie which he had told first, for no other purpose than that of evading the blame of his master, added, that 'his father told him so.' Mr. Roberts then asked him if he had seen the negroes meeting, and the boy answered, 'Yes, two times, but that father told him more than he knew at the meeting.' Witness asked if any of his negroes were among them: he said 'he believed George was.' Witness asked if any more Bay negroes; he said, 'yes, Mr. Walker's Ned and Douglas.' Witness asked 'if he thought they were going to kill all the buckras (whites);' he said, 'his father told him so.' Witness then asked him 'what he must do; should he go to Kingston or Spanish Town?' He answered 'no, negroes would walk all about the country.' Witness said, 'if he should pack up his books, and go to the fort, or Mr. Beard's, would he be safe?'—'No; negroes would walk all about, and Wentworth negroes would rise same as Frontier.' Witness asked 'if they would kill every body;' he answered 'yes, every body; you and Capt. Barton go on board of ship, and take me with you; would not be safe any where else.' Now it would be seen that, in the whole of this evidence, there was not one word said by the negro boy which was not first suggested to him by his master's questions. He did not mean to deny that it was enough to justify the calling out of the militia, or any other measure of precaution; but not the steps which were subsequently taken for the trial of the negroes, who were arraigned upon no other ground. The boy, upon being examined on the trial, repeat-

went to establish the existence of a rebellious conspiracy. Witnesses were not examined who might and ought to have been called; and in the examination even of those who were called, many contradictions were to be found. He would, as an instance of this contradictory testimony, advert to the evidence of Mary and Ned. Ned stated, that the conspirators intended to rise on the day before Christmas-day, but that on his observing that a guard was set on Christmas-eve, they altered the day of rising to Thursday, the 18th of the month. Ned said, that this conversation about the setting of the guard, and the alteration of the day of rising, took place on the Saturday. Mary, the wife of Nibbs, however, stated in her evidence, that the alteration of the day of rising, which Ned stated to have made upon his suggestion on the Saturday, was mentioned to her on the Friday. Similar contradictions were observable with respect to the number of cutlasses, the number of men and women present at the different meetings of the negroes, and indeed upon many other points.—It appeared by a letter, dated Dec. 20, written to Mr. Bullock, the Secretary of the Government at Jamaica, by Col. Cox, who was commander of the militia, and had been called upon to take a part in putting down the insurrection, in case it should obtain a head, that it had been considered necessary that the slaves should be brought to trial—not, the house would observe, for the sake of coming at the truth, but for the sake of example. The Colonel's words were as follow: "I thought it my duty to insist on the magistrates trying the negroes that had been taken immediately, and to send their trial and sentence express, as it will, in my opinion, be highly important for the safety of the parish, and probably the island, that they should be executed before the holidays, as an example to the other negroes, and to prevent the danger of an escape, or an attempt to release them." That was the spirit in which this commander of militia, who had brought the slaves to trial, and sat as judge, wrote to the Governor. It was the duty of the Governor, upon seeing the spirit in which this letter was written, to have paused before he authorized the execution of the slaves. The Governor, however, thought proper to carry the sentence into immediate effect, and the warrant was drawn out for the execution of the eight unfortunate negroes. The letter in which Col. Cox described this melancholy scene was by no means unworthy of the attention of the house. The letter, dated the 25th of December, was addressed to the Secretary of the Government, and ran thus—"I have to acquaint you, for the information of his Grace, that the eight negroes were executed yesterday, with all due solemnity and decorum, attended by the custos and several magistrates, four companies of the St. Mary's regiment, and a troop of horse: only one of the wretches confessed to the Rev. Mr. Girard, that it was their intention to have burnt Frontier Works and Port Maria, and killed the whites; but none would mention any other negroes concerned with them, or show any symptoms of religion or repentance. They all declared they would die like men, and met their fate with perfect indifference; and one laughed at the clergyman, Mr. Cook, when he attempted to exhort him under the gallows. Every thing was at present perfectly tranquil; three companies are on duty in different parts of the parish." He should like to have the report of

Mr. Cook upon this subject (hear)—instead of the inflated and unwarrantable account which Col. Cox had sent to the Government. This was the sequel to the history of the trials at St. Mary's. A boy, in order to save himself from punishment, thought proper to tell a story of the negroes rising, and to connect his father with it; and on that evidence, unsupported as it was by any circumstances of probability, the unfortunate negroes were called to trial without counsel, without the opportunity of making any defence, or calling a single witness even to character; and in the short space of eight days they ceased to live. It was the duty of the house to interpose, and to prevent persons in future, whether slaves or not, from falling the victims of perverted evidence, of ignorance, and of passion, which tended not less to the punishment of innocence, than to the impunity of guilt.—He would now proceed to notice the trials which had taken place in other parts of the island. There appeared to be a taste for plots in Jamaica, so numerous were the charges of conspiracy, and so slight was the foundation for them. At St. James's, a number of negroes were convicted of conspiracy; but the Duke of Manchester was so satisfied of the ridiculous nature of the charge, that he commuted the sentence of transportation for life to imprisonment for three months. The whole affair, it appeared, originated in the idle conversation of a lame boy about 'King Wilberforce' (a laugh). The Duke of Manchester declared, that after reading the whole of the evidence, he had not been able to discover any combination amongst the negroes for any criminal purpose.—The next case of alleged conspiracy occurred at St. George's. In this case, a slave named Corberand, who might in some respects be compared to Titus Oates, was the principal evidence. This man was examined on the 26th Dec. and stated nothing that could in any degree support a charge of conspiracy. On the 7th Jan. however, another slave, named Mack, came into play, and stated various particulars. Corberand, then, finding that there was a demand for a plot, came out with a history equal to any that Oates imposed upon the disgraceful credulity of the English nation. Fortunately, however, he was detected, by having endeavoured to implicate Lecesne (whose case had been already before the house) in the rebellious conspiracy, which was satisfactorily refuted by the equally satisfactory circumstances of his being, for a greater portion of the time, off the island; and for the other part of the time, confined in prison, except for a very short period, during which he clearly shewed that he could have taken no part in the alleged conspiracy. A sufficient proof of the infamous character of these witnesses was to be found in the following recommendation of the Secret Committee of the Assembly, that Charles Mack and Jean Baptiste Corberand should be sent off the island, as persons of too dangerous a character to remain at large in the colony.—He now came to the rising of the negroes at Hanover. It could not be denied that there was something of reality in this case. If the poor negroes at Hanover had been informed of the iniquitous manner in which their fellow-slaves had been thrust out of the world elsewhere, they would not have had the feelings of men if they had not expressed resentment against such a transaction. The insurrection, however, had not its origin in feelings of that nature, but arose out

of the misconduct of the manager of an estate, who abridged the slaves of a day on which they were in the habit of making holiday.—These were the four cases which he had felt it his duty to bring under the consideration of the house. It was a remarkable fact that in all the cases the charges were supported, almost without exception, by the evidence of slaves only. No fact of any importance was deposed to by a free man. And here he would take the liberty of saying a few words upon the subject of the slave evidence bill. That bill, it was known, was rejected in the Jamaica House of Assembly by a large majority; and of the minority, some voted in its favour only for the sake of depriving those whom they supposed to be their enemies of a topic for censure. The bill was brought forward by Mr. Stewart, who said that the reception of slave testimony could alone supply the defect in the present state of the law, by which, in hundreds of cases, not only cruelty, but even murder, might be perpetrated without the possibility of conviction. In order to prove the necessity of adopting the measure, Mr. Stewart stated a case of dreadful cruelty—not one which had occurred forty years ago, but one of recent date. He said, “In this town a white man, a monster of cruelty, concealed a female slave in a room, where, with a hot iron used for burning marks on cattle, he disfigured and mutilated the fellow-being who was so unfortunate as to be in his power. He trusted to the effect of the law which prevented slaves from giving evidence (hear, hear); but it chanced that a young man of colour suspecting what was going forward, peeped through a crevice, and saw the horrid scene. On his evidence the owner of the slave was convicted and punished.” Another fact was related by Mr. Mais. He spoke as follows: “There is one instance which, because of recent occurrence, I must take leave to mention. It is the case of a female slave, who, on her return home, was met by a free man of colour, who had been out shooting. A little dog, which accompanied her, barked, and probably might have snapped at the man. This irritated him, and he threatened to shoot the dog. The woman, alarmed for his safety, called out, ‘Oh! don’t shoot him; don’t shoot my dog!’ upon which the man turned angrily upon her, and said, ‘Not shoot him? I’ll shoot you if you say much!’ and, with little ceremony, lodged the contents of his piece in her side. This was in the face of day, in the presence of many persons, but who, being slaves, were not qualified to give testimony on the occasion. This was a damning fact, and yet the offender escaped. Shall it be said, then, that such a provision as is now sought for is not necessary?” There was, he admitted, much weight in the objections which were urged against the measure. “If,” said Mr. Hislop, a member of the Assembly, “the evidence of a slave were to be received now, he might the next moment be sent to the workhouse by his master to receive a flogging.” It must, indeed, be evident that as long as the present order of things continued, the influence of the cart-whip would be paramount. But when these were the sentiments of the House of Assembly, what was to be thought of a judicial inquiry, at which only the evidence of those unfortunate creatures was received—persons under the immediate dread of the cart-whip, bending their souls as they crouched their bodies under the influence of

terror, and yielding up every function, both corporal and mental, to their masters? Twenty-three slaves had been executed on the evidence of their fellow-slaves. If he were asked what remedy he would apply to such a case, he would reply, he knew of none but the extinction of slavery. Suppose the evidence of slaves was received at the present moment, what good effects could be hoped from it? The slaves, instead of coming before a jury of their peers, would come before a jury of their masters. They would appeal to a law imposed by their masters, interpreted by their masters, and executed by their masters. It was made a matter of accusation against the unfortunate slaves who were executed, that they showed no religious or penitential feeling. Was this to be wondered at? Was it possible, he would ask the house, for Christianity to make any progress amongst the negroes in our colonies whilst slavery existed there? They had been told that these men had died without showing any symptoms of religion or repentance, but exhibiting the utmost hardihood in respect to their crimes. He did not wonder that they should reject the truths of that religion which they saw professed by their persecutors.—These were the circumstances under which he had felt it to be his duty to bring this subject before the house. When he spoke of the abolition of slavery, he trusted that the house would not imagine that he was the advocate of hasty measures (hear); but he thought that ministers should always bear in mind that the abolition of slavery was the goal; that it should be made the ground of their measures. He would now move.—“That this house, having taken into their consideration the accounts laid before them of the judicial proceedings in Jamaica, on the trials of the slaves, for rebellions, conspiracies, and other offences, in the years 1823 and 1824, feel it their duty to express, in the strongest terms, the sorrow and indignation with which they contemplate the perversions of law and violations of justice, displayed in those trials; they deeply lament the precipitation with which sentence of death, wholly unwarranted by proof, was in several instances carried into execution; and they cannot refrain from expressing their conviction of the necessity of an immediate and effectual reform in the administration of criminal justice affecting slaves in that island.”

Mr. W. Horton said, he was not less earnest than the learned gent. in his wishes for the extinction of slavery at the earliest period at which it could be securely effected. It was, however, his duty to guard the house against the observations of the learned gent. which, though true in the abstract, did not bear on the question before them. With respect to these trials, he should state that the Duke of Manchester and the Jamaica Government had been convinced by information derived from various sources, that rebellious intentions existed amongst the slaves on the northern coast of the island; and there could be no doubt that rebellious conspiracies had existed in the parishes of St. George’s and St. Mary’s. That at St. George’s was proved by the confession of the slave Jack, who, at the period of his confession, could have no motive to utter a falsehood; he was on the eve of execution, and was not worked on by any promises of pardon.—But the learned gent. stated that the proceedings in St. Mary’s had been irregular. Was the learned gent. aware of the law which governed that Court?

The Act of 1817, under which the slaves were tried, and which, severe indeed as it was, ought to be the object of censure—not the Court that administered it—provided, “That if any slave eater, or be concerned in any rebellion or conspiracy, to commit murder, felony, burglary, or to break into any out-house, no person being therein, or compass the death of any white person, or attempt the same by any overt act, such slave shall suffer death; and if any slave shall be found to have in his custody any fire-arms, pikes, swords, gunpowder, slugs, or ball, without the leave of his owner, he shall suffer death.” The learned gent, had said, that there was no evidence to justify the punishment of the slaves at St. Mary’s; yet one of the witnesses stated that she saw a black man hold a gun in a particular manner, and take a bayonet from a basket. The constable who searched the premises found the gunpowder and ball, but did not find the bayonet. The learned gent. could not dispute the facts; and such facts being established, could he blame those who put the law into execution? The last clause of the act enacted, that “Any slave present at any secret meeting, or at the taking of any secret oath, drinking human blood with rum, or meeting to learn the use of arms, should suffer death or transportation, as the court might direct.” As a commentary on the remarks of the learned gent., and a proof of the evils inseparable from a state of slavery, and of the state of feeling in a slave country, he (Mr. Borton) could inform the house, that this very act of 1817 was an amendment of one passed in 1759; and, severe as its enactments were, had been pronounced by an individual in his office, (Mr. Stephen, son of the Master in Chancery), to be one, which contained many beneficial clauses in favour of the slave-population. If the Government had not allowed this act to receive the Royal sanction, they would have lost the beneficial clauses, and the old act would have been in force. The learned gent. had referred to the evidence of Colonel Cox, and had endeavoured to hold him up to ignominy. The fact, however, was, that Mr. Cox was the very individual who had introduced the beneficial clauses, which deprived the slave court of the power of sentencing any slave to death, excepting in cases of treason and rebellion. The magistrate who tried these slaves in St. Mary’s had the power to sentence them to immediate punishment, which would have been carried into execution, but for Mr. Cox’s letter, desiring that the case might be sent to the Governor for his consideration. He must acquit Mr. Cox of the inhumanity imputed to him, on account of a letter written in haste, in which he applied the term ‘wretches’ to the criminals. He could confidently appeal to several West India proprietors, on behalf of his character as a humane man. He was a proprietor of slaves; and when he knew that he was endeavouring to promote the happiness of his negroes, it was not to be wondered at that he should feel a little exasperation at finding they were plotting against his life. It had been asserted, that a boy had got up the story of this conspiracy, and that it was all the result of an accidental circumstance. It was impossible that such an hypothesis could be sustained by any man who had read the reports of the trials. The boy had not been aware of the consequences of his evidence, for, in the first instance, he had impli-

cated his father, and when his father was put upon his trial, he denied his former evidence (hear, hear). The inference he drew from this was—the veracity of the boy in the first instance. He did not stand there to justify the law of the island; nothing could be further from his intention; he only said that if the law did admit of extreme laxity of evidence, the fault ought not to be charged upon those judicial functionaries, who had no duty to perform but that of obeying the law. He was sorry to state, that the most unfortunate prejudices prevailed in the minds of the West Indians with respect to their slave code, which a better state of knowledge would eradicate, but which at present were attended with serious consequences. A great part of the law of Jamaica related exclusively to a state of things which no longer existed; to the state of slavery, and to the slaves, when they were imported from the coast of Africa. Such laws were absurd and unjust, mischievous alike to Black and White, when applied to the present state of slave population. It was desirable that the opinion of the country should be expressed as to the propriety of repealing those laws, or adapting them to the present state of things. As to the assertion, that manumission and money were offered as rewards to the slaves for evidence, the Duke of Manchester positively denied the charge. The practice was, to hold out to the negroes, that if by their good conduct or instruction, they could obtain a certificate that they were qualified to give evidence in a court of law, their evidence would be admitted. With reference to the practical evils of the judicial system, there was, at the present moment, a legal commission in Jamaica, appointed by the house, to investigate into the jurisprudence of the island. With reference to the actual trials, the learned gent. should reflect that it was utterly impossible to put on paper the many circumstances which might influence a jury in receiving evidence—the gestulation, the action, the tone, the emphasis. The Duke of Manchester had stated that the trials had been most scandalously reported. If the evidence had been lax, it was the fault of the law; if it was so great an outrage upon justice not to have admitted counsel to have pleaded for the accused, still it was the fault of the law, and not of those who administered it. With reference to the parish of St. George, the evidence of Jack would satisfy every man that there was a conspiracy. This negro had sworn that ‘bad usage had driven him to this crime.’ He stated, that “James Manherty brought up 36 guns, in three turns; each turn he had two mules; on each mule six guns. Corberand then brought up a keg of powder, and carried it to Oliver’s house. Oliver then said it would not do to hide the guns and powder in Balcarras; he would hide the guns, but Corberand must carry the powder to Mullett-hall, and there hide it.” Those were facts, which, if believed, completely proved a rebellious conspiracy. The learned gent. did not deny the existence of rebellion at Hanover; he said that the real history of it was, that the slaves were called together by Mr. Malcolm on a day which had been given to them; but how could a special injury offered to the slaves on Malcolm’s estate account for the rebellion at Golden Grove and Alexandria (hear, hear)? This was not a sympathy in particular suffering; it was a general and unfortunate impression in the

minds of the negroes that injustice had been done them. Great as the evils were, there was no cure but in the progressive improvement of the slaves; and in proportion as that took place, they would no more bear of treasonable practices, which arose solely out of the state of ignorance in which the slaves were kept. As to the non-extension of mercy to the persons convicted in the present instance, the Duke of Manchester felt that an example was necessary to prevent scenes of bloodshed. Even in this country, where justice was administered in a manner that defied commentary and criticism (laughter), it was sometimes necessary to punish individuals with death, by way of example, for crimes which others expiated by a less severe penalty. The Duke of Manchester had acted on the same principle, by aiming, in the exigency of the moment, at striking a salutary terror into the slaves. The contradictory evidence of Corberand ought not to be allowed to militate against his first evidence before the jury. The punishment inflicted, however opposed to our English notions of feeling, had been even less heavy than was authorized by law; it was too much, therefore, to call upon the house to express sorrow and indignation at the result of proceedings so conducted. Nor was it quite just, in estimating what had been done in Jamaica, that hon. gents. should judge entirely from their own feelings, living here in England—out of the scope, as they stood, of that alarm and danger to which the colonists were eternally exposed. Some hon. members seemed scarcely to appreciate the terror with which a West Indian contemplated the revolt of his slaves. This feeling, though it could not justify the severities which had been exercised, might serve to extenuate in Jamaica, acts, from which we should recoil with horror and disgust in England. No one could be more anxious than he was for a change in the slave system; but, as he saw neither the justice nor the advantage of visiting with censure the authorities of Jamaica in this instance, he should move, as an amendment, "That this house sees, in the proceedings which have been brought under its consideration, with respect to the late trials of slaves in Jamaica, further proof of the evils inseparably attendant upon a state of slavery, and derives therefrom increased conviction of the propriety of the resolutions passed by this house on the 15th May, 1823;—But that, however desirable it is that the law under which the late trials took place should be amended, it does not appear to this house to be expedient or safe, to impeach sentences passed by a competent tribunal, upon persons brought to trial according to law, and convicted by a jury duly empanelled, and sworn to give a verdict according to the evidence laid before them."

Mr. Buxton said, that hon. gents. on the other side had uniformly deprecated all such discussions as the present, upon the ground that they tended to keep alive those violent and angry feelings which were said to exist in our Colonies, and were described to have their origin in the agitation of the question of Slave Emancipation in this country (hear, hear). For himself, he was always in favour of those discussions; for no discussion arose in that house on the subject, in which some advantage was not gained, some concession made in favour of the negroes. Even that night, some important concessions were made by the hon.

sec. (Horton), who had admitted, that no such proceedings would be for a moment allowed in this country; and further, his admissions proved, that where slavery existed, impartial justice could not be obtained (hear, hear). Let them look at the series of injustice and cruelties which had been perpetrated within the last three years. First came the trial, he might call it the murder of Mr. Smith, the Missionary (hear, hear); then followed the massacre, he could use no better term, of the negroes at Demerara, for doing or intending only that, as he (Mr. Buxton) firmly believed, which in law and justice they were entitled to do. Then followed the persecution of the Missionary Shrewsbury. Next came the deportation of two free natives from Jamaica; next, the Berbice Papers; and last of all, the proceedings at Jamaica, now before the house. Was it not time, after seeing all this in three years, that the subject should be agitated again? Now he was prepared to make it appear that there had been no plot in any of the affairs at St. Mary's, St. James's, or St. George's. Upon the trial at St. George's three witnesses had been examined—Mack, Hypolite, and Corberand. Now Hypolite's master, Dr. Daron, stated on the trial that Hypolite was a great liar, and had, only a few days before, robbed the man against whose life he was swearing. Dr. Daron said that he had a very bad opinion of Hypolite; and his son, Mr. Charles Daron, swore he would not believe a word that Hypolite could say. The second witness, Corberand, by his own contradictions, proved the material parts of his evidence to be absolutely unworthy of credit. For instance, on his first examination, speaking of what took place before the death of Mr. M'Farlane, he said that he went into a negro hut, where he found an illegal meeting assembled, "because he heard a noise." On the trial of Smith and John, distinctly contradicting his first assertion, he said that he had gone into this hut on purpose to "take the swear." Again, on his first re-examination, he said that the night on which he accidentally heard the noise was the first night of his going to the hut and meeting that assembly, and that the next night was the last. But it appeared that he had been regularly one of the party, and that they had had meetings at a negro-house every week of the year. On the trial of Jack and Prince, Corberand swore, that he saw a negro cut his finger—he afterwards denied that it was his finger, and said that it was his arm—and let the blood run into a bason, where it was mixed with rum and gunpowder, and the negroes drank it. He saw a magician practising his incantations; rubbing the necks of the negroes to make them invulnerable, and their faces to make them invisible: and this magician afterwards offered to catch a musket ball. While he swore all this at the trial of Jack and Prince, on another occasion he had sworn that at the same place, and at the same time, he had seen nothing; and, after swearing that he had heard nothing, he swore that he heard a plan laid to kill Mr. Learmond, the overseer, and the book-keeper, and afterwards to proceed, both up the river and down the river, murdering and burning; besides hearing one man appointed a king, another a general, a third a major, &c. These contradictions were constant; and shewed that Corberand either did not know what he uttered, or did not care. In one place, he said that James Thompson was made king. In another,

he swore that it was Henry Oliver who was king. At one time he spoke of a particular act having been done before he knew Lecesse; directly afterwards it appeared that he had known Lecesse from his childhood. On the night when the "swear" was taken—this was one statement—there was a great anxiety for secrecy. Afterwards, he swore that, on that night when they were so anxious for secrecy, they had marched with a drum and a fife, and with their Governor at their head. The evidence of the third witness, Mark, seemed to be worth about as much as Corberand's. In one place he swore that he had never seen but one gun in the conspiracy, and that in the hands of Henry Oliver; presently after, he spoke of a gun in the hands of a man named Rae. He swore, in one page, that he had left Balcarras three weeks before Christmas, and, in the next, he said that he had been still at Balcarras a week before Christmas. And let the house recollect that this was all examination in chief. There was no cross-examination, or ten thousand contradictions more would probably have been elicited. The whole trial was carried on in a language of which the prisoners scarcely understood a word; and it would be worth hon. gents' attention, in the way of showing what chance these wretches had of escape, to hear the nature of the defences which they made for themselves. Prince, a negro, being tried for his life, said only—this was according to the judge's notes—"Prince, —no business in matters; wood, punish, fear; J. B. C. brought word; never mustered; Jack saw him at Balcarras, made hoops. M. Pl. gave Ct. to negroes to do work, though in the wood.—B. P.—Mul. II.—Lee.—gun—knows J. B. Corberand put bit in mouth to get free; broke his neck; never let master's property; when at home worked at wood; made baskets for salt." Now this was the sort of creature who was hanged for rebellion; and yet in the strange jargon which Prince uttered, there were two words, which, if attended to in time, might have saved his life. He said, that he knew J. B. Corberand "put bit in mouth to get free." There was a superstition among the negroes, that if a man put a piece of silver into his mouth, while he swore falsely, he was free from the guilt of perjury; and the "bit" of which Prince spoke, was a small coin so called, which Corberand actually had in his mouth during the trial; as the jury, in fact, saw; and the thing was so evident, that Corberand was never brought as a witness before the court afterwards. —(On what had taken place at St. James's, he would go no farther than simply to quote the opinion of the Duke of Manchester, who said, "that having most accurately looked into these trials," (upon which thirteen persons were prosecuted). "it afforded him particular satisfaction to state, that he could see no evidence of any combination at Montego Bay for a criminal purpose."—At St. Mary's the peculiarity of the evidence was extraordinary. A boy was produced, who swore, as the other witnesses in the St. George's case had done, to circumstances, one half of which must have been untrue, because his statements constantly contradicted one another.

The *Attorney-General*.—He was not put upon oath.

Mr. Buxton:—If he did not swear, he stated. The court had probably thought it indecent to put such a boy upon his oath. They had not

thought it indecent, however, to call him as a witness to swear away the life of his own father.

The *Attorney-General* desired not to be misunderstood. He merely meant to observe that the omission to swear the witness had been one of the most objectionable parts of the system.

Mr. Buxton:—The whole system was an execrable one, and such as must be got rid of. Now, let the house consider the nature of this boy's evidence. He stated that he was going along the high road, and there he saw a number of negroes publicly plotting a conspiracy; they were doing this openly, and in a place where any person passing might over-hear them. He walked into the midst of the conspirators, and no objection was made to his presence; he offered them his council, they accepted it, and altered the whole of their plans at his suggestion. This was the statement of the boy, William; but he did not stop here; he went on to state, that there was a large concourse of negroes present: the man who deposed to what happened at the same time and place, swore that there were no more than six persons present. The boy stated that there were many women present: the man, that there were none (hear, hear). These witnesses contradicted one another upon material points; and as to collateral evidence, in the way of confirmation, there was nothing like an attempt. The only approach to such testimony was a statement from a Mr. Gordon, that on a particular night he had heard a gun fired, and on looking out of the window he saw two negroes walking with white frocks on; that he heard one of them say "It would not do;" but what "would not do," or what was the subject of their conversation, he could not say. Mr. Gordon, after hearing this, was so violently alarmed, that he went quietly to bed and fell asleep. But apart from the internal importance of this evidence, there was one fact which prevented it from having much effect against the prisoners—to wit, that this circumstance had occurred on the 17th of December at night, whereas the prisoners had been taken up on the 17th of December in the morning. Next came the evidence of the constable; and he was asked whether he had not found guns amongst the insurgents? His answer was, that he had not; but he had found a place where he was told guns had been. Then he was asked if he had not found large quantities of ammunition? And he answered, that he had not. Had he not found a number of bayonets? "No," said the constable, "but I was shewn a basket in which I was told a great number of bayonets had been" (a laugh). He was at length asked, if he had not found a great many balls? He had found a single ball. Mention had been made of the confessions of the criminals. Where were those confessions to be found? The letter of Mr. Cox said distinctly, that only one of the wretches had made any discovery. But where was the confession? Such a confession was not likely to have been lost sight of when Mr. Gordon's story was preserved; and he (Mr. Buxton) would not believe that any confession had been made, until it was produced.—He thought that no man could look at what had taken place upon these trials—at the character of the witnesses called, the nature of the evidence given by them, and the total absence of all counsel or means of defence afforded to the prisoners—without concurring with his learned friend (Mr. Denman) that there had been a

monstrous perversion both of law and justice in the business (hear, hear).

The *Attorney-General* did not rise to justify the proceedings in discussion, for no man could reprobate more strongly than he did the whole system of the administration of justice in our colonies, as far as the slave population was concerned. He could not understand upon what principle the law should be differently administered when the lives of a black man and a white were at stake—why any of the forms and securities should be waived in the one case, which were insisted upon in the other. Nor could it be questioned that at last we must come to an altered state of things, a state in which the slave, upon trial for his life, would be prosecuted under the same restrictions, and defended in the same manner as his master. What was the comparative situation of the two parties at the present moment? If a white person was put upon his trial—no matter for what offence—a distinct charge was necessarily preferred against him, which he would be able to defend himself against, and know how to meet. Now a particular act had not long since compelled the reduction of a charge against a slave to writing; but that act had been accompanied with the sweeping proviso, that no objection should ever be raised upon a point of form. Unfortunately, persons in the situation of the members of that assembly were very likely not to distinguish accurately that which was matter of form from that which was of substantial importance. He did not mean to say, with reference to the present proceedings, that they were illegal under the slave law of Jamaica; but only let the forms of the charges in any of the trials be looked at, and let the house then say whether that system of law could be supported. The prisoners were charged with being guilty—of what?—of “rebellious conspiracy;” against whom? But there was the addition—and “of other crimes.” This left the prosecutor at liberty to give evidence of any crime (no matter how unconnected with the main charge) of which the party might have been guilty. The house, then, would not fail to say, that this system deserved reprobation in the highest degree; and would join unanimously in the amendment proposed by his hon. friend (Mr. Horton), which, while it treated the law as one which could not too speedily be got rid of, discharged those from blame who had only followed the accustomed course in carrying it into effect. He would now call the attention of the house to another curious point—he meant the law as it related to slave evidence. In the case of an accusation made against one of the white population, slave evidence was not allowed. The slaves were supposed to possess no adequate idea of morality—no due notion of the distinction between truth and falsehood; and they were not suffered, therefore, to give evidence against a white man. But let the house mark the extraordinary inconsistency. When a slave was to be tried, the evidence of a slave was admitted against the accused party—not under the sanction of an oath, but on his bare word, he having previously listened to an exhortation not to tell a falsehood (hear, hear). Now, he would ask the house, could a system of this kind lead to the ends of justice (hear, hear)? He did not blame the persons who acted under this system, but he blamed the system itself (hear, hear). The acts of those individuals were only

in accordance with law. Now let the house look at the charge which was made in this case. It was a charge of high treason. The first person called was the boy William. Was he sworn?—No. He was insensible to the obligation of an oath, and yet he was admitted to give evidence to take away the life of a fellow-slave. Here he begged the house to mark another peculiar circumstance. It was a rule of common law in this country (and he always understood that the common law of the country extended to Jamaica), that hearsay evidence should not be received. Yet in this case, hearsay evidence was received to a very great extent. The boy William said, “Sterling, my father, told me such and such facts.” This was the very worst species of hearsay evidence, and yet it was admitted against the prisoner (hear, hear). He understood, that this course of proceeding had been uniformly admitted with reference to Blacks (hear, hear). He condemned this system in its general principle; he condemned it also in its mode of working, as it was developed in the cases before the house (hear, hear). But when he stated this, he must declare his conscientious belief, that the persons who were engaged in those prosecutions were convinced of the existence of a conspiracy; and, in endeavouring to defeat it, it could not be denied that they acted in accordance with the established law, which had existed for 150 years in the colony. He must add, that every body who read the reports of the trials, must perceive that they were very imperfectly given. Indeed, they could form but a very loose idea of the guilt or innocence of the parties accused, from the mere reading of those reports. Those who were present, by marking the demeanour of the witnesses, by observing the conduct of the accused, could form a more just idea of the guilt or innocence of the parties, than any men were capable of doing from the perusal, not to say of an imperfect report, but of the most perfect report of those proceedings. On that point, therefore, some allowance should be made. He objected, as much as his learned friend could do, to the evidence of a son being received against his father. He must observe, however, that this was not illegal, even in this country. He had known instances in our criminal courts, where a son and daughter were sworn to give evidence when the life of the father was at stake. There was another observation of his learned friend on which he wished to make a remark. His learned friend had said, that on one of those trials nothing material was disclosed in evidence, except what was advanced by a wife against her husband. In the printed report, the female, who gave the evidence, was stated to be the prisoner’s wife. He knew, however, and his learned friend must also know, that when, amongst the slaves, a woman entered into cohabitation with a man, it was usual to speak of her as his wife. He had made inquiry into the fact, whether the woman who gave the evidence in this case was or was not the wife of the prisoner; but he had not been able to procure satisfactory intelligence. He admitted that if she were the wife of the prisoner, nothing could be more irregular—nothing could be more contrary to law—nothing could be a greater violation of the first principles of justice, than to suffer her to be examined; but, on the other hand, if she were merely cohabiting with him, it was

not illegal—it was not contrary even to the law of England, as practised in the highest courts.—He must now state, that under such circumstances as had been disclosed, he (the Attorney-General) would not have returned a verdict against those people; but he must contend, that there was no ground for charging those before whom they were prosecuted with any intentional act of injustice. The question was, did they believe that a conspiracy existed? Surely no person who had read the letter of the magistrates to Colonel Cox, which was printed in the minutes, could for a moment suppose that they did not believe that such a conspiracy had been formed. The answer to that letter clearly showed a similar conviction in the mind of Colonel Cox. Colonel Cox was well known, and was highly respected by many members of that house. He was brought up in this country, with English manners, feelings, and habits, and he was a man of known mildness and humanity. But there was other evidence on this point which he considered decisive—he meant the honest persuasion which appeared to fill the mind of every gentleman on the island. He alluded more particularly, to what had passed in the debate in the House of Assembly, on the slave evidence bill. One of the most active supporters of that measure was a gentleman of the name of Evans. No man was, or could be, more anxious to ameliorate the condition of the slaves in the West India islands than that individual; and therefore his persuasion, that a conspiracy existed, must make a greater impression on the house, and on the mind of the learned member himself, than that of almost any other person. Mr. Evans, in his speech, thus expressed himself: “We had the misfortune at the period to which I have alluded, to be compelled to institute important trials for conspiracy.” This, he observed, was the expression of an individual, running in a certain degree the same race as his learned friend—advocating the same cause with the same sincerity, and, he would add, with great and distinguished talents. Mr. Evans went on to say: “The parishes of St. Mary, St. George, and St. James, were the chief scene of the conspiracy. Fifty-four persons in all were convicted, and twenty-three were acquitted. Of those convicted some were executed, some were transported, and some were pardoned. The convictions in almost every case rested on the evidence of slaves; and yet no one supposed that that evidence was defective. Of the number of slaves examined on those trials, only two or three were viewed with suspicion; and their evidence was disregarded, except it was confirmed by other and more credible testimony.” Why did he (the Attorney-General) read this? He read it because it was the evidence of an honest individual to the fact, that he believed in the existence of a conspiracy. And yet after this evidence they were called on to censure 12 men who declared on their oaths that they were of opinion that a conspiracy existed. In endeavouring to introduce a new system, let not the house censure those who carried into effect the old system, if they acted conformably with its provisions, and adhered conscientiously to the law as they found it (hear, hear).

Dr. Lushington said, that the speech of the learned gent. who had just addressed the house, went to the fearful extent of showing, that if the forms of law were but observed—if the

forms established in any one of the distant territories of this country, however revolting to humanity, were adhered to—the House of Commons were prohibited from inquiring, in any case, how far justice had been administered. The learned gent. had dwelt on the difficulty of judging of what had occurred at a great distance, from an incorrect record of the proceedings, and when they had not such an opportunity as the jury had, for sifting and examining the matters alleged against the accused. He, however, looked to the principle which governed those proceedings; and, keeping that in mind, he would contend, that it mattered not whether the prisoners were executed on the evidence of bribed slaves, or of an unsworn boy; they might have been condemned on half the evidence adduced, and the argument of the learned gent. would have been just as conclusive. He (Dr. Lushington), however, would argue, that the first duty of that house was, to see that justice was administered in a strictly impartial manner in the most distant possessions of this country (hear, hear). In those distant possessions, there was an infinitely greater opening for injustice and oppression, than could, by possibility, be found at home. Here, if an apprentice were ill-used, or if any abuse were discovered in a jail, members of that house were ready to start up, to call on ministers to redress the grievance, or, if they found it necessary, to proceed with the case themselves (hear, hear). Now, however, they heard of the execution of six or eight individuals, under most extraordinary circumstances, and they were told, that they were not to inquire into what took place, because, forsooth, it was all in accordance with an old and barbarous system. The evidence which was printed, was the most inconclusive that could be imagined: but then it was exclaimed, “Oh! that evidence was considered quite ample by the Duke of Manchester” (hear, hear). To him it appeared to be the weakest and most illegal evidence he had ever seen. How came it that the Duke of Manchester had authorized the execution of the individuals found guilty upon this evidence, without having it examined by legal men? He might have had the opinion of the chief justice of the island, who would at once have detected the errors with which it abounded. He imputed not to the Duke of Manchester or the magistrates any wilful malice; but he did impute to them great carelessness (hear, hear). The prisoners had been found guilty of rebellion in a great measure upon hearsay evidence, which was never received in this country, and ought not to be received in any of its possessions. In the papers, they would find the information of W. C. Morris, Esq., which ran thus:—“William C. Morris, Esq., states, that Mr. Hole, a non-commissioned officer of the Hanover troops, and others, informed him at Flint River, that the overseer at Magotty, Mr. M'Donald, has informed them, that the driver on the Magotty estate had stated to him (hear, hear), that the Tryall negroes had invited the Magotty negroes to join them in a conspiracy to assert or claim their rights or freedom, but the Magotty negroes had refused to do so; nothing of the kind was intended on Magotty estate by the negroes.” Such was the testimony which led to so melancholy a result. Let gentlemen peruse the letter of Mr. Vaughan. It was strange that any person could act upon such frivolous information.

—“I deem it my duty to make the following communication:—it appears there is a general expectation among the negroes of freedom being given shortly by Government at home. The negroes are every where behaving well, and perform their work as usual, but still entertain this belief. The grounds on which I have formed this opinion I shall now give. Mrs. Fowler, at Kensington, St. James's:—she saw many strange negroes, who talked freely with her that they were soon to be free; she laughed at them, and asked whether, if they had a fowl, they would give it up for nothing? Eliza Tucker, a person of colour, Greenwich-hill, St. James's. —she hired a man from Gilsborough on negro days, who talked much of this free, but said he did not like it, for many negroes would be idle, and quarrel and fight as in Guinea country; and who was there to give clothes, fish, &c.?” Now could any rational being suppose, looking at the samples of evidence which he had quoted, that any insurrection was contemplated, or could be contemplated, by those who were described as likely to be the actors in it? His learned friend (the Attorney-General), after expressing his entire disapprobation of this system, had stated that, on the present occasion, no blame could attach to the magistrates, who had honestly adhered to the laws: He (Dr. Lushington) could not assent to that position. He could not think that a jury of twelve Englishmen, and five magistrates on the bench, unless they were actuated by strong prejudice, or by that fear and cowardice which sometimes compelled men to do injustice towards their fellows, could have returned such a verdict as they had done (hear, hear). The hon. gent. (Mr. W. Horton) had said that none of the persons who gave evidence had been induced to come forward by the influence of bribes. Now, what said one of the resolutions of the secret committee of the House of Assembly?—“We recommend to the house to reimburse to the parish of St. Mary the sum of 376*l.* paid by them for the manumission of certain slaves who rendered essential service by the discoveries which they had made” (hear, hear). Was this likely to produce honest testimony, and were those who held out such temptation seeking for it? After he had stated this, he would ask whether any man living could say that the conduct of the Duke of Manchester, or rather of the Jamaica government, was correct, in proceeding on such evidence? How could they, on the single evidence of an accomplice, corroborated in no one particular, and who had contradicted his former testimony in the course of subsequent trials, proceed to the extremities which they had done? Was there, he demanded, the exercise of that cool consideration which ought to have been employed on such an occasion, before a number of victims were condemned to execution? Yet such was the fact—that sort of evidence was received; condemnation was the consequence, and death followed. There was much more in those trials which filled the mind with disgust and abhorrence. His learned friend (the Attorney-General) had said most truly, that the people of Jamaica were entitled, as their birth-right, to the protection of the law of England. But while they enjoyed it, was it to be tolerated, that there should be another system for the government of their slaves, in which every principle of injustice and oppression was nurtured (hear, hear)? The law of England said, that the judges were considered to be of counsel for the

prisoner: but in the whole course of these trials did they ask a single question in cross-examination? Did Colonel Cox, who had been so highly eulogized, say to any of the witnesses, “Have you been promised your freedom?” or, “Have you been threatened by your master?” Those five magistrates had not the common honesty, or the common humanity, to make inquiries of that kind, although they were essential to the interests of justice. What was the evidence given in the case of Charles Brown by the unsworn boy William, only 15 years of age, and by the boy Ned, who was in the same situation? To bolster up this evidence, they brought forward a white man (one William Kelly), who stated, “I am overseer of Frontier estate; prisoner is a cooper; had been head driver, and was very severe on the negroes, particularly on women, for which witness removed or broke him, and made him a cooper; he was partial in his punishment, and some he punished severely.” Now what, he asked, had this to do with the conspiracy? The fact was, those who prosecuted said, “if you don't believe the unsworn evidence of the boys, if you don't believe the slave evidence, we must give you something to act upon in the shape of the evidence of the sworn witness, Kelly.” This proceeding was entirely contrary to the spirit of English jurisprudence.—He would not, after the able exposition of his learned friend (Mr. Denman), and although the Solicitor-General was waiting to rise next—no doubt to declare that all the proceedings had been as regular and as impartial as in this country—travel through all the discrepancies of this evidence. If they agreed to the amendment, the result would be, that if those in power abroad adhered merely to forms, they would be entirely relieved from the responsibility of doing substantial justice (hear, hear). It was said that one of those slaves (and, be it remembered, one only) had confessed his guilt at the place of execution. Now, he would ask whether that did not occur at the execution in the parish of St. Mary? He would ask whether the graves of the miserable sufferers were not dug beneath the gallows? Whether the clergyman did not offer to spare the lives of any two of them, if they confessed their guilt? And, finally, whether the whole of them, except Charles Watson, did not firmly deny their criminality (hear, hear)? He put these interrogatories thus strongly, because he had conversed with an eye-witness, who spoke positively to the facts. The inhabitants of Jamaica declared the evidence of slaves to be such as, under ordinary circumstances, could not be relied on in the smallest degree. With respect to the European inhabitants of Jamaica, such evidence was altogether excluded; and to say to Watson and his colleagues when on the point of death, that pardon should be granted to any of them who would confess and give information, was neither more nor less than offering a premium to deprive other men of their lives (hear, hear). But it was said, that examples were necessary—that the Duke of Manchester had proceeded thus promptly to avoid any unnecessary bloodshed. He would merely say, that the Duke of Manchester, before he made that example, should have taken care to have established guilt. It was said, however, that there were 20,000 whites in the island opposed to a population of 380,000 blacks, and that if the latter were to make a simultaneous movement, the destruction of the former must be inevitable.

He admitted, that nothing could be more appalling than the character of negro ferocity; but he wished to know whether it was justifiable in a white man, educated in the Christian religion, in cold blood, and in the dread of danger, to wreak signal vengeance on those whom fate or fortune had placed in his power? If they wished to preserve the islands to the empire, and to retain the black population in subjection, let them do justice and love mercy (hear, hear). It was not the negro character any more than it was the character of other men to be continually restless and blood-thirsty. Let them look to the example of Sierra Leone, where 18,000 persons were collected who had formerly been caught wild, as he might say—who had been driven almost mad by their oppressors. He had it from his friend Mr. Hamilton that there were not more than 250 soldiers engaged to keep them in order, and those troops had never been once under the necessity of resorting to force (hear, hear). Let them then resort to those principles laid down by Providence for the good government of man; let them endeavour to impart to the negro a sense of justice and a knowledge of his God. He trusted that time and circumstances were nearly ripe for raising the condition of that fallen race to a state more gratifying to God and man. By an enlightened course, tending to their final emancipation, they might secure the affections of their negro subjects, although they could not govern them by force. He would conclude by exhorting the house, in spite of all difficulties, to persevere in improving the laws of those colonies—in ameliorating the condition of the negro—to do justice, and to punish oppression (loud cheers).

The *Solicitor-General* perfectly concurred with his learned friend (Dr. Lushington) in his generous abhorrence of slavery, and if the resolution of his learned friend (Mr. Denman) had only for its object a prospective improvement in the mode of trial which obtained in the colonies, he might have assented to it; for the amendment of his hon. friend (Mr. Horton) was to that very effect. But the motion of his learned friend did not simply point towards an amelioration of the code—it conveyed a charge of gross malversation against the Governor, the judge, and all other parties concerned in the prosecution of the trials in question. In that he could not agree: he must object to any condemnation of the Governor, the judge, and the jury, for carrying the actual law, which they were bound to observe, into effect. He would give way to no man in his abhorrence of negro oppression. He would have the law modified as to put the slave on his trial, on an equal footing with a free man. But if blame attached in this instance, it attached to the law, to the system of slavery, and not to individuals.—The cases in which a son had appeared against his father—and a wife against her husband, had been dwelt upon as being deficient in the very forms of evidence. Now, he must observe, that there were, besides these witnesses, two others in each of these cases, whose testimony was more complete: so, at least, he collected from the printed papers. His learned friends further objected, that certain three witnesses were not examined, an omission entirely chargeable on the law: further, it was alleged, that the witnesses examined, did not prove the case in a manner which would have satisfied a British court and jury.

But they would not presume illegality in a Barbadoes or a Jamaica court because the jury had not weighed the evidence with as nice a discernment, as fine a sense of justice, and as jealous a regard for the person and liberty of the prisoner, as would have been shown by a jury in Kent, administering the law of England. The hon. member (Mr. Buxton) thought that the exclusion of slave evidence proceeded from a mere prejudice, and expressed his hope that the law in that respect would be assimilated to the law of England. In talking of the prejudices of others, we should not forget our own. Did the hon. gent. recollect that within 150 years no testimony was admitted in our courts from persons who were not Christians? Nay, it was not more than 60 years since the evidence of pagans or infidels was rendered admissible by a decision of Lord Hardwicke. Even at this very period the evidence of Quakers in criminal cases was not admissible. Might it not be said that it was very hard for a Quaker to have his house torn down or pillaged, and not be able to prosecute the wrong-doers?

A Member across the table:—Then let that law be amended.

The *Solicitor-General*:—He had no objection to its amendment (hear, hear). He was certainly in favour of amending the law of the colonies, but he thought we should set the example, and that the amendment of our own laws should precede the amendment of theirs (hear, hear). Agreeing in all the general principles of his learned friends, he could not subscribe to the injustice of punishing, by the censure of that house, individuals acting upon laws, which, whilst in force, it was their duty to maintain.

Mr. W. Smith said, that the learned gent. (the *Solicitor-General*) had not very clearly shown that the admission of the evidence was justifiable, even on the slight ground of technical propriety. But mere technical rules were not the only things to be considered. Was not a juror bound by common sense, as well as by common justice, to notice the incongruity and crudeness of stories going about from hand to hand, and made up into evidence by the mere technical form of having the legal number of witnesses to swear to them? He rejoiced, however, that they had got thus far. He had now lived to see the time when the man was looked upon as one of a strange species, who would pretend that the system either could or ought to continue. This debate would show, that however tardy might be the operations of justice, and however individuals were sheltered by rank or situation, the unerring test of public opinion would be final and conclusive, and the result would afford a wholesome lesson to those in whom power was vested not to abuse their trust.

Sir Robert Wilson:—The Attorney-General had said, that by supporting the original resolution, they would pass a vote of censure on his Majesty's Government in Jamaica. Now he (Sir R. Wilson) conceived that on that very account the house should support the resolution. A vote of censure should not only be passed on the Governor, but on the judge and jury, by whose verdict the lives of these men were taken away; an act which he (Sir R. Wilson) could view in no other light than that of an authorized murder (hear). The law officers of the crown had spoken of the system under which the prisoners were tried in terms of merited reproach. But the house was not aware of half

its horrors. In 1822, one James Simpson was tried at Kingston for having chained down a girl only nine years old, and committing a rape on her person. The counsel for the prisoner, however, took an objection, that being a slave, the girl could only be considered as a chattel; and her evidence could not be admitted. Justice was stayed in consequence; and the case was transmitted to England for the consideration of the judges, who decided, that under the present law, judgment could not be inflicted, and the man was liberated accordingly. Government, however, to do them justice, took the case under their consideration, and a law was framed to prevent a recurrence of such atrocities. But there were instances as heinous and more recent, that called for a vigorous reform. But we were told to pause. Procrastination, however, would not do. The melioration of the condition of the slaves was a common cause, and one which should be pursued independent of political considerations.

Mr. Goulburn said, that with respect to the parties in this transaction, and the motives by which they were actuated, he did not think it fair to censure them, without considering that they lived in a society of which we could know but little; that they acted under the impression that their lives and properties were at stake. He admitted the necessity of reforming the colonial law; but supported the amendment, because the resolution implied, that in the trial and conviction of the prisoners, the court had acted illegally; whereas, the blame should be attributed to the laws themselves, and not to those by whom they had been administered.

Mr. Brougham:—If he could be brought to believe that the amendment would express the unanimous opinion of the house that these proceedings were unjust and illegal, he should not feel repugnant to adopt it. But feeling as he did, that that amendment was an endeavour to get rid of the question altogether (hear, hear), and that the proceedings which were the subject of the present debate, were sought to be screened, nay, actually defended by that amendment, he was determined to resist it with all his strength, and to press the resolution of his learned friend, although he should stand alone in the division (cheers). His learned friends (the Attorney and Solicitor-General), had said, "God forbid that we should defend such measures! They are bad enough: make what you will of them—think what you like—but do not pass a vote, which would imply that those proceedings were deserving of censure. However strange such proceedings might appear, compared with the way in which the laws were administered in England, yet it was the custom of the colonies; and, although it would be illegal here, it would not be illegal there." Now he (Mr. Brougham) did not mean to say that the law of the colonies had been violated, but it had been perverted to the commission of the most cruel and violent injustice (hear, hear). He must observe, however, that the charge against the negroes at St. Mary's was vague and unmeaning, and different from that against the negroes of St. George's and Hanover. In the latter places the indictments were regularly drawn up; the prisoners were tried by a slave court of five judges and twelve jurors, and the requisite forms of law had been complied with; but, in St. Mary's, the proceedings instituted against the unfortunate prisoners were not only marked

with the greatest irregularities, but were conducted and hurried forward with the most indecent speed. Comparing, therefore, the practice at both places, he was entitled to conclude that the mode of proceeding at St. Mary's had been wrong. He was entitled to draw this conclusion from the confession of the parties themselves. Colonel Cox admitted that it was requisite to expedite the proceedings: he said that dispatch was absolutely necessary. Yet in those latter places the danger was more imminent, and the number of disaffected negroes greater. The measures adopted at St. George's and Hanover wore all the appearance of decorum: a grand jury found the bill, solicitors were allowed to the accused, and every indulgence was given them. An objection was taken, on technical grounds, to part of the proceedings; and, in short, the trial proceeded as all trials should do, and more particularly trials which involved the lives of our fellow-beings. How was the trial at St. Mary's distinguished? In one brief tropical day the poor miserable men were put upon their trials, and before the sun went down they were no longer living: undefended, untried, and almost untried, they were hurried to their timeless graves to gratify the headlong impatience of those who wished for an example before Christmas week! After this, were we to say nothing, because we should not cast reflections on constituted authorities (loud cheers)? If danger existed any where to warrant the shadow of such proceedings, the danger was local, and confined to a few places. No earthly pretence could be produced to justify the rash, the headlong impatience of the Governor. He read the vague charge—compared the evidence; yet did he compare the evidence?—could he have compared it, and not have found that it varied in many most material circumstances?—yet calmly, and with his secretary and law officers to afford him their professional assistance, he gave no respite—no breathing time. Good God, breathing time! when men's lives were at stake! But no, the die was cast; and, innocent or guilty, they must be executed before the Christmas holidays. Let no false delicacy—no effort to screen individuals of rank and power—prevent the expression of the heaviest censure. It was due to the house, it was due to the country, to pass such a vote, and he was convinced that it would lead to the most beneficial results. He did not wish to employ harsh expressions towards those on whose conduct he had felt it his duty to animadvert, and therefore agreeing with his gallant friend (Sir R. Wilson) in most of his observations, he could not go the same length, and apply to those unhappy proceedings so harsh a term as "authorized murders;" although, to the fullest extent, he agreed, that great precipitation had been shown. There was a considerable want of firmness displayed at a time when nerve and courage were most wanted. Let the house beware how they adopted a course which went to sanction the precipitancy of persons high in authority, in measures that were irrevocable, and, above all, where they affected human life and the solemn administration of justice. It behoved them the more to secure this supervision, when the impugned acts were alleged to be done in times of alarm (and, indeed, were attempted to be palliated only on account of such alarm), and to express such an opinion as should, at least, prevent

their recurrence under the same unworthy plea. It was time to show these authorities that there were duties of justice imperative upon them; and not alone of justice, but also a solemn prerogative of mercy to administer, which was no less a duty, and no less imperative (hear, hear). This last duty was forgotten in the highest quarter, where, from the station of the individual, and the great trust reposed in him, something better might have been expected than that he should have allowed these cruelties to have been deliberately perpetrated under the sanction of that justice which, tempered with mercy, he was sworn to administer; that he should have allowed them, while men's minds were hurried away by a panic—while they were solely swayed and influenced by a wild apprehension of alarm, which they were determined to check by the most summary examples. If under these aggravated circumstances of undefended and most unjustifiable proceedings, they were prepared to let them pass the ordeal of parliament unrebated—if it should once more go out to the West Indies, that this system of monstrous cruelty and injustice could be perpetrated, not only with impunity but without indignation, then again and again, as long as the system lasted, would such acts be repeated without compunction, and justified by past tolerance, and in vain could they look for the least correction of such dangerous and inveterate evils (cheers).

*Mr. Canning*:—In rising to state the reasons why he approved of the amendment in preference to the resolution, he was anxious to have it understood that he did not yield to the gent. opposite in the feelings which those proceedings were naturally calculated to excite, and that he differed from them only because it appeared to him that the question must be decided upon grounds of a more limited nature. Even upon the learned gent.'s (*Mr. Brougham*'s) own shewing, it would be impossible for him consistently to vote for the original resolution; because that resolution condemned the whole of these proceedings by one sweeping affirmation of a perversion of all law and justice; whereas the learned gent.'s speech discriminated the cases from each other. In order to aggravate the injustice of the proceedings at St. Mary's, he (*Mr. Brougham*) adverted to those at St. George and Hanover, contrasting the latter proceedings with those pursued at the former place. Indeed, so clearly had the learned gent. drawn the line, that if his speech were to have prefaced a motion, it would have applied very differently to each of the three cases which were involved in the present inquiry. But in the amendment, or rather in the resolution—for it had been prepared as an original resolution—what was stated was true, with respect to all the proceedings: for there, whatever might be the shades of difference as to the colouring of the facts, the only proposition pressed upon their consideration, was, that they collected from the whole of these proceedings additional cause for feeling regret at the existence of distinctions in the law, as it affected the lives of the white and black population. That these distinctions in the laws for shedding the blood of two classes of persons, only differing in colour, ought not to endure, he (*Mr. Canning*) most readily admitted—(hear, hear), and the principle of a reform in it should have his support. Indeed, if the learned gent.'s resolutions had run thus, "That this house having considered certain judicial pro-

ceedings in Jamaica, on the trials of slaves for rebellious conspiracy, in 1823 and 1824, deem it their duty to express in the strongest terms their deep regret at their occurrence, and cannot refrain from declaring a conviction of the necessity for an effectual reform of the administration of criminal justice respecting the slave population of that island," he should at once have agreed. But then came these words, "sorrow and indignation at the perversion of law and justice displayed therein," and "sentences of death, wholly unwarranted by proof." From these expressions he (*Mr. Canning*) must dissent: he was not prepared to affirm that these trials were marked by a perversion of law and justice—that the sentences of death had been precipitate. He could not pass condemnatory resolutions upon those who, in the discharge of their duty, were acting under the known provisions of existing laws: nor was he prepared to admit the precipitate execution of the sentences. That was a charge which included two parties—the judges who pronounced the sentence, and the local Government that had confirmed it: respecting the former, they had the power, if they thought fit, to order the prisoners to instant execution, without awaiting any reference to the Government; but they declined to avail themselves of this power, and unnecessarily (he used the words in a legal, not a moral sense) referred the sentence for the Governor's confirmation. So that the bare recital of the fact showed not only the charge of precipitancy to be untrue, but to be directly false as applied to the proceedings of the judges. Then as to the charge against the Governor, how did it stand? The Duke of Manchester, acting in his judicial station, was the representative of the Crown, exercising the high prerogative of mercy. Now he (*Mr. Canning*) could not conceive a more formidable question to have been mooted, than the remission or non-remission of punishment by the prerogative of the Crown, or its deputy: it was at once to launch into arguments upon the most delicate of all human responsibilities; it was to probe a prerogative, the exercise of which must, from the nature of things, be left to the conscience of him who is invested with it. It must be left in his breast unfettered, or it must be taken away.—He meant not to blame the learned gent. (*Mr. Denman*) for the course he had taken; though, if he had thought fit to communicate his resolutions to him before this debate, he (*Mr. Canning*) should have felt much more satisfaction in trying how far he could have agreed with him, than in framing, at the last hour before he entered the house, a resolution such as he could sanction by way of amendment to the proposition. The difference between himself and the learned gent. was confined to the prudence, the expediency, the safety, of censuring by a parliamentary vote, judicial proceedings conducted according to a system of existing law. It was to save the house from establishing such a precedent that he was anxious to have the amendment adopted, because while it would sufficiently tend to correct these disgusting tribunals, it would not create a precedent which might hereafter be used against other courts very differently constituted. In the moral estimate of these transactions, he concurred with the learned gent., but he could not concur in his legal inferences. The transactions were monstrous and disgusting enough, but they were not corrupt or illegal. In endeavouring, while he delivered these opinions to

impose a bridle on his own feelings, he did not wish to restrain those of others; but to ward off an evil which in other times might lead to the worst consequences.

Mr. Denman in reply:—In the first place, he denied that he had withheld from hon. gents. opposite any knowledge of his particular motion: on the contrary, more than a fortnight ago, he had communicated its import to the colonial Sec. (Horton). No partiality to particular phraseology of his own would prevent his adopting an amendment, could his sense of duty permit him to concur in the amendment proposed. He had early in the evening regretted his inability to do justice to this subject, and had truly anticipated that his defects would be abundantly repaired by his learned friends who were to follow him. The hon. gents. opposite had also come to his aid, so as very much to narrow the point in contention: upon all the strong points they were agreed, and were now only disputing upon a quibble. It was stated, that the lamentable proceedings were justified by the laws of Jamaica; but he would ask by which of those laws were they bound to bring these parties to trial within two days—to try them without the assistance of counsel—without having the opportunity of calling a single witness? Where was it enjoined that a wife should be admitted a witness against her husband on his trial for his life? If the law did not absolutely compel them to adopt such a course of proceeding, then there was here a gross perversion of law and justice: and his resolution was founded upon this, that, although some form of law had been preserved, it had been perverted in principle. It was a perversion of the law to precipitate execution under a sentence resting on proof upon which no human beings ought to be condemned. It seemed, however, that this woman was not his wife in the legal acceptation, but a woman with whom he had cohabited. She had, however, stated the contrary at the trial; if she had not been so, was it to be supposed that the Judge would not have taken notice of it? The Attorney-General had said that it was the practice in the Colonies to proceed on hear-say evidence, and that such had been usually received in the trial of slaves. Now the common law of Jamaica was the same as the common law of England; and was it the law of England, that persons should be tried and condemned on hear-say evidence? In these cases the common law had been grossly perverted, and the only reasonable objection to his resolution was, that it did not go far enough—that it did not sufficiently set forth the extent of the violation of law, which had taken place in these infamous proceedings.—It was argued, that the resolutions did not discriminate between the several cases. It, however, proceeded upon grounds which were common to them all, as far as respected the perversion of law. Persons were tried and condemned on the testimony of witnesses not sworn—the executions had been indecently precipitated. All these were perversions of law, which clearly supported his resolution. Then as to the Judges, it was said that they had not been precipitate, and they had almost been praised for not ordering immediate execution, but referring the sentence to the Governor. It was a lame cause which required this sort of bolstering. The Juries were certainly the least blameable, because they had been misled by the Judges. And who was the

Judge in these cases? The military commander, who headed the troops which surrounded the court, and who was anxious to have executions before Christmas (hear, hear). Then came the complaint against the Governor, who certainly ought not to be left out of the resolution. It was said, that it would be dangerous to interfere with the exercise of the prerogative of mercy. But this was not a question of mercy, but of justice. He would appeal to the hon. Sec. (Peel) if, in the course of performing those duties which he so humanely fulfilled, of advising the Crown upon awarding execution of the sentences of the law, he would conceive that he would have done his duty by merely seeing that the forms of judicial investigation had been preserved when the substance was violated, and that, too, in order to have execution done and an example made before a certain day? He knew the right hon. gent. too well to suppose that he would shelter himself under such a fallacy. It was now, however, admitted on all hands, that immediate reform in the administration of justice in these islands was necessary. Still the local authorities were to be praised, and all the blame of past iniquity thrown upon the system. Then where were the checks that were justly to be expected from the superintendence of an English governor endowed with prerogative, possessing the sympathies of national feeling, and the education and habits of high rank? Should they not expect to see him wield his authority for the protection of the weak, instead of lending the influence of his power to sanction oppression and injustice? But if any thing in the arguments of the hon. gents. opposite more particularly determined him (Mr. Denman) against consenting to substitute the amendment for his resolution, it was the observation of the rt. hon. gent. (Mr. Canning), who said, that if censure were passed upon judicial proceedings regularly carried on, it would establish a dangerous precedent. Then, was the house prepared to say that they would never interfere with judicial decisions, if the forms of law were observed? If they were to be told, that it was neither safe nor expedient to pass censure on those who duly acted under the forms of law, why then had the cases of Russell and Sidney, and other victims of arbitrary power, been reversed? They, too, had been tried according to law, before judges and juries observing judicial forms.—Under all these circumstances, he felt it his bounden duty to submit his motion to the sense of that house (cheers).

The house then divided. For the original motion, 63—Against it, 103—Majority, 40.—After the original motion was negatived,

Mr. Brougham suggested the propriety withdrawing the second part of the amendment to which

Mr. Canning assented, and it was and carried in this form:—"That house sees in the proceedings which have been brought under its consideration with respect to the late trial of slaves in Jamaica, full proof of the evils inseparably attendant upon a state of slavery, and derives therefrom increased conviction of the propriety of the resolution passed by this house on the 15th of May,

LORDS, FRIDAY, MARCH 3.—The Duke of Gloucester, on presenting petitions from the university of Cambridge and the city of London, said, that if the colonial assembly

persist in disregarding the recommendations sent out to them, he relied with confidence on his Majesty's ministers taking measures to call on parliament for sufficient powers to enforce the resolutions which had been adopted. In that case, he had no doubt that parliament would promptly evince a determination to put an end to a state of things which was unbecoming this great country, and inconsistent with the honour and dignity of the crown.

Mr. Canning and others brought a message from the Commons, desiring a conference with their lordships, on a subject deeply connected with the interests of his Majesty's West India colonies.

The Lord Chancellor having taken the opinion of the house, the Commons, who had retired, were recalled, and informed that their lordships agreed to the conference to be held forthwith in the Painted Chamber. On the return of the lords, who were chosen to manage the conference on the part of the House of Peers, from the Painted Chamber, the Duke of Gloucester reported, that the Commons desired their lordships to agree to the resolutions on the subject of Colonial Slavery adopted by their house in 1823. The report being laid on the table,

Earl Bathurst moved that the same be printed; and gave notice, that on Tuesday next he would move that their lordships do agree to the resolutions.

COMMONS.—Petitions for an amelioration of the condition of the slaves, &c. having been presented.

Mr. Brougham, in reference to the debate of March 1st, said that, without imputing any intentional misstatement, there appeared to him a discrepancy between the statements of the rt. hon. Sec. (Canning) and the accounts which were laid upon the table. The rt. hon. gent. had said that some measures had been adopted for facilitating the manumission of slaves, where they had the means of purchasing it, on an appraisement. Upon this point he could not find that any measure of the exact description alluded to had been introduced by the colonial assemblies. The next point on which the house was told that an improvement had taken place was, that of the discontinuance of the whip as a badge of authority and stimulus to labour in the hands of overseers and drivers; but upon this he could not discover that any step had been taken, except by the legislature of St. Vincent's. Another point was, the admissibility of slave evidence. The statement of the rt. hon. gent. on this point was, that out of twelve of the colonies which had legislatures, (indeed, it might be said, out of thirteen; for the whole of our slave colonies, including our conquered colonies, the Mauritius and the Cape of Good Hope, were twenty, of which thirteen had local legislatures, and seven were governed by the direct authority of the crown) —but out of these thirteen which had local legislative assemblies, it was said that seven had adopted measures for the admission of the evidence of slaves. Now, from all the inquiries he had been able to make, and from consulting the public papers which had reached this country as late as the 22d of November, he could only learn, that three of the islands had passed acts for the admission of slave evidence. These were Dominica, Tobago, and Barbadoes. See. 1826.

The act of Dominica had been passed eight years ago, so that that could not be received as evidence of any disposition of the islands to act upon the orders in council sent out in 1824. There were thus only two islands which had passed any bill on this point in accordance with the orders in council. Tobago had passed such a measure; and in order to let the house see how far it entered into the spirit of the orders sent out, he would state how far it carried the principle of receiving slave evidence. The evidence of a slave was to be admitted in the single case of the murder of a slave by a white man; and even that admission was to be contingent upon two circumstances—namely, that there were none other but slaves present when the crime was committed, and that the testimony of the party admitted as evidence should be corroborated by that of another slave of unimpeached character. These regulations, and some others included in the act, rendered it so objectionable that it was disallowed by the Government here; so that for any practical good it was worth nothing. In the act passed in Barbadoes, slave evidence was admitted, provided that the witness produced a certificate of instruction in his religious duties; not, as had been most properly recommended in the instructions sent out from the Government here, which admitted the certificate from clergymen of the established church, or of the Scotch, or from the Roman Catholic clergy, or from the religious minister of any Christian denomination; duly licensed to preach and teach, or from any Christian clergyman, to whose religious community he might have belonged, but from the clergy of the established church only. This was a qualification involving such a mockery of justice, that the act itself was most properly disallowed by his Majesty's Government. But it was said that eight islands had taken some steps towards giving to the slaves religious instruction, and also for the more due observance of the sabbath. From any accounts which he had been able to see, he did not understand that much more had been done than had been effected by the measures adopted by Government and supported by that house, of providing and sending out a sufficient number of clergymen of the established church, for the purpose of affording religious instruction; but this was a measure for which the colonies could take no credit. As to the steps taken for a more due observance of the sabbath, and the regulation of the Sunday markets, he understood that such changes had been introduced into the orders, that the acts were disallowed by Government. It was said that five of the colonies had adopted measures to legalize the marriage of negroes; but he could not discover that any such had been adopted, except in Bahamas, and even there the rights of the masters might, to a certain extent, interfere. Eight of the colonies, the house was told, had adopted measures to secure the property of the slave so as more effectually to facilitate his manumission. Unfortunately, however, manumission was left out in the instructions sent to Demerara. This was to be regretted, as it would lead the other colonies to believe that the Government were not particularly anxious on that point. In the regulations arising out of the orders sent to Trinidad, there was one defect, which extended also to all the regulations made on the same point by the other colonies. It was, that though the slaves were allowed to

cultivate portions of ground for their own profit, they were prohibited from the culture of any of the staple articles of colonial produce; and thus they were precluded from the only branch of industry, by the profits of which their manumission might be greatly accelerated. In the five colonies which were said to have taken steps to prevent the separation of families by sale or otherwise, Bahamas was the only one in which a practical measure had been introduced; in Tobago and Grenada the measure extended no further than preventing the mother from being separated from the child up to a certain age. The house had heard that in eight of the colonies measures had been adopted to prevent the punishment of females. He was not aware of that being done in any island but Bahamas and St. Kitt's. In some of the colonies, the number of lashes which might be inflicted was reduced and regulated, which, no doubt, would make a great difference in the scale of human sufferings, but it did not go the length to which the restriction ought to be carried. He would not at that time enter into farther details; but he thought he had said enough to satisfy the house that the statement they had heard was not completely borne out by the facts of which they were yet in possession. To bring the matter to an issue, he would move for returns containing the titles of all the acts passed by the colonial legislatures since May 1823, for bettering the condition of the slaves.

Mr. W. Horton said, that not having the information in his possession necessary to enable him to follow the learned gent. step by step, he would merely state that the colonial department was responsible for the statement which his right hon. friend (Mr. Canning) had made the night before last. As to the proposition of the learned member, he (Mr. Horton) would lay upon the table a tabular statement of the different acts passed by the colonial legislatures, with their different clauses, so that the whole question might at one view be brought under the consideration of the house. It would be some time before this could be done, owing partly to the great increase of business in the colonial department, arising out of the recent discussions respecting the slave question, and partly to the illness of the colonial counsel (Mr. Stephen) which had been brought on by the severe application to the duties of his office. He must take that opportunity of stating, that an hon. member (Mr. Hume) had been chiefly instrumental in preventing the public departments from being manned in a way which was necessary for the efficient discharge of their duty. It would be much better, if the present system were not altered, for the house to pass a resolution to absolve the public departments from all responsibility. The colonial counsel had been employed in his office during the whole of last year, not less than ten hours a day. That was too much for any man. Unless the house would furnish him with assistance, the public business must, in case of illness, stand still. He pledged himself, when the colonial estimates should be brought forward, to show that it was impossible that the public business could be transacted without an augmented establishment.

Mr. Hume said, that he had a right to expect very different treatment from the hon. gent.; for last year he had allowed an increase of 1700*l.* in the estimate for the colonial department to pass without observation (a laugh). If his

economical arrangements were to be adopted, the reductions in the public departments would be much greater than had taken place. The increase of last year was made for the purpose of giving a salary to Mr. Stephen, who was appointed Colonial Counsel. Nothing could be more objectionable than the appointment of Mr. Stephen. He was the son of the person whom the colonists supposed to be their greatest enemy, and the putting him in an office in which every communication to and from the colonies must pass through his hands, had outraged the feelings of the colonists more than any other act of the Government.

Mr. W. Horton doubted whether the gentlemen in that house who belonged to the profession of the law would agree to the doctrine which the hon. member seemed desirous to establish—namely, that a counsel would allow his private feelings to impede the performance of his public duty. He believed what he had heard the individual, who had been alluded to, himself state, that on any subject connected with the West India interests, he had never had any communication, direct or indirect, with his father. There was no man to whom, if he wished for advice or information on subjects of difficulty connected with the West Indies, he would sooner resort, than Mr. Stephen. He might state as a proof that there was no sort of understanding between the father and son, that the former had published a pamphlet in which he called the order in council, which was drawn up by his son, a "parcel of trash." He was glad that he had been presented with an opportunity of stating, for the satisfaction of persons connected with the West Indies, that Mr. Stephen was merely an executive officer, and could do no more than obey the instructions of the head of the department.

Mr. F. Buxton felt it necessary to say, that Mr. Stephen never made any communications to him; on the contrary, he generally found that gentleman so very reserved that he preferred transacting business with the hon. sec.

Mr. Hume never intended to insinuate that Mr. Stephen consulted with his father respecting the duties of his office.—The motion was agreed to.

LORDS, TUESDAY, MARCH 7.—Earl Bathurst moved that the report of the conference on Friday, containing the resolutions of the House of Commons, passed in May 1823, be read\*; whereupon, the noble earl proceeded to move that their lordships do agree to the resolutions. He should now call their lordships' attention to what had been done since the period at which the resolutions had been passed. Since that time, with the exception of Barbadoes, Grenada, and St. Vincent's, very little had any where been done, towards effecting the objects of Government. He was sorry to say that the legislative assembly of Jamaica had rejected the proposed law for admitting the evidence of blacks under certain modifications. The bill for that purpose had been thrown out by a majority of 23 to 13. But that assembly, and others which had rejected the measures recommended by Government, would soon be dissolved, and others summoned, when there was reason to hope that the bill, as well as other measures calculated to ameliorate the condition of the slaves, would be passed. He must in

justice to the Assembly of Jamaica add, that an important measure had been carried through it, a provision for an episcopal establishment in Jamaica. In addition to this, the stipends of the rectors had been increased, and were transferred from the hands of the vestries to be distributed by the hands of the bishop. Several parishes had been enabled to build churches, and to repair and enlarge those already built; and he was glad to observe that many of the owners of plantations had contributed liberally to these buildings. The Government had received a communication from the Bishop of Barbadoes, in which it appeared that his lordship had visited several of the Leeward islands, in each of which he had received assurances of a disposition to take effective measures for the religious instruction of the slaves. From Barbadoes a report had been received from nine parishes out of eleven. In these parishes there were 317 plantations, of which 130 were under the instruction of the clergy of the established church.—He must observe that at a public meeting of the planters, slave-owners, and others, in Barbadoes, the destruction of the Missionary chapel was condemned in very strong terms. This showed that the feeling of those misguided persons who were engaged in that transaction was not extended to the respectable part of the community in that island.—His lordship next alluded to the language of some of the petitions for the abolition of slavery, in some of which it was asserted that a state of slavery was wholly incompatible with the doctrines of Christianity. The circulation of such principles amongst the slave population of the colonies, must prove extremely pernicious, since, at the same moment that Christianity was recommended to the slave, he was taught that the state of slavery (no matter what the kindness and indulgence of the master might be) was inconsistent with the religion which he was solicited to embrace. The noble lord then stated the intentions of Government, in the adoption of the Orders in Council, as they were explained by Mr. Canning, on March 1st, and concluded by saying, that from the earnest manner in which the subject had been recommended to the attention of the Colonies, he hoped it would have a successful result. But should it prove otherwise, it would then be for their lordships to consider what course it would be expedient to adopt, to carry the measures into effect. The circumstances under which the resolutions were now proposed to their lordships were favourable for their object. It would appear that they were not adopted in the heat of the moment, or as the effect of eloquent appeals to their feelings, on the subject of slavery, but as the result of mature deliberation.

Lord Calthorpe said, that though he concurred in the general spirit of the resolutions of the House of Commons now proposed for their adoption, yet he thought that the cold phrase "it is expedient," did not convey the feelings which pervaded the country on the subject of negro slavery, and which ought to be communicated in the instructions sent out from Government. Considering the great importance of this subject—considering the general feeling which existed in every part of the country respecting it, and the very little effect which had been produced by the adoption of these resolutions in the other house, it was not a practical mode of attaining the proposed object, to use the cold language with which one of those reso-

lutions commenced. He would have preferred the resolution (Mr. Buxton's) which had been first proposed in the Commons, and superseded by those now before their lordships. In that resolution it was declared, that a state of slavery was repugnant to the British constitution, and to the spirit of the Christian religion. He would admit with the noble earl (Bathurst) that slavery was not absolutely incompatible with the Christian religion; but still he would contend, that it was opposed to the spirit and genius of that religion, and he could not conceive that any country bound by that religion, and acting on its admirable precepts, and particularly under so happy a constitution as ours, could continue long without an earnest endeavour to get rid of such a pest (hear, hear). Neither could he conceive how it could be considered, that they who declared a state of slavery to be repugnant to the British constitution and to the spirit of Christianity, must, as a matter of course, be disposed to put aside every consideration of expediency, and all reference to the interests of the colonists, and rush at once to the attainment of abolition—that, having such an opinion of slavery in the abstract, they were not willing to allow its continuance one hour after their resolution was declared. The meaning of that resolution, taken as a whole, and the opinions of those who supported it, might be fairly stated to be—that slavery being repugnant to the genius of the British constitution, and to the spirit of Christianity, ought to be gradually abolished, due regard being had to the interests of the masters, and to the condition of the slaves themselves. Taking this as the fair view which the abolitionists took of it, and considering the necessity of expressing their opinions in forcible language, he thought their lordships would be acting more for their own character, and more in accordance with the importance of the subject, if they were to adopt a higher principle on this occasion than the cold one of expediency.—The noble earl had complained of some of the petitions presented to their lordships on this subject. Some of the petitioners had certainly used language, which, ignorant of metaphysical distinctions, they did not believe improper for the expression of their opinions; yet he would contend, that the principles for which they contended were fair, and that the other House of Parliament had shrunk too cautiously from their adoption. But there were petitions presented to their lordships—which alluded principally to that from Birmingham—which was adopted after due consideration, and by men not in the habit of coming to hasty decisions on any subject. There were others of a similar nature, from a high and most respectable body—he meant the clergy of the Established Church—who, it would not be said, were in the habit of deciding without due consideration, upon important questions. Yet from that most respectable body petitions had come, stating that slavery was incompatible with the genius of the Christian religion, and he thought that in so doing, and in the laudable zeal which they bestowed in support of this important question, they consulted as much the dignity of the church as the sacred duties of their profession. Neither he nor any of those who took the same view of this question, were disposed to adopt any hasty step on the subject of abolition, or on the subject of religious instruction. But it was, he thought, a lamentable mistake, if any of the colonists thought that by religious instruction,

which inculcated obedience to the powers that be, the slave would become more reconciled to his state of vassalage. The improved state of his mind which would follow his religious instruction would, no doubt, impress him with kinder feelings, but at the same time it would lead him to a knowledge of his rights, and to a stronger feeling of the cruelties to which he had been so long exposed—cruelties, the existence of which was placed beyond a doubt, and which could be proved at their lordships' bar. He stated this for the purpose of showing that the improvement of the condition of the slave, and his instruction in religious knowledge must, as they prepared him for a state of freedom, open the way for the termination of his bondage, and that it would be utterly hopeless to attempt to retain him in slavery when he became possessed of a due sense of the duties of a freeman. For the approach of that period, no doubt, gradual preparation must be made: but he regretted that the tone of the resolutions before their lordships was not of that kind which would expedite such preparations on the part of the colonists, and he was sure that their very tardy progress since the resolutions had been agreed to by the Commons, was in a great degree owing to the house not having adopted more decisive language. The best course would have been to adopt the tone originally recommended to the other house of parliament, and which he believed to be not only the best calculated to produce a satisfactory issue in the colonies, but also most consonant with the general feelings of the people of this country. He objected most decidedly to recognize expediency as the highest principle which they were to call into action on such a subject as this, involving as it did the honour and character of the country.

Lord Ellenborough:—The question was, ought they to sanction resolutions proved to have been ineffectual, or to adopt others more likely to promote a salutary result? If these resolutions were to be adopted alone, accompanied with a vague hint, that if they failed in their intended effect the legislature would proceed to ulterior measures, without avowing what the nature of such measures would be, he not only doubted that the anticipations of the Government would be realized, but he inclined to the opinion that such a course, instead of diminishing, would tend only to aggravate the existing evil. What were those ulterior measures? What objection could there be to supply a description of them? The noble earl admitted that the colonial assemblies had disappointed the expectations of Government; but he went on to state, that they had shown a disposition to amend their practice, that they had made a provision for the clergy of the Established Church, that they had taken steps for the education of slave children, and that therefore there was some prospect of their assisting in promoting the remedial measures of the Government, and departing from a contumacious course. Now he could not give the colonial assemblies that credit, because the better education of their slaves, by making them more enlightened Christians, tended rather to ensure their more patient submission, than to encourage insubordination and the throwing off their yoke. It was therefore good policy in the planters to concur in a measure which was calculated just as much to secure the continuance of slavery as to effect anything else, while at the same time it necessarily went some way to conciliate prejudices at home, which would

otherwise be used against them, in stimulating a perseverance in harsher measures. Let them put a parallel case, and they must be at once struck with the futility of the present proposition. Suppose that the noble earl and his rt. hon. friend (Mr. Canning) were walking together and saw a man ill-treating his horse—suppose his rt. hon. friend to have said—"Two or three years ago I saw that very fellow committing the same outrage, and on that occasion I forewarned him that if he persevered in the same course I should take such measures as must secure the better treatment of the animal. Do you now go up to him, and say, that if he continues to practice such brutality, I will certainly fulfil my intentions." Would not the noble earl say, "No, go up to him yourself. I could understand your asking me to knock the fellow down, or to take him before Sir R. Birnie; but he would laugh at me, were I only to repeat threats which he had already disregarded." As to the idea that the local assemblies would themselves take measures for the abolition of slavery, he thought it idle to dwell upon it. If Parliament were to pass a resolution recommending the Bench of Bishops to bring in a bill for emancipating the Roman Catholics, did any one believe that such a bill would ever be brought in?—There were many difficulties in the way of the adjustment of this system, which required that Government should at the outset proclaim what their real determination was, or would be. Suppose, and he thought it probable, that several of the colonial legislatures should resist the proposed course, what then was to be done? They might, he was aware, alter the duties upon sugar, so as to bear upon the colonial interests. Now to that course he would most decidedly object, for it must inflict great injustice upon some of the islands, which were ready to go a certain way with the mother country, and ought not therefore to be put on a footing with those which were wholly refractory. Suppose another course; namely, that Parliament were determined to legislate for the colonies *quoad hoc*.—That, again, they could not do, for if they once interposed their strong arm between the colonial authorities and the colonial population, there would be an end to the influence of the former; and then what plan could they devise for the future government of those islands—what means could they provide for the due execution of their enactments?—It was perfectly impossible to work any good in those colonies, without in the first instance establishing some system for the better administration of justice for the slaves, independent of the control of the masters. At all events he would not commit himself in the present proposition, without seeing his way through the future intentions of the Government.

The Earl of Liverpool said, that the noble lord (Ellenborough's) speech would go the length of recommending that Parliament should do nothing at all in this question. Now if all (as he believed was the case) agreed in the abstract, that slavery ought to be abolished—that immediate steps should be taken to ameliorate the condition of the slave, and qualify him for eventual enfranchisement, how was it that any noble lord could consistently call upon them to take no step in the accomplishment of their professed object? It would be in vain for him to deny that the question was surrounded by immense difficulties; but something was clearly to be done, or they must be prepared to aban-

does their declared opinions. Was it nothing to disseminate a religious education among the slave population, to get rid of their badges of thralldom, such as the whip, the Sunday-work, and those other degradations which mark the inferiority of the man—to establish a better system of justice, and something like means for manumission? It was true they must proceed in these improvements step by step: but the noble lord called for all the details at once, and asked, what will you do, should the colonies prove refractory? That had better remain to be determined when necessity called for its declaration. The colonies were under the direct authority of this Government, though some of them possessed independent legislatures for local purposes. These legislatures should be allowed the grace of preparing the arrangements, and the opportunity of preparing them in their own manner. Considering that those bodies were exposed to the influence of particular prejudices and habits, they were not likely to advance quite so fast as those who were not actuated by such associations, and were therefore better able to proceed with a cool and steady judgment. Allowances should be made for the infirmities of human nature, and a reasonable time allowed for the growth of reason. At all events, he would say, that whether the result of the resolutions should realize or disappoint their expectations, wisdom and good policy alike pointed to their present adoption.

The Duke of Gloucester thought that, waving for the present all ulterior considerations, their better course would be, to send forth these resolutions with the full sanction of their unanimity. The delay, at all events, in bringing to the test the sincerity of the colonies, could not be prolonged beyond another year; and if the consummation to which they now steadily looked forward should not be realized, the time would undoubtedly arrive when his Majesty's Government would be called upon to enforce, by the paramount authority of Parliament, the measures proposed. He placed entire confidence in ministers in this business, who could not recede from their course, without abandoning their duty to themselves, to their country, and their God.

The Lord Chancellor would not enter into the consideration why these resolutions had lain so long without their lordships being called upon for their concurrence—it was enough for him to know that they were now before them, and must be disposed of: and with respect to the wording of them, he saw no reasonable objection, more particularly to the word expediency; and he for one should have felt a great difficulty in giving his assent to a stronger term at the present moment. A good deal had been said in the discussions on this subject about its connexion with the genius of Christianity and the genius of the British constitution. As to the genius of the constitution, whatever was his own opinion respecting the propriety and necessity of abolishing slavery, he was bound to declare, that this system had been patronized, encouraged, and almost instituted under the British constitution, and under the auspices, too, of so great a constitutional authority as Lord Somers. Now, then, could he say that it was against the genius of that constitution (hear, hear)? When to this knowledge they must add the further information, that colonial slavery had been many times during the last century the express subject of legislative enactment, under the direct sanc-

tion and concurrence not only of the ablest laymen who had figured in the history of the country, but also of a bench of bishops as learned, pious, and respectable as that which their lordships now saw before them, he could not easily bring himself to believe that it was so clearly contrary to the genius of Christianity as some persons so readily asserted. With wishes as anxious as those of any man for the entire abolition of slavery—and when he meant its abolition he always spoke with a view to the well-being of the slaves, as consistent with the interests of their masters, and the safety and security of property—he must say that this measure had been more retarded by the intemperate zeal of those who had engaged themselves in its support, than it had been or could be by any direct opposition which the enemies of abolition had the power of opposing to it. If they looked at what had been done during the last century, they must be struck with the propriety of dealing equally and fairly with all the parties concerned. The history of these colonies would show that when at former periods some of the islands had proposed to diminish the number of slaves to be introduced into them, Great Britain had refused to sanction that restriction. Then why throw the whole blame upon the colonies, as if they alone had become responsible for the existence of slavery? They must always bear in mind, that even of late years property had been embarked upon the security of labour in the West Indies, when this country, as a country, was as much engaged in carrying on the slave-trade as any individual in the colonies could be said to be, and when the fact was, that by the arrangement and management, even of some crown property, the planter was compelled to take such an importation of African slaves as the British monopolist chose to impose upon him. His noble friend (Lord Ellenborough) had said, "I must know, before I agree to these resolutions, what further you intend to do." To be consistent in such a determination, he ought to be prepared to call on that house to rescind all their resolutions for the last 20 years. He (the Lord Chancellor) could not anticipate any permanent opposition to the final adjustment of the question, when it could be effected with benefit to the slaves themselves, with safety to their masters' property, and advantage to the general prosperity of the colonies. If the local authorities refused to accede to the measures about to be urged with renewed force upon their consideration, then Parliament would know how to meet such contumacy, without affecting the well-being of the slave, or infringing on the rights of the master.

Lord Redesdale contrasted the state of slavery in this country, in the reign of Richard II., when the whole number of villeins was calculated at 180,000, and its present condition in the West Indies. If, then, in the West Indies, the numbers were so great, it would be obvious that there was reasonable ground for apprehension. The planters had immediately before their eyes the massacres of St. Domingo, and their fears ought to be treated with indulgence. To proceed in such a case temperately, would be to proceed successfully; and he believed that the planters were themselves thoroughly persuaded, that if they could have the labour of the slave by wages instead of force, their work would be better performed. The difficulty was, to attain the object. A negro who obtained his freedom gradually by his own exertions and the

acquisition of property, was much more likely to prove a good subject, than a slave who was suddenly and incautiously manumitted. Nothing could be more clear than that 3, 4, or 500 in each year could be much more safely emancipated, than 30, 40, or 50,000 by one act of desperate generosity. On these grounds he approved of the resolution on the table, and objected to any step beyond it.

Lord Dudley and Ward felt that this subject was one from which he could willingly have abstained altogether, and which few could approach with any thing like satisfaction. From every corner of the kingdom, from every city, corporation, town, and village, Parliament had received the almost unanimous expression of disgust, not only against the hateful means by which men were reduced to that condition, but against slavery itself. Such an expression of feeling was at all times entitled to respect. Independent of the merits of the case, and there could be no doubt that this increase of interest among so large a portion of our fellow subjects, was to be ascribed to the increase of knowledge, humanity, and religion. So far there was good reason to rejoice; but having admitted it, he hoped he might add, without offence, certainly without the desire of offending, that the fervent zeal lately manifested was in part to be attributed to other and far different causes. The present was a period of great public tranquillity, although it had been subjected to a temporary interruption—he hoped he might also say of great national prosperity; it was a period of great intellectual activity and enterprise; and while the means of employment were below their usual average, the desire of obtaining it was more than ordinary; in other words, there was a great surplus of talent and energy in the country, and in such a state it was natural that such a subject should excite a strong feeling of interest. The history of this question afforded splendid instances of patriotism and humanity in every class of society, from the illustrious statesman who had from the first exposed the cause, to the itinerant philanthropist, who, having invested part of his property in the trade of the East Indies, went about lecturing at fairs and on market days, on the enormities of the West (hear, hear). It was not surprising, therefore, that in this struggle for the prize to be awarded, by the zealous piety of old men, and the delicate sympathy of old ladies, misrepresentations should have gone abroad, and that the state of the negroes in the West Indies should have been exhibited in a light more odious than it appeared to less partial observers (hear, hear). He did not pretend to justify what he knew to be wrong, but he would venture to say, that the ordeal through which the West India system had been made to pass was somewhat too severe. He did not wish to insult those institutions which had laid the foundation of civil society, by comparing them with slavery; but any man would see, that if the stores of private anecdote and the records of public justice were ransacked for instances of the cruel, nay, the merciless exercise of conjugal or parental authority, even the people of this purely moral and severely religious country might be made to appear in no very enviable condition. If these instances were afterwards chronicled and blazoned by the historians and philanthropists of other nations, a strangely unjust picture would be exhibited to the eyes of posterity: such a picture as he remembered a French General

(he forgot his name) had drawn, when, after spending six months in a prison-ship, he had made extracts from the crim. con. trials, and the Newgate Calendar, and then exposed the whole to the view of the natives of his own country, as a faithful representation of the virtue of the women, and of the honesty of the men, of Great Britain (hear, hear). He did not mean that in the case of the West Indies, the exaggeration had been equally gross; but as a proprietor, it afforded him great consolation to reflect that too much stress had been frequently laid upon cases of individual oppression. Whatever might be the defects of the West India system, it did not exhibit that uniform picture of relentless cruelty on the one side, and of despairing misery on the other. But the good people of England had been taught to contrast the situation of a labourer in the West Indies with that of a labourer in England. Such a comparison was unfair, and there was far less difference between the condition of the negro and the labourer, than between the condition of the slave in the West Indies and the slave under his legitimate master and owner, the King of Congo, or Ashantee, by whom he had been originally kidnapped and sold. The comparison ought not to be instituted between a bad condition and a good condition, but between two bad conditions, in order to ascertain which was the worse. In religion, it might be said that we had been guilty of a most grievous omission, in not taking earlier and more effectual steps to impart to these unfortunate beings the blessings of Christianity. It was to be recollected, however, that if they had never been brought from home, they would have been at least in equal darkness—slaves in body to their savage and tyrannical masters, and slaves in mind to a revolting superstition. It ought not to be forgotten, besides, that what might be considered the natural inclination of the public mind had received a strong impulse from the exertions of a numerous and respectable sect, who had engaged in this cause the most powerful of all human motives. In their view of the case, slavery was not merely a defect in society—not only a grievance that ought to be redressed, but it was contrary to Christianity. He was not disposed now to discuss a theological dogma, decided so peremptorily in all parts of the empire by men of all qualifications, but he must avail himself of this opportunity of protesting, with all respect, against this attempt to force religion into the service in merely civil matters (hear, hear). He agreed entirely with what had been so well said by the noble Earl (Bathurst)—that nothing was prescribed by religion on this subject in particular. Religion, indeed, generally enforced humanity and justice, but it was wholly silent as to the degree of power one man was to possess over another. This was not only an erroneous, but a dangerous application of the doctrines of Christianity; and twenty different interpretations might be put upon the same words, to suit twenty different purposes (hear, hear). Scarcely a century had passed, since Divines, the professors and oracles of Christianity, had ceased to assert, that Kings reigned *jure divino*—in other words, that it was agreeable to the doctrines of Christianity that all men should be slaves (hear, hear). The doctrine of the divine right of kings, and the doctrine of slavery, were in fact the same; yet it was now urged as strenuously by divines also, that it was contrary to Christianity that any

men should be slaves (hear, hear). This alone was sufficient to show how Scripture could be applied for any purpose; and there was nothing in the resolution he approved more strongly than that which had been left out of it—the assertion, that slavery was contrary to Christianity; which was nothing but the perversion of religion to civil purposes. Where then vanity, and the eager thirst for reputation, were united with the stronger motives of religion and humanity, and so closely united and blended as to be scarcely distinguishable by those who acted under their influence, great allowances ought to be made for exaggerated statements, arising from heated feelings. But after every possible allowance, he was willing to admit there still remained a great deal of positive evil that could neither be denied nor palliated. In his opinion, the system of the West Indies ought never to have existed at all; it was morally, politically, and economically wrong: the problem then which Parliament had to solve, was, how it could undo what had been unwisely and unjustly done by our forefathers, without fresh error and still greater injustice (hear, hear)? He did not desire it to be thought that he concurred in any view of policy which treated the West India system as permanent; it must be changed, it ought to be changed; and the care was not what the change ought to be, but how it was to be effected. Were the public feeling right or wrong, it was too powerful and too united to be disregarded, and the continuance of unmitigated slavery was impossible. Monopoly was unpopular, slavery detestable, and the united odium of both was more than the colonies could bear. It was unfortunate that this truth had not been more clearly perceived by the colonists, who, by an obstinate and ungracious resistance, might substitute a dangerous crisis for a gradual change, and lose the benefit of that protection they would otherwise obtain from the justice of the mother country (hear, hear). Although he did not mean to justify the conduct of the colonists, it might, in some measure, be accounted for and explained. It was within the memory of not very old men, that, formerly, another battle had been fought; the question was then, not whether slavery should exist, but whether the slave trade should continue? He had voted in the majority against it, and within 30 years, noble lords and illustrious peers, who might sit under that canopy, whose heads might be impaled with the Crown of England, had stood up in their places and vindicated that traffic. He did not blame them for doing what they thought right: he neither blamed nor commended them: he only stated a fact, adding an observation, that, under all the circumstances, it was a little hard upon the Colonists not to receive any indulgence for their impetuosity. They were, in truth, now in the situation which the illustrious personages to whom he had alluded had occupied 30 years ago. No man, however eager in the cause, however heated by the struggle, would assert that slavery was not a less evil than the slave trade, by which the wretches were torn from their native land, and exposed to all the horrors of the middle passage. The colonists had now arrived at the conviction, that the slave trade ought not to exist, and this country ought not to complain, or to think 30 years too long for a moral position to find its way across the wide Atlantic. He regretted, but was not surprised, that the voyage had been so long. The planters had been brought up in the midst

of prejudices; they had been so surrounded all their lives by slavery, that they hardly thought human society could go on without it: they looked upon it in the same light as the relations of master and servant were viewed in this country, and they looked upon the abolition of slavery as just as great an absurdity as we should consider the abolition of servitude. The anxiety for improving the condition of the negroes had only of late become so intense in England, and the planters had coupled with it the late grievous depression of West India property, and the heavy fall in the price of the staple commodity of the islands; both of which had ruined so many families, solely dependent upon their possessions there. Was it to be wondered, then, that they were not in the best possible humour?—that they were not inclined to receive very favourably any propositions which seemed calculated to reduce still lower their already fallen fortunes? The abolitionists, in the warmth of their zeal, had drawn a most unflattering likeness of the Whites of the West Indies. In was true that the parties had not been brought into contact—that they had treated only with the British Government, in returning their ill-judged answers to the orders in council. But the planters fancied that they saw their ancient enemy prompting the Ministers from behind, and that though the voice they heard was that of the noble Earl (Bathurst)—the hand they saw was that of their persevering antagonist (hear, hear). Still the conduct of the whites had not been that of men desirous of exercising unnecessary power, or of inflicting unpunishable cruelty: they acted like men who, having lost part of their property, trembled for the remainder, and smarted under the misrepresentations of calumny. On the subject of delay he would observe, that on some accounts it might be desirable to proceed with greater rapidity, but the sacrifice proposed did not seem too great for the advantage to be purchased by it: a year might seem long for the continuance of a bad system, but it was short, indeed, compared with the time generally required to remedy an evil of such ancient growth, and so deeply rooted. There was no magic in the decisions of either house; even the omnipotence of Parliament could not work miracles, and it would require much longer than a year to change the system: the system would be deaf to entreaty, and would never abate one whit of its demand upon human patience and forbearance. He did not concur in the delay, because he wished to stave off the result, but because he knew that it could not be avoided. He did not wish to enter into the delicate question of the power of the mother country over her colonies: he was most ready to admit the right of parliament, but the exercise of that right might be attended with the utmost inconvenience and danger. If they dared, the effect would be a rebellion; but as they did not dare, it would occasion profound discontent and rooted dislike. Besides, no man could deny that the best intended and best concerted measure of emancipation might be misunderstood by the negroes, and mischief thus occasioned. The chance of that mischief would be much increased by forcing the measure upon them. He did not say that the risk ought not to be incurred, but if the slaves saw power suddenly withdrawn from those hands where it was accustomed to reside, and transferred to those on the opposite side of the Atlantic, who they imagined would go all lengths in their favour,

the danger might be imminent. The execution of the law, be it whatever it might, must at all events be in the hands of the white population, and ignorance and reluctance on the part of the Colonial assemblies, and others, might both be called forth to impede the progress of a compulsory measure. It had been often said, that in Ireland, with a population of the same blood and complexion, and differing only in religion, it was difficult to secure the due execution of the law. How much greater then would that difficulty be in the West Indies, where the distinction was between master and slave, white man and negro (hear, hear)? The law transmitted for execution, might be looked upon in our Islands as a code of injustice to the whites, even if it were considered in England a code of justice to the blacks, and amid all the difficulties attending it, but little of the expected relief would be afforded to the unfortunate slave (hear, hear).

The Marquis of Lansdowne:—With regard to the proceedings of the colonists, he must observe in the outset, that if the same remissness were to be shewn in future which they had hitherto displayed, he should think the adoption of the resolution proposed at least useless, if not something worse. It would place upon record an abstract principle, and prove to the West Indies and to the world, that there did not exist in the British Parliament a determination to carry that principle into effect. Thus it would lead to contumacy and resistance on the part of the planters whenever they disapproved of the proceedings of the mother country, since they would know that the result would be to accomplish the object they had in view. He admitted that it was expedient to debate this subject at all times with reference to the opinions and prejudices of the Planters, created by habit, and cemented by interest, and at this moment he was desirous of saying no more than inevitably arose out of the principle the house was called upon to adopt. To the last hour he was willing to indulge the hope, that the time would come when the planters might attend to the considerations of justice, humanity, and religion; for, from humanity, religion could never be separated. The whole hemisphere in which the West Indies was situated, had of late years undergone the most important revolutions; and catching a spark only of the spirit that pervaded the vast continent, they might awake to their real interests, and discover how effectually they would be promoted by voluntarily improving the condition of the negroes, and conceding to them eventual emancipation (hear, hear). The West Indies must ultimately be brought to that test by which the existence of all societies must sooner or later be tried—the permanent attachment of the population composing their physical force. Although he was one of the last men to form a general judgment from individual anecdotes of cruelty or misconduct, yet he could not shut his eyes to the course adopted by some of the houses of assembly on particular occasions. Their debates and decisions afforded proofs of a determined resolution not to adopt any material amelioration of the condition of the negroes. Up to the latest advices, he saw in all the legislative bodies a resolute resistance to reform and improvement of every kind, with the single exception of the Bahamas, where, he was happy to say, some measures of a different character had been adopted. What chance was there, that if left to themselves, and without the

strong urgency of the British Parliament, any good would be done, when the assemblies of the colonies hesitated to introduce that so essential to religious and moral improvement—the solemnity of marriage? With one exception, there had been no step taken since the resolutions of 1823 to give facility to the manumission of a slave, who had saved sufficient money to purchase his liberty. Now were there any means by which the abolition of slavery might so certainly, so gradually, and therefore so safely, be brought about as this? Some acts, indeed, had passed in one or two islands, to relieve females from the degradation of public whipping, and other such punishments; but in the others, the law remained unchanged. He could go further in the dreadful catalogue, but he did not wish to enter upon it at present. He was, however, free to confess, that he was not very sanguine in his expectations of the effect to be produced by the proposed resolutions. He trusted, at the same time, that some alterations might be made consistent with the well-being of our colonies; but he trusted, also, that the noble lord (Bathurst) would, if he found it necessary, enforce upon our colonists that system which was at present so generally and so strongly recommended by Parliament and by the country (hear, hear). He trusted too that the subject would be taken up early in the next session; and in order to prevent delay, he wished to ask the noble earl (Bathurst), whether directions had been given to the local authorities, to call together the colonial assemblies at such an early period as to enable Parliament to be in possession of the necessary information, early after its next meeting? (Earl Bathurst said the necessary measures had been taken.) If this were done, they would be enabled to judge what further steps it would become the duty of Parliament to take. They had already waited three years, and they were now adding another year of doubt and delay, and it was the duty of ministers to shew a desire to inquire into existing abuses in all their bearings, and a determination to enforce the resolutions adopted by Parliament (hear, hear). He did not mean that they should lose sight of the interests of individuals; but he was then, and should be hereafter, prepared to contend, that those interests were most endangered by the present system (hear, hear) and if that system was not altered in time, the most disastrous consequences might follow to those who thought themselves aggrieved by the proposed interference of Parliament (hear, hear).

The Bishop of Bath and Wells asserted the incompatibility of slavery with the Christian religion, of which he was a minister, and the British constitution, whose free and willing and obedient subject he professed himself. He distinguished between the seeming countenance and toleration shewn towards a property in slaves by Christianity and the law of the land, because of their reluctance to interfere with private rights, and the direct antipathy which they manifested to all oppression and injustice. Equally hostile to the evils of slavery were the dictates of common justice and humanity. Those were arbitrators, however, whose judgment must be shut up in each man's breast. The interests of slave-owners were equally opposed by the maxims of political economy. Free labour must in every sense be preferable to that of slaves. The man who was conscious that, by the sweat of his brow, he was provid-

ing for his wife, his children, and himself, must be far before the hopeless creature who had only to work to that extent of toil to which the whip would goad him. Yet, though hostile to slavery, he was no friend to inconsiderate abolition: there might be greater evils in that step than any which existed in slavery. He had always been of opinion that the emancipation of the mind must precede the emancipation of the body; religion and education must go before abolition. With pleasure had he witnessed the resolutions of 1823, which were consonant with humanity and justice; which went to give the negroes the benefits of schools and a religious establishment of the same form with our own: he was sorry that they had been so ill received by the colonial legislatures. He rejoiced at the resolutions now taken by the Government, and if they were not better executed, he hoped that the spirit in which they were drawn up would be again awakened among the people, and that the determination of parliament and the expectations of the country would be carried into effect by doing away that stain upon the character of a Christian nation.

Lord St. Vincent stated that, though not able to give the noble marquis (Lansdowne) the satisfaction of hearing that the slave, when prepared with the means of purchasing his freedom, could demand it as a right, nevertheless, in the island of Jamaica, with which he was connected, he had been credibly informed that nearly 4000 slaves were voluntarily emancipated between the years 1820 and 1823. This was the more satisfactory, as well as the more honourable, as it arose from the mere spontaneous act of the master. In addition to what he had stated, the legislative body of Jamaica passed an act, by which slaves, under certain forms, notwithstanding any limitation, entail, debt, or other legal difficulties, might be emancipated. It was but fair to conclude, that the same feeling which had produced so considerable a manumission under many existing impediments, now that such impediments were removed, would operate in a much greater ratio. He had no doubt that the same generous impulse had equally operated in the other colonies; but not having the same means of information as to their local transactions, he could not state it as a fact. With respect to the charge of contumacy which had been made by one or two of the noble lords, something was to be said in consequence of a prevalent understanding in the colonies, and most assuredly in Jamaica, that the example proposed by ministers was to be tried first as an experiment in those colonies which were immediately under the control of the crown. This example was not set till 1824, and could not, therefore, if regarded as an experiment, be considered as an object of imitation, till its practicability was ascertained. On the meeting of the Assembly of Jamaica, in 1825, a committee was appointed to bring in a bill for the admission of slave evidence, and that bill was not thrown out till after much discussion. Where there was full and fair deliberation, it could hardly be said there was contumacy. He would trouble their lordships a little further, in consequence of the gross misrepresentation and delusion that prevailed, not only amongst the ignorant and inferior ranks, but amongst the higher orders; nay, even amongst their lordships. It was reported that a noble duke (of Devonshire), whom every one regarded who did

know him, and every one respected who did not know him, had said, at a recent county meeting, that he considered the claims of the West Indian, to compensation, if his property were destroyed, as the claim of a receiver of stolen goods. Had he been present at that meeting, he would have asked that noble duke, who stole those goods—who sold them—who pocketed the money for them?—who, but the people of England? The ancestor of that noble duke had taken a conspicuous part at the memorable era of the revolution—at the passing of the bill of rights; but the bill of rights was the bill of wrongs to the sons of Africa. It was in consequence of a doubt whether the bill of rights opened the African trade, that the act of 9 & 10 W. and M. c. 26, was passed. Before that period, the African slave-trade was exclusively limited to a few chartered companies. But after the bill of rights, this was deemed too precious for a chosen few, and was extended to all the good people of England. So precious, indeed, was it deemed, that whereas all other articles of that trade were subject to a duty of five or ten per cent.; gold, silver, silver ore, and slaves, were alone exempted from any. In fact, slaves were put on the same footing as gold and silver. He (Lord St. Vincent) was descended from one of the receivers of that period. The noble duke was descended from one of the licensers of the thieves. Had the noble duke been in his place, he (Lord St. Vincent) would have called upon him to support him in his title to that estate which the ancestor of the one had bought under a system not only sanctioned but encouraged by the ancestor of the other. He begged leave to recommend that act of William and Mary to the attention of that noble duke and others, and hoped that it would not be lost sight of by a learned member of the other house (*qu.* Sir J. M'Intosh), who was said to be writing a history of that period. Without troubling their lordships with a recital of further acts, he would remind them of the period of 1774, when, upon an application from the colonies to abolish the slave-trade, the answer was, by the mouth of Lord Dartmouth, one of the ministers, "We cannot allow the colonies to check in any degree a traffic so beneficial to the nation." It was too much, then, that those who had so largely contributed to produce the system which was now complained of, should turn round on those who had built up the superstructure, of which they had laid the foundation—that the "*artifices necis*" should dare to charge the "*participes criminis*" with the consequences of their own act. If the ear was distressed by sounds, or the eye offended by sights, which were not in unison with the present sensations of those acute organs, the West Indian, when reproached with these, might reply, "*Scelus exitiale Lacæna, illa hæc monumenta reliquit.*" If the offspring nursed by such a parent had not in some rare instances yet acted as she ought, let England recollect that she was that parent, and that it was her own offspring of whom she complained. But did he therefore mean to contend that England, as the parent, should not endeavour to wipe off the stain that attached to herself and offspring—that she should not endeavour to correct the deformities of the system of her own creation?—No; but let her not do it at the expense of the blood and treasure of that offspring, and add the injury of re-

proaches. He regretted exceedingly that, in justice to themselves, in confirmation of the claim which the colonies had long since set up, and fairly set up, to a kind and humane system of management of their slaves, they did not yield to the wishes of the mother country, as expressed in the orders in council;—that they did not ratify by law, what their own generous feelings had long since sanctioned in practice. He chiefly referred it to the irritation produced by the uncandid and unjust attacks of their enemies at home. But he sincerely hoped they would not confound friends and foes: let them not mix up in the same feeling those who held out the hand of a friendly assistance, and those who might be suspected of very different motives. He had, for the last twenty years, done every thing in his power to act up to the spirit of the resolutions, of all of which he approved. Nearly as far back as that time, he applied to Bishop Porteus, to assist him in procuring a clergyman for his estate. Another West India proprietor joined him in the same application. The bishop, however, distinctly stated, that there were not sufficient funds at command for that purpose, and that, owing to the heavy burthens of a most expensive war, it was impossible to look for assistance from Government. It had been said by a respectable gentleman (Mr. Wilberforce) that the cup of liberty had been dashed from the eager and thirsting lips of the negro as he was about to drink. But the cup offered to the negro was in fact the cup of Circe, which would have intoxicated and disordered his head, and have only introduced confusion and bloodshed in the colonies. The cup of which he could drink, the cup containing the living water, was not dashed from his lips, but presented to him willingly by his master's hand, on a branch from the stock of our inestimable church establishment. In conclusion, he would state that he approved of the resolutions, and had every hope that the colonies would carry them into effect\*.

The question for agreeing to the resolutions was then put and carried.

COMMONS.—Mr. W. Smith presented a petition against slavery, from certain Protestant Dissenting ministers in the cities of London and Westminster, and their vicinity. He hoped that the petitioners would meet with aid in this good cause, from a body of much higher rank than themselves—he meant the bench of bishops. The sentiments entertained by the petitioners on this subject, had now become much too general to render them any longer liable to be stigmatized. It had been observed, as an argument against our interesting ourselves in this matter, that we had misery enough at home to alleviate, without seeking for it abroad; but this appeared to him to be the remark of little illiberal minds, for he could not conceive that the spirit of benevolence was so narrow and contracted as only to be able to shed its influence over one spot or one object at once; and he had generally found those who were most feelingly alive to the wretched condition of the poor negroes abroad, most ready to step forward to relieve their suffering brethren at home.

\* This speech is republished from the "Substance of Lord St. Vincent's Speech."—Whitman and Fenn, London, 1826.

LORDS, TUESDAY, MARCH 14.—Lord Ellenborough had received a petition which would draw their lordships' attention to a point which had not been touched upon in the late debates on West India slavery—namely, the situation of freemen of colour. It appeared, that according to the laws of Jamaica and other islands, the evidence of free persons of colour could not be received against whites. In case of their incarceration, they could not be allowed to go at large unless they obtained what was called "white bail." They could not serve as constables or jurymen, and were not even allowed to vote on the election of white men to offices. It was evidently absurd to talk of giving liberty to the blacks in the West Indies, if those men of colour who were already emancipated were not allowed to enjoy the rights of free men.

Earl Bathurst observed that this subject formed quite a separate question from the general one relating to slavery: but it had not been overlooked. Instructions on this subject had already been sent out to Trinidad, and were about to be transmitted to Barbice.

Lord St. Vincent thought that there must be some mistake relative to the rights of free persons of colour. He knew an instance of a gentleman of large fortune having bequeathed 30,000*l.* to a free woman of colour, which she received without any deduction, and then enjoyed.

The petition was laid on the table.

FRIDAY, APRIL 14.—Lord Dudley and Ward presented a petition from the Board of Council and House of Assembly of the island of Antigua. Their lordships would see that the petitioners had indulged in the expression of sentiments that were somewhat harsh—perhaps too harsh and resentful towards the Anti-Slavery Society in this country. He would, however, venture to say, that the expressions of the petitioners were not harsher than were continually applied, to the colonists themselves, by the abolitionists. But what he particularly rose to point out was, that the petitioners said, and he thought justly, that they hoped, if any measures were forced on the colonies by the mother country, for the emancipation of the slaves, and those measures were to be at all injurious to them, that they should receive from parliament a full and fair indemnity. He did not think the colonists would be entitled to any indemnity, on account of any measures adopted by parliament for protecting the slaves, and improving their condition, as slaves. But if those measures went further—if they had for their object to give relief not only in degree but in kind—if the measures were to put an end to slavery, then there must be an indemnity to the masters. Where slavery ends, compensation must begin. It was, undoubtedly, a harsh thing to say that one man was the property of another; but this state of things had been established and sanctioned by law, and practised in the colonies for one hundred and fifty years. At length, however, it had been found out that our ancestors had acted unjustly; but to make the owners of these slaves, pay the whole price of our sudden repentance, was called for neither by justice nor policy. Parliament had never shown itself willing to infringe the rights of property; it had not only protected this right, when sanctioned by

law, but it had protected property not sanctioned by law. He need only mention what happened when the Union took place with Ireland. Was it not contrary both to the letter and spirit of the constitution, that any man should say, "I can influence a dozen members of this or that corporation; I am a landlord, and can command so many pot-walloppers, and if you do not give me 15,000l., I will vote against you?" He did not blame the Government for giving the price of these boroughs, but he quoted it as an instance of the respect which parliament had felt for the rights of property. In many of the petitions, the right of compensation was admitted; but he confessed he was not without apprehension, that in the application of this principle, many difficulties would be started. They were already told, first, that it was very easy to introduce free labour, and thus supply the place of the slaves. He would say for himself, that he was second to no member of the Anti-Slavery Society in his admiration of free labour, and that he did not share the opinion of some of the colonists, who held that there was something in the cultivation of the colonies, which rendered it impossible to be carried on by free labourers. He had seen too many instances of a slight increase of wages or profit being sufficient to make men engage in difficult, disagreeable, and dangerous employments, to suppose that there would be any difficulty in ultimately procuring free labourers for the colonies; but in the views of those who supposed that a rapid transition could be made from slavery to free labour, he could not agree. Nothing was more extravagant—to take Jamaica for an example—than to suppose that three or four hundred thousand slaves in that island could be instantly converted by act of parliament into free labourers. Whether it could be done or not, and he did not think it could, it was plainly an experiment, the expense of which ought to be borne by the public, and not by the planters. The planters would also be told—indeed it had been stated in a publication—that they were not entitled to an indemnity for their whole property, but only for the value of that property, as it would be, did they not enjoy an unjust monopoly. If there was a question for some of their lordships to give up a part of their estates to make a road or a canal, would they not require compensation; and would they consent to be told that the amount of that compensation should be measured by what the land would be worth to them without that monopoly which the noble lord (King) called an unjust system—the Corn Laws? Whether a monopoly were just or unjust, the value of property ought to be estimated by what it was worth under that monopoly; and whatever advantages were conferred on it by such a law, would be considered as fairly belonging to the individual. For his own part, his interest in the question was very small, and would not weigh sufficiently with him to make him interfere, were it not that he was anxious to prevent injustice being done to those who would feel it of greater importance. In this view he had thought it his duty to call their lordships' attention to the subject, as he had done once before, under the hope that he might assist in arresting the progress of those, who entertained what he thought not a well-founded opinion as to the situation of the slaves, and who, in their modern zeal for humanity, were ready to sweep away all the ordinary principles

of justice. At the close of the petition, a suggestion was thrown out which might appear somewhat extraordinary. It was proposed that this country, or the abolitionists, should purchase the whole property of the planters—that they should take the island of Antigua into their own hands. They might then make whatever experiments they liked as to free labour. Those who were for rash experiments, might have the opportunity of trying them; but he thought it was by far most desirable that the experiment of free labour should be made by degrees, and on a small scale; and for such a trial the island of Antigua would afford every facility.

Lord *Calthorpe* defended the Anti-Slavery Society, and denied that they were hurrying on the abolition too fast.

Lord *Dudley and Ward* explained, that his apprehensions were founded chiefly on a statement of the noble lord himself. He had hoped, he said, to see the emancipation of the slaves during the life of Mr. Wilberforce; and, in the ordinary course of nature, that would be hurrying on the matter with great rapidity.

Lord *Calthorpe* said, some people were unfortunate in having their speeches misreported. At a meeting of the Anti-Slavery Society last year, he had said that he hoped, before the termination of Mr. Wilberforce's valuable life, there would be such a visible approach to emancipation, that he might enjoy the prospect of its taking place after he was gone, which would be to him a more full and pleasing reward for his past labours, than any he had hitherto received.

Some conversation taking place as to receiving the petition, which purported to be from the Board of Council and the House of Assembly, and was signed only by the Speaker of the latter,

The Earl of *Liverpool* said, that the Colonial Legislatures were authorised bodies; and as long as Parliament claimed authority over the colonies, they must have some recognised means of bringing their grievances before parliament. He did not see how this was to be done, but by the communications of their constituted officer. Some questions of this kind were probably agitated during the disputes with the American Colonies, and he should wish, therefore, that the petition should be referred to a committee.

Agreed to.

COMMONS.—Mr. *Baring* presented a similar petition from the same parties. He said, he had always been a zealous friend, first to the abolition of the slave trade; and next to the amelioration of the condition of the slaves; he therefore need hardly state, that he was no party to the strong expressions of the petitioners, respecting the individuals who were at present employed in producing hostile feelings throughout the country towards the West India system. He must further observe, that these very petitioners set forth that they believed their own negro population to be in a better state, and in a more improved moral condition, than any other in the West Indies. Now, when they stated this, he thought they must be sensible that much of that improvement in the condition of the slaves must have arisen from the attention paid to the subject in this country, and to the exertions of the persons whose conduct they arraigned. There were passages in

this petition which seemed to him to be so true and just respecting the conduct of the planters, and which tended to relieve them from so much of the obloquy that had been cast on them from time to time, that he could not avoid requesting attention to them. The petitioners pointed out, what was perfectly known to all who had considered the subject, that the slave trade was originally promoted by this country, not with a particular view to the settlements in the West Indies, but as a profitable branch of traffic. It had been held up as honourable as well as profitable to the country, and it had been defended, in the face of Europe, without any reference whatever to the interests of those persons who were now pointed out to the world as the only sinners—as the individuals who alone had reaped the benefits that flowed from it. The petitioners further stated that, for a considerable length of time, it was so encouraged even in opposition to the wishes and the interference of some of the colonies, who wished to prevent it from being carried on to so great an extent. The colonies first marked the trade with their disapprobation in 1760, when the legislature of South Carolina, then a British colony, passed an act to restrict it. That measure was, however, rejected with indignation by the Governor, who declared that the trade was beneficial to the mother country. Similar attempts had been often afterwards ineffectually renewed. Liverpool and Bristol resisted every alteration, and on reference to the Board of Trade, that board declared, in their report, that they could not think of disturbing or discouraging that trade. This was so late as 1774. "If you have now altered your views,"—such was the argument of these colonists—"you are bound to give us an indemnity, whom you have constrained to adopt that slavery which you will now no longer tolerate." This he thought a very reasonable proposition. The petitioners concluded by offering their island to the Government, for a just consideration, as a fit spot for the experiment of cultivating the West Indies. He (Mr. Baring) did not say that any experiment need be made; but if the mind of the country could not be satisfied without it, then it ought to be on a small scale, and Antigua was the best situation for it.

The petition was ordered to be printed.

**LORDS, MONDAY, APRIL 17.**—Lord *Suffield* said, that in bringing forward the present motion his single object was, not to convey civil rights, but to prevent criminal wrong. With a view to this, much might be done by acceding to what he proposed—namely, that no public functionary should have any property in slaves. The great evil of slavery was not only felt in its effects upon the slave himself, but also in the contamination of its influence upon all who were connected with the system.—He first referred to the returns of the proceedings of the Fiscal of Demarara. The number of complaints laid before him from June 1824, to the following September, amounted to 25, out of which 16 were made by slaves against their masters. Of these, the complainants in 12 cases were punished; two were restored to their masters, to be, of course, punished by them; and two obtained redress. There were six complaints by masters against their slaves, in all of which the masters obtained redress; in

four the parties having been flogged, and in two imprisoned. The rest were complaints of slaves amongst each other, with which their lordships had nothing to do. He next quoted several instances of cruelty perpetrated in Berbice, although the slaves were less harshly treated in that colony than in any of the others, and yet even there, the women are not allowed so short a respite from labour, as to enable them to leave the field to suckle their children. The case of one woman was horrible. The driver was ordered to flog her; he remonstrated, stating that she was pregnant; in reply to which, the manager told him to "give it to her until the blood flew out." She was accordingly put down, and flogged until the whip broke. This was on Friday; on Saturday she was sent to the field, and miscarriage was the consequence. A slave of the name of Brutus was flogged for not consenting to the violation of his daughter. A man, named Michael, on the same plantation, was flogged on suspicion of having stolen some articles of property, which were afterwards found in the possession of another person; and on his laying a complaint before the Fiscal, he was told that he was entitled to no redress, as he had not given any absolute proof of his innocence; and the manager was reprimanded for punishing a man upon slight evidence. In another case it was proved that the manager had been in the habit of stealing ducks and fowls from the negroes for his own table, and upon complaint made to the Fiscal, he was only ordered to pay them the value of the stolen property. A woman complained of three successive floggings which had produced miscarriage, and the manager was reproved for it. The next case was that of the negro Felix, whose wife had been taken from him by the manager for the worst purposes. The husband complained of this, and was flogged. He then went to the Fiscal; and what was the redress he had received? The Fiscal ordered him to be flogged for leaving his work unfinished; and the manager was reproved for taking improper liberties with the women on the estate. Having referred to several other cases of this description, where the parties had complained to the Fiscal, and obtained no redress, he observed, that he thought he had sufficiently shown that that officer had been guilty of gross partiality. In every instance the slave was more likely to be punished for complaining, than the master for committing the crime. In short, it was such a mockery of justice, as was only to be accounted for by the corrupt influence of the system of slavery upon the mind, and which could only be removed by their lordships acceding to the motion which he was about to make.—Having now made out a case of obstinate resistance to their own interests on the part of the planters, in not complying with the wishes of the Government of this country, who were anxious that the work of amelioration should proceed from the colonists themselves; and of gross partiality on the part of the Fiscal; and if all that was not sufficient to warrant their lordships in agreeing to his motion, he thought he could supply every deficiency by reading two opinions from the report in his hand. (His lordship then read passages from the report, which set forth that guardians of slaves, themselves possessing property in slaves, always evinced partiality in favour of the whites; and juries, for the same reasons, acted

with the same partiality). The noble lord concluded by stating, that he was aware of the consequences to which the part he took on this subject exposed him. He had already received much abuse, and was prepared to meet with more; but nevertheless, so long as he drew breath, he would persevere in the advocacy of this cause, and endeavour to excite such feeling as would bear the friends of the cause through in the accomplishment of their object, as soon as it might be done with safety. Under these circumstances, he moved "that an address be presented to his Majesty, praying that he may be pleased to appoint to the civil government of the colonies, to the offices of judge, attorney-general, fiscal, guardian of slaves, and religious instructor, such persons as are neither owners of, nor possessors of any reversionary property in slaves, nor the agents of slave owners."

Earl Bathurst opposed the motion. The noble lord, in mentioning the cases which he said had been decided in favour of the masters instead of the slaves, should have made some allowance for the difficulties of the situation of the fiscal. In the colony of Demerara, the fiscal had encountered the greatest difficulties, on account of the opinions of the slaves; and before he could make any impression on them, he was compelled to undeceive them as to what was meant by this country; for they actually imagined that the parliament had resolved to set them free. It appeared from the noble lord's statement, that the commissioner employed by Government was possessed of some property in slaves. As for the instances of cruelty, he might appeal to any noble lord, whether in former times, cruelties, just as horrible, had not been committed in this country by masters against their apprentices? He admitted the excellence of the principle urged by the noble lord, but he doubted the possibility of carrying it into execution, at least with respect to more than one or two of the chief officers of the colonial government. The other officers would not find a sufficient motive in the emoluments of their offices, to undertake them, without being possessed of any interest in the colony. According to the way in which the resolution was drawn up, none except one or two of the principal officers could have any domestic; for in slave colonies, none but slaves could be had to fill that situation. His lordship concluded by moving the order of the day.

Lord Ellenborough thought this resolution would be productive of the most mischievous effects; and he was convinced, that if any thing was done, it must be by the silent operation of the expressed opinions of this Government, and by the example which they set in the treatment of the slaves more immediately under their control. As to our legislating for the colonies, he was convinced that ministers dare not submit such a proposition—that parliament would not adopt it; and if it did adopt it, the people would not second it—nor could it, if it were carried, be executed without danger to the colonies, and without incurring the risk of sacrificing the slaves themselves. A great evil had been done by putting forward emancipation, as the object of their efforts. If they would talk of emancipation, when they had no means of affording compensation to the masters, they would injure the cause they meant to assist.

After a few words from Lords Dudley and Ward, Calthorpe and St. Vincent, the motion was withdrawn.

THURSDAY, APRIL 20.—Lord Redesdale presented a petition from certain merchants and others of the city of London, proprietors, mortgagees, or who had made advances on West India property. The noble lord dwelt on the distress to which persons interested in West India property had been reduced by the proceedings in parliament relative to the subject of slavery. At present no person would advance a shilling on West India estates; but, amidst their distress, the unfortunate proprietors were obliged to go on, or the slaves would starve. Thus there was no hope for them, since they could not get rid of their property; and they must continue to cultivate it at a loss. Married women, whose settlements depended on plantations, and orphan children, were left entirely destitute. Persons who held mortgages, if they applied to the proprietors of plantations, could obtain no money. If they instituted proceedings for the sale of the mortgaged estates, and if they adopted that course there were no buyers to be found. The object of the petition was to induce the legislature to do something towards restoring in some degree the value of this property.—With regard to the emancipation of the slaves, that measure could only be brought about by the operation of time. Rash and precipitate measures might lead to all the horrors which the decree of the National Assembly had produced in St. Domingo. The prudent course would be to teach the negroes to feel the value of property, and of some distinction of rank in society. While the negroes remained all in a state of equality, this preparation could not be accomplished. He thought that the steps towards such an object would be with most advantage taken entirely by the colonial assemblies themselves. The petitioners deprecated any interference with the colonial legislatures, as acts of power might produce effects which at present could not easily be foreseen. It seemed to be suggested as a principle to be adopted on the other side of the Atlantic, that no further European influence should be allowed to extend itself there. He trusted, however, that under all the circumstances which might arise, the colonies would always look for protection to this country, and would find it afforded them.

The Earl of Liverpool could assure his noble friend, that if there existed an intention in any parties in this country to precipitate the emancipation of the negroes, without due preparation, no man could be more opposed to such intention than himself. The great interests and property at stake demanded caution, especially when it was considered that the Government and parliament of this country had been parties to the evils of slavery, in consequence of the direct encouragement which had for 150 years been given to the state of things existing in the West Indies. Having said thus much, he must express his deep regret that the colonial legislatures should have proceeded in the course which they had hitherto thought fit to pursue. They had shown a disposition, not to amelioration, but to resistance. He desired that their lordships would look at the nature of the measures directed in the instructions which had been sent out to the West Indies, and say whether any

possible evil could result to the colonies from adopting those measures. He agreed with his noble friend that measures of amelioration could be most advantageously carried into effect by the colonial legislatures themselves. But if they persisted in refusing to attend to the recommendation which had been given them, it would be the duty of parliament to interfere. He trusted, however, that whatever regulations the colonial assemblies might think fit to carry into effect would be adopted in the spirit of peace and conciliation, and that the Government would not be placed in the unfortunate situation of being obliged to resort to measures which might be necessary to enforce the course which had been recommended.

The Lord Chancellor regarded it as most fortunate for the country, that the language which had from first to last been held on this question in parliament, had been recommendatory of a gradual abolition. He must, however, beg leave to doubt whether the same opinion pervaded the whole body of the abolitionists; for if noble lords would examine the greater number of the petitions which had been presented to the house on this subject, they would find that they, in general, contained an express prayer for the immediate emancipation of the negroes.

The Marquis of Lansdowne denied the assertion of the learned lord, that the greater part of the petitions prayed for immediate emancipation.—He thought the colonists could only deliver themselves from the perilous condition in which they were placed, by adopting the course which had been recommended to them, and following the example held up to their imitation. With regard to the measures of emancipation, there could be but one sentiment; which was, that they ought to be gradual, and of a nature calculated to ensure that moral improvement by which alone the negroes could be fitted for the enjoyment of freedom.

COMMONS.—Mr. Baring presented a similar petition from the same parties. He expressed his own opinion that the holders of that property, before as valid and secure as any other, and now threatened with increasing danger from the measures taken against them, had nothing to fear from the sense and justice of parliament; but that it was impossible to know how far the madness of the public mind might be driven to their undoing.

A desultory discussion then took place, in which Messrs. Warre, Bernal, Manning, T. Wilson, and R. Ellis, complained of the violence and exaggeration of the anti-slavery petitioners, and Messrs. W. Smith, Sykes, and Dr. Lushington, of the violence and exaggeration in the statements of the West India proprietors. In the course of this discussion,

Mr. Bernal said, that a recent work of Mr. Stephen contained, amongst other misstatements, a charge against the West India proprietors, of branding their slaves. The practice was totally abandoned. He was certain that persons guilty of practising such a barbarity at present, would be held up to general odium. Slaves who had been condemned for acts of a particular description were, he believed, still branded, as had formerly been the practice in this country with respect to certain criminals; but the general charge was untrue.

Mr. Sykes said, that by a reference to the *Jamaica Gazette*, which he held in his hand, he

found that the practice of branding was very common. He found these words in an advertisement:—"William, a freehold slave, aged 40, marked W. D., and Caesar, a freehold Creole, in height about five feet four inches and a half, belonging to St. Mary's, and also marked K. B., with other negroes marked and unmarked together, with several horses (hear, hear), will all be sold together." He thought this was sufficient to refute the statement of the hon. gent.

Mr. W. Smith held in his hand the Supplement to the *Jamaica Gazette*, (16th February, 1826), which showed that the practice of branding was not an old story, but a still subsisting act. It contained such entries as these:—"La Clarendon workhouse, Tick, a creole negro, mark 8; Richard Smith, a creole negro, mark W. S., a diamond, and a large scar. At St. Mary's workhouse, Agnes, a creole, mark a diamond; Jack, a creole, W.S.P.; John Williams, a creole, mark A.T.; W. Brown, a creole, mark P.S.C.W., &c. &c."

Mr. Bernal remarked, that when they considered the Negro population of Jamaica to amount to upwards of 300,000, these instances of the practice alluded to were rare indeed. All he had said was, that this mode of marking was not general, and was discontinued. These workhouse cases were generally those of runaway negroes, of bad repute. For himself, he begged to be understood as denouncing the practice, but he repeated it was of rare occurrence.

Mr. Rose Ellis pledged himself to prove that the practice, so far from being tolerated, was made penal by colonial acts, and there had been an instance of the prosecution of a master for branding a slave, as an act of cruelty.

The petition was then ordered to be printed.

Mr. W. Smith then rose to submit a motion respecting the slave population in Demerara and Berbice. He began by commenting on the perverted feelings which the property in slaves gave rise to. He found it stated that on a recent trial in Berbice, the Attorney-General expressed his horror of the language which had been used, to the effect, that "there was no more harm in killing a negro than a dog." This was the feeling and language produced by the system. It was now many years since the public voice of England had pronounced its abhorrence of the whole system of slavery; and if any man should hereafter vest his property in the purchase of slaves, he would have no claim to pity or to redress from this country. He proceeded to vindicate the missionaries from the charge of exciting discontents in the minds of the negroes. These discontents had been made the pretext for delaying the adoption of the measures recommended by Government in 1823. The missionaries in Antigua, where, according to the petition presented from that island a few nights since, the slaves were better off than in any of the other settlements, had practised the same conduct, and preached the same doctrines, as elsewhere; and yet, to believe the assertions of the enemies of the missionaries, the house must suppose that what would produce happiness and tractability among the slaves in Antigua, would lead to insurrection and disorder in Demerara. He was disposed to refer to other and

more obvious causes the dislike which the Negroes manifested of the men who had oppressed them. During several years, circumstances had occurred which were calculated to produce an irritation, always likely to break out into insurrection. In 1789, an insurrection took place: the Negroes fled into the woods, and the most severe means were resorted to in order to put down and punish them. He would not recapitulate the horrors of that event. Mr. Bryan Edwards and other historians of the West Indies had preserved the details, which, while they were such as to make the blood of an European run cold, would make that of a Negro boil. On a more recent occasion, there had been acts of cruelty and outrage on the part of the Negroes; they had committed murders—no matter how many; burnt plantations—to a considerable extent; but this had been when there were no missionaries among them, and when their doctrines and their conduct had not yet begun to exercise their influence. On the last occasion which had happened, in Demerara, that influence had been exerted, and not a single white life was lost. The ill-treatment of the slaves was one of the principal causes of their insurrection. The private journal of the late missionary Smith, contained instances of punishments inflicted on slaves, which were far more likely to have produced in their minds resentment against their masters than his preaching, even if it had been such as his enemies had represented it to be. On referring to the returns, he found a strong confirmation of his opinion respecting the treatment of slaves. It appeared, that only one of the persons complained against by slaves for ill-treatment had been punished. His crime was something more palpable than ill-treatment—it was that of not having given his slaves a sufficient quantity of food. Another instance, with which he would trouble the house, was that of a slave, named Felix, who complained that after having lived for two years with a black woman, the manager of the estate had taken her away from him, although he had a wife of his own; that he was always taking away the Negroes' wives; that Felix's wife had had a child by the manager, and that, since the birth of that child, the manager had frequently punished Felix and his wife without any cause. On hearing this complaint, the fiscal examined witnesses, by which it appeared, that Felix having been punished for leaving his work, preferred this complaint against the manager. Felix was therefore sentenced to be punished; but the manager was also reprimanded for taking improper liberties with the female Negroes on the estate, and the owner was recommended to discharge him. In 1815, an overseer was taken up in Demerara, who had been guilty of a most heinous outrage—indeed, one for which he would have been torn to pieces by an indignant populace in this country; and what was the consequence? He was fined 25*l.*, and committed to prison for a short period; and, as soon as he came out, he was again taken into the employment of his former master, as the manager had been, in the former instance. He believed that ministers either had appointed, or intended to appoint, protectors or guardians of slaves; but this of itself would not be sufficient; it should also be provided, in order to render this measure of any service, that these protectors should neither be owners of plantations or of slaves, or in any

way interested in their labour. Without some provision of this kind, the measure would be wholly inefficient. He knew very well that in Demerara, the captain burghers, who had the deciding of causes, were themselves too interested as parties, to be likely to administer impartial justice: besides, they were incapable to act as judges, from another cause. Mr. Henry, who went to Berbice some years ago, as well as several other persons, represent the law of that district as a matter of great nicety, and as requiring considerable acuteness to comprehend and administer it, and that the captain burghers knew nothing at all about it. He (Mr. Smith) did not mean to accuse these persons of cruelty or barbarity: all he meant to say was, that they were wholly incapable of fulfilling the duties of the situations in which they were placed; and, if they were unfit to administer justice between the whites, still more were they unfit to decide differences arising between negroes and their masters, these latter being their companions, and having similar interests with themselves. —To revert to the subject of the missionaries, it had been strongly objected against Smith in Demerara, that he had gone about inquiring into the condition of the slaves, and as to how they were treated by their masters. Now, this very conduct, which had been so much reprehended in Smith's case, was enjoined by the Spanish laws, which directed that the priests should examine the slaves as to what kind of treatment they experienced from their masters, and whether they were properly supplied with food; and that, in order that the slaves might not be deterred from making just complaints, the priests were forbidden to reveal their communications. —They were told that slaves were not in a fit state for emancipation; he believed they were not, and should be sorry if any order was issued for their immediate emancipation. But, be they what they may, they were exactly what their masters had made them. Their masters had possessed an unlimited authority over their slaves. Had they used it for the purpose of humanizing them? On this point he wished for no other concession than that which had been made over and over again by Mr. Bryan Edwards, who had admitted that the state of the West Indies was truly deplorable; that the example set by the colonists to their slaves was such that it was no wonder that the slaves, instead of improving in their conduct and morals, actually deteriorated. There was an old story of the King of Prussia, who, when a soldier had been brought before him charged with some disorderly conduct relating to the fair sex, asked if he was a good soldier, and, upon its being answered in the affirmative, he ordered him to be discharged, saying he had nothing to do with his amours. So it was with the colonists: all they cared about their slaves was, that they should work well; and as to their morals or instruction, those were matters about which they never thought of troubling themselves. If all the negroes, for the last forty years, had been properly treated and instructed,—if a redress of their wrongs, and a cultivation of their minds, had been set about in good earnest, he entertained no doubt but that we should now have had our West India colonies filled with a sound, moral, and intelligent population. A commissioner had been sent from St. Christopher's to inquire into the state of the island of Anguilla, and his report respecting it

was, "that the ground was poor; there was no capital, no government, no punishment of crime, no morals; that the slaves had no clothing, and very little food; and, to sum up all in one word, that it was impossible to imagine a system more ruinous, both to master and slave." Now, from calculations which had been made, it had been clearly deduced, that in those colonies where the greatest quantity of sugar was grown, in proportion to the number of slaves, there was the greatest sacrifice of human life. In most of the colonies where much sugar was grown, in proportion to the number of slaves, there had been a considerable decrease in the slave population. In Barbadoes, where the least sugar was grown in proportion to the population, there had been a slight increase; and in Anguilla, where the proportion of sugar grown was only about two hundred weight to each slave, notwithstanding this island was in the very deplorable state he before described, still the slaves appeared to be vigorous and healthy, and the population was increasing. He should now merely read over the resolution which he was about to submit. "Resolved—That from the official documents laid before this house, and other authentic information, respecting the colonies of Demerara and Berbice, it appears, that although protection has been held out to the slave population of those colonies, either by the fiscal or chief judge, in the capacity of protector of slaves, or by some other person acting in that character, yet the slaves have generally been, and still remain, exposed to numerous vexations and grievous oppressions, demanding effectual relief; and that the house has therefore observed, with great satisfaction, the declared determination of his Majesty's ministers to promulgate in those colonies an order in council on this important subject, to which qualified obedience will be required. But that, from all reasoning and experience, this house is led to conclude, that no legal enactments, however well devised and strongly framed, can prove sufficient for such effectual safeguard of the slave, unless the officers, both principal and subordinate, to whom the execution of the law is to be entrusted, shall be appointed and supported by the Government at home, and absolutely be prohibited from possessing or employing slaves in any capacity, either predial or domestic."

Mr. W. Horton said, that the greater part of the hon. member's speech was so little applicable to the resolution that he had submitted, that he felt some difficulty in knowing whether he was to address his observations to the speech or the resolution. As, however, the course taken by ministers with regard to the Order in Council for Trinidad was at present in full operation in Demerara, and would shortly be so in Berbice, he thought the house had better await the result of those orders, than occupy itself in censuring past offences. A gentleman had already been appointed by the power vested in the Crown to act as the protector of the slaves in these colonies, and would leave this country in a short time, to take upon himself the duties of that office. The protector of slaves was instructed to watch strictly over the execution of all provisions made, or to be made, for the benefit of the slave population,—to apply to the governor of the colony for assistance, in case the powers with which he was vested were found insufficient to the discharge of the trust reposed in him,—to visit the slaves in person,

for the purpose of seeing that they were properly treated by their masters, and of affording them speedy redress when they were maltreated,—to be accessible upon all occasions to slaves, who had complaints to make to him,—to see that those complaints were legally examined before the proper tribunal,—and to use every exertion in his power to make the slaves understand that the provisions made on their behalf were not intended to interfere with the labour and industry which they owed their masters, but to secure to them the protection which they required. He should be able to lay the instructions in full on the table of the house in a few days; but he trusted that what he had stated would satisfy the hon. member (Mr. W. Smith), in whom, he thought, that it would be wisest to draw the attention of the house to the favourable prospects of the future, than to involve it in these inconvenient discussions on the past, from which no advantage could be derived to any party.—As to the hon. member's declaration that it was desirable that all persons connected with the tribunals in these colonies, subordinates as well as principals, should be prohibited from having any property in slaves, he (Mr. Horton) was prepared to say that in the case of the protector of slaves, of the Chief Justice, and of the Attorney-General of the colony, the Government was determined to enforce that principle: but he doubted the prudence of carrying it into effect with regard to all the minor officers of judicature. A regulation to that effect would render the property in slaves a degradation; contrary to the resolutions unanimously assented to in 1823, which recognized that species of property, and promised it ample protection. The hon. member had adverted to the insurrection which had broken out in Demerara two or three years ago. He had said that it was calumnious to attribute that insurrection to the causes to which it was usually attributed, as it arose principally from the unsatisfactory situation of the slave population. Now that was an admission which he (Mr. Horton) was very glad to hear. The hon. member had heretofore denied that proposition, which Ministers had always insisted on, and of which they had received further evidence by one of the last despatches of Sir B. D'Urban to Lord Bathurst. As to what had been said respecting the cultivation of sugar, he did not think that any unfavourable inference should be drawn against the West India Proprietors from the circumstance of the cultivation of sugar being attended with more extensive mortality than that of other articles. The same argument might apply to the collieries in this country. Mortality was much more extensive in the minorities from the fire-damp—from the greater labour undergone there, and from various other circumstances, than perhaps in any other occupation. This was owing to the unhealthy description of the labour, which, in some employments, was greater than in others; but it was a consideration altogether distinct from, and unconnected with, the mal-treatment of the slaves (hear, hear). Indeed, as to the charge of mal-treatment, from the various reports—reports which he had no reason to doubt—the statements which were made of the cruelty and hardships of the slaves were greatly exaggerated. And he would take this opportunity of animadverting upon the efforts that were made to work upon the feelings of the country, by inducing them to believe that the condition of the slaves

was more harsh than it really was. Government was disposed to do the utmost to ameliorate the condition of the slaves; and it was injurious to the cause which they professed to support, for gentlemen to work upon the feelings of the people, and to induce the country to go beyond the Government in its plans of progressive amelioration (hear, hear). The resolutions which had already passed the house, pledged Government and the parliament to certain measures—these measures had already taken place in some colonies, and Demerara and Berbice were on the eve of reaping all the advantages of them.—That the property of slaves should not be vested in the high functionaries in the colonies, he conceded; but that the subordinate officers should be trusted with the possession of such property, he thought was not objectionable but useful. Under these circumstances, therefore, he felt himself justified in moving the previous question.

Mr. R. Ellis bore testimony to the general humane treatment of the slaves, and lamented that when any exception occurred, the odium which it excited extended to all the planters, instead of being confined to the individual who deserved it. He coincided with many of the remarks which had been made on the report furnished by the Fiscal of Berbice, and admitted that it was impossible to read many of the complaints which had been made to him without feelings of disgust and horror. He was grieved that in the report none of the evidence by which those complaints had been substantiated or refuted was given; and still more that during the last twelve months there was an omission of any record of the Fiscal's decisions. To judge properly of that report, the house ought to know in how many cases redress had been claimed and afforded, and in how many it had been claimed and refused. He had made an analysis of that report; and he had found that, in the first section of it, out of 43 cases of complaint which had occurred in the last 13 months, 27 were judged to be altogether groundless; 8 were cases in which both parties were declared to be in the wrong; and 8 only were cases in which the complainant was declared to be in the right. Applying the same analysis to all the cases in the report, he found that out of 333 cases of complaint, 200 were declared to be unfounded. Of the other 133 cases, in one half, both parties were in the wrong; leaving 67 cases only of real complaint in fourteen years, or about five cases yearly, with a population of 20,000 negroes. With reference to the individuals who might be sent out to superintend the execution of any improvements, he had one observation to make. He hoped that those persons would be persons unconnected, either with the colonies on the one hand, or the Anti-Slavery Society on the other; and he thought it particularly fit that they should be lawyers, and men of character in their profession. The want of a due attention to this principle was particularly apparent in the allowing governors of colonies to be presidents in the courts of chancery—a species of duty for which their habits and education as military men rendered them in most instances unfit.

Mr. R. Martin requested the hon. gent. (Mr. Smith) to withdraw the resolution, because it could do no service to the slaves, and would be likely to create dissension in the colonies.

Mr. Denham had not heard, during the whole discussion of the evening, a single satisfactory objection to the resolution of his hon. friend.

Feb. 1826.

All that the motion required was, that individuals who were the owners of slaves should not be appointed to fill certain offices in the colonies; and he thought that it would not be improper to confirm what had been in part done by Government, by a resolution of that house.

Mr. Baring thought it might be observed with great propriety, that while, on the one side, it was dangerous for the house to interfere with the management of the colonies in opposition to Government, on the other hand, their interference, if in favour of what Government had already done, was little less than utterly useless—indeed it might not only be useless, but dangerous. What was the case made out on the part of the hon. gent. who proposed this resolution; and in what position did the house stand? A resolution had been carried in this house, which the government were now in the progress of carrying into execution in the colonies. The hon. gent. (Mr. Smith) did not want to go faster; he did not contend for immediate emancipation, for indeed, he had allowed it to be dangerous. Then for what did he contend? He ought to state distinctly what he meant, for experience had shewn, that the vague reports that reached them, respecting the intentions of parliament, operated most injuriously on the minds of the slave population. He did not mean to impute such an intention to his hon. friends round him; but he could not conceal from himself that there were persons who, finding that the system of gradual improvement would not suit their purposes, wished to infuse into the minds of the negroes an idea that parliament was goading on the Government to do something further for them (hear hear). Such seemed to be the sole object of the proceedings of the Anti-Slavery Society (hear, hear). He believed that their proceedings were not only totally irreconcilable with common prudence, but that they were opposed to the true interests of those people for whose advantage they were intended, and that they were calculated to produce irremediable mischief and most extensive confusion (hear, hear, from the ministerial benches). He had not wasted his time in reading the pamphlets issued by this Society, but he thought he had not been mistaken in his description of them. The members of this house, who concurred in the proceedings of the Society to which he had alluded, in some measure followed up the example, by frequent notices on this subject. A learned gent. (Mr. Brougham) had given, on the first day of the session, a notice of a motion with respect to the state of slavery in the colonies. That motion had been put off from day to day, until nearly the last day of the session. Then there was another incidental notice about Demerara, by another hon. member (Mr. Buxton); and there was still another little motion by some other hon. member, all tending to excite and maintain a ferment in the country. It was already on record, that the partial insurrection which had taken place in Jamaica had been caused by these means. The negroes laboured under the deception, that there was a conflicting power at home acting in opposition to the Government under which they were living. The negroes of the best conduct and characters were the most deceived. Their masters had so described them in their account of the insurrection. He trusted that this instance of the effect of unnecessarily agitating the colonies, would serve as a warning to hon. gents. In his opinion, the measures already adopted by Go-

vernment would, in the course of time, by preparing the minds of the negroes, do all that could be done for them. But the precipitate conduct of persons in this country could do nothing but mischief. The methodists who, he believed, had done more than any other class towards the moral and religious instruction of the slaves, came to a resolution in Jamaica, that the condition of slavery was not repugnant to christianity. This did not please the people in this country, who from one end of the year to the other were talking about slavery without knowing any thing about it, and they said that the resolution must be recalled. He had no doubt that the state of slavery formerly existing in the colonies required the interference which was now in progress; and if the country was satisfied with the course now pursued, we should arrive many years sooner at the object of the wishes of all classes, than by goading on the Government to greater and more dangerous exertions (hear, hear).

Mr. Brougham was compelled to complain of the gross misrepresentation of his hon. friend (Mr. Baring), both of certain members of that house, and of the Anti-Slavery Society. His hon. friend charged that society with agitating the country on the subject of negro slavery, and with creating the feeling which existed abroad, and which he (Mr. Brougham) was happy to know, would exist till it had produced an effect on the deliberations of that house, if necessary; on the conduct of Government, if that conduct should require such influence; and last, but not least in this question, on the West India legislatures themselves. He (Mr. Brougham) denied that in the publications emitted by the society, or the speeches made at their meetings, they had made an appeal to the passions; they had only repeated facts, stated in the first place out of the mouths of the West-Indians themselves; and by those facts had the feelings of the people of England been unanimously roused. In justice to the society, he wished that his hon. friend would not find time to condemn publications which he could not find time to read. He (Mr. Brougham) had read the accounts of almost all the Anti-Slavery Society meetings, and although the persons attending those meetings were naturally excited by the nature of the question with which they had to deal, he had never observed an instance—he made no exception—in which emancipation,—rash, sudden, and immediate emancipation—was recommended by the most ardent friend to the improvement of the negroes, or the most inveterate enemy of slavery. With respect to the publications put forth by the society, they consisted only of abridgments of papers laid before parliament.—His hon. friend (Mr. Baring) had accused him of having given notice of a motion on the subject of slavery, and of having put it off from day to day, which it was said had a mischievous effect. He had certainly given notice of a motion, and had attended from day to day, prepared to bring it on; but he was prevented by the discussion on a petition by his hon. friend (Mr. Buxton), which had drawn from the rt. hon. sec. (Canning) a detail of facts, of which he alone as a minister could be supposed to be possessed. He (Mr. Brougham) had since found that the rt. hon. sec. was deluded in the information conveyed to him. By the statements of the rt. hon. sec. he (Mr. Brougham) had been led to suppose that something had been done; but he had since reason to

believe, that what was done by the colonial legislatures was only a mock compliance with the wishes of the Government. He would pledge himself to prove, that nothing of what was then stated as having been done was accomplished by the colonial legislatures. Having, for the reasons he had mentioned, been induced to postpone his motion, he was obliged by inevitable engagements to put it off for six weeks, and had since fixed on the 11th of May, the earliest day at which he could bring on his motion.

Mr. Canning:—"In the view, sir, which I take of this question, it lies in a very narrow compass. If the motion were made with the object of throwing suspicion on the intentions of Government, either as they were originally conceived, or as they have been carried into execution—if it were thought necessary to arraign the Government before parliament, either for departing from the pledge it had given, or for having neglected to enforce the system, resolved on by parliament, by all the means in its power, there would be sufficient reason for rejecting the motion, when I should, as I easily might, have disproved the allegations on which the suspicions were founded. But the singularity of the present motion is this, that it professes, as many other motions of the same kind have professed, to be brought forward with the object of furthering the views adopted by Government, and of supporting its efforts in attaining that common object, in which the parliament and the Government concur. On a motion so founded, if I were to venture to give an opinion, I should say, that it was both inauspicious and unpopular, professing, as it does, not to oppose, but support—not to arraign, but encourage, the Government. I much doubt, sir, whether it answers this professed purpose. The present is not the only motion made with the same professed object; it is but a series or part of a system—a specimen of the whole. No man can look at the great question to which the motion refers, without being sensible that it is involved in an infinity of difficulties. In its first and principal characteristics, it is so plain, that no man can consult his own bosom, and not come to the conclusion of those who have expressed themselves in the most emphatic terms—those, however, who are most warm in its favour cannot examine the conduct of Government, and compare it with its means of action, and justly accuse it of either lukewarmness or insincerity. At an early stage of the proceedings, Government had the good fortune to propose resolutions, in favour of which the house came to an unanimous conclusion. From that time forward the proceedings of Government were not to be judged of by any pre-conceived principles of action, but by those resolutions, and by the conformity of its conduct to them. It was not to be judged of by the opinions of any individuals; for they had, by the common consent of the house, been overruled; and the only question which could be raised was, whether the Government, in sincerity and to the best of its judgment, had used all the means in its power to carry the resolutions into effect? With the exception of the threatened motion of the learned gent. (Mr. Brougham)—and I do not mean to bind him to the terms of his promised motion—but with the exception of that, I must say, that all the motions which have been brought forward, or threatened to be brought forward, are hazardous to adopt, not fit for discussion, and all calculated

to retard, not accelerate, the purpose for which they are professedly brought forward. They are not judicious, as they disturb the temper—and they are not fair, as, under the pretext of aiding the Government, they interrupt its course, and break down into mean and insignificant details and divide into fractions what parliament has resolved to treat and promote as a whole. The hon. member (Mr. W. Smith) says he brings forward his motion to aid the Government. Sir, I tell him the Government does not want such aid. It is an aid which rather adds to our incumbrance than increases our power. What, sir, let me ask, are the difficulties in our way? On the one part, we have over-weening expectation of too sudden results, the hopes of wrong-placed enthusiasm, inculcating impracticable measures. What are the difficulties on the other? Obstinate resistance to the projects of the legislature, impeding all our operations. Are these two classes of difficulties lessened by this course of proceeding? Resolutions, sir, are brought forward at public meetings—I do not by any means wish to speak disparagingly of public meetings—but resolutions are brought forward at them, which only add to the enthusiasm of the already enthusiastic; and when they are known and promulgated to the world, threatening those at a distance, they make obstinacy more obstinate, and apprehension more fearful (hear, hear). If the object of such motions as the present were to condemn us, we must justify ourselves, or submit to condemnation. But they are brought forward to assist us; and every motion is an impediment in our way, and makes more difficult of execution the task imposed on us. I say, that these statements and these motions throw enormous difficulties around the object, and that, perhaps, against the wishes of those who pursue this course, making it less practicable, and postponing final success. On the one hand, by all such appeals enthusiasm is augmented; on the other, the angry passions are aroused, and the alarms quickened, of those who believe they are to be the victims. New opposition is engendered, new difficulties created, the old ones aggravated, and all the obstacles which lie in the way of attaining our common object are multiplied. It is said, “here are facts which ought to be known, and cruelties which ought to be stated, to excite the abhorrence they deserve. You cannot annihilate these facts—you cannot annihilate these cruelties: they are atrocities which cry for retribution—they are placed on record, and cannot be defaced. It is right that such monstrous cruelties should be stated, and known to the world.” If the question now were, sir, whether this system should be upheld or not—if there were any lingering reluctance to acknowledge its enormities—the object of bringing forward such motions would be fair, just, and necessary. I can understand, if such were the case, what would be the logical object in bringing forward such statements; and I can understand the logical conclusion which might be drawn from them. But this is not the object to be obtained. No man upholds the system. All agree that it is necessary to amend the system; and these facts are only brought forward to excite that enthusiasm here, which requires control, and which can lead to no practical good (hear, hear), and to excite in the colonies a determined resolution, that must be overcome

before the purpose can be carried into effect. On this ground, sir, and on this ground alone, I am inclined to oppose this motion. This is not the first or the second motion which has been made, and it is not the last, by five or six, that are threatened to be made, which are intended, as it is said, for the purpose of strengthening Government, and which are only calculated to augment its difficulties (hear, hear).—Before I sit down, if the opinions or intentions of Government be doubted, I am prepared to state, that it is the fixed determination of the Government to carry into effect, without regard either to the opposition on the one hand, or the stimulating zeal on the other—without being driven out of its course by the enthusiasm of the people here, or the apprehensions of the colonists—it is the determination of the Government to carry the resolutions agreed to by parliament into full effect. The orders in council, drawn up consistently with those resolutions, contain the expression of our avowed object; and if those orders cannot, from circumstances, be immediately adopted, we shall steadily keep the object before us. The orders in council contain the expression of the general system of Government; and Government, with the assistance of parliament, will find the means and the power, sooner or later, of carrying that system into execution (hear, hear).

The motion was then negatived without a division.

TUESDAY, APRIL 25.—Lord Nugent rose to submit a motion for leave to bring in a bill for the better regulation of courts of justice in the West Indies. One of the first objects of the bill would be, that the judges of the Leeward Islands should be rendered independent of legislative assemblies, as far as the payment of their salaries, which should be paid from the Government-house; that the judges should be prevented from receiving any emolument, or holding any other office in the colonies. The second object would be, to have three chief justices, one who would hold his sittings in Jamaica, and the two others to make their sessions every year in the smaller islands. He would affix the salaries of the judges at such a liberal rate, as would ensure the offices being filled by persons of the highest character at the bar. His intention had next been to cut off from persons holding the situations of judges, every link which might be supposed to give them a common interest, or even understanding, with the planters—he meant, to enact that no judge should be competent to hold land, or to possess slaves, in any of the colonies. By the law of England, judges of prize courts, during the late war, had been prohibited from holding any property in vessels with letters of marque; and the consequences to be apprehended from any possible influence of feelings in their decisions, were far less important than such results would be where the lives or liberties of human beings were at stake. As he fancied that he saw the line for reform pretty clearly before him, and felt that the subject was one of high importance, he certainly should have pressed his proposition as strongly as possible upon the house; but circumstances had recently occurred which made that proceeding unnecessary. He had received, only two nights since, a communication from the right hon. colonial secretary, stating that the third report of Mr. Dwarries,

on the state of the courts of justice in the West Indies, was nearly ready for production, and that, as soon as ministers had that document before them, it was their intention to take the subject formally up, and devise some sufficient code. This being the case, he should merely say farther, that he felt the greatest gratification in seeing the question transferred to hands so much more able than his own; and should withdraw his motion.

Mr. Hume presented a petition from Mr. Augustus H. Beaumont, who was possessed of considerable property in Jamaica, but was at present resident in London. The petitioner stated the difficulties which stood in the way of ameliorating the condition of the slaves, in consequence of the apprehension entertained by the colonists for the security of their property in the event of emancipation. He (Mr. Hume) considered that the property of every man in the state was only valid in consequence of the protection afforded it by law; and the oldest Peer, or first commoner in the realm, had no higher claims to property than were possessed by the West India proprietors. In 1774, two bills were introduced into the Jamaica legislature to put an end to the slave-trade; whereupon a strong reprimand was sent out from this country against any interference in a trade which was so beneficial to the interests of the mother country; and thus a direct sanction was given to the acquisition of property in slaves. The petitioner stated, that there was not a proprietor in the colonies who would not freely consent to the abolition of slavery, if the security of their property was guaranteed; and it would be idle to look for any amelioration in the condition of the slaves by any measures opposed to the obvious interests of the proprietors. The great object should be to carry the colonists with the parliament at home in all their measures of improvement, and not to use language which might induce the colonies to adopt a course of opposition.—The petitioner concluded by expressing a hope that some assurance would be given of an intention, on the part of Government, to secure the property of the colonial proprietors; for if the black man was entitled to the mercy of the house, the white man was entitled to its justice.

After a few words from Mr. Canning, declining to enter upon the subject till Mr. Brougham should bring his motion forward, the petition was ordered to be printed.

THURSDAY, MAY 18.—Mr. Hume presented a petition from G. C. Rapier, a free person of colour, and a native of Grenada, complaining of the obstacles in the way of the negro's attaining his freedom, in the West Indies. In addition to the disinclination amongst the whites, a person of colour was obliged to pay no less than 92*l.* currency, as the cost of the bill by which he became entitled to the full rights of a British subject.

Dr. Lushington said, that he had received a similar petition, which was signed by all the free people of colour in the island of Grenada, who enjoyed no inconsiderable part of the property in that colony.

Mr. W. Horton thought that the colonists would do well to take into serious consideration the condition of the free people of colour (hear, hear). If they did not undertake the consider-

ation of it themselves, it would be forced upon them soon by the natural course of events, and they would then be compelled to accommodate their laws to that new state of things which had recently grown up among them (hear, hear).

Mr. Bernal assured the house that this subject had not escaped the notice of the colonial legislatures.

The petition was then ordered to be printed.

FRIDAY, MAY 19.—Mr. Brougham, in rising to bring forward his motion upon this subject, desired that the resolutions of the 15th of May, 1823, might be read:

The resolutions (see, *ante*, p. 76) were accordingly read by the clerk; after which,

Mr. Brougham proceeded:—"The resolutions, sir, which have just been read, were adopted by this house with a rare unanimity; the only doubt, at the time, being, whether they went sufficiently far in expressing the feelings of the legislature and of the country, and in pointing out the measures which were to carry the dictates of that feeling into operation. All parties agreed in one conclusion—that these resolutions were the least measure of justice which could be meted out to the slaves in our colonies; and Government at once proceeded to recommend the adoption of various regulations to effect the objects of those resolutions in particular colonies, to the local legislature; and, of its own authority, to carry such regulations immediately into effect in those other colonies which were subject to the legislative power of the crown. I shall first, sir, advert to the case of those colonies which are under the Crown, and to the steps taken by Government, in compliance with the resolutions of Parliament; and then, sir, I shall advert to the manner in which those resolutions have been complied with in the colonies which have legislatures of their own.—I must here take occasion to say, that my statement will be one of details. I wish to avoid all declamation—every thing which can be perverted into invective—all general observations; not that I deem such observations unworthy of being submitted to the house—or rather, I deem it incumbent on me freely to submit them at a proper time, but at present I have taken on myself the more difficult task of bringing only the details before the house, so as to make the house acquainted with the actual state of the slaves. I am aware, sir, that in doing this I have great difficulties to encounter; that I cannot accomplish it without fatiguing the house and myself; but I wish to state only facts; and, I trust, that the paramount importance of the subject, and the deep interest felt in it in every part of the kingdom, will serve as an apology to the house, and make it bear with all the fatiguing details (hear, hear). I shall proceed, first, then, to consider the measures adopted by the Crown in those colonies over which it has legislative authority, for effecting the purposes expressed in our resolutions. First, I shall advert to Trinidad; for which the Government issued an order in council for the better treatment of slaves. This order was the basis of all the proceedings adopted on this subject, both in Trinidad and in the other conquered colonies; and I object to this order in council, that it does not call on them to do enough. With this abatement, it merits all the praise I can bestow on it.

In one or two points, it falls short of the resolutions adopted by this house, and of what I expected from the Government. It falls short in one most important point, that relative to the admission of slave evidence; that evidence was limited, not only as regards persons, and as it applies to crimes, but the slaves themselves must have first obtained a certificate that they are religious and moral individuals, and sensible of the obligation of an oath. My objection to this is, that I see no reason why slaves should not be treated exactly like other witnesses—why it should not be left to the court and the jury to examine them, and satisfy themselves of the value of their evidence, and whether it was fit or not to be received. Pagans, Mahomedans, men of no religion at all, are considered as qualified witnesses; and no objection is made to them, though they do not believe in revealed religion, provided they believe in God, and in the existence of a future state of rewards and punishments. They are then admitted as witnesses in our courts, and I see no reason why the slaves should not be placed on the same footing. It is true that the Government has not restricted the giving of this certificate to the Ministers of the Established Church, but allows of the certificates of Catholic Priests, and of the Ministers of the Presbyterian or any other Church, to attest the religion or morality of the slave. My objection, therefore, is merely to the needless departure from our own safe practice. Let the witness be produced in court; and let his capability, upon preliminary examination, be openly and publicly determined. Another objection, sir, which occurs to me, is, as to the causes in which the slaves are allowed to give evidence. First, they are not admitted as evidence, with no good reason, as appears to me, in those civil causes in which the master is a party. Next, they are not received in cases where white men are tried for capital offences. I object strongly to this, for I see no reason why their evidence should not be admitted in capital as well as other crimes. My next objection to this Order in Council, does not apply to the slaves, but to that officer who is appointed their protector. By the order, this officer cannot hold plantations or slave property; but it is not sufficiently strict in this point. It says that the protector shall not hold plantations and slaves in Trinidad only, and he may own both plantations and slaves in other colonies; nay, sir, what is worse, he may own domestic slaves in Trinidad itself. It is in this latter case, which more immediately affects the feelings of the individuals, and is more likely to operate on those of the master—that the feeling ought to be mainly guarded against. But the restriction, even as to plantations and slaves, only applies to the protector in chief, and the subordinate protectors; those who will come more immediately into contact with the slaves, are not subject to this restriction, and they may hold plantations and slaves in Trinidad.—The next point to which I shall advert is, the abolition of the Sunday markets. It proposes that this shall take place, but at an indefinite period, that is, when some conditions not yet fulfilled shall be so, or when certain changes shall happen. The order only limits Sunday markets to the hour of ten o'clock on Sunday morning, and thus provides very imperfectly for the better observance of the Sabbath. When the market is in the vicinity of the

plantation, the rest of the Sabbath may be kept free from violation; but when the market is at a distance of ten or twenty miles, the whole day must be occupied in going to and returning from the market, and in attending it till ten o'clock. Then, sir, I find no provision made to compensate the slave who shall not work at his own garden on Sunday; so that there are no means taken either to provide for the better observance of the Sabbath, or compel its better observance.—I object also to that part of the order which relates to the separation of families in the case of sales. By the order, the separation, in case of voluntary sale, is allowed; but not in cases of a sale by order of a court of law. If I were disposed to make any difference, and permit the separation of families in any case, I should say it should not take place in voluntary sales, and should be judicial; but I think the prohibition should be applied to all sales.—My next objection to the order applies to the penalty imposed on slaves who shall make false accusations. This recommendation fell in with the views of the inhabitants of the colonies, and they have adopted it. If the slave charge his master with having punished him illegally, and the charge is proved, the master is fined 10*l.*, but if the slave's charge is declared to be groundless by the magistrate, he is delivered back to his master, who is authorised to inflict on him any number of stripes, not exceeding twenty-five. This part of the order is framed on a most erroneous principle. In the case of a groundless charge, the slave is handed over to the person whom he has accused, who is thus made the executioner of summary justice. I see no reason why the justice should be summary—why the slave should not be tried and regularly punished by law for his offence; and I see very strong reasons why the accused master—the individual most irritated and offended—should not, precisely at the time also when his feelings are most roused, be the executioner of this summary justice.—I may, indeed, say, the judge in his own case, for the master is to decide in what manner and how the stripes are to be inflicted, provided he does not give more than twenty-five.—With these defects in the Order in Council, I am bound, sir, to say, that if its general provisions be rigorously carried into execution, they are such as to satisfy my mind in many essential points, to rectify some of the worst abuses, and to abolish some of the worst practices in the colonies. On every other part of the order I must bestow great praise. This order has been sent also to Demerara; but the Court of Policy has thought proper, in its discretion, to adopt it only imperfectly. They will not allow the slaves the privilege of what is called, in this house, compulsory manumission; that is, when the slave has found means of purchasing his own freedom, the law appoints persons to fix the price at which he shall obtain it. This, as well as several other parts of the order, has been wholly unnoticed in Demerara. In the five other colonies under the Crown, nothing whatever has been done. I have understood, indeed, that orders have been sent out, and a correspondence has been entered into, but no one thing has been done. I do not make it a subject of accusation against Government. I say that no change has been effected, and that the Order in Council has not been enforced in any colony under the Crown, except Trinidad.—I

now come, sir, to the thirteen colonies which have legislatures of their own; and I say, that, except in five or six of those thirteen colonies, nothing whatever has been done to carry into effect the resolution of this house, and the desire which has been expressed on the subject by Government, and by the country at large. In six of them, there is not even the shadow of a pretence of any thing having been done. As to Antigua, Montserrat, St. Kitt's, Tortola, Nevis, and the other Virgin Islands, containing a population of 80,000 slaves, I cannot find in the whole correspondence, which has been laid on the table of this house, up to last night, for these three or four years past, one page, one line, one sentence, one word of any thing which has been done in those islands in compliance with the declared wishes of the Government, the Parliament, and the Country. I come now, sir, to speak of an island, in which, from its importance, its wealth, and its population, I should have expected these measures would be most readily embraced, and most easily carried—an island containing 340,000 inhabitants, a large body of them whites, and rendered conspicuous as being the example for other colonies. If I looked at the tabular return for the evidence of what has been done, I must say nothing has been done. Five of the columns are complete blanks, the return being *nil*; the five I mean are those referring to evidence, marriage, the separation of slaves from the land, the separation of members of the same family, and regulation of punishments. An act has been passed for the observance of the Sabbath, to prevent slaves from being levied for the debts of their owners on Saturday. This is a sort of Jewish Sabbath, and the law is not intended to promote the observance of the Christian Sabbath. Though not allowed to be levied on the Saturday, the slave is not prevented from violating the Sunday. It has been asserted, that, under the head of manumission, something has been done. It is true, that a person, having a life-interest in a slave, is enabled to manumit him, under certain regulations, for a price to be paid over to the credit of the individual possessing an interest in the property in remainder. Then comes a regulation with respect to legacies, or pecuniary bequests, to slaves. They can give an acquittance to the executors of those who have made a will in their favour; but they are interdicted from bringing any action at law, or suit in equity, for the recovery of the legacy itself. If the executors, therefore, refuse to pay these legacies, the slave cannot recover them. Perhaps, however, this was intended as a benefit to the slave, by keeping him out of a court of equity (a laugh). This is a ridiculous attempt, and the Governor bears me out in this opinion; for he says, (speaking of it in a letter addressed to Earl Bathurst), "A bill has been passed, of trifling importance, enabling the slaves to receive bequests, on paying the legacy duty." I understand that an act has been passed, which does not come under the head of religion—an act for building a church in Jamaica, which gives great satisfaction to the right reverend prelate at the head of the church in that island. He speaks of it in the strongest terms of praise, and expresses his satisfaction at the state of the island. [Here the learned gent. began to read some extracts from the correspondence of the *rt. rev. prelate*, at which the house, manifesting some impatience, he said—"A great part of what I have to say

consists of extracts, and if gentlemen do not choose to hear them, they had better go away" (hear, hear). The bishop says, in a letter addressed to Earl Bathurst,—"I have the highest satisfaction in being able to assure your lordship, that the same good feeling, which I had the pleasure to communicate to you on a former occasion, with regard to Kingston, continues to animate every part of the island I have hitherto visited. Mr. Archdeacon Pope and myself have just completed a progress through all the parishes, except two."—"The general result of our observations has been, a hearty desire, on the part of the proprietors generally, or their representatives, cheerfully to promote, as far as their limited means will allow, any measures which I have thought it my duty to suggest."—"What will the house think? For the benefit of the slaves? No. The *rt. rev. prelate* says, "for the benefit of the Church."—"Public meetings have been called in many parishes, and private subscriptions entered into, to promote the same desirable object." The bishop is satisfied with the state of the island, because he found the people ready to build the church (hear, hear); and he expresses his opinion, that nothing can be done for the slaves till churches are built—till they are filled with congregations—and till the words of religion shall have operated on their minds. He would not have schools till the slaves have been taught religion. In this I beg leave to differ from the *rt. rev. prelate*. He thinks the slaves should have nothing but "oral instruction;" what would he think of teaching them to read? He thinks the churches should be first built, and then the schools; but I think it would be better to begin with the schools; or we might have both schools and churches at once. From the manner in which the legislature of Jamaica has treated a measure, which has been twice propounded to that body, in favour of the slaves, I confess I see nothing to hope that they will accede to the desire of this country. First, a bill was introduced to the legislature, in 1824, by an individual, whose speech on that occasion proved that he possessed considerable talents, and a well-cultivated mind. That bill was for admitting slave-evidence, under restrictions, which went to render the admission of slave-evidence perfectly harmless. It was, however, rejected by the almost unanimous voice of the assembly, the mover of the bill alone being found to vote for it, and nothing could exceed the vehemence with which certain statements, that had been made in the House of Commons, were received on that occasion. That bill was afterwards submitted to a committee in 1825. They entered on their labours in the early part of November, and they framed their bill with all proper regard for local feelings; the bill was brought in in December, and thrown out by a majority of two to one, many of those who voted for it declaring, that they would have opposed it in a subsequent stage, but that they thought it ought to receive further consideration, and not be too hastily withdrawn. And what was the measure so rejected? It was a bill admitting the evidence of slaves, under the following circumstances:—"That upon the production before the justices and vestry of the parish in which any slave shall have last previously resided for three years, or, if in Kingston, before the common council, of a testimonial in writing, signed by the person who has had the possession and ma-

nagement of such a slave, as owner, attorney, &c. &c. for three years next before the giving of such testimonial as to the good character and disposition of such slave, and upon production also of a written declaration, signed by the rector, or in case of the absence of the rector, by the minister officiating for such rector of the parish in which such slave resides, that such slave has been baptized, &c.; and further, that such rector or minister has examined the slave, and found him or her to be sensible of the nature and obligation of an oath, it shall and may be lawful for the justices, &c. unless proof be made before them, contradicting the said testimonial and declaration, to grant such slaves a certificate signed by the clerk of the vestry, or court of common council of Kingston," empowering him to give evidence in certain cases. This certificate, be it observed, was not to be granted by the Roman Catholic priest, or the dissenting minister, or the Protestant clergyman; but—what was of much more importance, and which really made the measure nugatory and of no effect—it was to be signed by "the person who has the possession or management of such slave—by the owner, attorney, or overseer of the estate;" so that unless the party against whom the slave was to be examined—or, in other words, the owner or overseer of the estate—chose to make the slave a competent witness, by signing the certificate, there was no fear that his testimony would ever rise up against the individual of whose conduct he had cause to complain. Such was the measure which the legislature of Jamaica had contemplated, as a fit offspring of the order in council. But even this measure, thus attenuated and mutilated—nay, absolutely nullified, was rejected by the Assembly. The account which the Duke of Manchester gives of this transaction is very important, because it shows the tone and temper that prevailed at the time. He says, addressing Earl Bathurst, "I am very sorry to inform your lordship, that the session of Assembly has terminated in a very unsatisfactory manner, and without any measures having been adopted for the effectual improvement of the condition of the slaves. A bill was brought in for receiving the evidence of slaves in certain cases . . . and, although this bill was confined to the cases of murder, treason, and mayhem, and guarded by provisions which, in the opinion of the most intelligent portion of the community, and of those who possess the largest stake in the country, rendered it perfectly harmless, the clamour out of doors was so great, and the resolutions entered into at parochial meetings so strongly expressed the public feeling, that many members whose sentiments were favourable to the measure, yielded to the opinion of their constituents, and voted against the bill (hear, hear). The principle of the bill was however recognized, and it was on the question of committing it that the bill was ordered to be committed that day three months." In introducing what I am now about to state, and which respects other legislatures in the West Indies as well as that of Jamaica, I must be allowed to say that I feel very sincerely for some of the persons composing those bodies. I do not always, and sometimes I do not at all, cast blame on them. I believe that very frequently they had it not in their power to follow the bent of their own inclination. Some of them, I am convinced, were not the authors and abettors of these acts. They live

in a community in which they are bereft of the power of doing that which their own intellectual light would guide them to do, and which their own principles would induce them cheerfully to carry into effect. The state of that community will be best illustrated by what I am about to state. I beg leave to call the attention of the house to a resolution adopted at a meeting held in Jamaica, subsequent to the rejection of the bill. That resolution went the length of alleging, that even new restrictions ought to be imposed on the slaves—that sectarianism should be abolished—and that it would be dangerous to make any farther concession in favour of the slaves, unless a penitentiary feeling was evinced on their part. Some new restrictions to be imposed! Penitentiary! The slaves were to repent of the injuries they had suffered from their masters, and of the efforts of relaxation which had been made in their favour; and, without evidence of such repentance, it would be dangerous to allow any farther concessions in their favour! This is the language of the Colonists, and thus they appear to regard any relaxation in favour of the slave population. But, sir, this point of sectarianism has suggested to me some remarks respecting the resolutions and proceedings in many parishes of Jamaica, in favour of the instruction of the Negroes in Christian knowledge and morality, and of which the Bishop and his clergy naturally expressed their high approbation. Why, no doubt, sir, when the Bishop made his progress through the island, he would receive the most flattering addresses from parishes and individuals, as to the zeal which animated them, and the exertions which they had made, and were still ready to make, to place the established church on the best possible footing, and to place all the institutions for the education of the Negroes under the superintendence of the clergy of that church. I attribute no blame to the Bishop for approving highly of measures for the advancement of his own church; nor to those members of the establishment who appear anxious to promote such measures; but I know perfectly well what it means, and the meaning is this—by how much they extend and build up the church establishment in goods and endowments, by so much will they reduce the influence of the sectarians; and in so far would they get rid of the Methodists and fanatical teachers, as they call them; and among the planters, with a few exceptions, there is the strongest disposition to refuse favour or protection to any thing like sectarianism. Now it is not my opinion only, but the opinion of many respectable persons, who do not go the full length which I do in favour of the negroes, that if you really wish to diffuse Christianity among the Negroes, the best way to do it is by encouraging sectarian teachers; and the greatest benefits which the Negroes have received in this way have been from the Methodist teachers. This has been admitted even by my hon. friend (Mr. Baring).—Having said so much with regard to Jamaica, I now come to consider what has been done in Barbadoes, which contains a population of 80,000 slaves; with respect to which I see that a tabular return has been made, and that as to improvements in certain places, or particulars, there are nine columns of *nil*. At that I was by no means surprised; but I was surprised when, some time after, an attempt was made to shew that something had been done, in consequence of the exertions of some

of the slave proprietors in this country. An act was passed in Barbadoes, in 1825, entitled "An act to repeal several acts and clauses of acts, respecting Slaves, and for consolidating and for bringing into one act the several laws relating thereto, and for the better ordering and governing of Slaves, and for giving them further protection and security, and for altering the mode of trial of those charged with capital and other offences; and for other purposes." In the manumission clause of this act, it is enacted, "that if any slave shall discover, or give information, of any evil designs or plots of any other slave or slaves, &c., or the possession or concealment, by any slave or slaves, of gunpowder, or any warlike instrument, for the purposes of insurrection and rebellion, whereby the accused thereof shall be legally convicted, such slave shall be appraised at his due value, and the amount paid to the owner; and the slave shall be free, with a pension of 10*l.* currency; or if he chooses to remain a slave to the owner, a pension of 25*l.* currency." Now in 1688, by one of the acts repealed by this last act, the very same provisions had been made, with this only difference, that the slave was set free with a premium of 40*s.* There was another clause in the act of 1825, by which it is enacted, "that every slave who in the time of invasion, or in case of rebellion, shall engage and courageously behave in battle, or who by any means shall kill or destroy one or more of the enemy or rebels, shall be rewarded at the public expense, in such manner as the legislature may think fit; and if the legislature should think that he ought to be rewarded with freedom, that such slave shall be declared free, and his value paid to the owner." Now an act had been passed in 1707, whereby it was provided that in case any slave should behave courageously in battle, in case of invasion, or kill any of the invaders, he should be free *ipso facto*, without having recourse to the legislature. The house would, therefore, observe what had been done, and consider whether the slave has gained anything by the alterations. I will not go any further into particulars; but I pledge myself to shew, that whatever advantages the slave has acquired under this law, were only substituted for equal or greater advantages under the acts of 1688, 1707, and other old acts. Now, by this act, "any slaves guilty of quarrelling, threatening, or fighting with each other, or guilty of any insolent language or gestures to or of any White, or of swearing, or of uttering any obscene speeches, or of drunkenness, or of making, selling, throwing, or firing squibs, serpents, or other fireworks, or of cockfighting or gaming, or of riding upon a faster gait than a walk, or of driving upon a faster gait than a gentle trot, on any road of this island, or through any of the streets or lanes of any town of this island, or of cruelly whipping, beating, or ill-using of any horse, mare or gelding, mule, ass, or other cattle, whilst under his charge, in the driving of any waggon, cart, carriage, or other chaise, or of negligently or of improperly driving any such waggon, cart, carriage, or other chaise, or of any disorderly conduct or behaviour, every such slave, on conviction thereof before any Justice, shall be whipped at the discretion of such Justice, according to the nature of the offence, not exceeding thirty-nine stripes; the punishment of pregnant women to be commuted for imprisonment." By an act of the 9th Aug.

1749, some provisions of this description had been made about quarrelling and driving waggons; but this act, in taking up the subject, adds a heap of trifling and ridiculous particulars which were not to be found in the former act. Their wisdoms of 1825 alter the particulars of the riding at a walking pace, and driving at a gentle trot. What is the meaning of "any" disorderly conduct, or misbehaviour? Then again, the punishment by the old act could not be awarded except by two Justices. By this modern act, it may be applied at the discretion of only one Justice to the amount of thirty-nine lashes. By the old act, the slave was punished if he behaved insolently to five or more White persons. By this act, he is punished for insolent language or gestures to or of any White person. What can be the meaning of this? It may be difficult enough to decide what may be insolent language and gestures to a White person, but who could ever say what was insolent language and gestures of a white person, gestures behind his back, to be punished with thirty-nine lashes at the discretion of a Justice! This certainly is a most extraordinary improvement of the great modern wisdom of the modern West India planters! Then there is another serious alteration. The slave is to be punished, not only for negligently or improperly driving; but also for "any other disorderly conduct or misbehaviour." Who is to decide what is any disorderly conduct or misbehaviour? Why the single Justice is to decide it, and it may be any thing in the world which he may choose so to denominate. Now let the house mark the difference in the old act of 1749. That, too, has the expressions of "any other misbehaviour"; but observe what follows:—"whereby the public may be disturbed, or any person aggrieved" (hear, hear). I don't by any means like that phrase; I think that likewise too vague and uncertain. But it at least afforded some criterion for judging what was disorderly conduct or misbehaviour; whereas, by this wise and humane modern act, we are left completely in the dark, and left to make any thing we, or any other persons, please, of this same disorderly conduct and misbehaviour. There is a clause in the act also relative to the murdering of a slave, which well deserves attention. It is enacted, that if any person kill a slave by accident, he shall pay the value to the owner; "but if any slave shall hereafter be killed while committing or attempting to commit any robbery or theft, or in the act of breaking at night into any house, out-house, or negro-house, or in the act of setting fire, either at night or in the day-time, to any house, out-house, or negro-house, canes, stacks of cane-trash, cane-tops, corn-stalks, pea-trees, or cotton-wood, or stalks of dry fuel, or piles of timber, or while maliciously setting fire to any property of any value, or in the attempt to maim or injure any white person, the person or persons killing any such slave, shall not be punished for the same either criminally or otherwise." So that under this clause, if a white man can set up any appearance of any of the acts enumerated being committed by a slave, he may kill him, under the pretence of any such acts, without the slightest danger of being criminally or otherwise prosecuted! Then, if any white person maimed, mutilated, or dismembered a slave, he was to be punished for every such offence, by fine or imprisonment, or at discretion; so that this is all that has been done for

the slaves, under such circumstances, by an act passed not much above half a year ago. Now, let it be observed, that there is no minimum of fine or imprisonment; so that the fine may be one shilling, and the imprisonment one day. Whereas, when a white man killed a slave upon any pretence of robbery, or attempt at robbery; or the commission, or attempt at committing, or supposed attempt at committing a variety of offences, he is not to be prosecuted criminally or otherwise. Then there is a clause enacting, "that if any person shall hereafter commit any wanton act or acts towards any slave, or if the same be committed by his direction or order, or with his or her order, privy or consent, or shall wantonly and maliciously and cruelly whip, beat, or bruise any slave or slaves; or shall suffer, permit, cause, or procure the same to be done, whether such slave or slaves may or may not belong to him, such person shall be summoned before any two or more justices of the peace to answer for the offence; and such justices are hereby ordered and empowered, on conviction thereof, to impose a penalty on the person so offending, not exceeding 25*l.*, according to the nature of the offence; and then the justices are authorised and required to summon the parties before them, and examine into the case; and if the accusation should appear to be well founded, they are to proceed to fine the accused in this 25*l.*" So that the slaves may be bruised, or in any way cruelly used; they may be maimed, wounded, their bodies may be cut in pieces; they may be so bruised as to make them miserable for life; and yet, unless any thing is done that may extend to the life of the sufferer, the guilty person escapes with only these wretched penalties. There is still another clause of this act, to which I solicit attention—in which it is enacted, "that if any slave shall hear any other slaves speaking any words *tending to mutiny, insurrection, or rebellion*, or know of his, her, or their having in possession, or concealed, any gunpowder, warlike or mischievous weapon, for the purposes of insurrection or rebellion, and shall not immediately disclose or discover the same to his or her owner, proprietor, or possessor, or to some justice or representative, every such slave shall, upon conviction thereof, suffer death without benefit of clergy, transportation, or any other punishment, as the court before whom such offender may be tried, shall think fit to inflict." I beseech the house to consider these words—"any slave hearing another speaking words tending to mutiny." Why, what can a slave know of the meaning of *tending to mutiny*? It must be extremely difficult for any one to say what may be the words which might be considered as *tending to mutiny*. But what judgment can a slave be expected to form on such a question? Why, the deciding as to what has or has not a tendency to mutiny and insurrection, is a subject full of doubt and difficulty even to some of the ablest lawyers of the present day, and there exists no little difference of opinion respecting it; and yet the poor illiterate and half-civilized slave is expected, under a penalty of death, to come to a just conclusion on this most difficult case (hear, hear). There are a great number of other clauses in this act in the same spirit as those I have read to the house. Yet did the colonists think that this act, by a happy union of every thing which could protect the slave and secure the master,

Nov. 1826.

would be rendered dear to posterity. Now if I were to say that I was disappointed at this piece of legislation on the part of the Barbadoes Assembly,—it I were to say that I would rather it had not passed, and that it had in due things rather worse than better, it would make but little impression. But what says the Governor of the island? That officer, in his despatch to Lord Bathurst in November, said—"It would have afforded me real satisfaction had I been enabled to draw your lordship's attention to any part of the address of the House of Assembly calculated to encourage your lordship to expect, that that body would proceed without delay to adopt, as far as possible, those measures which have been suggested by his Majesty's Government." This was the opinion of Governor Skeete, many months after the act had passed. The opinion of the council in the address (enclosed in the despatch) to the Governor, contained the following:—"After deploring the unfortunate delay which had taken place in passing an efficient slave amelioration bill, it added, "for although, after the most deliberate and impartial consideration of the measures recommended by his Majesty's Government for ameliorating the condition of the slave, we feel convinced that some of those regulations are not calculated to promote the happiness or moral advancement of the slave any more than the interest of the master." The address of the House of Assembly, delivered on the same occasion, spoke of the tone of "censure and menace" which pervaded "a portion of the despatch of the noble Secretary for the Colonies" (Lord Bathurst), "and," it was added, "which forms so prominent and so important a part of your honour's speech,—censure and menace aimed, as it appears, at the House of Assembly; as if the House of Assembly could pass any act, or had passed the act to which his lordship alludes, without the concurrence and assent of the other branches of the legislature." Then, after alluding to the "unreasonable concessions" which were expected from them in favour of the slaves, they added, "If, however, such expectations are, unfortunately for us, entertained by those under whose control we are placed—if nothing less than an implicit conformity with orders in council, the ruinous effects of which are published almost daily in *The Gazette* of a neighbouring colony—if, in short, a plan has been already organized for our destruction—if it is determined that we shall be the victims of fanaticism, prejudice, and injustice, we must submit; but neither threats nor persuasion will ever induce us to put the finishing hand to our own political, perhaps natural existence; and we have too much reliance on the justice of our beloved Sovereign to believe that he ever will." What was this but saying, in other words, that beyond what they had passed in the act from which I have quoted, no further concessions should ever be extorted from them by threat or menace?—I now come to the Bahamas, and there I find that nothing has been done that can be called an approach to an amelioration in the condition of the slaves. The first proceeding to which I will call the attention of the house is that for promoting the religious instruction of the slaves. The first clause is . . . I know it is tiresome to the house to have its attention called thus at length to the proceedings of the colonial legislatures clause by clause,—and I can assure the house, I do

R

not to do so either from pleasure or amusement, for the subject is one of the dryest that can well be imagined—but I feel it necessary to examine in detail what has been done by the colonies, in order to come to a proper conclusion as to what it is probable they may do still further towards carrying the resolutions of the house into effect. They have now had nearly four years' trial, and in that time, as some hon. gents. contend, much has been done; while others maintain that nothing whatever has been accomplished in the spirit of the resolutions of 1823. On this point we are at issue. The only way left, then, is to examine in detail, what they have or are said to have done, and to judge from that, of their disposition to go on further. To return to the act of the Bahamas' legislature. This act was passed on the 28th of Jan. 1824, and the clause respecting the religious instruction of the slaves, to which I wish to call attention, is to this effect—"And be it further enacted, that all masters or owners, or, in their absence their overseers, shall, as much as in them lies, endeavour to instruct their slaves in the Christian religion, and shall do their endeavour to fit them for baptism, and, as soon as conveniently may be, shall cause to be baptised all such slaves as they can make sensible of a Deity, and of the Christian faith." This clause is, no doubt, one of the many recent steps which have been taken by the colonists since 1823; but the fact is, this is verbatim a copy of a clause inserted in an act passed in the same colony in 1796. That act set out with a preamble, stating the necessity of consolidating the slave laws, and of taking measures for improving the moral and religious condition of the slaves: but what says the preamble of the act of 1824? Does it not say, "whereas it is necessary to follow up the resolutions of the British parliament of May 1823, for improving the moral and religious condition of slaves?" No such thing. It sets out by saying, "Whereas, it is expedient that the laws which, from time to time, have been enacted for the government of slaves should be amended, consolidated, and brought into one act, and other provisions made for their protection, and the promoting of their moral and religious instruction, and by means thereof, their general comfort and happiness, so far as is consistent with due order and subordination, and the well-being of this colony." Now I will ask, is this treating the House of Commons fairly? We came to a resolution in 1823 that it was necessary that immediate steps should be taken for improving the condition of the slaves. It is now contended that steps have been taken by some of the colonists in furtherance of that resolution, and as an instance, this clause is cited, which on examination turns out to be nothing more than a *verbatim* copy of a clause contained in the act of 1796, and without even the preamble which headed that act. This is actually doing nothing, or at all events it is not sufficient to support the argument of those who contend that something new has been done by this colony. I will now call attention to the 5th clause of this act. "And be it further enacted, that all and every act and acts, clause and clauses thereof, whereby any tax or duty whatever is or hath been imposed on the manumission of any slave or slaves within these islands, shall be, and the same hereby are, (so far as relates to the imposition of any such tax or duty), suspended for and during the conti-

nuance of this act." Now, to show how far this ought to be taken as doing something towards ameliorating the condition of the slave, I will inform the house, that by a return from this colony in 1822, signed J. Nesbit, Secretary to the Bahamas, just two years before the passing of the act of 1824, there was under the head of "Taxes on the manumission of slaves," this statement—"No tax of any kind is charged in this colony on the manumission of a slave:" so that these gentlemen take credit to themselves for a clause to repeal a tax which, in fact, had no existence in 1822 (hear, hear). And this is the act to which I am referred as demonstrating the good which has been effected (hear, hear). The regulation respecting the quantum of punishment is a repetition, in so many words, of the act passed in 1796, containing simply a substitution of private for public chastisement in the case of females. In the papers which were last presented to the house, there were various passages referring to the heads of the various resolutions contained in the orders in council, containing, amongst other things, the prohibition of putting round the necks of slaves an instrument of torture, and various other provisions of that nature. By referring to the various sections, gentlemen will see that every one of them is to be found in acts of an ancient date.—Now as to Sunday markets: In Jamaica the market is confined to ten o'clock in the morning—in other islands the practice has been differently modified—but Tobago is the only island in which the Sunday market has been abolished. And here, be it remembered, that even in Tobago no provision had been made for giving the slaves another day, as a substitute for Sunday, to work in the provision grounds. Now this is very material; for you do the slave a positive injury, unless you give him a day in lieu of the Sunday, to abstain from working. He had formerly 18 additional days, and the only substitute you propose is, the addition of 10 days. But formerly he had 52 days besides the 18, and by your regulation of discouraging work on Sunday, he will be a loser of 42 days; and when this is the case, it is ridiculous for you to think he will listen to your admonitions, or hearken to any attempt to discourage him from working on Sunday (hear, hear).—Now with respect to the admission of slave evidence, in case no free persons can be produced in the cases of murder or mayhem, slave testimony is to be admitted, that is to say, the evidence of two slaves will be admitted, if of good repute. Now, in order to put the house in possession of the temper displayed by the colonial legislatures, I beg to call attention to the language used by that of the island of Tobago:—"We have yielded, rather from a desire to comply with the instructions which have been sent out, than from a conviction that those instructions will lead to any improvement in the condition of the slaves. But, we most respectfully, and at the same time, firmly declare, that when these points are carried, concession will then have reached its uttermost." Here, then, we see how far they are disposed to go. They have stated their *ultimatum*. No consideration, say they, would induce them to go further, or fritter away, or tamper with the rights of property, which they considered to rest on as solid a foundation as property in England. So that, here, we find the very utmost point to which they will go is, to reject

any material provision contained in the orders in council, and to adopt only that which is wholly nugatory, with the single exception of the provision I have mentioned for the admissibility of slave evidence.—Now it has been said that Grenada, Dominica, and St. Vincent, are the islands in which most good has been effected; but I contend that nothing has been done in those islands. St. Vincent is said to have been foremost in carrying into effect the orders in council. In the address of the Speaker of the House of Assembly, in Oct. 1845, to the Governor, the Speaker said,—“I am now happy to inform your Excellency, that a bill has been read a second time, and yesterday passed its commitment, with an order for a third reading in December, in which the house hopes it has embodied the substance of all or nearly all that is important in the Trinidad order.” After enumerating several of the enactments in the bill, the Speaker added, “And finally, slave evidence is made admissible in all criminal matters on the basis of the Trinidad order in council, thus evincing on the part of the house of assembly a similar desire to go to the utmost limits, nay, almost beyond the limits of what it deems safe and practicable, to meet the wishes of those persons in England who have the true interests of the colonies in view.” Now I contend, there is nothing in those new provisions at all to correspond with the Trinidad orders. There are six essential distinctions between the admission of slave evidence enjoined by the Trinidad order and that allowed by the St. Vincent’s act. The first is, that by this act slaves are admitted to give evidence only in case of murder, or mayhem, or maiming—or felonies, punishable with death or transportation; the second, that the slaves are not allowed to be examined until they produce a certificate from a clergyman, stating their knowledge of a Deity, and their acquaintance with the Christian doctrine; the third is, that a certificate is also necessary from the proprietor, or in his absence, the master or overseer (a regulation which goes to destroy the advantage of the whole clause, for it gives the proprietor or master a power of defeating the ends of justice by withholding his certificate); the fourth point of difference is, that the slave is to be first examined by the court as to his proficiency in the knowledge of the Christian doctrine; the fifth, that two slaves shall be examined apart, and to make the testimony of either admissible, it is necessary that they should be both altogether consistent in their account; the sixth, and last, and most important difference of all, and one which renders the whole clause entirely futile, and inflicts a total denial of justice in those cases where the slave is most likely to be injured, and in which he, of course, stands most in need of protection, is, that in no case is the evidence of a slave to be received, where his or her owner, master, employer, or overseer, is affected. Now will any man tell me after these differences, that the Trinidad order is in substance contained in the St. Vincent’s act? Is this a proof that in that act the legislative council has gone to the very verge of, and beyond the order, to the end that they may conciliate the people of this country? It is stated in one of the papers on the table, that no driver, being a slave, shall use, as an emblem or badge of authority, a common cart whip, but no mention is made that such instrument of punishment shall

not be used by a free negro, or a white man, who may be employed as a driver. This applies particularly to Grenada; but in the Dominica act is a clause to this effect:—“That for the maintenance of discipline on plantations and elsewhere, a cat such as used in the British army, and no other instrument, shall be employed for such punishments as may be lawfully inflicted, and that the whip commonly called the cart-whip, shall never hereafter be employed either as an instrument of punishment or an emblem of authority.” Yet not a word is here said about the use of this instrument by the drivers of slaves as a stimulus to labour. I now come to what this same act says, about the admission of slave evidence. The clause states, That in all cases, not being capital nor of charges against their owners, it shall hereafter be lawful for all courts and magistrates to admit the evidence of slaves having been duly baptized, and appearing to the said courts or magistrates, after having been minutely interrogated on the subject, thoroughly to comprehend the true nature and meaning of an oath; provided always, that in every instance two such slaves at least being duly examined apart, and out of the hearing of each other, shall distinctly depose to the very same facts, without in the least degree contradicting each other’s evidence. And provided also that no one shall be convicted of any offence on the evidence of slaves, unless such offence shall be prosecuted and brought to trial within months after the commission thereof.” The house will see, that this clause is rendered futile, by the omission of that which would afford the slave protection against those against whom he most requires it—namely, his owners and masters. There are in fact, no instances in which the spirit of the order in council, has been embodied in the acts of the colonial legislatures. All that they have done is only deceptions in itself, and done, too, with the view of deceiving Parliament and the people of this country. If any hon. member should tell me that they have bettered the condition of the slaves in any degree—that they have mitigated the severity of the former laws—I say, he is mistaken; and I will undertake to prove his error, by a reference to former statutes, from which I will shew him, that whatever has been done has not been to introduce any new improvement consistent with the spirit of the times, but merely to return to the practice which existed above 100 years ago. Under these circumstances, sir, I cannot but say that it is astonishing to me that any men calling themselves legislators, could imagine the parliament of England would be satisfied with what it had done—and still more astonishing will it be if that parliament should allow itself to be treated in such a manner. Sir, I shall not pursue any further the details of this subject: but, if I do not, I trust my abstaining will not be imputed to my fear, that I cannot substantiate all the charges against the West India legislatures. I have no such fear, and I beg leave to add, that if any hon. member shall think fit to dispute my statements, he will entail upon me the disagreeable necessity of going fully into the other part of the subject. I should be sorry to do this, although I will venture to declare, that I could, by reference to documents, satisfy the house in an instant, that whatever has been done is wholly insufficient, and has not been done in compliance with the intention and spirit of the resolutions of this

house. It is my firm opinion, that the mere repeating to the colonial legislatures, what we have already told them in language sufficiently intelligible, or the mere sending back to them those resolutions we have before adopted, unless we accompany them with something more definite and peremptory, will not only be doing no good, but will actually be making bad worse. I would say, let these assemblies, which, since the year 1824, have done nothing, or worse than nothing—let these assemblies that have passed the semblances of acts for admitting negro evidence, when, in fact, they have not only not admitted, but have, in reality, excluded it, at least from those cases where its admission would be principally beneficial—let these assemblies know that they can no longer pursue such a course; but that unless they wish to press this house to an extremity, they must resolve to do something that will substantially benefit the condition of the slave. I have deemed it my duty to give this house the opportunity, by their vote of this night, of letting it be known, not to the Government, which does not want to be urged forward, but which requires its hands to be strengthened, but also to the whole country, which takes a deep interest in this question; and above all, to the colonial legislatures themselves, who have hitherto disregarded the wishes of parliament, who still disregard them, and who will—till we rouse ourselves into activity—continue to disregard them, that the time is at length arrived, when, if they do not do their duty, parliament will perform its own. Sir, I have the greater confidence, in proposing to you the present resolution, since I think, that by adopting it, you will be undertaking nothing new; but will merely be adopting the observation made by Lord Bathurst, to the colonial legislatures, when he said to them, “If you allow another year to pass away, another session to expire, and content yourselves with merely making another promise—I cannot answer what may be the effect produced on the meeting of parliament next year.” Sir, that is what the noble lord has in effect said to these colonists; and now that all the assemblies have met—that in all of them our resolution has been considered, and this threat (so to call it, or this warning, if that word be more agreeable) has been laid before them, and still nothing has been done—for what has been done, is, in truth, nothing, or worse than nothing—I say sir, after all these events have taken place, shall we go on again in the same course we have before pursued?—And after what Lord Bathurst has said, shall we allow that next meeting of Parliament, of which he has spoken, to pass away, without doing any thing to shew that our determination is fixed upon the subject? If we do, what will be the effect of our negligence? The colonists will say, “we have done nothing; and yet Lord Bathurst has not come to parliament to ask for their authority to compel obedience to his official orders; and, in truth, what he said to us was only a vague threat, full of sound, but signifying nothing, except that he has told us what any other man could have done, that he did not know what parliament would do when they met.” Sir, I ask whether we should allow the colonist to say this; and whether, if we do, we shall not be holding out a premium, an additional inducement, for them to consider that we are deterred from doing our duty, by that which, I will venture to say, is nothing more than a vain and chimerical illusion, which those

even of the weakest nerves ought not, and are not to be scared by, namely, the fear of the ultimate resolutions that may be adopted by the colonists, if parliament should take any compulsory measures upon the subject. I entertain a most sanguine hope that a considerable majority, or, if possible, the unanimous vote of the members of this house, will support their own consistency, and pass this resolution. If they do, and if this resolution then goes out to the West Indies, perhaps a different course may be pursued; or if not, I shall say that parliament will have next session, on every account, and especially of their own forbearance, their extreme forbearance, to do that which, unless it is done by parliament, I fear will never be done. I shall, therefore, move a resolution to this effect—“That this house has observed, with deep regret, that nothing effectual has been done by the legislatures of his Majesty’s colonies in the West Indies, in compliance with the declared wishes of his Majesty’s Government, and the resolutions of this house, of the 15th May 1823, touching the condition of the slaves; and that this house will, early in the next session of parliament, take into its most serious consideration such measures as may appear to be necessary for giving effect to the said resolutions.” I have moved the resolution, pledging the house to proceed on this matter next session; first, because it is too late to undertake any definite measure now; and secondly, because, although I have any thing but a sanguine hope that the colonists will do any thing effectual before parliament meets again, I am yet willing to try the experiment once more, and after that time I think it will become an absolute and indispensable duty of parliament, should that experiment again fail, to adopt some measures for enforcing their own resolutions” (hear, hear).

Lord Nugent having seconded the resolution,

Mr. W. Horton rose, not for the purpose of contradicting the facts which the learned gent. had thought fit to detail, but in order to set the question in a different point of view from that in which the learned gent. had exhibited it. If the house were not already pledged to the subject to which the resolution just proposed referred, there would be some reason for the motion: but when it was known that the colonial assemblies had been called upon either to adopt or reject the regulations contained in the Trinidad order, with the assurance that, if they pursued the latter course, their conduct would be brought under the consideration of parliament, he thought it was quite unnecessary to call upon the house for any pledge as to the future. The resolution submitted was equivalent to declaring that the measures which Government had adopted were frivolous and useless. That was not the case. In some instances, the colonial legislatures had adopted the regulations of the order in council, and in some they had refused to do so. He would, however, appeal to the justice of the house and of the country, as to the motives which impeded the adoption of the provisions which Government had recommended. He would ask any man who had read with attention the documents on the table of the house, whether they did not prove that the principal source of resistance on the part of the colonists was the dread they felt that the measures adopted by the house would tend to destroy their property. When it was attempted to be maintained that the re-

sistance of the colonists rose out of an abstract love of slavery, he thought it was right to direct the attention of the house to the circumstances on which that resistance was mainly founded—namely, a conviction that the measures recommended by Government were calculated to produce a deterioration of property which would be attended with total ruin to the planters (hear, hear). In proportion as the colonists became satisfied, from experience, that the measures which had been proposed by Government were not of that dangerous nature which they at present imagined them to be, he was convinced that there would be a relaxation of those objections which formed the principal source of the—he would not say declamation, but—argument of the learned gent. He considered it wiser to pursue such a course of legislation as would create an improved feeling amongst the colonists rather than one of suspicion and distrust, which would imply that the owner of slaves was necessarily disposed to reject any advantages or accession of immunities which it might be thought expedient to give to the slaves.—He then went into a detail of the changes which had been effected in the amelioration of the condition of the slaves, and declared that the free use of the Sunday had been so long withheld from them, solely from the opinion that, until they had been instructed, it would be inexpedient to give them one whole day to themselves. The learned gent. had complained that the negroes were not afforded the proper means for urging complaints against their masters. Now, upon that point it did seem to him that it was a mistake to offer to the negroes a *bonus* for complaining, where their complaints might be light or frivolous. With respect to the alteration of the law in Demerara, he begged to observe, that that colony had formerly belonged to the Dutch, and that all which was done there should be, in some measure, accommodated to the forms of that foreign law which had been so long in use in that colony; and beyond this, that whatever alterations were effected, should, if possible, be effected by the colonists themselves, who ought to be allowed ample opportunity for so doing. The alteration which had taken place in Jamaica, as to the Saturday and Sunday markets, had met with the approbation of the Duke of Manchester, who, as he was quoted on other occasions as an authority, by the learned gent., must, of course, be considered of equal authority in the present case. The principle of manumission, too, had been carried into effect, by compelling the heir, when the last tenant had manumitted any slaves, to receive an equivalent in money for the loss which his estate might have sustained in consequence of those manumissions. The learned gent. had spoken of the unfavourable manner in which Sectarian Education had been viewed by the slave proprietors; and had declared that they supported the church establishment, not so much out of veneration for religion and religious education, as from a dislike to the Sectarians. Now, he (Mr. W. Horton) must say, that when the people of Jamaica saw the nature of the tuition dealt out to the slaves by Sectarians, it was not to be wondered at that they should prefer the tuition afforded by the ministers of the church of England. He was of opinion that the conduct of the Bishop of Jamaica was deserving of praise; and that the assembly of that colony equally merited credit, for the support which they had

afforded to the church establishments lately formed there. He then went in detail through the legislation of the different islands, for the purpose of shewing that many measures had latterly been passed for the protection and benefit of the slave. He did not deny the accuracy of the learned gent.'s statements; but he contended that there had been material improvements on the preceding legislation of the colonial assemblies, and these improvements were such as to justify the expectation that they would continue progressively approaching the model which parliament desired to see attained.

Dr. Lushington said, that three years had now elapsed since the resolutions of that house had been passed, and the order in council issued, yet not a single colony had, up to the present day, taken one step towards adopting the principles recommended to them by parliament and the Crown. The house was, however, told to wait till another session, in the expectation that these colonial legislatures, which had hitherto done nothing, might at last manifest signs of repentance, and, in good earnest, begin to carry the wishes of Government and the country into execution. How could they, however, expect that any mere declarations of their opinions would have any effect, when they found that persons of the highest character and greatest power in this country actually, by their conduct and expressions, gave a countenance to the resistance which the colonists on all occasions offered to the measures of the abolitionists? If he was, indeed, to judge from what was said in another place, he might assert that even some of his Majesty's ministers held sentiments different from those which others of the same ministry maintained in that house; and that the utterance of those sentiments confirmed the colonists in the opposition which had been the subject of complaint, and protracted the time when a final amelioration of the condition of the slaves could be effected. Not two months ago, these opinions had been made public; and lest they might suppose that there was any thing in the language or the circumstances which could possibly create a misconception, he would read the one and the other; and when they saw how different the language and the feeling of the *rt. hon. Sec. (Canning)* seemed to be from the learned Lord (Chancellor) at the head of the other house, they might, perhaps, acknowledge the propriety of those efforts of his learned friend which were now called unnecessary, and feel less disposition to blame those who wished to press upon the house, through the means of petitions, the necessity of immediate and urgent declarations. The right hon. gent. said, "that the principles of the Christian religion were directly opposed to slavery." This was language at once consonant to truth, and to the spirit of the professions which ministers had so often made in that house; but what said the learned lord in the other house? "A good deal had been said in the discussions on this subject about its connexion with the genius of Christianity and the genius of the British constitution. As to the genius of the constitution, whatever was his own opinion respecting the propriety and necessity of abolishing slavery, he was bound to declare that this system had been patronized, encouraged, and almost instituted under the British constitution, and under the auspices, too, of so great a constitutional authority as Lord Somers. How, then, could he say that it

was against the genius of that constitution? When to this knowledge they must add the further information, that colonial slavery had been many times during the last century the express subject of legislative enactment, under the direct sanction and concurrence not only of the ablest laymen who had figured in the history of the country, but also of a bench of bishops as learned, pious, and respectable as that which their lordships now saw before them, he could not easily bring himself to believe that it was so clearly contrary to the genius of Christianity as some persons so readily asserted.\* He (Dr. L.) was sure that at this time no man, who spoke his honest opinion, could doubt that slavery, in all its shapes, was wholly repugnant to the principles of the British constitution; but he would ask any man acquainted with the writings of Lord Somers, to point out any instance of his defending it? If, however, such an instance could be produced, it would form no argument for the perpetuation of a system which every feeling of justice and humanity condemned; and would it not have been better to bury in oblivion a fault which was not Lord Somers's, but that of his times, and which could only cast a stain upon his just reputation, while it left the question, in support of which it was adduced, wholly untouched? There was, however, in the speech of the learned lord, much more which deserved reprobation—an assertion that slavery was encouraged by the bench of bishops. For the honour of that bench, he could say, that he believed they had always been among the most strenuous advocates of its abolition, and he did not recollect any one of all the numerous petitions presented to that house on the subject, which did not, among those who signed it, present the name of the rector or clergyman of the parish. The assertions, therefore, contained in that speech were not correct, and were, when placed in opposition to those of other members of the Government, calculated to do infinite mischief: for unless they admitted the principle contended for to its fullest extent, and with a feeling of perfect unanimity, it would be vain to hope that any good could be effected from their recommendations. They required nothing from the colonists but what they were willing to give them compensation for. They imputed no blame or crime to them which they did not acknowledge they themselves might have committed under similar circumstances; they only wished to do one of those acts of justice which no nation or party ever neglected for the sake of lucre, without falling, sooner or later, into destruction. All they desired was, a prompt obedience to their wishes upon the promise of the fullest compensation; but unless that obedience was prompt, they could not expect that their claims would be listened to when force compelled them to do that which all entreaties or promises had failed to effect. That obedience, instead of placing their properties in jeopardy, would, he was convinced, contribute at once to the security of the colonies and their inhabitants; for it was not in human nature to suppose that continued wrong would not at last provoke resentment, and kindness and protection secure affection. It was not, he acknowledged, possible to effect any great change in the condition of the present population, but they were not on that account to entail miseries upon their innocent offspring; and he was con-

vinced, that in whatever measures they might adopt to secure the prosperity and happiness of the present and future race of negroes, the people of England would give them their unanimous concurrence, and support with pleasure any burthens which might be imposed upon them. Mr. Coleridge's "Six Months in the West Indies," which was by no means calculated to give an exaggerated picture of the sufferings of the negroes, contained a description of the painful emotions excited by the sight of a female negro labouring in the field; which, however some persons might choose to scoff at, would convince every one with the feelings of a man, that no time ought to be lost in applying a remedy to such evils (hear, hear). Notwithstanding the degraded state of the slaves in the island of Jamaica, the bishop of that place attributed all the vices of which they were guilty to their want of religion. Mr. Maynes, in the legislative assembly, had said that although he was surrounded by hundreds of negroes, he could lay his head on his pillow in perfect security, and without a door being locked or a bolt drawn, or the least expectation of injury either to person or property. If these representations were true, what reason could there be for delaying to another session that which might now be profitably and justly performed? What reason could be urged against this house declaring that, unless the West India body should adopt some efficient measures, they would take the matter into their own hands, and do that which every argument and the most enduring patience of insult had hitherto failed in inducing the West Indians to adopt (hear, hear)? It was too plain, that that body were actuated by a temper directly opposed to the opinion of the house. The votes of money to Mr. M<sup>c</sup>Queen and to the Editor of *John Bull*, proved that they not only encouraged a bold and open defence of slavery, but that they engaged agents to attack with the most scurrilous abuse all who differed in opinion from them on this point. It was in vain to pretend that the opposition which was raised in that house against slavery, was only created and kept up by the Anti-Slavery Society. On the contrary, the force of public opinion was its only support, and the perfect unanimity with which persons of all opinions in religion and politics approached the house and claimed by their petitions the fulfilment of their common wishes. Before he sat down, he would state, that he had no personal enmity to the West India interests. On the contrary, he was a member of a committee, in 1817, wherein it was proposed to allow sugar to be distilled; and on that occasion, singly and alone, on his own side of the house, he supported the motion of Government. In the slave consolidation laws, too, he found that some clauses pressed more heavily on the proprietors than he thought was fair; in consequence of which, he altered the clauses so as to protect their interests. He mentioned these facts only that it might not be said he was a man, who having nothing of his own at stake, was forward to perform an act of humanity at the expense of others. In conclusion he expressed a wish that the West Indians abroad would attend with impartiality to the discussions in this house, and act with such justice towards their slaves as would render any interference on the part of the legislature unnecessary—a mode of conduct which would not only be universally agreeable to the people of England, but which might be adopted without any loss of property to themselves (cheers).

\* *Ante*, p. 101.

Mr. Bernal said, that when attempts were made to deprive the planters of certain privileges, which must ultimately prove ruinous to their properties, it was time for them to step forward and use every fair means in their own defence. It was only in 1775 that a statute was passed, relieving a certain class of the people of Scotland from a state of slavery as complete as that under which the slave population of any of the colonies laboured. It was only so recently as the reign of his late Majesty, that an act was passed that the persons who worked in the collieries and salt mines of Scotland were enabled to get rid of the engagements which bound them to work there for life. As it was only so lately that this improvement had taken place here, it was not too much to allow some space of time for improvement on the other side of the water (hear, hear). In commenting upon the conduct of the colonial legislatures, it was not fair to confine their attention solely to what had been done since 1823;—it would be a fairer course to extend their observation over a space of twenty years, and to embrace in their consideration the many measures which had been adopted for the improvement of the condition of the slaves. As to the charge of opposition, which had been offered by the colonists to religious instruction, he could with confidence assert, that even the Wesleyan and various other missionaries, were favourably received and encouraged in Jamaica and Antigua; and he would ask if it was fair, after such favourable treatment, to hold up those to obloquy who were connected with the colonies, and to excite prejudices against them as persons hostile to religious instruction (hear, hear)? The question of property was not to be lost sight of in this subject: it might be originally a property acquired by spoliation—it might be, in its first acquisition, contaminated; but it had long been recognized by this country, and was as much entitled to the protection of Parliament as any other species of property. It was easy for gentlemen who had no colonial property to speak in the language of lamentation upon the subject—but those who were possessed of that property—who had wives and children and families dependent upon that property, could not divest themselves of some apprehension of the danger that would arise from any peremptory measure of interference in effecting a change in their condition (hear, hear). He was not—God forbid that he should be—hostile to improvements in the condition of the slaves; but at the same time that they were desirous of dealing out humanity to the black, they should be mindful of meting justice to the white population—whilst they were improving the condition of one class, let them bear in mind the protection that was due to the legal interests of another (cheers).

Mr. R. Ellis confessed that this motion appeared to him better calculated to embarrass the proceedings of Government than to assist them in their meritorious views for the amelioration of the condition of the slaves. He was not the indiscriminating champion of the colonial legislatures; but he conceived that on many points they had been both misrepresented and misunderstood. And first, with regard to the point of religious instruction, which was the most important of all, as it was the only safe preparation which the negro could have for the exercise of those civil rights which Parliament was so anxious to confer upon him—the colo-

nial legislatures had given the Bishops sent out by this Government every power which they had themselves required. He would refer, in support of this assertion, to the testimony of the Bishop of Barbadoes, who stated, that wherever he went he was received with the utmost respect, and that he experienced the greatest readiness and desire to co-operate with him in the objects of his mission, both on the part of the colonial legislature and of the inhabitants. The second point to which he was desirous of inviting attention, was the measure which had been sanctioned by an act of assembly in Jamaica, relative to the manumission of slaves. The security which had formerly been deemed requisite was dispensed with, and a summary process of manumission had been introduced, which could not be regarded otherwise than as a measure greatly facilitating the attainment of freedom by the slaves. The position formerly taken up by the abolitionists was, that the emancipation of the slaves ought to proceed, not from any positive act of the legislature, but from that benign and almost insensible revolution in morals, and in the manners of society, which might induce the masters to liberate their slaves spontaneously, and without any extraneous compulsion. They referred to the practice of individual enfranchisement as the cause of the abolition of villeinage in England, and they said the abolition of slavery would be produced in a similar manner in the colonies. Why had the abolitionists abandoned their own principles? He regretted that Government had adopted the principle of compulsory manumission, in the order in council. If the slave knew that it was in the power of his master to grant or to withhold his freedom, he would feel it his interest to conciliate his master by his good conduct; otherwise his object would be to become as worthless as possible. If the slave could purchase his freedom by right or law, it would naturally be the object of his master to keep him poor, by depriving him of those indulgences and privileges, which, under other circumstances, would be allowed him. The measure therefore tended to defeat its own objects. —He very much regretted the rejection of the Slave Evidence bill in Jamaica: he lamented the refusing of the evidence of slaves upon oath; he highly disapproved of the principle of taking away the life of a negro upon the evidence of a slave, not upon oath, and rejecting the oath or evidence of a slave against a white man, in cases even of simple misdemeanour. The rejection of these meliorations by the house of assembly in Jamaica was not to be attributed to any deficiency of knowledge, or impropriety of feeling, but to an extraordinary coincidence of circumstances. At the period of that discussion in the colonial assembly, there was a great clamour out of doors, and the discussion was upon the eve of a general election. There was, however, an improved sense in that island, and the measure might be received in better temper hereafter. It had been stated, demi-officially, that the orders in council, in relation to the island of Trinidad, constituted the whole plan, and comprised a summary of the intentions of Government. The house of assembly, therefore, determined to wait until they saw how the regulations would work.—He was not disposed to question the power of this country over its colonies: he knew it was irresistible—that it was able to crush its colonies. They had not the power of resistance; but they had another

power—that of inertness; they might resolve to do nothing, and thereby might defeat the objects of Government. That the measures of amelioration and emancipation must originate with the owners, was not his opinion alone, but that of the greatest statesmen. He would quote one only, and he would select a person whom the learned gent. (Mr. Brougham) must respect,—he meant Mr. Fox. On no question was this great man's opinion entitled to more weight. By his energy of character, he had put a stop at once to the slave-trade, which all the eloquence of Mr. Wilberforce, and all the power of Mr. Pitt, had been unable to accomplish. Yet, in 1806, Mr. Fox had said, that "the idea of parliament's emancipating the slaves in the West Indies, without the consent and concurrent feeling of all the parties concerned in that house and in the country, would not only be mischievous, but actually extravagant in its conception, as well as impracticable in its execution."

Mr. Butterworth rose amidst the most vehement cries of "question." He said that the question was of the utmost importance, and he only wished to detain the house by a few words (question, question). He was sure all must rejoice in the establishment of the Church and its machinery in the West Indies (question, question). Now that the slaves were instructed by the missionaries, it was most extraordinary that they could not be admitted as witnesses in the courts of justice (question, question). The missionaries had talked to the slaves about the Sabbath, and—(the cries of "question," and the coughing throughout every part of the house, here induced the hon. member to conclude).

Mr. Denman said, that the extraordinary progress of the colonies in liberal views, within these few years, was a proof that the house ought not to wait the slow progress which some hon. members talked of; but that it ought to press its measures. The sentiments of preceding authorities had been misquoted. It was true, that in 1806, the hopes of the legislature had been, that the masters of the slaves would themselves effect the amelioration in their condition: that was the wish of this country; but if the experience of twenty years taught that these expectations were fallacious, was the house to be bound by the mistaken views that had been then taken? In 1806, Mr. Fox had thought the question not ripe for discussion, and had depended upon the good sense and sound principles of the masters; but if these hopes had been defeated, and the masters would not become the instruments of emancipation, and the Government met with resistance to its measures, it became the duty of parliament to see that the hands of Government were strengthened. In 1807, one of the greatest ornaments, and one of the most splendid orators of this country (Mr. Sheridan), had said that he did not like to hear the term "property" applied to the subjects of a free country. He had asked, could man become the property of man?—and, speaking with reference to the English Constitution, he had said, that every colony of the country must bear its principles of Government, and could no more shake off its allegiance to the Constitution, than it could its allegiance to the Sovereign.—The system of slavery would not wear itself out, unless the Parliament of England did its duty. Of this, there was abundant proof, in the resistance which the colonial legislatures offered, not only to the known wishes of Parliament, but

to the general and undivided sense of the country.

Mr. Canning said, that the resolution contained a proposition to which he, in the abstract, could offer no opposition; but the question was whether, involving with that proposition other matter, it was or was not calculated to produce hurtful rather than beneficial effects? He must lay altogether out of his consideration the other topics of the learned gent.'s speech, for they turned upon points upon which that house and Government had already determined to proceed. The learned gent. recommended force and terror, while Government thought it most advisable to try recommendation and conciliation. In turning to the arguments used by the learned gent., he should take the resolutions adopted by that house in 1823 as the code upon which ministers had determined to act. If there were in that house those who wished to go back to 1807, and say, act upon the principle, that the act of abolition passed at that period, ought to have been followed up by an act of emancipation, then his answer was, that they came too late in the field (hear, hear). He would tell them that the emancipation now sought to be obtained, was by gradual, temperate, and moderate means, and that Government were not to be diverted from that course, unless by such acts of resistance and contumacy as he trusted they were not likely to experience. Again, others who wished to proceed on the abstract question, would set at nought the lives, the liberties, the property of thousands, upon the ground that man was not made to be the property of man. In answer to those who so argued, he must say, that they did not treat the subject either as legislators, or as men who understood the frame and formation of society, and that they aimed at nothing less than the dissolution of all civil society in our colonies, and the introduction of ravage and desolation (hear, hear)! This was a course which it surely was not advisable to take. For who could expect that our colonies would co-operate with us, in bringing about that which must ultimately effect their own ruin? A learned gent. (Dr. Lushington) had referred to a former speech of his, in which he (Mr. Canning) stated, that the spirit of the British Constitution was hostile to slavery. That that sentence was his, he had no hesitation in avowing; but, in quoting it, it was but fair to take into consideration the occasion, and the object which gave rise to it, as well as the other observations with which it was coupled. The sentence was uttered upon a motion made by an hon. member (Mr. Buxton), in which that hon. member stated, that the established religion and the constitution were inconsistent with a state of slavery. But he (Mr. Canning) appealed to the house, whether it was treating him fairly: to quote a passage, which of itself had one meaning, but when coupled with others, bore a very different construction. He had proceeded to say that the constitution had tolerated slavery—whether it was that the country was governed by men, who, however able upon other matters, were blind upon this;—whether it was that the period of maturity had not arrived, and that those lights which had recently burst upon us had not yet shone forth, he knew not, but so it was that a system of slavery had been established, and carried on by this country, and that black and Stygian stream which had been poured into our colonies had become necessary

to its sustentation and support (hear, hear). Moreover, whatever might be men's wishes or feelings, it was impossible to maintain, for a moment, that slavery and the Christian religion were incapable of existing together. They did exist together; they had existed together from the first dawning of Christianity, down to the present time. The spirit of that religion was to tame the proud, and to assist the lowly; but not by sudden changes—by the destruction of existing systems—by revolutions of danger and of blood. While mounting the throne of the Cæsar, it was comforting the poor captive in his cell: it had been preached in the streets of ancient Rome, at a time when *servi cruciuntur* was the ordinary process of the Forum. Though that house, and the country, and religion, were alike repugnant to slavery, it was not the less true that they had continued to rear and encourage it with a fostering hand. What, though we looked upon it with abhorrence, was it the less true that it had gone on and flourished? Were we, then, whose fathers nourished that system, and who ourselves continued to rear it, to turn short upon a portion of our community, and say, "You, you alone are guilty, and you shall bear the whole of the punishment" (hear, hear)? Were we, in endeavouring to get rid of the pestilence, to turn round and point out a few, as the spotted lepers, who were to be exterminated (hear, hear)? Then he came again to his original question—what would be the effect of the resolution now proposed, but to precipitate the intentions, and to perplex the policy of Government? The resolutions now existing—those of 1823—had been approved by all parties. Was there any suspicion—any occasion to suspect that Government had not acted sincerely in its attempts to carry those resolutions into execution? Had they not avowed their determination, and were they not prepared to abide by it, if those attempts were met with contumacy and resistance, to call upon Parliament for that aid to which, under such circumstances, though unwillingly, they must have recourse? The resolutions now proposed, prejudged the question. They said, that the house had seen with regret the proceedings of the West India legislatures, and in that feeling he entirely agreed; but he could not close with the practical conclusion—without which the first part of the resolution was good for nothing—that the house would, in the next session, take into its serious consideration such measures as might appear expedient for giving effect to the resolutions. The effect of all this would be, to deter the colonists from doing any thing. They would say, that there was no hope of satisfying Parliament—no utility in making the attempt. Whatever hope there was, in the period of six or eight months between this and the next session, of their thinking better of the absurd and impolitic course—to apply no harsher term to it—which they had thus far pursued, that chance the impatience of hon. gents. opposite would in all probability destroy. On the main ground of his opposition to the learned gent., his (Mr. Canning's) opinion remained unaltered. In principle they were nearly agreed; but some persons there were who were always ready to run a risk for the sake of arriving suddenly at their object; others—and of these he (Mr. Canning) was one—were content to put up with some slight retardment for the sake of arriving at their object safely.—At so late an hour he would not trespass longer  
SEN. 1826.

upon the patience of the house. He hoped that he had, however, shewn the sincerity with which ministers meant to carry into effect the gradual but effectual abolition of slavery; that if he opposed the resolution of the learned gent. it was because, whilst he did not wish to adopt that which had an air of menace on the one hand, he was prepared to shew that, in proportion to our liberty, we were determined and enabled to enforce our wholesome and holy determination (cheers).

Mr. Brougham maintained that slavery had existed, not in accordance with the principles of the British Constitution, but in spite of them. So it was with respect to the Christian religion. Could any man deny that it was most unchristian to hold a fellow being in slavery—to treat him as a brute beast; and, at the instigations of capricious cruelty or sordid avarice, to tear the very flesh from his bones (cheers)? Such a system was essentially repugnant to Christianity, and could, by no process of sophistry, be reconciled with its mild and benignant spirit.—The rt. hon. gent. (Mr. Canning) had represented his (Mr. Brougham's) resolution as imposing an obligation on the house to proceed absolutely next session with coercive measures against the colonies. The resolution, however, only bound the house to take the question into its "serious consideration" next session, if nothing should have occurred intermediately to obviate the necessity.—As to the argument, that harm would result from the rejection of the resolution, let the responsibility rest on the heads of those who voted against it.

The house divided. For the Resolution, 38  
 —Against it, 100—Majority, 62.

FRIDAY, MAY 26.—Lord Dudley and Ward presented a petition from the merchants of Liverpool, trading to the West Indies; in which the petitioners expressed their apprehensions for the security of West India property. The petitioners complained of that compulsory system of emancipation by which a slave had a right to purchase his freedom, according to an arbitrary standard; for, supposing 80*l.* to be the price of a slave's freedom, and that there were 100 slaves on an estate, the whole amount would be 8000*l.* But, by the emancipation of these slaves, the estate would be ruined; for though the value of it might be, perhaps, three times as great as that of the slaves, without them it would be of no value at all. The fair way, then, of settling the value of a slave, was by taking the value of the whole estate, with the slaves and cattle, &c., and then, dividing the whole amount by the number of slaves: the quotient would give the just value of each slave. Any thing short of this was, in his opinion, confiscation.—The petitioners also complained of interference with the colonial assemblies. He certainly thought it best that the proceedings in regard to the emancipation of slavery should be voluntary; but if, before the meeting of next parliament, they should offer any opposition to the reasonable measures proposed by parliament, it would then be time to interfere with a strong hand, and the colonists would lose the favour of those persons who now defended their interests.

The Earl of Lauderdale rose to make one observation on a word that had fallen from the noble lord. If the noble lord meant by "strong hand" that Parliament should interfere with an armed force, he (Lord Lauderdale) took this

opportunity of expressing his hope, that before such an interference took place, their lordships would well consider whether they would not thereby bring on scenes more shocking to humanity than any ever attributed to colonial slavery, much as it had been the subject of exaggeration in this country.

COMMONS, THURSDAY, FEB. 16.—Mr. *Herries* moved to bring in a bill to repeal so much of the act of last session "making provision for the salaries of bishops and other clergy in the diocese of Jamaica, and in that of Barbadoes and the Leeward Islands; and enabling the Crown to grant annuities to retiring bishops," as restricts the number of ministers and their salaries; and also, to enact that their salaries, to be charged on the consolidated fund, should be distributed by the bishops of Jamaica and the Leeward Islands, with the consent of the commissioners of the treasury.

### *Sierra Leone.*

WEDNESDAY, MARCH 1.—Mr. *Hume* said, that a sum of 27,000*l.* had been ordered, two years ago, for building a barrack at this horrible place, which sum, after it had been expended, the house was only now called upon to vote. He objected to such a mode of transacting business; and wished that money, generally, should be voted before works were set about. As a commission was now sent out to report upon the state of that colony, he thought, moreover, it would be highly advisable to incur as little expence as possible before the report of that commission was received. He had no doubt, that the best thing they could do with Sierra Leone would be to get rid of it as fast as possible.—He concluded by moving for quarterly returns, since the cession of Sierra Leone to England, of the number of persons, civil and military, sent to that settlement, with an account of the numbers who had died, and returned, distinguishing those who had been killed in battle; and certain other particulars.

Ordered.

### *Cape of Good Hope.*

TUESDAY, FEB. 7.—Mr. *Hume* said that it was three years since a commission had been sent out, in consequence of repeated complaints, to inquire into the state of the Cape of Good Hope. The commission to which he alluded had been ordered before any proceedings against the noble lord (Charles Somerset), had been intimated, and as its inquiries were unconnected with those proceedings, he thought a report of them ought to be given to the house.

Mr. *Wilmot Horton* replied, that no report upon the general state of the colony had as yet been received.

### *Lord Charles Somerset.*

MONDAY, MAY 8.—Mr. *Beaumont* presented a petition from Mr. Bishop *Barnett*, relative to the conduct of Lord Charles Somerset. The petitioner stated:

That he had presented a petition last session inculcating Lord C. Somerset's conduct; but

that in consequence of an intention being signified on the part of Lord C. Somerset of returning to England, and leave of absence having been given to him for that purpose, the house declined proceeding on that petition:

That the petitioner, thereupon, laid a second petition before the house, requesting permission to return to the Cape, for the purpose of procuring evidence in support of his charges against the noble lord:

"That the Under Colonial Secretary of State having virtually promised the sanction of his department to the petitioner's return, by pledging its accedence to his request, on the exhibition of a just pretext, the hon. house thought proper to decline acting on his petition; and the petitioner took measures for his immediate return to the colony, when to his astonishment this leave thus promised was peremptorily withheld by Earl Bathurst."

"That as his Majesty's Commissioners of Inquiry at the Cape had by an extraordinary course of proceeding intimidated witnesses from giving in their testimony in the scrutiny of grave charges against his Excellency the Governor, the petitioner could not perceive that the reference of the Colonial department to the functions of those gentlemen furnished any satisfactory hope of redress when their long protracted report should arrive. The petitioner, therefore, protested against any conclusions being drawn or any decision being formed in his case from an investigation necessarily partial and imperfect, in a colony where the petitioner had no hesitation in declaring, no man dared disclose a truth in the slightest degree offensive to its Governor, without entailing persecution."

The petitioner further prayed that the house would examine Lieut.-Colonel Bird touching the premises previous to his return to the Cape of Good Hope.

Mr. *W. Horton* was not surprised that the petitioner impugned the motives, and protested against the report of the Commissioners, being aware that that report must be unfavourable to himself. A voluminous report had been received by the Colonial department from the Commissioners, and was ready to be laid at any moment upon the table of the house. The house, if it would take the trouble of reading the evidence annexed to that report, would be qualified to decide, whether it ought to concur in the opinion of the Commissioners, that the charges which the petitioner had preferred against Lord C. Somerset were grossly exaggerated, and were not such as required the interference of that house (hear, hear). Even from the statement of the petitioner himself, it was evident that he inculpated Lord C. Somerset for what had been done by the judicial authorities of the colony. The Commissioners had recommended that the Dutch law, which now prevailed there, should be assimilated to the British; but until that assimilation took place, it was the duty of the constituted authorities to act upon the Dutch and not upon the British law. He contended that the Commissioners were fully competent, both from their respectability and from the opportunities which they had enjoyed of collecting information, to give a correct opinion upon the subject; and as the fullest information was contained in the report on the subject of the petitioner's charges against Lord C. Somerset, it would be unnecessary to examine Lieut.-Colonel Bird upon them, who, as far as he could judge, had no

connexion whatever with them. With regard to the petitioner's application to Lord Bathurst for leave to return to the Cape, he would only say, that if any gent. chose to move for copies of the correspondence which had passed between the petitioner and the Colonial government, he should willingly accede to the motion. The petitioner had been backward in bringing forward his charges in a substantive form against Lord C. Somerset, and had been particularly active in filling the newspapers with the most exaggerated descriptions of them. Though the case of the present petitioner could not dispose of the cases of other petitioners, still he thought that the perusal of the report would convince every unprejudiced man that his statements were gross and unfounded exaggerations (hear, hear).

Mr. Home said, that at an early period of the session, he had inquired if any report had been received from the Commissioners sent to the Cape, and had been informed by the hon. Secretary that there had been none. If, therefore, there was any delay in bringing this subject before the house, the blame was either with the Colonial Secretary, or with the Commissioners; certainly not with the petitioner, who had last year brought forward substantive charges against Lord C. Somerset, when the house thought it right that Lord C. Somerset should return before it proceeded to investigate them. Why, he would ask, had the noble lord not returned to this country—why, but because he wished to evade justice, and to frustrate inquiry (hear, hear)? He had some time ago read to the house a letter from the Cape, in which it was explicitly stated to him (Mr. Home) that he would not see Lord C. Somerset during the sitting of the present session. That prediction was now verified: and how did such conduct on the part of an accused man appear? It was unfair, therefore, in the hon. Secretary to say that the petitioner had been backward in bringing forward his charges. The delay had been caused by the petitioner's waiting for the arrival of the noble lord in England.—Then as to the Commissioners, they had been three years at the Cape, and as yet it was a secret to the house—or, at least, it was a secret to him—what they had done, or whether they had done any thing (hear, hear). He had, therefore, good grounds for doubting their activity in accomplishing the objects of their mission. As to the refusal of Government to let the petitioner return to the Cape, he considered it to be a very harsh and unjust proceeding (hear, hear). The petitioner had been sent off from the Cape at a moment's notice, without the possibility of making any arrangement for obtaining redress; and this refusal had the appearance of an unwillingness on the part of Government to allow him to collect the evidence necessary to substantiate his accusations. But if the witnesses were not fairly brought forward on behalf of the accusation, an acquittal of the accused would be deprived of more than half its value. The evidence of Lieut.-Colonel Bird, who was acquainted with all the details of Lord C. Somerset's conduct, and whose testimony was essential, either to inculpate or exculpate the Governor, should be secured, in justice to all parties; not merely to the colony and to the petitioner, but also to the accused Governor.

Mr. W. Horton stated, that he had not presented the Commissioners' report sooner, be-

cause he thought that the house would not enter into a discussion of it till the return of Lord C. Somerset. If any gentleman had asked him a question on the subject, he should have given him, without any reserve, the same information which he had that evening afforded to the house.

Mr. F. Palmer said, that twelve months had elapsed since leave had been granted Lord C. Somerset to return, and yet he was not in England (hear, hear). He (Mr. Palmer) did not know what was contained in the report, but he could not forget that, besides the accusations of Mr. Bishop Burnett, there were several others much more grievous, brought forward against the noble lord. He thought that the friends of the noble lord should be anxious to detain Lieut.-Colonel Bird, whose evidence seemed so material to the question.

Lord E. Somerset rose for the purpose of declaring unequivocally, that his noble relative had been most anxious to leave the Cape on first hearing of the charges against him, but that he had been ordered by the Government at home—and he spoke in the presence of those who could confirm his assertion—not to leave it until the arrival of the Lieutenant-Governor. The Lieutenant-Governor did not arrive till the 9th of February last, and his noble relative had sailed as soon afterwards as he possibly could (hear, hear). He was still in hopes that his noble relative would arrive before parliament separated, as letters had been received in England, stating that he had left St. Helena. Indeed, had it not been for the continual succession of north winds for some time past, it was most probable that he would before this time have been in England (hear, hear). Though he had repeated that his noble relative was most anxious to face his accusers, it was not for him to say whether Lieut.-Colonel Bird should be detained in this country or not.

Sir F. Burdett said that upon the propriety of taking the evidence of Lieut.-Col. Bird before he left England,—that was a point of so much importance that he trusted that ministers would for their own sakes, for the sake of the noble lord now under accusation, and still more for the sake of the petitioner, not deprive him of the means of securing that evidence, which was described as most important to the prosecution of his claim for redress.

Mr. W. Horton said that Col. Bird was not in any respect connected with the charges which the petitioner had brought against Lord C. Somerset, as would be seen, whenever the report and appendix was printed. If any subject could be pointed out on which Col. Bird could afford to the house any information which the petitioner might deem favourable to his cause, he would have no objection to grant the petitioner his request; but at present he did not know how any gentleman could put a question to Col. Bird, if he was at the bar, relative to the complaints made by the petitioner. Surely the petitioner must state something specific before his prayer could be acceded to.

Sir F. Burdett:—"The petitioner states, that he conceives Col. Bird to be a material witness on his side."

Mr. Brougham said that it would be unjust to the colony, to Lord C. Somerset, and to the petitioner, if Col. Bird were not examined as to his knowledge of the facts of this case.

The Chancellor of the Exchequer said, that it was very easy for gentlemen to talk of detain-

ing Col. Bird; but the fact was, that Government had no power to detain him. He was going on his own private business to the Cape of Good Hope, and Government, therefore, had no right to say that he should not quit the country.

The *Speaker* here observed, that on looking over the petition he observed an informality in it which must prevent its reception by the house, and it was accordingly withdrawn.

FRIDAY, MAY 19.—Lord E. Somerset begged leave to ask the Under Colonial Secretary whether he was prepared to lay before the house the papers relating to the complaints which had been made by Mr. Bishop Burnett against his noble relative. His noble relative had now arrived in this country, and was most anxious, before the separation of parliament, to meet the charges and insinuations which had been thrown out against him; and he himself had no doubt, when the matter came to be properly investigated, of convincing the house that they were gross and unfounded calumnies.

Mr. W. Horton said, that he had intended to have moved that those papers should be laid before the house, but he had all along been expecting that an hon. member (Mr. Beaumont) would make some motion on the subject; and indeed, he had received a note from him that morning, saying, that it was his intention to do so.

Mr. Beaumont said he should have moved for these papers before now, but as he understood parliament had decided on taking no further steps in this business this session, he had refrained from doing so; but he pledged himself, that if he had the honour of a seat in the next parliament, he would take an early opportunity of bringing the matter before the house.

### Colonial Currency.—(Cape of Good Hope).

Mr. Baring presented a petition from Lieut.-Col. Bird, complaining of the changes occasioned in the currency of the Cape, by large issues of paper money by the colonial Government. The hon. member entered into a description of the various changes which had been effected in the currency of that colony by the Dutch governors, whilst it was in the possession of the United Provinces. He then said that by the proclamation of Sir David Baird the value of the rix-dollar had been fixed at 3s. 6d. It had been so high as 4s. but had then declined, and from that period to the present had been successively reduced to 3s., 2s. 6d., and finally to 1s. 6d., at which rate it now continued. All these depreciations had been occasioned by the extensive issues of paper money, and showed the influence which paper money had upon the value of a metallic currency. He was quite sure those issues would not have the sanction of the house, and he hoped to hear that the case of the petitioner would receive further consideration from Government. The total amount of the Cape currency was about 2,500,000l.; the amount of mortgages made during the period in which these changes were taking place, was 30,000,000l.; and other private transactions came to nearly the same amount. He knew that it would not be easy to return at once to a currency of the original value, nor would it be consistent with justice to do so indiscriminate-

ly, even if it were practicable. But a graduated scale might be made of the various engagements which had been entered into, and of the value of the currency at different times. It was obviously necessary that some such measure should be adopted, because, as he had been informed from unquestionable authority, many individuals had been ruined by the effect of these changes. If he had heard that these things had been practised in a barbarous country, he should perhaps have felt no great wonder at it; but when he knew that the subjects of the British empire were exposed to their effects, he could not hesitate in his censure.

The *Chancellor of the Exchequer* said that when the time should serve, he should be ready to justify the course which Government had felt it necessary to adopt; but he should first be obliged to move for certain returns, in order to put the house in possession of certain facts explanatory of the present subject; and in the meantime he hoped that hon. members would not conclude with the hon. gent. that the conduct of ministers had been as unjust and iniquitous as he represented. When the hon. gent. compared the paper money of the Cape with that of this country, he compared two things which had no resemblance whatever to each other; for the former, whether issued by the Dutch or by the British Government, was never convertible into specie, nor payable on demand. Like all other paper-money, the amount of which was unlimited by the law of the country in which it was made, it contained all the essential qualities of depreciation; it never included any obligation on the part of the Government to pay it in specie (hear, hear, from the opposition). However this might surprise gentlemen, he would prove it by means of documents for which he should move by and by. The measure which gave rise to this complaint, was a part of a general design to give to the colonies which were overrun with paper-money, something like the benefit of a metallic currency. It became necessary, in putting this into practice, to consider at what rate they should receive the paper-money already issued, in exchange for the silver they sent out. This showed also that the Government did not feel themselves obliged to take the paper-money at par. The hon. gent. was mistaken if he supposed that the various issues of paper-money which had taken place at the Cape grew out of the necessities of the British Government, or that they had been used in payment of the British troops, or for the public services of this country, but for the local purposes of the colony. It would be extremely unsatisfactory to enter at present any further into this subject, but he would first put the house into possession of the materials necessary for forming an accurate judgment, and then he should be ready to enter into any further discussion of the matter.

Mr. H. Gurney mentioned an instance of some infant children, whose property had, upon the death of their parents, been deposited in the Orphan's Chamber, at the Cape, by the fiscal, their legal guardian, when the dollar was at 4s., and who for the last 11 years had been able to obtain only a part of the interest, and that at a depreciation of between 200 and 300 per cent. He knew that in many other instances losses to a similar amount had been sustained by persons whose property was in the hands of the Government at the time of the capitulation of the Cape to the English forces.

Dr. Lushington said that the petitioner could have no remedy at law; but it was usual on other occasions to afford to parties interested an opportunity of stating their cases to the Privy Council, where they were duly heard and examined.—He was greatly astonished at the right hon. gent.'s (the Chancellor of the Exchequer's) declaration that the paper-money had been issued without any obligation for repayment. He could not conceive any Government's issuing notes without the most solemn obligation, in common justice as well as in common sense, to repay in value that of which they had received the value. And yet the rt. hon. gent. offered it now as a grace and condescension, to give 1s. 6d. for that which had been issued at the rate of 4s.

Mr. Elliot said he should like to know in what part of the history of the paper currency of this or of any other country, the rt. hon. gent. had found that the notes issued by a government were not convertible into specie. It was clear that the rix-dollar had been reduced from 4s. to 1s. 6d. by the issues of the Government since the colony had been in the hands of the British; and it was impossible that the legislature of England, whatever the ministry might have done, could authorize the continuance of that system, or withhold the justice which was now demanded.

Mr. Herries:—His rt. hon. friend had not said that those who issued paper-money did not incur an obligation to pay its value. All that he meant was, that when we took the Cape and engaged to maintain the paper-circulation which was then in existence, that was not a circulation convertible into specie at the will of the holder. If the hon. member (Mr. Baring) would refer to one of the notes, he would see upon the face of it, that it did not specify that the bearer was to receive the amount on demand; but that he was the proprietor of so many stivers. The depreciation of the currency was nothing new in the colony, for in the second year after the issue of paper-money, an edict was published by the Dutch Government, prohibiting persons from selling the notes at a certain rate below their nominal value. The paper-circulation never approached *par* but upon two occasions; one was when the Dutch Government paid off a large quantity for the purpose of issuing more; and the other occurred immediately after the capitulation, when it was believed by the inhabitants that they had much to expect from the liberality of this country. The measure which led to this petition was calculated to effect a most desirable improvement in the currency, and to introduce British money in lieu of the various circulations which prevailed in different colonies. In some of them, paper was in use, in others, foreign coin, or coin which had been fabricated by different Governments on the spur of particular exigencies. In one instance, they had been so absurd as to cut a circular piece out of the centre of a Spanish dollar, and to publish a declaration, after its intrinsic value had been thus reduced, that it should pass current for 1s. more than before. It would have been an act of enormous injustice, had the Government introduced a metallic currency, and established the rix dollar at 4s. The object of the legislature ought to be to place all, as nearly as possible, on a footing of exact equality. The Treasury had not undertaken to pay off the debts of the old governments, but to substitute a metallic for a paper-currency. There was a sum of 3,100,000*l.* in circulation in paper

in rix dollars, part of which had been advanced in loans; of this sum 1,870,000*l.* was due to the colony. The Government, therefore, would have been no loser by a regulation by which this sum was paid at 4s. the rix dollar. The subject would come before the house in the next parliament, when he would be prepared to enter more at large into the details.

Mr. Baring fully agreed with the hon. gent. (Mr. Herries) in the propriety of establishing a metallic currency at the Cape; but he complained of the inequitable adjustment of different contracts.—He begged to state, that in the observations he had made, he intended to make no reflections on a distinguished individual at the head of the Cape Government.

Mr. Hudson Gurney begged to know whether the creditors in England and Holland, previous to the capitulation of the colony, were to receive the amount of their claims in rix dollars, or sterling money?

No answer was returned to this question.

The petition was then ordered to be printed.

### Singapore.

LORDS, TUESDAY, MARCH 14.—The Marquis of Lansdowne moved for an account of the imports and exports of Singapore. He made this motion in consequence of understanding that the East-India Company had entertained a design of imposing duties upon that port, the effect of which would be to stifle its trade, which, if these papers were produced, would appear to be flourishing with a degree of increasing prosperity since its cession to this country, that was likely in a short time to render it an acquisition of the greatest importance. All the advantages anticipated from our possession of the country had been fully realized; and he was certain that they would continue to increase rapidly if Singapore were retained as a free port. In that part of the world, composed as it was of various tribes and nations, some of them barbarous, some civilized, such was the quick apprehension which prevailed of the advantages of a free trade there, and of the permission granted them of frequenting that place, that its trade, which in 1822 had amounted to 8,468,000 dollars, in 1824 had increased to the enormous sum of 15,773,000 dollars; doubling its amount in three years. It was impossible to consider this extensive trade, drawn from so many different quarters, without feeling that it must have operated a most material effect upon our great empire in the east, as well as upon that of China, by producing a commercial spirit in that quarter of the world, of which this country ought to avail itself. In the course of two years and a half 2889 vessels had entered that port, only 363 of which were manned by Englishmen, the remaining 2506 being manned by natives of other nations. He trusted the port would be suffered to continue in its present state in despite of the short-sighted policy that would sacrifice such important advantages to the paltry lucre to be derived from the imposition of duties, which would only have the effect of annihilating its trade in a short time.—Accounts ordered.

### Juries in India.

COMMONS, WEDNESDAY, FEB. 22.—Mr. Wynn moved for leave to bring in a bill to regu-

late the appointment of juries in India. At present juries in India could consist only of British subjects; and though one would imagine that these words would admit of the widest construction, so as to include all persons born in the British dominions, a different construction was, however, put on the matter in India, where all persons not born of British parents, even half castes, were excluded from serving on juries. This construction had continued for so long a period, that nothing but an act of parliament would be effectual in altering it. The remedy he had to propose was, that all good and sufficient persons in India should be held capable of serving on juries—with this provision, that where Christians were on trial none but Christians should sit on the jury. Such other regulations and qualifications as might be necessary, would be added by the Supreme Council at Madras, subject to the approbation of the King in council.

Leave given to bring in the bill.

### *Mr. Buckingham.*

TUESDAY, MAY 9.—Lord J. Russell presented a petition from Mr. Buckingham. That gentleman arrived in India in 1814, at a time when the Marquis of Hastings had abolished the censorship of the press, and left editors to act on their own responsibility, establishing at the same time certain rules to which they were ordered to conform. Mr. Buckingham engaged in the publication of a daily journal at Calcutta, which he conducted for five years without ever being convicted of any libel, private or public, having been only once indicted for an alleged imputation on the impartiality of the six secretaries to Government, upon which occasion he was acquitted without the slightest hesitation by the jury; and it should be recollected, that juries there being chiefly composed of Government dependents, were not so impartial as here. The petitioner invested 20,000*l.* in the establishment of this journal, and by his exertions brought it into so much note as to render it worth 40,000*l.*; and it paid annually a sum equal to 4000*l.* sterling in postage, to the revenue of Bengal. After he had brought it into this high state of repute, and had himself obtained the esteem of all his associates, he all at once received notice that he had given offence to the Government in India, by publishing articles which he ought not to have published, and that he must immediately quit the country. Now, these articles were such, that although they might not indeed have been permitted in countries where the Government was a perfect despotism, still would have been tolerated without objection in any country where the least freedom prevailed. However, shortly after he had received this notice, his license was abrogated, and, in that order, was involved his total ruin; the only ground for which was an article in his *Journal*, respecting the appointment of a Presbyterian Minister, which was no sooner noticed than annulled. As to the tone and manner of that article, it was such that, considering the circumstances, would, in this country, so far from being considered dangerous to the peace of the community, be regarded as deficient in bitterness, in severity, and political spirit. But Mr. Buckingham was obliged to depart from India, and leave behind him the property which his talents and his industry had accumulated. No sooner had he left India, than certain regulations were made, ordering, amongst other things, that the

proprietor of every journal should take out a license, liable to be revoked at the pleasure of the Government. One of the judges, Sir Francis M'Naghten, said, he should object to these regulations if they were made to extend to any existing journal. But, what followed? Within one month after Mr. Buckingham's departure, an order was given to suspend the publication of the *Journal*. He had come home to England, and, at considerable expence, had sent out materials for printing, and other purposes, in order to support his establishment in India, but the order had been issued in the meantime, to suspend the publication of his journal. After various negotiations with the Government, only one person could be found who would be allowed to carry on the newspaper, and that was the son-in-law of one of the members in council, and thus was his property destroyed, and the copyright of his journal transferred to a person not of his own choice. He therefore thought, if ever there was a man who had a right to complain, it was Mr. Buckingham. The consequence of this treatment had been, that he had not only lost the 20,000*l.*, which he had embarked, but that he was in debt to the amount of 10,000*l.*, on account of the acts and proceedings of the Indian Government. It had been said, that the measures of the Marquis of Hastings had led to these transactions; but he had seen communications from that nobleman, in which the removal of Mr. Buckingham was condemned, because, he said, whatever might have been the tendency of Mr. Buckingham's writings, he never was guilty of wilful and deliberate offence to the Government. As to the propriety or inexpediency of a free press in India, that was a question into which he did not mean to enter at present; he should confine himself strictly to the wrongs which the petitioner had suffered; and he complained of it as gross injustice, that, because the Marquis of Hastings had thought fit to abolish the Censorship, and try the experiment of a Free Press, under certain regulations—and because that experiment had not succeeded, that, therefore, the whole loss should fall upon the petitioner (hear, hear). It appeared to him that the Marquis of Hastings had not acted with due foresight in abolishing the Censorship, and substituting in its stead an arbitrary power over the writings of editors. He could easily believe that, so long as the Marquis remained as Governor, an editor would have nothing to fear, unless he abused the freedom which was allowed him; but the case was quite different when others succeeded the Governor-General. This was a case of individual grievance which imperatively demanded the attention of the house, and he therefore meant to move, that the petition he now held in his hand be referred to a select committee, instead of the usual course of moving that it lie on the table (hear, hear).

Mr. Charles Wynn said, that it was unusual to move for a committee, unless some previous notice had been given; a course of which the noble lord himself must see the propriety. The whole question appeared to him to hinge on this consideration: Was the press in India to be as free as in this country? On this point he was ready to meet the noble lord, and contend for its impossibility. The noble lord had adverted to the passages published by Mr. Buckingham, and had said that, although they might not be tolerated under a despotic, they would pass freely under a liberal government. No doubt,

under a free representative Government, such writings could produce no mischief; and if the noble lord thought it would be expedient to abolish the present form of Indian Government, and establish a representative one in its stead, he could understand his principle—if a representative Government were to be established, then let there be a free press; but it was the very essence of a free press that it could not co-exist with absolute authority (hear, hear). The noble lord had said, that the Marquis of Hastings had abolished the censorship, and thought fit to try the experiment of a free press. Now he would beg leave to read to the house the regulations under which the change was made. "The editors of newspapers are prohibited from publishing any matter coming under the following heads:—

"1. Animadversions on the measures and proceedings of the hon. court of directors, or other public authorities in England, connected with the Government of India; or disquisitions on political transactions of the local administration, or offensive remarks levelled at the public conduct of the members of the council, of the judges of the supreme court, or of the lord bishop of Calcutta.

"2. Discussions having a tendency to create alarm or suspicion amongst the native population, of any intended interference with their religious opinions or observances.

"3. The republication, from English or other newspapers, of passages coming under any of the above heads, or otherwise calculated to affect the British power or reputation in India.

"4. Private scandal, and personal remarks on individuals, tending to excite dissensions in society."

These regulations contained an express direction how a newspaper was to be conducted, and warned a proprietor what course he was to avoid. That warning, however, Mr. Buckingham had, from the very first, disregarded. He seemed to think, that as Lord Hastings freed the press from some restraints, he had determined to make it wholly free;—and although repeatedly informed that such was not the intention of the Government, he persisted in acting as if it was so. In 1820, he was told what would be the certain consequence of the course he was pursuing; and when he still persisted, he was again, in 1821, assured that, if he once more offended, his license would be withdrawn, and he would be compelled to quit the country. Undismayed, however, by all threats—unaffected by all warnings—disregarding all advice—he still continued his course of libel against the Government, and then, and not till then, Mr. Adam compelled him to quit the country—a course to which he was driven by Mr. Buckingham himself, and which he could not avoid, with any regard to the dignity of the Governor-General, or the character of consistency, which ought to be maintained in a Government. A great deal had been said upon the conduct of the Government towards Mr. Buckingham and his property, after his departure from India. If, however, after his departure, a licence for printing his paper had been continued to the same proprietors, it was evident that it would have rendered nugatory all the former proceedings of Government.

Mr. Scarlett begged to remind the house, that the petitioner could not maintain an action against the Indian Government for any injury which he had received from it in the exercise of

its power, and that his only remedy therefore lay in the supreme authority of that house. He confessed that he was very strongly struck by one of the statements in the petition. Banishment might be nothing in the opinion of some members; but would the house bear to be told, without inquiry into the matter, that the most valuable part of the petitioner's property had been taken from him without any consideration being tendered for it, and then presented as a free gift to the son-in-law of one of the members of the very Government under which such an extraordinary transfer of property took place? If such a statement were correct, it appeared to him that the conduct of the Indian Government had not only been oppressive, but corrupt. He would gladly support the motion.

Mr. Wynn observed, that the licence of the *Calcutta Journal* had been withdrawn, and had never been granted to any other individual. The licence which had been granted to Dr. Mostyn, the individual referred to in the petition, and a friend of the petitioner, was a licence to print a paper to be entitled *The Scotchman in the East*.

Mr. John Smith said, that the East India Company had allowed its servants not only to deprive Mr. Buckingham of his property, but also to leave him incumbered with debts incurred in acquiring that property. Every attempt which Mr. Buckingham had made to obtain redress, had been treated with disdain and contempt; and even when he desired to obtain from the compassion of the Company such a remuneration as would only secure bread to himself and to his large family, he was met with the declaration that he had been deservedly punished, and had no claim upon them of any description.

Mr. Astell contended that, after the repeated warnings which had been given, Mr. Adam would have been unworthy of his situation, if he had tolerated any longer what he must call the insolence of Mr. Buckingham. On a late ballot at the East India House, out of 2000 proprietors of East India stock, only 157 had approved of Mr. Buckingham's conduct—a clear proof, in his opinion, that the public took no interest in his claim for remuneration.

The petition was then brought up and read. It stated that, "In consequence of the measures taken by the East India Company, the petitioner, instead of being possessed of an income of 8000*l.* from a property of the saleable value of 40,000*l.* which he enjoyed at the period of his banishment from India, had been utterly deprived of both income and capital, and was now involved in debts to the extent of at least 10,000*l.* more, from the measures pursued towards his property in his absence, and against which no foresight on his part could possibly have provided. That on hearing of this calamity, he solicited the Court of Directors for leave to return to India for ever so short a period to be named by themselves, to gather up the wreck of his property, and to prevent the further accumulation of debts; which permission was denied. And that, as all remuneration or redress was denied to him at the hands of the Company, he was driven to apply to the House of Commons."

Dr. Phillimore repeated the statement made by Mr. Wynn, and added that, in all that had been done, there was no undue exercise of authority. The punishment which had been in-

dicted on Mr. Buckingham was strictly conformable to the law; and if it had been severe, he had no one to complain of, because he had brought it upon himself. When the house considered the vast importance of our possessions in India, and the slender tie by which they were held—that a handful of Europeans exercised supreme sway over many millions of the native people, and that our empire was maintained by opinion alone—they must see that if the same freedom of discussion were allowed to prevail in that country as we enjoyed here, and if individuals were permitted to traduce the Government through the means of the press, it would be impossible to retain that power from which this country drew so much advantage.

Mr. Trant said, that if the question were solely confined to the removal of Mr. Buckingham from India, perhaps he might be disposed to concur in the propriety of his banishment. But looking at the whole of the conduct which had been adopted towards that individual, part of which, from his connexion with the Government of India, he (Mr. Trant) had an opportunity of observing, he must say, that a case never occurred to him by which he had been so perplexed. Upon a review of the whole of it, he was by no means satisfied that justice had been done towards that individual (hear, hear). It was necessary, no doubt, that very extensive power should be vested in the Government of India, but some exercise of that power, beyond proper limits, might occur; some stretch of authority might arise; and he must add, that in the case of Mr. Buckingham, such a stretch had arisen (loud cries of hear, hear). He regretted to differ from those with whom he generally acted, but felt that he was called upon by a sense of duty, on an important review of the whole conduct adopted towards Mr. B., to vote for the motion of the noble lord.

The house then divided. For referring the petition to a committee, 43—Against it, 40—Majority, 3.

THURSDAY, MAY 11.—Lord John Russell moved that the committee to which Mr. Buckingham's petition was referred might be empowered to examine witnesses and send for papers, &c.

Mr. C. Wynn said, that he might now, with great propriety, move that the order which the house had made on a former evening on this subject, should be rescinded; and the ground upon which he should be justified in doing so was, that there had been no notice of the motion which the noble lord had carried. He (Mr. Wynn) had, at first, resolved to do so, but he had since abandoned his intention, because the case was one in which an individual complained of having suffered great hardship: if it had been of a different description, he should certainly have acted upon his original resolution. He did not now rise to oppose the motion; but as the noble lord, in forming a committee of sixteen, had taken only five members from his (Mr. Wynn's) side of the house, the other eleven being selected from the opposite benches, he should object to the addition of any more names to the committee.

Lord Milton supposed the reason of the right hon. gent.'s complaint was, that no opportunity had been given for sending round treasury notes on the occasion (a laugh, and hear, hear).

Mr. Hobhouse said, that so far from there

having been any intention on the part of his noble friend to take the house by surprise, he had himself requested his noble friend to put off the motion. He had no reason for doing so, but that he thought any other occasion would be just as favourable to its success as that on which it was made. He could not sufficiently express his surprise at the intention which the rt. hon. gent. (Mr. Wynn) avowed. If he had carried it into execution, what would be the inference of the country? The most ardent reformer that ever lived would not wish that a more striking picture of the state of the representation should be held up to the country. Because the benches on the rt. hon. gent.'s side of the house were not so well filled as usual, any motion which happened to be made at that time was afterwards to be rescinded. Would it be openly insisted, that if by an accident,—a rare one, it must be confessed,—they, on that side of the house, succeeded in carrying a question, it was afterwards to be decided over again at an opportunity which ministers might think more favourable? He did not see why this question differed from any other, or why it required any more notice than the corn question, which had been so lately proposed.—After some further conversation on this point,

Lord J. Russell said, that he considered the course which he had adopted to be as regular as any other which could be pointed out. He saw no reason why he should adopt a course which would enable ministers to issue their summons to individuals in that house who were the representatives of Downing-street (a laugh)—calling on them to give their vote on a question which they had not heard discussed. He thought it was always better to have a question decided by those who had listened to the discussion (which was the case in this instance) than by those who had not. Many persons voted in favour of the motion, who generally voted against the opposition,—a circumstance which of itself afforded sufficient proof that the question was not carried by improper means.

After some further remarks, the motion was agreed to.

On the motion of Lord John Russell, Mr. Abercrombie and Sir C. Forbes were added to the committee.

Mr. W. Wynn then moved that Mr. Stuart, Col. Baillie, Mr. Yates Peel, Sir E. H. East, Mr. Ross, Lord G. Somerset, Mr. Wellesley, and Col. Lushington, be added to the committee.

Lord Milton observed, that the parties now proposed were either in office, or connected with the East India Company, whereas, when the committee was appointed the other night, the names were taken alternately from both sides of the house, in order that the committee might be impartially constituted (cheers).

Lord J. Russell said that there were on the committee which was appointed on Tuesday evening, five persons, who were either Commissioners of the Board of Control, or East India Directors,—individuals who were certain to vote against Mr. Buckingham's claim. Of the other members of the committee, a considerable portion were gentlemen who sat on the opposition side of the house, and who were in favour of inquiry. The rt. hon. gent. had, however, introduced the names of a number of persons who had either places under the Crown, or who were connected with the East India Company. He was sure that the right hon. gent.'s ancestor, Mr. Speaker Williams, did he preside in the

Chair, would be ashamed of a committee thus partially selected.

Mr. Peel:—The noble lord (Milton) had stated that the members of the committee had been taken alternately from both sides of the house. Now, out of 16 names, 10 had been taken from the opposite side of the house; and one of the remaining six (Mr. Trant) had made a speech in favour of Mr. Buckingham. Two gentlemen who were favourable, he believed, to this claim, had since been added to the list, so that there was a balance of 13 against 3.

Mr. Scarlett observed, that if the object of this committee was fair inquiry, it certainly ought not to be filled up by those who had voted against such inquiry.

The names proposed by Mr. Wynn were then added to the committee.

### *East India Writers' Bill.*

THURSDAY, MARCH 16.—Mr. C. Wynn moved for leave to bring in a bill to suspend such part of the act 53 Geo. III. c. 155, as relates to the appointment of writers; and to remove doubts as to the payment of allowances of officers dying while absent from India. By the act of 53 Geo. III., no person could be appointed a writer who had not passed four terms at the East India College at Haileybury. Since the establishment of that college, from the extension of the Company's territories, and other causes, there had been a deficiency of persons qualified according to the directions of the act. The present establishment of the college did not admit of supplying the requisite number. His object, therefore, was to suspend the operation of the clause in the statute, in order that persons might be selected who had not passed their four terms, but who were duly qualified. He had no intention of insinuating a distrust of the system pursued at the college. He believed the system had fully answered its purpose; although, if the question related to the new constitution of the college, he should prefer its being assimilated to our existing Universities, as he preferred the plan of associating gentlemen in different studies to that of educating them exclusively for a particular profession.—As to the other point embraced in this bill, the act of 53d Geo. III. provided that certain allowances should be paid to officers, while absent from India, on account of ill health, for a period not exceeding three years; but beyond that time no allowance was granted. This was a considerable hardship on those officers whose state of health rendered it impossible for them to return to India within the prescribed period. By going back to India within three years, any of those individuals would be entitled to claim a certain allowance, under the act of Parliament. Many officers had done so in consequence of the state of the law before their health was completely established, and the consequence was, that they had fallen victims to disease. The object of the bill, in this respect, would be to give to officers going to the Cape of Good Hope or to Ceylon, on account of ill health, the same allowances as if they were in India, and also to provide for the payment of allowances on account of officers dying while absent from India on account of ill health.

Mr. Hume observed, that the *rt. hon. gent.'s* Sen. 1836.

speech cast, in his opinion, a strong, and by no means an unjust reflection on the Company's institution at Haileybury. The whole of the system on which that institution was founded was exceedingly injurious. The young men were shut out from all society, and they had no opportunity of acquiring any knowledge of the world. Year after year disturbances had taken place in that college, and the young men acquired any thing but that high tone of honour, principle, and public spirit, which they ought to imbibe to fit them for the high situations which they were destined to fill. He had often deplored the situation in which India was placed, in consequence of the formation of that establishment. Young men were sent out to act in the most important capacities, from a secluded monastery, in which they could acquire no knowledge of active life. Young men who had never mixed in English society—young men of twenty-two or twenty-three years of age—were raised to the rank of judges in the zillah courts, many of which had jurisdiction over a space larger than Yorkshire. No later than yesterday, a gentleman informed him that his son, a young man of not more than twenty-four years of age, had obtained one of those situations. For five successive years, attempts had been made in the Court of Proprietors to alter the system which prevailed as to the education of writers; but every attempt had failed. He was glad, therefore, that Government had at last taken up the subject. He hoped that the *rt. hon. gent.* would select some proper mode of examination, to which all individuals proceeding to India should be subjected. He wished those persons educated in the college, as well as those educated out of it, should be subjected to the same test. But some provision should be adopted, by which persons appointed to military situations would be compelled to acquire a certain degree of information in the language ordinarily spoken in India, before they went out there. He must express his decided conviction that Haileybury College would never answer the purpose for which it was intended, and the expense incurred by keeping up the establishment ought to be done away.

Sir T. Baring assented to the *hon. gent.'s* (Mr. Hume's) remarks; and expressed a wish that the *rt. hon. gent.* (Mr. Wynn) would make his alteration permanent.

Mr. C. Grant trusted that his *rt. hon. friend* would only make this a temporary measure. The complaints against Haileybury College rested on mere vague report. That institution had been opposed by the protectors of patronage—by those who obstinately adhered to the former system, and who were averse to any improvement, which they regarded as a dangerous innovation; and likewise by a certain class of the Company's servants in India, who conceived that it would militate to their prejudice. Much had been asserted about the disturbances and irregularities which occurred in that establishment. On this point he would only say, and he defied those who censured the college to the proof, that those disturbances and those irregularities were not greater in number or degree than were to be seen in other seminaries of the same magnitude. Men of great talent, and who were perfectly competent to form a just opinion on this subject, had expressed decided sentiments as to the defects of this institution. In 1810, Lord Minto spoke

highly of its usefulness; a few years after, Colonel Roebuck gave testimony of a similar character; and, finally, the Marquis of Hastings had expressed his approbation of the college in the most unqualified terms. If he were not mistaken, the Marquis of Hastings traced much of the proficiency in knowledge, and much of the efficiency which was displayed by the Company's servants in the discharge of their duties, to the terms which they were obliged to pass at Haileybury College. Some gentlemen were of opinion, that it would be sufficient for every purpose, if individuals going out to India were obliged to submit to some common test. There appeared, at first sight, something very plausible in this; but it should be observed, that this test on examination could apply to nothing but literature. It could have no reference to scholastic discipline, to moral character, or to propriety of conduct. Besides, gentlemen must feel how easy it was to procure a certificate of proficiency under such a test as had been alluded to. When individuals spoke of the proficiency which a young man ought to obtain before he proceeded to India, he took it that they adverted to the lowest degree of proficiency—to that which might be fixed as a *minimum*. Now, it was quite evident to him that that *minimum* would be both the *minimum* and the *maximum*. There would be no inducement for a young man to acquire any knowledge beyond that which was necessary to carry him through his examination. Where there was competition, as was the case at present, the result was very different. Now he begged to ask, what was to be done with the patronage of the East India Company, if the existing system were abandoned? Was it meant to throw open the writer-ships to all the young men of the country? Were they to be made the reward of successful competition? If so, the question must be argued on other grounds. At present those appointments were made by the directors, and were viewed, not as matters to be contended for, but as a vested interest which individuals had already obtained through their connexions. So far from its being looked upon as a thing that might be contended for, many cases could be adduced, where, even when some delinquency was proved, it had been considered a great hardship to deprive the student of that which had been promised to him. This was a very nice point to deal with. The present system, he conceived, was well calculated for sending out efficient servants to India; but if a better could be devised, be the expense of time or money what it might, he certainly would support it.

After a few words from Mr. Trant, who said, that from his experience of its effects in India, he did not think so highly of the education of this college,

Leave was given to bring in the bill.

FRIDAY, APRIL 28.—Mr. Wynn moved the order of the day for going into a committee on the East India writers' bill.

Mr. Denman said that the incompetency of the persons who had been formerly sent out to India to fill the situations in which they had been placed, had been the cause of the most serious mischiefs. It was in order to correct this evil that the East India College had been founded, and in his opinion the experiment had fully succeeded.

When he recollected that the college could boast of such names as Macintosh and Malthus, he could not but feel alarm at any proposed interference with it. He did not mean to say that misgovernment had not occasionally prevailed in it, and that the students had sometimes been guilty of excesses; but when it was recollected that these students were apt to consider themselves not merely as boys at school, but as persons having a vested interest in the situations which were procured for them by their friends, and which but for the institution of this college, they would then be in possession of, it was not surprising that they occasionally fell into these irregularities.

Mr. Trant could not assent to the assertion that the persons who were sent out to India previously to the institution of the college had been so ignorant and uneducated as they had been represented. The abuses which had taken place in India, had not arisen from any want of education, but from the different system which prevailed there formerly, to the one which prevailed at present. In his opinion, the civil service had been very little improved by the establishment of the college, which had totally failed to answer the purpose for which it had been founded.

Mr. Canning quite agreed with the learned member (Mr. Denman), that although, in former times, great men had appeared in India, yet the country had a right to expect that there should be some competent security for the instruction and education of those who were sent out thither. At the same time he might hesitate between the present and a more general plan of instruction; for he believed that for all the purposes which men could be called upon to execute, the English gentleman's education was decidedly the best (cheers). But there were no means of obtaining this desirable object except by the test of examination; and then there were partialities, and a thousand other impediments, to operate against the purity of such a test. With respect to the institution under discussion, it appeared to him, that under circumstances of peculiar difficulty, it had been conducted with eminent credit to those to whom its management was entrusted, and great utility to the public service. At the same time he must say, that if it were to begin over again, he could wish, that instead of having the establishment in the centre of a barren heath, remote from all society, it had been placed under the local supervision of one or other of the Universities (hear, hear). It was to be regretted; that the whole time of the students was devoted to their own studies, and their youth spent in the society of those with whom their future lives were to be passed; for it would be much preferable if they were mixed up with the other youth of England, who were to devote their lives to other pursuits (hear, hear). In giving his support to this bill, he felt it right, however, to declare that he was not at all actuated by any wish to get rid of the college.

Mr. Lushington said, that, having had two sons at Haileybury College, he was enabled to speak to the character of the education furnished there, and he must say, that the system appeared to him to be excellent. One of his sons was reported to be qualified for the public service in seventeen days after his arrival in India, and the other in six months; and when young men were thus prepared, he thought it was the best

proof that the College fulfilled the purposes for which it was intended.

Mr. C. Wynn said, that there were only two plans by which the East India Company could obtain an adequate supply of efficient servants. One of them was to allow young men to qualify themselves elsewhere than at the College, and the other to increase the number of the young men educated there. Now this latter plan could not be immediately adopted, since it would take some time to erect additional buildings for their habitation, and the Company required an immediate supply of active servants. The first plan, therefore, must be acted upon for a time, and he conceived that much advantage might be derived from the competition which it would create among the promoters of the different systems of education for young men proceeding to India. He could not see any reason why a young man who had gone through the usual routine of a public school, and had afterwards applied himself at the Universities or elsewhere to the study of the languages of India, should not be equally well qualified for service in India with a young man educated at the college. He could not forget that one of the Company's most able servants, Warren Hastings, had been educated at Westminster school in the same form with Lloyd and Churchill, Colman and Cowper; and that he had retained the love of literature which he had imbibed there in his youth, amidst all the active pursuits of his maturer life. He agreed with his right hon. friend (Mr. Canning) that it would be desirable to connect the college with one of the Universities. He proposed to pass this bill only for three years, in order that it might be reconsidered at the end of that time, when the house had obtained further knowledge and further experience on the subject.

Several verbal amendments were then made in the committee, and the bill subsequently passed.

### *War in India.*

WEDNESDAY, APRIL 26.—Mr. Hume wished to know from the president of the India Board, whether he was prepared at this late period of the session to lay before the house any papers relating to the unfortunate occurrence at Barrackpore? He also wished to know whether the right hon. gent. was prepared to enter into any statement, or to submit any documents relating to the progress made in the unfortunate war which we were now carrying on against the Burmese?

Mr. C. W. Wynn said, that with regard to the first point, he thought it inexpedient to make any communication to the house. As to the second, Government had received despatches respecting the occupation of the island of Shappoorce, which he intended to lay before the house.

Mr. Bright thought that it was strange that this war should have been carried on so long, and so complete a silence observed in that house with respect to it. The only information which reached the country on the subject, was derived from the ordinary channels of public communication; and if any reliance was to be placed on the accounts thus published, the state of our affairs and of our army in that part of India was dreadful. He hoped that the session

would not be allowed to close without full details being given on the subject by Government.

Mr. C. W. Wynn said, that the public were not left without information as to what was passing in India, for copies of the despatches detailing the progress of the war, had been published in the *Gazette* in the usual way. It was true that some of our troops had suffered severely by the effect of the climate, but for this no blame could be attached to the Government of India.

Lord J. Russell observed, that it was the duty of the house to obtain information on this point from his Majesty's ministers. Without entering into any examination as to the cause, he could not help remarking that the present Government of India did not inspire that respect or confidence which had so eminently characterized the government of Lord Wellesley and Lord Hastings.

Here the subject dropped.

### *East India Naval Force Bill.*

FRIDAY, APRIL 28.—On the order of the day being moved for the second reading of this bill,

Mr. Bright said that he would take this opportunity of making a few observations on the indifference with which all subjects connected with India were treated by the people of England. The government of a hundred millions of people was entitled to the most serious consideration. One reason of that indifference was, that the Commons of England had no opportunity of examining minutely into the matter, for want of the information necessary to enable them to understand it. At present the generality of the people of England knew nothing of the affairs of India but what they learned from the *Gazettes*, and even there the intelligence was sometimes printed from copies which were not official. He knew that the measure before the house was not to be recommended on the score of economy. The house would be told that the East India Company was rich. He hoped it was so; he hoped that they should hear nothing of loans from the native Princes either forced or voluntary, for the purpose of carrying on the wars. But the money was not the only consideration the house ought to be influenced by. The power of granting money enabled the house to exercise that salutary control over all political matters which was the real preservation of the country. If this should once be abdicated, the house would commit the greatest possible fault by withdrawing from the public that knowledge and interest which was excited by the expenditure of the national money. He should, therefore, oppose the bill, and at some more convenient opportunity take the opinion of the whole house on the subject.

Mr. Wynn said, the bill was introduced in consonance with the system on which the affairs of India had been managed for the last forty years, which was, that all expenses arising out of wars in India should be defrayed out of the Company's territorial revenues. The public would be put to no expense whatever by the bill.

After a few words from Sir J. Newport and Mr. Astell, the bill was read a second time, and passed May 6.

## FINANCE AND TRADE.

*The Budget.*

MONDAY, MARCH 13.—The house having resolved itself into a committee of ways and means, the *Chancellor of the Exchequer* spoke as follows\* :—

"Mr. BROGDEN.—Although, sir, the circumstances under which we are now called upon to review the situation of our finances, differ in some material respects from those which existed at the corresponding period of the last year, yet there is nothing, in my mind, in the present aspect of public affairs, which ought to create either alarm or despondency. There may be grounds, and no doubt there are grounds, for much of individual sympathy for the severe distress which recent events have brought upon many classes of the community; and it is impossible that the causes which have tended to produce that distress should not, at the same time, be accompanied by much public inconvenience and embarrassment. But, sir, I think I may venture to say, that the violence of the storm has passed away; that the clouds which impended over us have begun to disperse; and that, by the very conflict of the elements, the atmosphere has, to a certain degree, been cleared and purified. If, indeed, there were any thing doubtful in the situation in which we now stand, and in the difficulties by which we have been so recently surrounded;—if there were any thing obscure or mysterious in their nature;—if they had arisen from causes beyond our comprehension;—then, indeed, there might be much more reason for uneasiness than appears to me to exist at the present moment. But in all the discussions which have taken place in parliament upon this subject in the course of the present session,—although there has undoubtedly been a great difference of opinion as to the precise extent to which different causes may have operated to produce certain results, there has prevailed among us, I think, but one sentiment as to the general nature of those causes, and as to their general operation in producing such consequences. I confess, therefore, that to my mind, this circumstance is a source of no ordinary consolation. In the course, however, of these discussions, there has been, in my opinion, a great deal of very unnecessary contest between those who are sneeringly denominated philosophers, and those who designate themselves by the more humble title of practical men. I call it "unnecessary contest," because I consider it to be the bounden duty of the legislature to endeavour at all times to render available the sound reasoning and theory of one class, by applying to them the practical experience of the other. It is only by a just application of the lessons of experience to the development of sound principles, that parliament can be enabled to determine upon its course;—it is only by a judicious combination of these, the two elements of all wise conclusions, that the house and the public can be empowered to form a just estimate of the situation in which the country may be placed, and to arrive at an accurate and satisfactory decision. But, if those who have to prepare their minds for the consideration, or for the determination of subjects of this nature, are to

be told that books must be thrown aside, and elementary reasoning rejected, I know not at what fountain they are to drink, if they are to be driven from those springs where science and knowledge are the presiding deities. And, sir, when we find that in every class of the community knowledge has extended, and is extending itself to a degree, which but half a century ago, would have been deemed impossible, are we who sit here, some of us as the ministers of the Crown, and all of us as united in the important act of legislating for a great country,—are we, I ask, to be behind-hand in availing ourselves of the increasing lights of human intelligence? Is it not, on the contrary, our duty to struggle to be foremost in the race (hear, hear)? Knowing, as we do, that the progress of human knowledge must, in the first instance, be gradual and limited, it is our business to take care that, instead of being outstripped, we lead the way; and, by assisting the judgment of our countrymen, enable them to avoid the errors into which they might otherwise fall, in regard to those great questions which so nearly affect their own, and the national interests. I am aware, sir, that there are some persons who think this general diffusion of knowledge the misfortune of the age; but, for my own part, I confess that I cannot conceive how that mind can be constituted which contemplates the progress of human knowledge with an eye of fear (cheers). On me it produces an impression diametrically the reverse. I am convinced, that the more accurately the mass of the people is informed, the more they are in a condition to see and comprehend what is essential for their good, and the means by which that good is to be attained; the more likely are they to abstain from the use of means which would be prejudicial in their operation, and which would be calculated to prevent, rather than to forward the attainment of the good which they naturally desire to possess. If then, all men (I was going to use that despised term, all philosophers) are agreed in the maxim, that "knowledge is power," the general diffusion of knowledge becomes of incalculable value to a nation; for if, with reference to our present difficulties, and to all difficulties of a similar kind in which we may be placed hereafter, we find the people at large, if we find the legislature in accordance with the people, and if we find the government in accordance with the legislature—all building their conclusions on sound principles, all proceeding on the foundation of correct reasoning, I confess I think we may treat with comparative indifference the recurrence of the dangers by which we have lately been assailed; partly, because the chance of their recurrence will be diminished, and partly, because, if they should recur, we shall know better how to meet them.—Sir, it is under these circumstances that we are called upon to look at the situation in which our finances now stand, and to consider what are the prospects of the country for the future. I think, however, that before I can satisfactorily proceed to explain the view which his Majesty's Government takes of what it is fitting to do under existing circumstances, I ought to recal the attention of the committee to the course which has been pursued with respect to our financial system during the last two or three years. And I am the more anxious to do this because I have been reproached,—and reproached in no very equivocal terms,—with having, on former occasions, used warmer lan-

\* Reprinted chiefly from "Speech of the right hon. F. J. Robinson, &c."—London: Hatchard, 1826.

guage than I ought to have used, and with having contributed by that language to the production of much of that mischief which we all so deeply deplore. Sir, it may be true, it undoubtedly is true, that in adverting to the situation of the country in the last few years, daring which it has been my lot to have any concern in matters of this kind, I have used strong expressions of congratulation. It is true, I say, that, on such occasions, I have described the country as in a condition of prosperity. And, sir, I do not now regret that language; I do not now depart from that declaration; for surely the country is not to be considered in a state of decadence because some untoward circumstances may have occurred, to interrupt her progress, and even throw her back, for the moment, in her course. But this I will venture to add, that however I may have erred in the terms which I have employed; however, from the delight which every honest man must feel in seeing his native land flourishing and happy, I may have congratulated the house on the result with more of earnest warmth than of calculating hesitation, I have, in no case, stated any thing as fact but that which was strictly true: and, I think I can satisfy the committee, upon a reference to what I have led them to expect during the last three years, and to the results which have actually ensued, not only that I have not intentionally deceived the country (though that, indeed, has, I believe, not been imputed to me) but that no deception at all has been practised.—When, in 1823, it first became my duty to submit to the house a view of our finances, I ventured to assume that, in the course of that year, a certain amount of revenue would be realized; and allow me to ask,—What was the result? It was found that my estimate, not formed upon any over-confident anticipation of improvement and increase, but upon the plain and simple basis of the revenue which had been already received, was far below the actual amount. I assumed, in that year, that the Customs, the Excise, the Stamp Duties, the Assessed Taxes, and sundry miscellaneous items, would produce an income of 52,200,000*l.* In the course of that session, we repealed taxes to the amount of about 3,200,000*l.*; of that sum I calculated that about a million and a half would be lost to the revenue in the course of 1823; so that, in point of fact, my original estimate would have been borne out, if the receipts had been 1,500,000*l.* less than 52,200,000*l.* Now, what was the result? Why, that the actual revenue, after sustaining the loss that I have mentioned, amounted to 52,017,000*l.*; being less by 183,000*l.* only than my first estimate; and exceeding, by 1,318,000*l.*, what would have been sufficient to realize my anticipations, after the reduction of taxes had been adopted. In regard to the year 1823, therefore, it is clear that I held out no expectations which were not justified by the event. And if the committee will examine the accounts for the following year, they will be led to the same conclusion. In the year 1824, I estimated the probable produce of the revenue at 51,265,000*l.* In the course of that session, however, taxes were repealed to a very considerable amount; and I calculated that the loss which the revenue would immediately sustain in consequence, would be 630,000*l.* But what was the fact? The actual receipts of the year, notwithstanding such a reduction of taxes, were considerably beyond the original estimate which I had formed: for, the estimate

being 51,265,000*l.*, the actual produce was 52,562,000*l.*; being an excess of nearly 1,300,000*l.* Again, in 1825, I assumed that the revenue derived from the same sources would be 51,975,000*l.* From the repeal of taxes, subsequently enacted, I expected that in the course of that year the loss upon that assumed amount would be about 630,000*l.* Yet, the actual receipt, notwithstanding the defalcation occasioned by that cause, and by the commercial difficulties and pressure that began to be felt at the latter end of the year 1825, was 52,259,000*l.*; or, 284,000*l.* above my original estimate in the statement of the Budget; an estimate founded upon an hypothesis which had no reference to any reduction of taxes in the course of that year.—The result of all these statements is this:

|                             |                      |
|-----------------------------|----------------------|
| Estimated revenue for 1823, | 52,200,000 <i>l.</i> |
| 1824,                       | 51,265,000 <i>l.</i> |
| 1825,                       | 51,975,000 <i>l.</i> |

Total, 155,440,000*l.*

|                               |                      |
|-------------------------------|----------------------|
| Actual receipt for .... 1823, | 52,017,000 <i>l.</i> |
| 1824,                         | 52,562,000 <i>l.</i> |
| 1825,                         | 52,259,000 <i>l.</i> |

Total, 156,838,000*l.*

It thus appears, that in those three years the actual receipts exceeded the estimates by the sum of 1,398,000*l.*; notwithstanding the concomitant repeal of no less than 8,000,000*l.* of taxes. I say, then, and I say boldly, that I have not erred as to facts; and that I have not been guilty, even involuntarily, of deluding the country by the language which I employed.—Allow me, sir, here to advert to another point, to which it is material that the attention of the committee should be called. I have already stated, that in the course of the three years to which I have been alluding, taxes to the amount of 8,000,000*l.* were repealed. But I think I should give a very imperfect view of the situation of our finances, and of what has been done in respect of them, if I did not request the committee to go back with me a little further, namely, to 1816, when, after winding up all the expenses of the war, parliament was enabled to establish and pursue something like a systematic diminution of our burthens. It is very material, sir, that this subject should be adverted to, because it has been argued in the course of the present session, that in fact the reduction in the burthens of the people, which has been made since the conclusion of the war, is not worth speaking of; that it is but a feather in the scale, opposed to the general amount of our expenditure; and that it has not been more than sufficient to balance the difference which has taken place in the value of our currency. It has also been maintained, that it is impossible for us to return to a more sound currency (for the purpose of returning to which, measures have lately been, and now are, under the contemplation of parliament)—that that perilous experiment, as it is described to be, cannot safely be hazarded, unless his Majesty's ministers are prepared decidedly and essentially to curtail the whole expenditure of the empire at once, inasmuch as it would be impracticable to effect the amelioration of our currency, and at the same time continue to levy the amount of taxation of which the exchequer is at present in the receipt. Sir, I consider these two propositions to be wholly unfounded in

fact and in reasoning. I think I shall be able to show the committee, that there is no ground whatever for the assertion that we have done nothing,—or rather that we have not done enough. When I say that we cannot justly be charged with not having done enough, I do not by any means wish to be understood that we ought to stop in the course of reduction, where we are; that is far from being my view, or my feeling, on the subject; but I am prepared to prove, that there is no truth in the statement, that we have been doing little or nothing; and just as little in the assertion, that the melioration which we are endeavouring to effect in our currency is inconsistent with the present scale of our expenditure, and the present amount of our taxation.—Adverting, in the first place, to the reduction which has taken place since 1816, I will state to the committee the precise process of the reduction which originated at that period,—the different items on which it has been made—and the principles by which it has been regulated. And, when I have made this statement, I think the committee will see that parliament has not been asleep upon its post; that it has not neglected the great duty—for a great duty I must always consider it—of endeavouring, in a time of peace, to relieve the people, as much as possible, from the oppressive burdens which have been unavoidably imposed during the continuance of war. In 1816 (the first year in which any reduction of taxation took place), the property tax was repealed. I know very well, sir, that the repeal of that tax was effected contrary to the opinion and recommendation of his Majesty's Government. It is undoubtedly true, that under the circumstances of the time, Government was desirous that the property tax should be continued for two years longer. The house thought otherwise; they thought it ought to be repealed immediately, and repealed it was. It is not my purpose now to inquire whether Government was right in proposing to retain it, or the house in resolving to take it away; but, at all events, the people gained the advantage of the repeal of a tax, the annual amount of which was no less than 14,320,000*l.* In the same year, the war malt duty of 2,790,000*l.* was abandoned; and further relief was afforded, in the diminution of war-customs, duties on tonnage, and coasting duties, to the extent of 828,000*l.* To these are to be added, 35,000*l.* arising from a small reduction of the assessed taxes in Ireland, and 315,000*l.* from the diminution of the duty on malt and spirits in the same country. The total amount of taxation thus repealed in 1816, was 18,258,000*l.* In 1817, partial relief, under the heads of shop-windows, husbandry, horses, &c. was afforded, to the extent of 280,000*l.* In 1818, various assessed taxes were reduced in Ireland, to the amount of 236,000*l.* In 1819, the policy pursued by Parliament was of a different character; and a very considerable addition, to the amount of 3,190,000*l.* was made to the taxation of the country. In 1820, no alteration whatever took place. In 1821, the repeal of the agricultural horse tax lessened the burdens of the farming class of the people by 480,000*l.* In 1823, the duty upon malt was reduced one shilling a bushel, and the public were relieved thereby to the amount of 1,400,000*l.* Nearly the whole of the impost upon salt was also removed, being a reduction of 1,295,000*l.*; there was likewise a reduction of half the duty upon leather, 300,000*l.*; the tonnage duty, 160,000*l.*; and the tax upon

hearthths and windows in Ireland, 800,000*l.*;—so that the total amount of taxes repealed in the year 1822 was 3,355,000*l.* In 1822, various assessed taxes in England were repealed, to the amount of 2,250,000*l.*; whilst the relinquishment of the whole of them in Ireland, saved the inhabitants of that country the payment of 100,000*l.* Added to this, was a reduction of the duties on spirits, both in Ireland and in Scotland, to the extent of 800,000*l.*; and a reduction of 50,000*l.* in several minor branches of the customs. The total relief in 1823, therefore, was 3,200,000*l.* In 1824, the following duties, to the following amount, were diminished: viz. on rum, 150,000*l.*; coals, 200,000*l.*; law stamps, 200,000*l.*; wool, 350,000*l.*; silk, 527,000*l.*; union duties, from 1822, 300,000*l.*; making a total of 1,727,000*l.*—The total repeal in 1825, was not less than 3,146,000*l.*; and it was produced in the following manner:—by the relinquishment of the remainder of the salt duty, about 200,000*l.*; of the duty on hemp, 100,000*l.*; on coffee and cocoa, 150,000*l.*; on wine, 900,000*l.*; on British spirits and rum, 1,250,000*l.*; on cyder, 20,000*l.*; on assessed taxes, 276,000*l.*; and, finally, on customs, in various minor articles of commerce, 250,000*l.*—Thus, sir, it appears that the grand total of taxes repealed from 1816 to 1825, amounts to the sum of 30,712,000*l.*; from this, however, must be deducted the sum of 3,190,000*l.*, being the amount of taxes imposed in 1819, for the purpose of establishing an efficient sinking fund: but, taking that sum from the total of 30,712,000*l.*, it will leave 27,522,000*l.* as the clear remission of taxation since 1816. Now, sir, I say with confidence, that the repeal of 27,522,000*l.* of taxes, is a substantial and important relief to the country; and that it is impossible for any man in his senses to argue, that this large remission of duties has not mainly contributed to that increased consumption which has itself augmented the revenue. It is very true, that in 1816, if the rates of exchange with foreign countries be taken as the criterion, the value of the currency was depreciated, perhaps to the extent of 5 per cent.; so that the whole reduction of taxes which, as I have stated, took place in that year, cannot perhaps be looked upon as a clear reduction, since a part of it might be necessary, in order to meet the rectification of the circulating medium; if the depreciation were 5 per cent., then, upon the actual amount of taxation in the year in which it occurred, namely 61,000,000*l.*, that portion would amount to about 3,000,000*l.*; and if we deduct this 3,000,000*l.* from the 27,522,000*l.* of taxes remitted, it will leave 24,522,000*l.* as the actual reduction of the burdens of the people, since 1816. And, when I assert and prove that actual relief has been afforded to this extent, I know not that it is necessary for me to argue, *à priori*, that it has done good; because I apprehend that the common sense of every man must demonstrate to him that that must be the inevitable consequence. Let us, however, look at it a little in detail; if we deduct the 24,000,000*l.* from 58,000,000*l.* (which would have been the amount of the revenue, after deducting the sum of 3,000,000*l.*, to which I have before alluded), the result would leave only 34,000,000*l.* as the produce of the revenue; but the actual receipts of 1825, notwithstanding all the diminutions which I have been describing, were not less than 52,000,000*l.* And how have the 18,000,000*l.*, the difference between the two sums, been ob-

tained?—solely from the greater means which the people have possessed of consuming the various articles upon which taxes are levied: and if, sir, we were to try this question by the test of the feelings of the people who had to pay the taxes, I ask whether we should not find that the remission of them had given the freest satisfaction? I see in his place the hon. member (Mr. Calcraft) who so actively and successfully exerted himself to effect the repeal of the duty on salt. The ground which that hon. gent. stated, and truly and clearly stated, for that repeal, was, the severity with which the duty upon salt pressed on the poor man. Ask the poor man, now that he has no duty to pay upon salt, whether, when he comes to sum up the amount of the charges for his maintenance and comfort, he does not feel better satisfied, and more at his ease? He will tell you that he is greatly obliged to the hon. member for having been the means of inducing the house to repeal that tax. I should like, sir, to ask the 171,000 persons who were last year relieved from the payment of the house-tax, or the 635,000 persons who were last year exempted from the window-tax, if they have derived no practical benefit from those reductions, and if they do not feel grateful to parliament for having made them (cheers). I should like to ask them, whether they agree with the hon. member for Aberdeen (Mr. Hume), that nothing has been done for their relief, either by his Majesty's Government, or by the legislature; and whether they feel, as that hon. member would fain persuade them that they ought, that as much money is now taken out of their pockets in the shape of taxes, as was the case before those reductions took place (cheers). I should like to ask them whether they agree with the hon. gent. that their feelings and wishes have been set at nought; and that his Majesty's Government can think of nothing but plunging into some wanton and extravagant expense, for some wretched and trumpery purpose of patronage! I declare most sincerely, that if there be any thing uppermost in my mind in the consideration of these matters, it is an earnest desire to lay aside all thoughts of mere official interest and patronage. In considering the expediency of the abolition of any particular tax, the miserable question of patronage has never crossed my mind. It has never occurred to me to ask myself, "What will be the consequence, if Government should lose this or that source of influence?" No doubt, sir, that, in many respects, it would have been very agreeable to me, personally, if a different system had been pursued, and if the patronage of his Majesty's Government had not been cut down as it has been. I have many friends upon whom I should have been exceedingly glad to confer some convenient appointment (a laugh). But, when applications have been made to me on such a subject, I have felt no difficulty in saying, "I am really very sorry, but I have nothing to give you; we have no spare offices, and no spare money; we have reduced every thing to the lowest point; we cannot put any individual into a public situation who is either too old, or too young, or too idle, to do his duty. I can recommend to an office under Government only the man who is competent to fill it properly; if you are not competent, I am very sorry for it, but you cannot come in" (laughter). This is the language which I and others invariably hold on such occasions; and the consequence has been, that I

believe it is agreed, on all hands, that the efficiency of the public service, in every department, was never more complete than at the present moment. Allow me also to say, sir, that, during the period to which I have been referring, the permanent burdens of the country—I mean those connected with the debt of the country—have been materially reduced. But, before I touch upon that point, it may be satisfactory to the committee to know a little in what ratio the power of consumption in the country has increased since the year 1816; and here I shall be able to shew, beyond the possibility of dispute, that the fears of such as assert that the country cannot go on without the adoption of some undefined and unintelligible change in our present system, are perfectly visionary. I have in my hand a list of a great variety of articles paying duty, with a comparison of the amount of those articles on which duty was paid in 1816, and the amount on which duty was paid in 1825. From this list I find that the increase has been in the following ratio:—

|                              | Per cent. |
|------------------------------|-----------|
| Auctions - - - - -           | 64½       |
| Beer - - - - -               | 16½       |
| Bricks - - - - -             | 188       |
| Candles - - - - -            | 36½       |
| Licences - - - - -           | 36        |
| Paper - - - - -              | 51½       |
| Printed Goods - - - - -      | 110½      |
| Hard Soap - - - - -          | 113½      |
| Soft Soap - - - - -          | 121½      |
| Tea - - - - -                | 20½       |
| Crown Glass - - - - -        | 95½       |
| Green Glass - - - - -        | 10½       |
| Flint Glass - - - - -        | 104       |
| Plate Glass - - - - -        | 108½      |
| Leather - - - - -            | 29        |
| Malt - - - - -               | 50        |
| British Spirits - - - - -    | 53½       |
| Foreign Spirits - - - - -    | 81½       |
| Butter - - - - -             | 317½      |
| Sugar - - - - -              | 19        |
| Tallow - - - - -             | 201       |
| Timber - - - - -             | 196       |
| Deals - - - - -              | 182½      |
| Coffee and Cocoa - - - - -   | 43        |
| Hemp - - - - -               | 74½       |
| Rum, a decrease of - - - - - | 12½       |
| Raw Silk - - - - -           | 274½      |
| Thrown Silk - - - - -        | 180       |
| Tobacco - - - - -            | 13½       |
| Wine - - - - -               | 88        |
| Sheeps' Wool - - - - -       | 443       |
| Cotton Wool - - - - -        | 119       |

Hon. gents. may exclaim, "Do you mean to say that the increase of consumption is to be taken strictly in that extravagant ratio; as upon wool, for instance, at 443 per cent.?" I answer, certainly not; but I produce this document to show that there is that progressive power of consumption in this country which is indispensable to her greatness, and which forms the most convincing proof of the inherent vigour which has hitherto enabled her to meet and overcome difficulties the most formidable, and on which I confidently rely for similar success in future.—I will now return to what I was about to state with regard to the public debt. Whilst we have been decreasing the pressure of taxation, to the amount of 27,522,000l. since 1816, and of 8,000,000 since 1823, we have not been inattentive to the permanent burdens of the kingdom. In this part of my statement, I will advert only to the transactions of the last

three years, because it was not till 1823 that the present arrangement of the sinking fund was carried into effect. On the 5th Jan. 1823, the public funded debt amounted to 796,530,000l.; on the 5th Jan. 1826, it amounted only to 778,128,000l.; being a reduction in the three years of 18,402,000l.; which is at the rate of nearly 6,134,000l. per annum.—I will now direct the attention of the Committee to the unfunded debt. On the 5th Jan. 1823, the unfunded debt was 36,281,000l.; on the 5th Jan. 1826, it was 31,703,000l.; being a reduction of nearly 4,578,000l. The total charge—and that is the only true way of looking at the subject, for all that we are interested in knowing is, not what is the nominal capital of the debt, but what it costs us annually—the total charge (including the charge for management) on the 5th Jan. 1823, was 28,123,000l.; the total charge of the unredeemed funded debt, on the 5th Jan. 1826, was 27,117,000l.; being a reduction on the charge of the funded debt of 1,006,000l. The interest on Exchequer Bills, during the same period, was reduced from 1,100,000l. to 820,000l.; being a reduction of 280,000l. The total charge of the two descriptions of debt was, on the 5th Jan. 1823, 29,286,000l.; on the 5th Jan. 1826, only 27,946,000l.; being a reduction of 1,340,000l. in the annual charge of the whole debt, in the course of three years. And yet the hon. member (Mr. Hume) says, that all this is nothing—that it is a mere feather in the scale—that it affords no substantial relief to the people! Now, sir, in my view of the case it is of no consequence whether this state of things has been produced by a sinking fund, or by a surplus, or by any other means. It is not the name of the thing, but the substance, that is important. If the nation pays less in this respect now by 1,340,000l. than it did in 1823, and if, at the same time, good faith has been preserved with the public creditor, and adequate provision made for the maintenance of the character, honour, and security of the country; if we have also been enabled to do much towards the extension of the benefits of religious instruction and worship to the poorer classes; if we have furnished the means of interior improvement, in the construction and repair of roads, bridges, harbours, and objects of that kind; if we have had something likewise to bestow on the promotion of the arts and sciences; and if, in three years, we have nevertheless repealed 8,000,000l. of taxes, and have reduced the annual expense of the debt considerably more than 1,000,000l., I say, fearlessly, that we have done something, and that we may boldly face our constituents, in whatever part of the country, and at whatever time, we may have to appeal to them for their suffrages.—Sir, I have just been alluding to that portion of our annual charge which has been diminished by a reduction of the charges of the debt. There is, however, another part of our expenditure, against which I have always felt inclined to wage the most unrelenting warfare; I mean, the expense attending the collection of the revenue. It is a subject which has often attracted the attention of the house; and I have never allowed it to go out of my sight. We have not been idle or inattentive on this point. In 1818 the expense of collecting the taxes of the United Kingdom was 4,353,000l.; in 1825 it was reduced to 3,832,000l.; being a diminution of no less than half a million. This was a great deal to do in the time. Considering that great changes in such matters cannot be accomplished all at once, let me say, that this

reduction of half a million affords, at least, *prima facie* evidence that we have endeavoured to do our duty. Nor, sir, let it be supposed that this was a very easy task. We have had many strong prejudices, many powerful interests, many deep-rooted habits, to contend with. I think I cannot give a better proof of the sort of feeling which we have had to encounter, than by adverting to what has been recently published to the world in the northern part of this island. It seems that the extinction of the two independent Boards of Customs and Excise in Scotland (and the same course has been pursued in Ireland), and their amalgamation with the central Boards in England, are to be considered by every true Scotchman as derogatory to his national dignity, offensive to his national pride, and subversive—Good God! of what?—Subversive of his prescriptive rights? When Antony, in the beautiful speech which Shakspeare puts into his mouth over the dead body of Cæsar, after an eloquent and pathetic description of the wounds under which Cæsar had fallen, exclaims, in a burst of passionate enthusiasm,—

“O what a fall was there, my countrymen!  
Then you and I and all of us fell down,  
And bloody treason flourished over us:”

the appeal was not more vehement, the passions of his auditors were not more keenly excited, than the appeal which is now made, and the fire which is now kindled, against the unfortunate author of the woeful tragedy which terminated the existence of two insignificant fiscal departments (loud laughter)! Sir, I could not imagine, at first, what was meant by all this indignation. I felt almost like “a guilty thing,” oppressed by the weight of some undefined offence. If I chanced to meet my noble friend at the head of the Admiralty, or any of my hon. friends who sit at the same Board, I hardly dared look them in the face. I felt confident that the denunciation was for some dreadful crime, but I knew not what; and I was left for some time in all the agony of doubt. At last, I had the consolation of recollecting that I had Scotch blood, and good old Scotch blood too, flowing in my veins; and was persuaded that I could never be insensible to the honour and dignity of that ancient country. But, sir, I confess that, when I have been passing in review all the signal triumphs which Scotland has achieved, in all that adorns, and ennobles, and benefits the human race; when I have been calling to mind the originality, the grace, and the genius of her poets; the eloquence, the accuracy, and the research of her historians; the elaborate lucubrations, and the profound discoveries of her philosophers; when I have been watching their progress as they respectively either traversed the delightful regions of fancy, or penetrated the depths and recesses of history and of science, I never thought of including among the worthies of Scotland, the members of her independent Board of Excise. And when I have been reading with grateful exultation of the heroic exploits of an Abercrombie, a Moore, a Lynedoch, and a Hopetoun; when, two years ago, it fell to my lot to propose to this house to do an act of tardy justice, by proposing to vote a monument to the memory of Lord Duncan; I certainly never dreamt that the honour of Scotland would be tarnished, if in the same year I transferred the seat of the Board of Customs from Edinburgh to London. I always thought that

the honour of Scotland rested on a more solid basis. I thought that the glory of the great men who have adorned the annals of that country, would have shone with perennial light, if the Excise had never meddled with her whiskey, nor the Customs controlled her commerce; and I trust we may long continue to contemplate their lustre with instruction and delight, although her revenue boards have lost the affected importance of their imaginary independence, and have been swallowed up, O! dreadful catastrophe! in the all-devouring vortex of English uniformity (loud laughter). When, too, I am told, that the abolition of these and similar offices is something disrespectful to the what is called (not however by me) the impoverished nobility of Scotland, I think that if I were a real Scotchman, I should be too proud to admit that the honour of the ancient lineage of that ancient kingdom would be diminished, because the Government had less patronage to offer, and her nobility less of emolument to covet (cheers). These measures, dictated alone by the necessity of judicious retrenchment, may indeed be represented as punishments inflicted on an innocent and unoffending people, and the wrath of Scotland may be denounced against their author; but, as long as I am armed with the consciousness of seeking to diminish the burdens, and to increase the happiness of the people, I can look without terror upon the flashing of the Highland clay-more, though evoked from its scabbard by the incantations of the first magician of the age (loud cheers).—I shall now, sir, proceed to the subject more immediately under our consideration, and call the attention of the committee to the financial condition of the country for the present year. I have already stated to the committee the great extent to which taxation has been diminished; I have stated the benefit which I am sure the country must have derived from the reduction; I have also shown how, out of that very reduction itself, may arise the means of carrying the benefit still further; and I shall now proceed to detail the estimate for the present year, 1st, as respects the charges, and 2dly, the means by which I propose that those charges shall be met. The expenses are divided into two parts, viz.—the permanent charges, and those which are the subject of annual votes; and as of the latter, a considerable portion has already been sanctioned by the House, I do not think it will be necessary for me to trouble the committee with any comments or details respecting it. But the general heads of the two branches are as follows, viz.—

|                                                                                                                             |              |
|-----------------------------------------------------------------------------------------------------------------------------|--------------|
| Interest and Management of the Public Debt - - - - -                                                                        | 27,117,186l. |
| Interest of Exchequer (deficiency) Bills - - - - -                                                                          | 50,000l.     |
| Civil List, and Pensions of a permanent nature, charged on the Consolidated Fund, and not the subject of an annual vote - - | 2,065,000l.  |
| Half-pay Annuity - - - - -                                                                                                  | 2,800,000l.  |
| Sinking Fund - - - - -                                                                                                      | 5,585,235l.  |
| Permanent charge on Consol. Fund                                                                                            | 37,617,421l. |

The annual votes this year in the Committee of supply are as follows:—

|                |             |
|----------------|-------------|
| Army - - - - - | 7,747,000l. |
| Navy - - - - - | 6,135,000l. |
| Szsa. 1826.    |             |

|                                 |             |
|---------------------------------|-------------|
| Ordnance - - - - -              | 1,751,000l. |
| Miscellaneous - - - - -         | 2,225,000l. |
| Interest of Exchequer Bills - - | 850,000l.   |

|                          |              |
|--------------------------|--------------|
| Annual Votes - - - - -   | 18,711,000l. |
| Add the Permanent Charge | 37,617,421l. |

The whole expenditure of the year 56,328,421l.

I now, sir, proceed to state the revenue upon which I calculate to meet this expenditure:—

|                                                                                                                                                                                                                                            |              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| A small item, being the surplus of last year beyond the demand of the Sinking Fund, which I consider myself entitled to make available towards the expenditure of the present year - - -                                                   | 167,000l.    |
| Customs and Excise; which I take together, on account of the transfer to the Customs of a large proportion of the duties formerly collected by the Excise; and the impossibility of separating the items without great confusion - - - - - | 37,446,000l. |
| Stamps - - - - -                                                                                                                                                                                                                           | 7,400,000l.  |
| Taxes (including the Assessed Taxes) - - - - -                                                                                                                                                                                             | 4,800,000l.  |
| Post Office - - - - -                                                                                                                                                                                                                      | 1,550,000l.  |
| Miscellaneous - - - - -                                                                                                                                                                                                                    | 1,360,000l.  |

The total Income from these sources - - - - - 52,723,000l.

Payment from the Trustees of Half-pay and Pensions - - - 4,320,000l.

The whole Receipts of the year 57,043,000l.  
Deduct the Expenditure - - 56,328,421l.

Surplus for Parliament to deal with as they may think fit - } 714,579l.

Having thus stated the revenue on which I calculate to meet the expenditure of the present year, it is fit that I should state the grounds of that calculation. It may appear to the committee that, under all the existing circumstances, I am now looking to a receipt higher than that which I have a right to expect; but I will distinctly specify the reasons which induce me to believe, that the amount on which I calculate will be realized. I begin by laying down, as the basis of my estimate, the actual receipt of the past year; making, afterwards, such variations as circumstances may appear to require. The actual receipt of the Customs and Excise, for 1825, was 37,546,000l. But this sum would have been much larger, had it not been for various occurrences which happened in the course of the year, and which affected those branches of the revenue to an extent much greater than I had anticipated; occurrences which cannot again take place. I allude, principally, to the amount repaid, in consequence of the reduction of the wine duty, to the holders of the stock on hand. This was no less than 1,050,000l.; a formidable sum; and much more, as I have already observed, than I conceived it would be. Since, however, it arose from a cause of only casual occurrence, and since there can be no operation parallel to it upon the Customs and Excise of the present year, I am entitled to assume, supposing no other circumstance interferes to reduce the net receipt of the revenue

ne, that this sum of 1,050,000l. would be receivable in 1826; that is to say, that it will not be abstracted from the gross revenue of Customs and Excise in 1826, as it was in 1825. I calculate, also, upon a small addition to the receipts of the present year, arising from the further operation of those measures for getting rid of divers useless or mischievous bounties, which my rt. hon. friend (Mr. Huskisson) introduced so beneficially for the commerce of the country, in the last session of parliament. I take the amount of these to be about 50,000l. There was also another circumstance which most unexpectedly affected the revenue of last year. The committee is aware that, in the course of the last session, there was carried into effect one of the most extensive alterations and amendments ever made in the laws of the Customs. Several hundred acts of parliament relating to them were, by the laborious and joint exertions of an hon. friend (one of the Secretaries of the Treasury), and of the gentlemen who were associated with him in the task of getting rid of so multifarious and inconvenient a system of legislation, reduced to about six clear and intelligible statutes. In the accomplishment of so great a work, it is not wonderful that some minor errors should have crept in and escaped detection; and it so happened that by one of those minor and venial errors, the revenue has been affected in a way for which we were not quite prepared. The duty on Tobacco, which, at the beginning of 1825, was four shillings a pound, and which was meant to be continued at that rate during the remainder of the year, was so dealt with in one of these new acts, that, by some strange mischance, one shilling of it lapsed on the 5th July; so that for one half of the last year, that is to say, from the 5th July, 1825, to the 5th Jan. 1826, the duty on Tobacco has been reduced from four shillings to three shillings a pound. This accidental omission has cost the revenue 450,000l. But, I am entitled to assume that, unless it should be the pleasure of the house to confirm permanently this temporary diminution of the duty on Tobacco, that loss will not occur in the present year. The three items, then, to which I have alluded, are as follows:—

|                                                                                                                   |                    |
|-------------------------------------------------------------------------------------------------------------------|--------------------|
| Progressive reduction of Bounties                                                                                 | 50,000l.           |
| Wine Drawback, allowed last year to the wine merchants, but not to be deducted from this year's revenue - - - - - | 1,050,000l.        |
| Loss by the lapse of Tobacco duty - - - - -                                                                       | 450,000l.          |
|                                                                                                                   | <hr/> 1,550,000l.  |
| If to this be added the actual produce of the Customs and Excise in 1825 - - - - -                                | 37,546,000l.       |
|                                                                                                                   | <hr/> 39,096,000l. |
| We have a Total of - - - - -                                                                                      | 39,096,000l.       |

It is, however, obvious, that it would be quite preposterous in His Majesty's Government to calculate upon such a receipt as this, under the present circumstances of the country. I think it would be exceedingly imprudent to do so, as I am perfectly ready to admit, that such a receipt is not likely to be realised in the course of the present year. It is our duty, then, to see what deductions from this amount of 39,096,000l. we ought to calculate upon. In the first place, there is to be taken into the account a further loss to the revenue, arising from the

reduction of taxation last year; which further loss I estimate at 350,000l. The statement of the views of Government, in respect to the reduction of taxes, took place at so early a period last year, that the effect of them began to be felt almost as soon as they were announced. In point of fact, during three quarters of the last year, we experienced three quarters of the whole amount of the loss which I had calculated as likely to accrue from the operation of the reductions. I therefore imagine that we may lose in the present year, from the same cause, not more than the amount of loss on the remaining quarter; and I estimate it at 350,000l. I feel, however, that I ought to explain to the committee how it happens that, after having stated the total amount of reductions effected last year to be no less than 3,146,000l., I now, when speaking of the loss to be expected in one quarter, state it at no more than 350,000l. The reason is this: although the reduction of taxation, as estimated by a comparison with the previously existing rate, amounted to 3,146,000l.; yet, upon the principle that a judicious reduction of a high rate of taxation naturally leads to a great increase in the consumption of the articles taxed, I took the *actual* loss to the revenue at not much more than 1,500,000l., of which sum 276,000l. would fall upon the assessed taxes; so that 350,000l. being rather more than one-fourth of the *actual* loss assumed upon the customs and excise, is as much as we may expect to lose in 1826. I am, however, sir, very sensible that, under all the circumstances attending the late derangement and confusion of the money market, and the consequent stagnation of the external commerce and the internal industry of the country, it would be very unsafe to frame any estimate of the revenue of the present year, without making a fair allowance for a further loss, which may be expected to arise from diminished consumption. I have endeavoured to form, as well as I could, some sort of calculation of the amount at which that loss ought to be taken. It is, undoubtedly, very difficult to come to any such precise conclusion upon this subject, as can be satisfactorily exemplified at once by any mere statement of figures. It must depend upon such an infinite variety of considerations, that possibly no two persons, although working with the same materials, and reasoning upon the same principles, would arrive at precisely the same result. But, having already assumed that there will be a deficiency in the customs and excise of 350,000l., being the remainder of the loss occasioned by the reduction of taxation last year, I anticipate from diminished consumption a further loss of 1,300,000l.; which, notwithstanding the difficulty of coming to any precise decision upon the subject, I take to be as reasonable a view of the matter as can be taken under such uncertain circumstances. And I am confirmed in this view of the subject, when I refer to what has been the actual state of the excise revenue during the two first months of the present year, which were months of great pressure and great uneasiness, and during which the officers of the revenue were directed to abstain as much as possible from pressing inconveniently on those who were not in a condition to meet their demands,—a course of proceeding which we felt ourselves called upon by the severity of the distress in some districts to adopt.—Looking, then, to the general receipts

of the excise in Jan. and Feb., on all the articles in which there has been no alteration in the duties, and comparing them with the receipts in the corresponding months of 1825, it appears that the loss has not exceeded, for that period, the sum of 2389l.

|                                                           |             |
|-----------------------------------------------------------|-------------|
| The gross receipts for Jan. and Feb. 1825, were - - - - - | 2,259,669l. |
| For Jan. and Feb. 1826 - - - - -                          | 2,257,290l. |
| Decrease - - - - -                                        | 2,389l.     |

On those items in which a reduction of duty was effected last year, such as cyder, glass, licences, sweets, and vinegar, there has been a diminution of produce in the two months of Jan. and Feb. last, as compared with 1825, of 102,000l.

|                                                  |           |
|--------------------------------------------------|-----------|
| The produce in Jan. and Feb. 1825, was - - - - - | 292,933l. |
| In 1826 - - - - -                                | 190,933l. |
| Decrease - - - - -                               | 102,000l. |

But this decrease does not arise principally from a diminished consumption of excisable articles. It arises almost entirely from an alteration of a very extensive nature, which has been effected in regard to the system of granting licences in Ireland, and to the scale of duties payable on those licences. That system, the committee is perhaps aware, is now entirely changed. A great number of absurd regulations, which formerly existed in that country, have been abolished; as for example, that which, in various places in Ireland, regulated the duty upon licences according to the fact of whether or not the borough returned members to parliament (a laugh). That was an absurdity, the reason of which I do not profess to be able to divine. But, at all events, the system upon which the duties on these licences are payable, has been, in almost every respect, assimilated, as much as possible, to that more reasonable arrangement which prevails in England. The consequence, however, is, that whereas formerly the duties on licences were payable early in the year, they will, most of them, not now be payable until after the 5th of July; and from this change there has resulted in the present quarter a loss of not less than 100,000l. If, therefore, I may venture to judge from the result of the two months in question, as regards the excise, of the effect which diminished consumption may have, during the whole year, upon the two branches of excise and customs, taken together, I do not think that I am taking too sanguine a view, when I estimate the probable loss in this year from that cause at 1,300,000l. Deducting, then, this sum, and the deficiency to which I have before alluded, from the amount of the customs and excise last year, together with the additions which I have above specified, it will leave 37,446,000l., as the estimate of that branch of the revenue in 1826. The next head to which I shall advert, is that of stamps. Stamps produced last year 7,417,923l.; I shall take their produce this year at 7,400,000l. The post-office, last year, produced 1,595,461l.; I will suppose a falling off, in the present year, of 45,461l.; which will leave the post-office estimate 1,550,000l. The assessed taxes produced last year 4,990,961l.

The loss to the revenue on this head will be something more considerable, since, of the 276,000l. remitted in 1825, not more than one-fourth was lost in that year. I anticipate, therefore, a decrease of 190,961l.; which will leave that estimate 4,800,000l. The miscellaneous items for 1826, will, on the other hand, be much larger than usual. The increase will proceed from three or four casual causes. In the first place, there is a sum of 100,000l., which, by treaty with the government of Holland, was to have been paid to this country in 1825. That sum, however, was not actually received within the year, and consequently could not form any part of the produce of 1825; although, as it is now, I believe, received, it will form a part of the estimate for 1826.—There is another sum, with respect to which I confess I did not anticipate that money from such a source would again find its way into the exchequer,—a sum which arises from what I am afraid many persons believe to be the never-ending lottery (a laugh). The last lottery, I must explain to the committee, was contracted for in 1823. I acknowledge that, for my own part, I was not aware, when that contract was made, that the usual system upon which lotteries are conducted would protract their existence one or two years beyond the period at which they might be contracted for. It appears that I was in the wrong, and it certainly was my mistake; it cannot, however, be now helped; and the consequence of this is, that in the present year a sum of about 190,000l. will be derived to the revenue from these lotteries, which have so often, and so justly, met with the reprobation of the house. I am as rejoiced at their approaching termination as the house can be; for I felt it my duty to take the first opportunity of putting an end to a system which, however it might be glossed over by ingenious reasoning, was exceedingly inconsistent with those principles of good government which would seek to derive no advantage from any practice of gambling, which, whilst it was prohibited by the general law in its application to individuals, was permitted, under the lottery system, to be carried on by the Government. There is another item, of some importance, which will come into the exchequer in the course of the present year; and that is, the return from Ireland of the old silver coinage, which has been called in, and replaced by the new. That new coinage cost us, last year, 500,000l. This year the old coin will come back, and will be available for the public service; it will, probably, amount to not less than 400,000l. The last point to be noticed, in respect to the miscellaneous receipts, is a sum arising from an arrangement between the Admiralty and the East India Company; who, in consideration of the increase of the navy, made with a view to the state of their affairs in India, have felt themselves bound in justice (as, it is my duty to say, they have with the utmost cheerfulness admitted), to pay 60,000l. for the benefit they are deriving from the augmented naval force stationed in the Indian seas to defend their possessions.—These several sums account for the increase of the miscellaneous items from 619,088l., which was their produce last year, to 1,360,000l., which is my estimate of them for the year 1826. The general estimate for the present year, therefore, stands thus:—

## CUSTOMS AND EXCISE.

|                                                         |              |
|---------------------------------------------------------|--------------|
| Produce of 1825 - - - - -                               | 37,546,000l. |
| Add—Progressive Reduction of Bounties - - -             | 50,000l.     |
| Wine Drawback - - - - -                                 | 1,050,000l.  |
| Loss by lapse of Tobacco duty - - - - -                 | 450,000l.    |
|                                                         | <hr/>        |
|                                                         | 1,550,000l.  |
|                                                         | <hr/>        |
|                                                         | 39,096,000l. |
| Deduct—Further loss from Reductions last year - - - - - | 350,000l.    |
| Further loss from diminished consumption - - - - -      | 1,300,000l.  |
|                                                         | <hr/>        |
|                                                         | 1,650,000l.  |
|                                                         | <hr/>        |
| Estimate for 1826 - - - - -                             | 37,446,000l. |

## STAMPS.

|                                   |             |
|-----------------------------------|-------------|
| Produce of 1825 - - - - -         | 7,447,923l. |
| Deduct assumed loss in 1826 - - - | 47,923l.    |
|                                   | <hr/>       |
| Estimate for 1826 - - - - -       | 7,400,000l. |

## TAXES.

|                                              |             |
|----------------------------------------------|-------------|
| Produce of 1825 - - - - -                    | 4,990,961l. |
| Deduct loss from reduction in 1825 - - - - - | 190,961l.   |
|                                              | <hr/>       |
| Estimate for 1826 - - - - -                  | 4,800,000l. |

## POST-OFFICE.

|                                   |             |
|-----------------------------------|-------------|
| Produce of 1825 - - - - -         | 1,595,461l. |
| Deduct assumed loss in 1826 - - - | 45,461l.    |
|                                   | <hr/>       |
| Estimate for 1826 - - - - -       | 1,550,000l. |

## MISCELLANEOUS.

|                                                                                            |             |
|--------------------------------------------------------------------------------------------|-------------|
| Produce of 1825 - - - - -                                                                  | 619,088l.   |
| Add—Payment from Holland, Lottery, and East India Company, on account of naval force - - - | 340,912l.   |
| Add also—Silver from Ireland - - - - -                                                     | 400,000     |
|                                                                                            | <hr/>       |
|                                                                                            | 740,912l.   |
|                                                                                            | <hr/>       |
| Estimate for 1826 - - - - -                                                                | 1,360,000l. |

I assume, under these circumstances, that (as I before stated) the condition of the revenue, during the present year, will be such as to leave us a surplus, a clear surplus, after all the deductions which I have described, of 714,000l. Now, this sum is, perhaps, not a very large one; but I think it is worth something; and I also think that it may be made available to some useful purpose. At the same time, I apprehend that our choice as to its application is very limited on the present occasion, on account of the circumstances to which I have already alluded, regarding the unintentional alteration of the duty on Tobacco, which took place in the course of the last year. I should state to the committee that, when it was ascertained that that one-shilling duty had elapsed, the parties interested became very anxious to know what his Majesty's

Government intended to do with regard to it;—whether they intended to let it lie dormant, or to allow it to revive, as by law it would have done, on the 5th of January last. Our answer was, that at all events we should not revive the lapsed duty until the pleasure of parliament should be taken on the subject. But now, I have no hesitation in saying, that it appears to me to be incumbent upon us to recommend to parliament to continue the reduction of that one-shilling duty, although I do not mean to say that, if our means had not enabled us to continue the reduction, we should not have been perfectly justified in allowing the full duty to continue in operation. I should greatly have preferred carrying this reduction still further; but in the actual condition of the country, I do not think it would be prudent or expedient to do so. At the same time I must say, that a great deal of good has arisen from this reduction, apparently small as it is; it has had no inconsiderable effect in checking the smuggling of Tobacco, particularly in Ireland, where that practice is carried on to an extent beyond all imagination or belief. I do not suppose that the ingenuity of man was ever exercised to a bad purpose with greater success than it is in the smuggling of Tobacco; and the committee would be astonished if I were to enter into a detail of the devices to which that most ingenious class of persons, the smugglers, have recourse in order to carry on the illicit introduction of this article; but the reduction of the one-shilling duty has, I repeat, already had an exceedingly beneficial effect in the discouragement of the illicit traffic in Tobacco; and whenever circumstances may enable us to carry the reduction still further, I have no doubt that the revenue will derive a large compensation for its first loss, not only from the increased consumption, but also from the more complete extirpation of the extended evils of smuggling. The amount of the loss resulting from the abandonment of this part of the Tobacco duty, I estimate for the whole year at about 600,000l. and although I do not mean to deny that it would have afforded me great pleasure, either to extend the amount of this particular reduction, or to apply a similar principle of reduction to other articles, I do not feel that at present I should be justified in doing so. I do not profess to be a prophet; and it would be foolish in me to hold out positive expectations on a subject liable to the operation of so many uncertain contingencies: but, when I state that during the last three years I have had the good fortune to propose the reduction of eight millions of taxes, I think I say enough to entitle me to ask of parliament to believe that I shall not be slow in carrying the principle of reduction further, whenever a fit opportunity may present itself. There is another subject, connected with the financial arrangements of the year, to which I now wish to call the attention of the committee. I have endeavoured to show the grounds upon which I am satisfied that we are at present in a situation, not only to meet all the necessary demands that the public service may require, but to carry still further, although to a more limited extent than I would desire, the reduction of taxation. There are, however, certain other points connected with our financial system, which are of the greatest importance, and to which I think the attention of parliament ought to be devoted with peculiar care. Gen-

lemen are aware how much has been said, in the course of the discussions of the present session, upon the subject of the situation in which the Bank of England is placed in consequence of its advances to Government. And although I have always been ready to defend the conduct of Government in respect to those advances, as well as in respect to the general amount of the unfunded debt, I have never contended that it would not be a very desirable thing to diminish the amount, not only of those advances by the Bank, but also of that portion of the unfunded debt which is in the hands of the public, whenever those objects could be safely and properly accomplished. On the 5th of January, 1826, the Bank of England held exchequer bills, upon advances to the Government, to the extent of about 6,000,000*l.* These bills were independent of any which the Bank might have purchased in the market, and which they deal with as they think proper; but in the month of February of the present year, it is well known that the Bank, at the instance of Government, consented to purchase 2,000,000*l.* of outstanding exchequer bills. The object of this measure was partly to relieve the money-market from the pressure which at that time seemed to operate with peculiar force upon this species of security; and partly in the hope that various classes of the community, who were suffering from the forced contraction of the currency, which alarm and want of confidence had produced, might obtain a certain degree of relief from this mode of extending the general circulation. But it is quite clear, that, however willing the Bank might be to purchase these 2,000,000*l.* of exchequer bills, it would not have been prudent for them to do so, unless they received an assurance that the amount should, if necessary, be repaid them at no very distant period; and accordingly they were informed by his Majesty's Government, that the amount should be repaid in the present year—I believe in the month of June. At a subsequent period the Bank consented to make advances to a large amount on goods, for the purpose of still further contributing in a more direct way to relieve the difficulties of the commercial world; and having undertaken to do so, it becomes still more important, with a view to save that corporation from possible embarrassment, that the Government should provide itself with the means of giving to the Bank every facility in their operations, which can be derived from a diminution of their general advances to the Government. The proposition, sir, which I intend to submit to the committee, is, that in the course of the present year, and as early as circumstances may render it advisable, the Bank shall be repaid 6,000,000*l.* of the exchequer bills in their possession. The committee will observe, that the Bank hold of these bills, first, the 6,000,000*l.*, which they possessed on the 5th of January last; secondly, the 2,000,000*l.*, of which they became possessed, by purchase, in February; and thirdly, rather more than 3,000,000*l.*, upon which they had made advances for the purpose of paying off the four per cent. dissentients: and the total of these various sums is rather more than 11,000,000*l.* With respect to the last class of advances, however, (those which were made by the Bank on account of the four per cent. dissentients), provision has already been made for them by their being charged upon the Sinking Fund; and at the close of the present year they will be nearly extinguished. There re-

mains then the sum of 8,000,000*l.*; 6,000,000*l.* of which, as I have already mentioned, I propose to pay off in the course of the present session, or as soon after as the general circumstances of the case may render advisable. In addition to what I propose to do with respect to exchequer bills held by the Bank of England, I cannot but think that it is very desirable to effect some reduction in that portion of the unfunded debt which is in the hands of the public; I shall therefore propose a moderate reduction of the outstanding exchequer bills of that description; and I conceive that we may carry that arrangement to the extent of two or three millions. In order, therefore, to effect these two purposes, I propose to fund, in the course of the present session, exchequer bills to the amount of eight or nine millions. I am by no means prepared to say, that I should not be glad to see the unfunded debt reduced in a greater proportion than that which I now recommend; but I am satisfied that every one will see, that too rapid a course of reduction by means of funding, might, at this moment, be attended with great inconvenience, and lead to a very injurious derangement in the circulation of that species of security. At the same time, I can see no reason why, after the present year, when the Sinking Fund shall have been relieved from the payment of that portion of the unfunded debt which is now charged upon it, it should not be made applicable to the reduction generally of the unfunded, as well as of the funded debt. Such an application of the Sinking Fund would be strictly in conformity to its original object; for in the act by which the present Sinking Fund is established, it has been provided, that it shall go on accumulating at compound interest, until it reaches one per cent. on the capital of both debts, funded and unfunded, taken together. Parliament has, therefore, already so connected the two descriptions of debt with the Sinking Fund, as to render such an application of it quite consistent with the principle of its formation; and the only effect would be, that the daily amount of stock bought in the market would be diminished—a circumstance, which, at present at least, is comparatively of no very great importance. It is my intention, therefore, either in the present, or early in the next session, to propose such an alteration in the mode of applying the Sinking Fund, as may render it, if necessary, as available to the reduction of the unfunded, as it is now to the reduction of the funded debt. I have thus, sir, endeavoured to state to the committee the circumstances under which our revenue stands at present; I have endeavoured to explain the course which his Majesty's Government, sanctioned by parliament, have pursued during the last few years; and I have endeavoured to shew the grounds on which I relied (and, as the event has fully shewn, justly relied) in framing the estimates of preceding years; as well as the grounds on which I consider myself warranted in relying now upon a prosperous future. Sir, I am not afraid or ashamed to use the word "prosperous." I say, that a nation may safely be termed prosperous, when, combining within itself all the great elements of wealth and power, it finds the legislature and the Government striving, with a generous emulation, to promote the development of the national resources, by correcting what is defective, removing what is obstructive, and giving life and scope to what is

active. I see the foreign policy of this country confirming and extending that just and independent influence amongst other nations, which the fair dealing, the honesty, and the prudence of England have heretofore entitled and enabled her to maintain. I see, year after year, the most vigilant attention paid to all practicable improvements in the construction and administration of the laws; whereby, whilst the liberty of the subject is never overlooked, justice is rendered more intelligible to those by whom it is dispensed, and more satisfactory, as well as accessible, to those for whose benefit its dispensation is intended. I see the commercial policy of the country adapted to more enlightened views, and every amendment of the system pursued with a spirit and a perseverance worthy of so good a cause, and essential to its final success. I see, that in the management of our finances, the ruling principle is, to combine a due provision for what the honour, the dignity, and the safety of the country require, with a just circumscription of unnecessary patronage, and a well-considered reduction of excessive taxation. I see all these useful measures suggested, enforced, and sanctioned by the deliberate, and I might almost say the unanimous, voice of Parliament: and when, in addition to all this, I see that, as respects the people at large, the light of knowledge and of reason is gradually dispelling the mists of ignorance and of prejudice, and opening their minds to a discriminating appreciation of what ought to be the conduct of those to whose care their interests are confided—am I using the language of exaggeration and overconfidence, when I say, that the affairs of this kingdom are in a right and prosperous course? There may still be many difficulties to meet us on our way. We may have to undergo, as we recently have experienced, the sudden violence of the unexpected tempest;—we may have at times to encounter “the slings and arrows of outrageous fortune;”—but, sir, if we have only resolution and constancy enough—

“To take up arms against that sea of troubles,  
And by opposing—end them;”—

if we pursue our path with steadiness and fidelity, we shall find our dangers and our difficulties diminishing with our progress; and we shall advance with systematic regularity towards the great end of all good government—the happiness and well-being of the people (loud cheering).

Mr. *Maberly* said that he was by no means induced, by the eloquent speech of the right hon. gent., to overlook the fallacies with which his statement abounded. The rt. hon. gent. had taken his estimate from 1816, and quoted that year as instancing the diminution of the charge of debt, as compared with last year. But that was by no means a fair estimate, as, in 1823, a charge of 2,000,000*l.* was made upon the debt. The rt. hon. gent. took those years for the purpose of reference, which he found most convenient to the particular point he was desirous of establishing. This was an unfair, fallacious mode of representation. Instead of a decrease, upon a fair computation it would be found that there was an increase, taking 1819 and 1826 as the years of instituting a comparison. When the rt. hon. gent. submitted a statement, whereby it appeared that, in some items, a diminution to the extent of 5,500,000*l.* was effected, it

should be recollected that, within the same period to which he had referred, we had got 4,000,000*l.* more in debt. He then proceeded to contend, that compared with later years the amount of our debt increased instead of diminished. He did not object to the principle of the funding of exchequer bills; but this made little alteration in our case. As to the estimate of revenue for this year, he should be most glad to coincide with the rt. hon. gent., but he was afraid the calculation had not been made on sufficiently certain data. The rt. hon. gent. had taken only one month of last year with one of the present. But he (Mr. *Maberly*) should like to have the calculation made from the 1st of Jan. this year, to the present time, and compared with the same period of the last year. That would have been much better ground on which to have gone, than the one he had chosen. Doubting, therefore, the accuracy of his principle of calculation, he could not place much reliance on his estimated surplus. Last year, the rt. hon. gent. had told them that they were to have a surplus of 864,000*l.*, and it turned out not to be a fifth of that sum; and this year they were told they were to have a surplus of 714,000*l.*

The *Chancellor of the Exchequer* said, that the calculation to which the hon. member alluded was made last year before the reduction of taxes took place, and of course the surplus was less by the amount of the taxes reduced.

Mr. *Maberly*:—That of course would alter his argument as to that point. Still, however, he must repeat his regret, that the rt. hon. gent. had not made his calculation on the produce of the revenue up to the present period; for if it should turn out that there was a great falling off in the revenue in the month of Feb., the rt. hon. gent. could hardly be said to have made a fair calculation. As to the reduction of the unfunded debt, he did not object to it; but he did contend, that a more favourable moment might have been selected, when it could have been done with more advantage to the public. The right hon. gent. had expressed an intention of making the sinking fund applicable to the reduction of the unfunded as well as the funded debt; but he (Mr. *Maberly*) thought, that before any such alteration was made, it would be much better to apply the sinking fund for the purpose of getting rid of the dead weight of 2,800,000*l.* now paid on account of the half-pay and pensions.

Mr. *Hume* objected to the mode in which the rt. hon. gent. had made his calculations, and the periods which he had selected for his comparisons. The rt. hon. gent. referred to one period for the amount of taxation, to a second for the amount of debt, and to a third for the amount of consumption, just as each period was suitable to his purpose. However, he (Mr. *Hume*) would not have risen now but for the allusions made to his statement on a former evening, that though so much had been talked about the reduction of taxes, yet there was more money taken from the pockets of the people within the last three years, than there had been within the three preceding years. The moment he made the assertion, it was positively contradicted by the rt. hon. gent. (Mr. *Canning*) and by the *Chancellor of the Exchequer*. He would, however, repeat his assertion, and he would prove it by the returns before the house. He would not follow the rt. hon. gent. back to 1816, and he did not see what right he had to go to that year;

but he would take the returns of revenue of the years 1817, 1818, and 1819, and, comparing them with those of the last three years, it would be seen that in the latter more money was taken out of the pockets of the people than in the former. By those returns it appeared that the amount of revenue was—in 1817, 51,000,000*l.*; in 1818, 52,000,000*l.*; and in 1819, 51,000,000*l.* Now, he would admit that many advantageous changes had been made in the mode of collecting the revenue, and the repeal of useless and injurious restrictive laws, in the last two or three years; but in those years the amount of revenue was—in 1823, 52,561,000*l.*; in 1824, 52,685,000*l.*; and in 1825, 52,044,000*l.*; thus making an average increase of 1,000,000*l.* and nearly 40,000*l.* per year. So that in the eleventh year of a peace we found ourselves in the actual payment of a progressively increasing taxation upon the productive industry of the nation. From the particular financial circumstances of the country in 1816, he would not go into the consideration of that year. It furnished no criterion of comparison with the present. But taking a review of the last seven years, it would be found that we had to pay, by the extraordinary measures which were resorted to in the transactions between the Government and the bank, and in a variety of ways, fully fifteen millions more of charge really imposed upon the country, than in any of the last preceding seven years. As to the repeal of the tax on tobacco, it was one of so trifling a consideration, as not worthy to be taken into account. It was not to such a reduction as that, and of a few other trifling items, that the country had a right to look, after eleven years of peace. The statements which he had made were taken from the returns laid upon the table of the house, and they supported, as clearly as figures could support, what he had now and before advanced. The *rt. hon. gent.* had referred to the amount of consumption in 1816 and 1825, and endeavoured to establish, from this comparison, that there was an increase in the quantity of consumption. When all the returns were laid before the house, which would complete the series of returns for which he had moved (a laugh), he would be able to shew that great delusion prevailed upon the comparative consumption of different years. He would take a period of ten years, as one furnishing a sufficient space of time whereon to ground a fair estimate. The *rt. hon. gent.* had said, that there was an increase in the consumption of beer, of tea, and several other articles. Now he (*Mr. Hume*) would be able to shew, not from the returns of a single year, but from the average of several years, that the consumption of malt, and beer, and tea, and several other articles on which they were told that a large increase had taken place, had diminished; taking, as they were bound to do, the increase of the population into consideration. He would undertake to say, that so far from there being an increase of consumption in the article of beer of 16½ per cent. that there had been a great reduction in the consumption of malt. This was partly shewn by the duty paid on it. It was not a little remarkable, respecting the consumption of malt, that, taking the period between 1788 and 1792, and a similar period preceding 1825, the consumption in the former period was greater, although the population of England had, since the former period, at least increased forty per cent. Sugar also, notwithstanding the state-

ment put forth by the Chancellor of the Exchequer, had decreased. Tobacco, on which the *rt. hon. gent.* said there was an increase of 13½ per cent. if not diminished in consumption, had certainly not undergone any material increase. As to tea, on which an increase had been stated of 20 per cent., every one knew that the consumption of tea for the last twenty years had been stationary. In short, no part of the statement of the *rt. hon. gent.* was fairly supported by the returns laid upon the table of the house. Then the *rt. hon. gent.* had not condescended to notice the great increase that took place in our naval and military expenditure. Why, he would be glad to know, was the great increase introduced in the military, and naval, and ordnance, and miscellaneous, and other estimates (hear, and a laugh)? He had hoped the *rt. hon. gent.* would have given some reason for that increase, as no one had thought proper to do so at the time of moving them, except, indeed, the noble lord (Palmerston), who gave a reason, which was really no reason at all (a laugh), that it was necessary for the purpose of reliefs. The *rt. hon. gent.* had stated that the public had saved much by not funding exchequer bills a few years ago, but he would remind him of what the country would lose by funding them at present. Last year the Government might have funded their exchequer bills with the funds at 97. They will now have to fund at a loss of 20 per cent., which they might have avoided, had the Chancellor of the Exchequer attended to the suggestions that had been made to him from the left side of the house. This loss would be equal to the amount of the assessed taxes for one year; and it was a sum entirely thrown away by the improvidence of Government. The country was now paying at the rate of only 1½*d.* and one penny interest on the outstanding exchequer bills, and he would beg the Chancellor of the Exchequer to consider how the country could pay the increase of interest that would arise from funding them at the present rate of the funds. The *rt. hon. gent.* had thought proper to take notice of an ephemeral publication in Scotland, which only proved to him (*Mr. Hume*) that the *rt. hon. gent.* was conscious that he laboured under a great lack of argument, and that he wished to carry the house with him by extraneous means. It was reasonable to suppose that persons who were born and bred upon the taxes, like the author of the publication in question, should be advocates for their continuance. Any thing which fell from such persons, was beneath notice in that house. The *rt. hon. gent.* had taken credit for the reduction of the Scotch customs and excise boards, but he (*Mr. Hume*) wished that the *rt. hon. gent.*, instead of boasting of the past, had informed the house how the country was to go on. Between four and five millions were annually extracted from this country, on account of Ireland; and yet it was only within the last year that any inquiry into the subject had taken place, by the appointment of a commission of investigation. He believed that all the upper classes in the employ of Government were over-paid, whilst the under classes were very much under-paid. A revision of the expenditure would save the country a large amount. In proportion as the national debt decreased, the Government augmented the establishments and expenditure of the country. The Chancellor of the Exchequer had been telling the country for three years, that the re-

duction of taxes was to continue, and that the amount of the sinking fund was to increase; but neither of these pledges had been redeemed. On a future occasion he would enter more fully into the subject. On the present occasion he had merely risen to enter his protest against the statement of the *rt. hon. gent.*, lest the house should be led astray by the fallacies which it contained.

*Sir J. Newport* said, that he felt himself obliged to differ from the *hon. member* (*Mr. Hume*) with respect to the conduct of ministers (*hear, hear*). He thought that the country was greatly indebted to the *right hon. gents.* (the *Chancellor of the Exchequer* and *Mr. Huskisson*) for the measures which they had adopted since they had been in office. They had effected a considerable reduction of taxation, and placed matters in such a train that a progressive reduction must continue, which would, he believed, particularly in the case of Ireland, ensure an increased revenue. The measures which ministers had adopted for reforming the mode of collecting the revenue in Ireland, would work a great moral improvement in the habits of the people. He trusted that ministers would carry their reforms, with respect to the revenue of Ireland, still further than they had already proceeded with them.

*Mr. Baring* thought that, in the present situation of the country, it was impossible for any man, however gifted, to say, with any degree of certainty, what would be the result of the revenue for the year. Whilst the country was filled with bubble fortunes, there must be a bubble revenue. The recent decrease of revenue must, in part, be ascribed to the generally artificial state in which the country had been placed. Upon the whole, he had never, since he sat in that house, heard a speech which had given him more satisfaction than that of the *right hon. gent.*

The *Chancellor of the Exchequer*, in explanation, observed, that although he could not calculate upon so much as 400,000*l.* or 500,000*l.*, yet the increase, next year, would no doubt be considerable. As to the question of the dead-weight, although the defence of that measure did not devolve upon him, yet he had felt it necessary to justify the Government, though he was not insensible to the objections which the measure was liable to. In other circumstances than the present, he might have been not averse to re-considering it; but now, when he must assume some reduction of the revenue, he did not think he was in a situation to state what was the intention of Government, should circumstances be favourable at the expiration of the period for which the bargain was made with the bank. With respect to his intention of funding, his plan was, to fund 8,000,000*l.* or 9,000,000*l.*, and through the medium of this fund, to repay 6,000,000*l.* to the bank, and apply the remainder to the reduction of exchequer bills in the market.

*Mr. Calcraft* observed, that a regulation had been adopted by his Royal Highness the Commander-in-Chief, allowing officers to purchase rank by purchasing half-pay. A young officer might purchase a majority of a senior, and it looked like the purchase for a better life. He believed, however, that when a purchase of this kind took place, an accurate calculation was made of the value of the half-pay, and the overplus of the purchase-money given by the junior, was paid to commissioners on account of

the public. He wished this point to be explained, for it was not fit that any misapprehension should prevail upon it.

*Sir Charles Long* confirmed *Mr. Calcraft's* statement. The difference was paid to the Paymaster-general on account of the public.

*Sir Charles Forbes* hoped that if the *right hon. gent.* persisted in interfering with the Scotch system of banking, the Scotch members would do their duty, taking a pattern from the members for the sister country, and stick together. He would oppose such a project night after night; and if only one member would stand by him, he pledged himself to defeat the measure (a laugh).

*Mr. Ellice* would put it to the *hon. bart. why*, when a bill had been prepared for the regulation of bankers, it should not be extended to those of Scotland? It brought in question the proverbial prudence of the Scotch, that they should come down to the house as petitioners for time to make their arrangements. An *hon. member* (*Mr. J. Smith*) had complained of aspersions upon the bankers of England; but not one of them had petitioned. They seemed rather too eager, at least they went beyond the intention of the house. If there had been any such thing as overtrading, the Scotch bankers had been guilty of it, and this he pledged himself to prove, if occasion offered. If the measure was right as respected England, it was equally so in respect to the rest of the empire. —As he was upon his legs, he would beg to ask the *right hon. gent.* (*Mr. Huskisson*) with respect to the tax on soap, whether any relief was intended to be afforded to the silk trade in that particular? Some relief had been expected with regard to that article, as well as dye-drugs, and he hoped the subject had excited attention.

*Mr. Bright* remarked, that the tax on receipt-stamps was evaded, and had become unproductive, pressing only on those who were disposed to do right. He thought that tax might be removed.

*Mr. Huskisson*, in answer to the *hon. member* (*Mr. Ellice*), stated that it was intended that the relief to be afforded to the silk-trade, in respect to the duty on soap, was the same as that afforded to the woollen trade—namely, a drawback on the quantity of soap consumed. As to the duty on dye-drugs, he would be glad if the *hon. member* would say upon what articles the duty could be reduced. The utmost attention had been paid to this subject last year, and the reduction had been carried to the farthest limit. He thought that the statements of the *hon. member* (*Mr. Maberly*) were calculated to obscure the very clear and satisfactory statement of his *right hon. friend*. According to the *hon. gent.* the debt, capital as well as charge, had increased since 1819. It was a common observation, that by means of figures any result could be gained; and certainly the *hon. gent.* had demonstrated the truth of it. The house would be surprised to learn, that by an account moved for by the *hon. member*, and now on the table, it was made to appear, that between 1824 and 1825, the debt of the country had increased 70,000,000*l.*, and the charge 2,000,000*l.* This was an entire misconception—a fallacy which the form of the account moved for by the *hon. member* tended to produce.—An *hon. member* (*Mr. Hume*) said that the country paid more taxes now than in 1816; but in proportion as taxes were reduced, consumption was increased,

and consequently the aggregate amount of the taxes. Suppose his right hon. friend were to take off half the existing duties on commodities, the consumption would increase, and the people would pay the taxes more cheerfully; yet the hon. member would get up and say that we paid more taxes than we did before. The house would judge how far this argument was entitled to weight.

On the motion that the usual 4s. in the pound upon all pensions, offices, &c. should be voted,

Mr. Hume begged to suggest a measure by which the country, at one stroke, could save 2500l. The cost of collecting this 4s. in the pound duty amounted to 2500l., or something near that sum; let the poundage only be deducted in the payment of the pensions, salaries, &c., and the whole charge of collection would be avoided.

The Chancellor of the Exchequer admitted, that the existing mode of diminishing the amount of these pensions was inconvenient, and ought, if possible, to be altered; but it could not be altered at present, because most of the pensions and salaries were paid out of the civil list. The civil list was fixed at a certain sum for the life of the sovereign; and this change could not take place without a revision of it. The civil list could not properly be altered from the sum at which parliament had settled it; but whenever any change took place at a future period, the course might be followed which the hon. gent. suggested.

Mr. Hume said, that the objection to him seemed quite untenable. The very taking of this 4s. in the pound at all was a virtual alteration of the amount of the civil list.—The resolution was then put and carried.

### *Management of the Public Debt.*

FRIDAY, MARCH 10.—The order of the day for the house resolving itself into a committee of supply, was read. On the question that the Speaker do now leave the chair,

Mr. Maberly said, that, in his opinion, the Government, and especially that part of it over which the rt. hon. gent. (the Chancellor of the Exchequer) presided, had, in concert with the Bank of England, added greatly to the existing causes of distress. He felt it to be his duty to point out where the great error in their conduct lay, and to show by what means they had aggravated the calamity under which the country had been suffering. The statement he had to make he should divide into two parts. The first would relate to the mismanagement of the unfunded debt, and the latter to the misarrangement and mismanagement of the funded debt; both of which had, in his opinion, added greatly to the inconvenience of the country.—To begin with the manner in which Government had managed the issue of Exchequer-bills. He should suppose, from the eagerness with which certain hon. gents. came down to vote away 30 or 40,000,000l. of Exchequer-bills, that they did not know what the nature of those securities was. As he should find a strong case upon them, he would describe this species of security. Exchequer-bills were bills issued for a debt previously contracted, which was usually denominated the unfunded debt. They were not payable on demand, though they were almost equally

pressing,—they were rather, in some cases, payable at sight. When they became so payable, they were receivable as payment for the revenue; and Government, when it was obliged to pay them off, paid them off either in money or revenue receipts. Hence it was, that when Government advertised that it was ready to pay off Exchequer-bills, the time was always found to be near that in which the revenue became due. Though he should have some difficulty in stating what portion of Exchequer-bills had been paid into the Exchequer on account of the revenue, he could show what quantity of bills they had due on particular days, without having one shilling in their coffers to meet them. On the 6th of April, 1825, there were 6,258,000l.; on the 6th July, in the same year, 30,000,000l. of these promissory notes, payable at sight, due and receivable as money by the revenue. On the 11th of October, there were 20,160,000l.; and on the 6th of Jan. 1826, 7,400,000l. of these dangerous promissory notes in existence. This would be sufficient to show the danger which might arise from a too copious use of these securities. He could show how dangerous it was, not by putting an imaginary case, but one which had really happened. In December, Exchequer-bills were at 80s. discount, from an over-issue. No one could doubt that this paper, like any other paper, could be over-issued; for the proof of over-issue was discount, as the proof of the reverse was premium. Government being alarmed at the depreciation, and fearing they should have to pay off the exchequer bills from the revenue, persuaded the Bank to buy them up with an issue of paper. To raise their value further, the interest on them was raised from three-halfpence to two-pence a day. Notwithstanding all this, on the 14th of Feb. they were again at a discount of 20s. Could it then be doubted that this species of paper was a most dangerous one to be afloat in the market? It appeared that the Bank had advanced 5,500,000l. towards the payment of the January dividends, and if they had not done so, it was impossible to say what inconvenience the country might not have felt from the immense amount of exchequer bills which were then abroad. The returns shewed that in July last, the whole amount of those bills was 30,000,000l.; that between July and October, there were issued 20,000,000l., and between October and January, 7,000,000l. All these sums might have been forced upon the Government instead of money, in payment of the revenue; and but for the measure he had alluded to on the part of the Bank, in taking up what were called the deficiency bills, that event must have happened. Where was the Government to get money to pay the dividends but for the assistance of the Bank? And how was the Bank to give that assistance but by an extensive issue of notes? Then, said ministers, "if you will give us this, of which we are in present need, and if the exchange should take such a turn as to bring a demand for gold, we will give you a restrictive act." Had he not a right then to call that a dangerous species of paper which produced consequences like these? But if the quantity of this paper were dangerous to the revenue, what might not be its effects in case of the breaking out of a war? Suppose the Russian army should march (and there was a greater probability that it would than it would not), how would Government be able to clear the

market of this paper? If the exchanges, which were hung as it were upon a pivot, should turn against this country, by what means could they be restored?—It appeared to him, that instead of appropriating the sinking fund to the discharge of the funded debt, on which it had no operation, it would be better to use it for the relief of the unfunded debt. Upon this part of the finances, he thought the conduct of the rt. hon. gent. had not been such as was likely to prove beneficial to the country.—He should now read the resolutions he meant to propose on this subject:—

"That it appears by returns to the house, that on the 6th of Jan. 1826, the amount of exchequer bills outstanding and unpaid was 37,502,017l. 9s. 7d.; that on or about the 20th of December they were at a discount of 80s., and that it therefore became necessary to raise the interest previously granted on them, in order to prevent their being paid into the exchequer as revenue, or a part of them being demanded in cash. And that, notwithstanding this advance of the rate of interest on exchequer bills, it became necessary to relieve the market by reducing the quantity on sale, which was effected by means of a large portion of them being absorbed in purchases made by the Bank, which brought them to about par at the end of the month.

"That on the 14th of February they were again at or about 21s. per cent. discount, when the Bank came once more into the market, and brought them to par.

"That the Bank, from various circumstances, might not have been able thus to relieve the market without endangering its credit: yet, had not relief been afforded, bills paid in as revenue might have left the exchequer without any means of paying the dividends, provided the Bank could not advance the whole amount of them.

"That the Bank, in order to pay the Jan. dividends, having already advanced 5,548,817l. 9s. 7d., it was highly improbable that it could at such a moment make a further advance of 3,128,183l. (the additional sum necessary) without placing itself in a most hazardous situation: and it appears, therefore, that although the prompt relief in the purchase of exchequer bills given by the Bank did at the moment avert these calamitous consequences, still the danger of having such a large unfunded debt becomes strikingly obvious, by the Bank being obliged a few days since to come into the market a second time to prevent a further depreciation of them.

"That, notwithstanding the low rate of interest which has been paid on exchequer bills, it has been both inexpedient and dangerous to leave so large an amount of debt unfunded; not only for the reasons stated in the foregoing resolution, but because it might have been funded on most advantageous terms, and at a saving of some millions to the country, whilst by leaving it unfunded until a period of political difficulty arrives, it cannot fail seriously to affect public credit, and to impair the energies of the country; and that it appears therefore to this house, that it is highly expedient to reduce the unfunded debt within more reasonable limits."

He now came to the mismanagement which had prevailed in the funded debt. In 1822, a noble lord (Bexley) stated in the house, that it was impossible the country could be rendered safe without a sinking fund of 5,000,000l. a-

year, and his lordship's view of the subject was confirmed by a large majority of the house. Fourteen days afterwards, however, the noble lord came down again (having in interim found that this was not very agreeable to some gents. on his own side of the house) proposed a reduction of the half-pay list paying annually 2,800,000l. for 45 years. The value of this had not been stated, but by a valuation which was recently made, it appeared that this annuity for 45 years was actually worth 74,632,000l. Could any thing then be more extraordinary, than that fourteen days after it had been stated by the minister, and confirmed by the house, that nothing but a sinking fund of five millions a-year could save the country, the same minister should propose, and the house should agree to, the largest loan that ever been made? For, look at it in what light they would, it was a loan to the amount he stated. There had been twenty divisions against it, and his lamented friend Mr. Ricardo had proposed it in the most strenuous manner, because he saw its objectionable nature as well in principle as for its enormous amount. The loan was bought as much of this dead weight as can be, 13,000,000l., and added that to the load of which was not convertible, and which was ready on their hands. Of this nature were 5,500,000l. which they had advanced, together with 7,000,000l. before due on account of exchequer bills. There was no official document in proof of these sums, but they had been often admitted in debate, that he supposed could not now be disputed. 3,000,000l. had been advanced to pay off the dissentients on the reduction of stock, and lately 2,000,000l. to the exchequer bills from coming upon the hands of Government. There was, moreover, an amount advanced by the bank on mortgage, which was also not convertible. He desired the Bank to disincumber themselves of this debt but by means which would bring relief to the country. They could only attempt funding exchequer bills; and if this were done, would any body say that things were going well? It was time that something should be done to avert the danger that might ensue from doing this the best and most satisfactory way would be to release the Bank from the burden it had been forced to make.—He would advert to the mode of rendering the accounts to the house, which was so managed as to create the greatest difficulty to any one who wished to understand them, and to give a representation very different from the actual state of the accounts. The fact was, that the public debt amounted to more than 100,000,000l. more than had been stated. The reason for this difference was, that in the accounts which had been presented before the house, the various descriptions of stock had been stated, but there was no valuation of the life annuities, no valuation of the long annuities, none of that dead weight which he could scarcely command his terms (speak); and these omissions, if they were supplied, would form an amount of 101,000,000l. more than had been returned. By a valuation which was now in the hands of the printer would soon be before the house, it appeared that on the 5th of Jan. 1819, the public debt was 832,000,000l. and upwards. Now, notwithstanding the operation of the sinking fund, it was found that it had increased by 61,646,000l. and that the annual charge was 31,000,000l. more than in 1819. Although there had been,

said, an annual saving of between fifteen and sixteen hundred thousand pounds in the reduction of interest in the four and five per cents., it was shewn, not by his statement, but by that signed by Mr. Finlayson, the accountant of the Bank, and by Mr. Higham, of the National Debt office, that this was the present state of the debt. Would it be said that this was right? Did it not shew that Government was involved in a debt which they could not pay, and that, notwithstanding the blame they had heaped upon the country bankers for issuing more notes than they could pay, they had themselves sent out paper which they had no means of liquidating? He (Mr. Maberly) was convinced that no policy could be worse than to fetter the money concerns of the country, that it would be disgraceful to continue it, and wise and advantageous to abandon it. He trusted that on Monday the rt. hon. the Chancellor of the Exchequer would announce his intention of following his (Mr. Maberly's) advice, and put the unfunded debt upon the sinking or on the consolidated fund. He would now read his other resolutions:—

"That although, by a vote of this house, 5,000,000*l.* were declared necessary as a sinking fund to uphold public credit by diminishing the national debt, yet, in the course of a very few days after that declaration, the house came to a determination of granting an annuity of 2,800,000*l.* for 45 years, thereby increasing the public debt many millions (by return to the house, March 1826, 74,632,051*l.*), and at the same time violating the very principle which it had declared to be the only one by which public credit could be supported.

"That part of the said annuity, amounting to 585,740*l.* for 44 years, was sold to the Bank of England for 13,089,424*l.*, payable by instalments, the last of which falls due in July, 1828, and part, amounting to 2,214,500*l.*, still remains unsold, to the value of nearly 50,000,000*l.*; and that, under present circumstances, it will be expedient to sell the remaining part of the said annuity, and that it will be expedient to repeal so much of the act granting the said annuity as relates to the part unsold, and to charge the amount necessary to defray the naval and military pensions from July 1828, on the consolidated or sinking fund.

"That the capital of the funded unredeemed debt of the United Kingdom stood in the finance accounts of the 5th of January, 1825, at 781,123,222*l.* 15*s.* 6*d.*; whereas the real capital debt of the country approaches to nearly 900,000,000*l.*, inasmuch as the capital of the terminable annuities is not included in the above sum."

Mr. Herries:—The hon. member confined his speech to two points:—In the first place, he took a retrospective view of the conduct of Government with respect to the unfunded debt; and in the other he had alluded with no small condemnation to the manner in which Government had managed the funded debt.—The hon. member had accused the Government of confusion in making up the accounts of the funded debt. The confusion existed only in the ideas of the hon. member, and greater confusion than prevailed there he had never known. The hon. member, some time ago, called for a paper, to show the state of the funded debt, which the house ordered to be produced. The hon. member had directed, that in that paper an estimate should be made of the total value of the

annuity of 2,800,000*l.* set apart for providing for the charge of the military half-pay. This estimate was set down under last year's head alone; and the consequence was, that in that year, as compared with former years, there appeared an enormous difference in the amount of the funded debt. Upon this mistake, created by the hon. member himself, he had raised his argument. The hon. member had charged the Government with not having effected the reduction of the national debt. He begged to call the attention of the house to this subject. The bullion committee of 1819 recommended that the unfunded debt should be reduced to the extent of 10,000,000*l.*; and he was able to show, that Government had not only complied with that recommendation, but gone beyond it. From the time of the report of the bullion committee up to the present moment, Government had discharged upwards of 13,000,000*l.* of the unfunded debt. In order to make the subject perfectly intelligible, it was necessary to explain the nature of the unfunded debt. It was divided into two parts. One part, consisting of Exchequer-bills, was called the unprovided debt; and the other part, existing merely by anticipation of the funds, by which at a limited period it was to be discharged, was called the provided debt. When he spoke of the reduction of the unfunded debt, it would be understood that he alluded only to that part of it which was unprovided. To the unprovided debt no addition had been made since the date of the report of the bullion committee; on the contrary, it had been made the subject of gradual reduction. On the 5th of January, 1819, the unprovided debt stood at 19,480,000*l.*; on the 5th of January, 1826, it stood at 6,139,000*l.* The chief reduction in the amount of this debt took place in the first three years after the recommendation of the bullion committee. In 1820, 1821, and 1822, it was reduced 10,000,000*l.*; and, in 1823 and 1824, it was reduced 3,000,000*l.*, making a total reduction of 13,000,000*l.* Did this gradual reduction of the amount of debt exhibit any inattention on the part of Government to this important subject? The question raised by the hon. member was this—whether it would have been wiser for ministers to have funded the Exchequer-bills, or raised money to pay them off, or to have adopted those measures which had relieved the country from a portion of taxation, and enabled us to enter upon a more liberal system of commercial policy? It was impossible that Government could have adopted both plans. If they had funded the Exchequer-bills they would thereby have been prevented from pursuing the other advantageous measures to which he had alluded. They could not row two ways at once. Was there any thing in the state of country which should have induced ministers to resort to the expedient of funding Exchequer-bills? The hon. member had indulged in some talk about Government being overwhelmed with Exchequer-bills, in consequence of their coming in as revenue. Now, during the few last years Exchequer-bills had been at a premium. So great had been the demand for them, that an opportunity presented itself, which Government would have been to blame to let pass, of reducing the interest on them. It was true that these securities had recently suffered a depreciation of value; but it was impossible that Government could anticipate the late convulsion. Ministers would

have been censured for imprudence, if, instead of reducing the taxes, they had funded Exchequer-bills at a period when the state of the market presented no inconsiderable difficulties to such a measure. The whole amount of unfunded debt at present out-standing in the hands of the Bank and the public, might be called 30,500,000*l.* On the 5th of January, 1819, it was about 44,000,000*l.* For the sake of argument, he would suppose that the whole of that sum had been funded in any year since 1817, to see the way in which that proceeding would have operated on the public interests. If that amount, then, had been funded in 1818, when the price was 60*s.*, the country would have incurred a burden of 5,420,000*l.*; in 1819, when the price was 80*s.*, the burden on the country would have been 5,121,000*l.*; in 1820, when the price was 69*s.*, the burden would have been 5,035,000*l.*; in 1821, it would have been 4,126,000*l.*; in 1822, 2,692,000*l.*; in 1823, 2,469,000*l.*; in 1824, 1,017,000*l.*; and, in 1825, about half the last sum. Independently of any other considerations, the expense to which the country would have been put by the proceeding formed a reason for not funding the debt.—With respect to all that the hon. member had said about the embarrassment of the Bank, owing to their transactions with Government, he was sure it was completely fallacious. As a proof of this, he might mention, that when very lately the Bank found it necessary to make advances to the merchants, they did so unhesitatingly, and to a very considerable extent. He had now stated all that seemed to be necessary in reply to the speech of the hon. member (hear, hear).

*Mr. Baring*.—As to the question whether the unfunded debt was or was not too great, it depended on a variety of circumstances. It would have been a wise measure on the part of Government, when the stocks were at 95, to fund a portion of this debt. When it was known that they could not rise above 5 per cent. higher, and might descend 40 per cent., it was a piece of common prudence to seize the time. Every debt the Government was liable to pay, they should then have paid. No explanation had been given by the hon. member (Mr. Herries) of the difficulties of the Bank. It had been said that the Bank had shown the utmost readiness to come forward in order to relieve the public embarrassments; but, from the middle of November, they had been screwing the circulation of the country. The story told by the Bank, in the paper which he held in his hand, was—that during the bubble period they had a circulation of 21,000,000*l.*, on an average, down to the month of August. The exchanges going up, the Bank took fright, and in three months brought down their circulation to 17,400,000*l.* Was not then the Bank pressing upon the capital of the country for the purpose of relieving itself of the mass of choak? When they found the measure unbearable, the Bank was then said to come forward gallantly, after diminishing the circulation of the country 2,600,000*l.* in the space of a few weeks (hear, hear). This was the barometer by which the country circulation was regulated; and it was impossible to look at the consequences of the measure without condemning it. Some might say, that the Government were in fault, and others might lay the blame on the Bank; but no man who understood the subject

would hesitate to say that between them the blame rested. The symptom of the distress on the part of the Bank, was their selling Exchequer-bills. Though the amount might have been small, it had an effect on the market; for the Bank could not sell without creating an alarm beyond the occasion.—The advance made by the Bank on account of the dead-weight amounted to 8,000,000*l.* and, if suffered to run up, would reach 13,000,000*l.*: he (Mr. Baring) would suggest to the Chancellor of the Exchequer, that as the price of stocks was the same now as when the negotiation on that subject took place, the Government should take this dead-weight concern out of the hands of the Bank.

The Chancellor of the Exchequer said, that if the hon. member (Mr. Maberly) had gone as far back as 1816, he would have found that on the 5th January of that year, the unfunded debt amounted to 61,000,000*l.*; and that on the 5th January, 1826, it amounted only to 31,000,000*l.*, having been reduced nearly one-half. The hon. gent. might say that this was not a sufficient reduction, but it afforded some proof, at least, that the Government had not been inattentive to the reduction of this debt.—As to the transactions of the last three years, in which he (the Chancellor of the Exchequer) was concerned, the hon. member (Mr. Baring) had unfairly represented them. In 1823, when the hon. member said the Government should have funded, and thereby effected a saving, the three per cents. were not, as he represented, ranging between 90 and 100, but had been so low as 72; and he (the Chancellor of the Exchequer) would have acted absurdly to propose to fund at this price. The hon. member had stated that no attempt was made to reduce the unfunded debt in 1824: this he denied. When the unfunded portion of the debt was at a high premium, funding was not an easy operation. When the securities were at a premium of 60*s.*, people would not part with them without some advantage being offered (hear). It would, besides, have been inconsistent in 1824 to fund a mass of exchequer bills, whilst Government was reducing the four per cents. It would have been a manifest inconsistency to do any act which would lower the funds at such a time.—The subject of the deficiency bills, to which allusion had been made, was, perhaps, not well understood by the house. The nature of those bills was this:—There was a certain portion of the current expenses of the country payable at the end of every quarter. These payments were charged on the consolidated fund, the guarantee of the public creditor, and composed of the aggregate of almost all the taxes. These taxes were paid into the Exchequer from day to day, and greatly exceeded the amount of the charge. The total amount was about 45,000,000*l.*; the charge was about 35,000,000*l.* The difference between the charge and the total amount was applicable to the payment of the annual supplies. But only a proportion of it was applied each quarter, and the greater part of the charge did not accrue till the end of the quarter. If no use was made of the money, it was formerly paid into the Bank; but of late years it had been deemed advisable that the public should have the benefit of the employment of their own money. Hence there was a diminution at the end of every quarter of the amount of money appli-

cable to the payment of dividends then accruing; and this called for an advance from the Bank to the amount of the difference. This advance was made on the credit of exchequer bills; and such was the history of the deficiency bills. But in 1823, the receipts of the revenue had so increased, that there was scarcely any necessity for these deficiency bills, for all demands upon the Exchequer were promptly met. In 1824, it appeared that it would be desirable to apply 4,000,000*l.* of the growing produce of the revenue to the reduction of the permanent unfunded debt. This measure, when proposed to the house, was approved—the hon. members for Aberdeen and Abingdon (Messrs. Hume and Maberly) joining in that approval. Then in October 1824, 1,000,000*l.* had been appropriated to this object; in March 1825, another million; in June 1825, another million, besides 3,000,000*l.* paid to the public; so that, since October 1824, the debt had been reduced 6,000,000*l.* But for these payments made to the public, the deficiency bills of the 5th Jan. 1826, would have been almost nothing; so that the hon. member (Mr. Baring) was not justified in charging ministers with neglect and incapacity in this matter. He should be extremely mortified if the house disposed of this question upon the point of form; and would much rather at once go into the merits. If the house agreed in the opinion of the hon. mover, he (the Chancellor of the Exchequer) could no longer be fit to be a finance minister. If such was the opinion of the house, hon. members were bound in duty to declare it; and he should endeavour to submit to the consequences with the best grace that he might be able (cheers).

Mr. Hume said, that if he (Mr. Hume), personally calculating the full extent and value of all he owed in the world in the year 1819, found it amount to 20,000*l.*, and after applying a sinking fund for six years to liquidate it—viz. up to the year 1825—found it then amount to 22,000*l.*; the inference, which it would be rather difficult to get over, would be, that he had lost 20,000*l.* by his liquidating operation. Then, what would be true as to the debts and accounts of an individual, must necessarily be true as to the debts of a nation; and let the house observe the course of calculation which had been taken by his hon. friend. On the 5th January, 1819, the value of the whole debt of the country—funds at 3 per cent. 4, and 5—long annuities and annuities for lives—in fact, all the claims to which the nation was liable—as valued by the public accountant, amounted, in present money, to 832,000,000*l.* That sum, in currency, would have cleared the kingdom from the principal debt; and the yearly amount of interest paid was 29,000,000*l.* Now what was our situation when our sinking fund had been seven years at work—in 1826? Why we had had an increase of revenue over expenditure to the extent of 19,000,000*l.*; this was exclusive of a sum of 500,000*l.* received from the East India Company, and another sum from Austria of more than 2,000,000*l.*; and yet the value of the whole amount of our debt, including the funds, annuities, dead weight, and every thing which in 1819 had been 832,000,000*l.*, was now 893,700,000*l.*, being an increase, as regarded principal, of 61,700,000*l.*; and the interest which we paid was increased by about 31,000*l.* a year. Then where was our surplus of revenue, 19,000,000*l.*? Where was the mo-

ney that had been borrowed? It was all lost. These were the advantages and bounties of the sinking fund. In 1819, when our taxes had been increased 3,000,000*l.*, to support that common delusion, the country had been told that, upon calculation, if it were maintained and held sacred, in ten years it would reduce 70,000,000*l.* of the debt; instead of this, its operation during seven years had been to add to the debt considerably. The hon. gent. spoke of fallacy and confusion; it was the fallacious system upon which this fund proceeded,—the buying with the right hand and selling with the left,—that threw the whole accounts of the country into a state in which it was almost impossible to comprehend them. In 1822, a loan had been contracted for with the Bank of 13,000,000*l.*, in which we had given 100*l.* 3 per cent. stock, for every 73*l.* 5*s.* in money that we received. What followed? The commissioners of the sinking fund carried this 73*l.* 5*s.* into the market, and bought stock, paying 90*l.*, 95*l.*, and even 100*l.*, for that which we had sold for the 73*l.* 5*s.* Here was a loss of no less than 15*l.* per cent., upon the average, upon the sum paid up, which was 8,000,000*l.*—The whole system was one which called for change—a change in the management of our financial scheme, and in the manner of making up the accounts. The only real source of a sinking fund was surplus revenue: within the last seven years, our surplus revenue had been 19,000,000*l.*; and the commissioners of the sinking fund had bought and sold, and transferred, and retransferred, stock within that time to the amount of 117,000,000*l.*!—He now came to the manner in which the unfunded debt of the country was managed, which was just as satisfactory as the rest. The rt. hon. gent. made much of the mischief which the issues of the Bank paper had done to the country—how came it that they said nothing of their own excessive issues of Exchequer-bills, which had done ten times more towards deranging the money-market, and producing the causes which had led to the late distress? In 1817, they had had 49,000,000*l.* of Exchequer-bills out; in 1818, they had issued 12,000,000*l.* more; making 61,000,000*l.* If the issues of Bank paper had raised prices through the country, what must have been the effect of such an issue as this? In 1819, the Exchequer-bills out had been 48,000,000*l.*; 14,000,000*l.* having then been paid off. But why had not ministers funded their Exchequer-bills in 1825? Why had they not funded at least a part of them, as they had been so vehemently pressed to do? To this question no answer had been made.—The subject generally required the closest consideration of the house, and the hon. member had done perfectly right in bringing it forward.

Mr. Maberly declined pressing a division, and the resolutions were negatived.

### *Funding of Exchequer Bills.*

MONDAY, APRIL 17.—The Chancellor of the Exchequer, in a committee of ways and means, rose to propose certain resolutions respecting the funding of Exchequer-bills, a measure which had been adopted by ministers for the purpose of relieving the Bank from a portion of the advances which had been made to Government, and of diminishing the amount of Exchequer-

bills in the market. In pursuance of that plan, Government had, in the course of last week, sent a proposal to the Bank, stating the nature of the measure, and explaining that it was intended to fund Exchequer-bills, by creating a new stock, which should yield 4 per cent., fixing the amount of stock at 1071. for each subscription of 100l. Exchequer-bill, or 100l. 10s. cash; and it was further proposed, in order to make the proposition more acceptable, that the stock should not be redeemable in less than seven years. In consequence of this measure, books were opened at the Bank on Wednesday last, and it was fixed that the interest should commence on the 5th of April current, and that the first payment should be made on the 10th of October next. The total amount proposed to be subscribed for was 8,000,000l. He was happy to state that the measure had been most successful; 8,000,000l., or nearer 9,000,000l., had been purchased; and he had no doubt, that if the transaction had not been closed, a still greater amount would have been subscribed for. All that remained now was, to state the charges which would be created by this funding of Exchequer-bills, and to propose the resolutions which he meant to submit to the house. The addition thus made to the funded debt would be 8,560,000l., the interest on which would amount to the annual sum of 342,400l.; the addition of the sinking fund would be 5600l., not upon the stock created, as the only sinking fund necessary would be 1 per cent. upon the funding and capital created, making a total of 350,368l., including 2368l. for the management of the concern. The two sums of 5600l. and the 2368l. he did not mean to meet by levying a new tax, but he proposed to place it to the account of the consolidated fund. It was not necessary for him to go farther into explanation, as it was not probable that the house would be disinclined to confirm a bargain which was so fair for the Government and the country. The rt. hon. gent. concluded by moving several resolutions, which merely repeated the condition of the subscription.

Mr. Irving asked, whether any arrangement had been made for including in the payments to be made to the Bank the sums they had disbursed in the purchase of Exchequer-bills in the early part of the year?

The *Chancellor of the Exchequer* replied, that there was no specific time named in the engagement, but the payments would be made at such times and under such circumstances as the state of the currency and the demands of the Bank would render desirable to the Government, and useful to the country.

Major Maberly asked a question as to the amount of sinking fund required for the new stock.

The *Chancellor of the Exchequer* said, that the principle of the sinking fund was, that it should go on to accumulate at compound interest until it made 1 per cent. upon the whole debt, funded and unfunded; but these Exchequer-bills had been already provided for in that way, as unfunded debt; so that the only thing to be now provided would be, for the difference between the amount of those bills as unfunded debt and the stock which they made when funded.

The resolutions were put and agreed to.

### *Management of the Public Debt;— Bank of England.*

Mr. Greenfell rose to move for accounts, first of the balances of public money in the hands of the Bank of England; and next of the charges for the management of the public debt, and other services performed by the Bank for the public. It was, perhaps, in the recollection of some persons who now heard him, that when he had first called the attention of parliament to the affairs of the Bank, the production of these accounts was resisted not only by that corporation, but also by the then *Chancellor of the Exchequer*. After, however, a two or three years perseverance in calling for them, the resistance at length gave way, and on every successive year they were yielded without a struggle. Nevertheless, when he considered the approaching period of the expiration of the charter—a charter which he hoped and trusted would not be renewed—he thought that he might be allowed to say a few words, for perhaps the last time, on the state of their affairs. He remembered that at one time the average amount of the public balance lodged in the Bank for current use, in the same manner as any gentleman kept his cash account at his private banker's, amounted for 10 or 12 years to no less a sum than 11,000,000l. or 12,000,000l. a year. Of late years this amount had considerably decreased. In 1821 it was diminished to 3,900,000l. In 1822 it rose again to between four and five millions; in 1823, to between five and six; in 1824, it had advanced to above seven millions. He was quite sure, that no man at all conversant with business would deny the advantage which these balances must in a pecuniary point of view confer upon the Bank; and he must repeat what he had often before asserted, that the nature of the service performed by the Bank for the public, as compared with the profits accruing from the use of such large deposits, was so trifling, as hardly to admit of calculation in any proper settlement of these transactions. It was right to call attention to this circumstance, for when the expiration of the Bank charter arrived, it would be for the Government to consider what bargain it would renew for the transaction of the public business with the present Bank, (for he thought it would still be preferable to deal with them); or whether a second bank on a large scale would agree to give the public a large participation in the profits arising from heavy balances in hand, and take such a sum as 10 or 20,000l. a year for the management of the national business. At all events, whenever the bargain was made again, the public ought to receive a large participation in the profits derived from the use of millions of their own money. Let them consider how the public cash account stood at the Bank of England. The Bank had advanced 15,000,000l. the whole of its capital, to the public, at 3 per cent. interest, and this large premium they were receiving for the year 1824, while they actually were holders of nearly seven millions and a half of the money of that same public. Surely there ought to be a balance of mutual profit struck under circumstances like these. The next subject that he wished to refer to was the allowance made by the public to the Bank for the management of the public debt; the trouble of this management consisted in the daily transfer of stock, and the payment of the annual divi-

deads. It was due to the Bank to say, that the whole of this business was invariably performed with promptitude, exactness, and diligence; that in fact nothing could be better done; and there was only one complaint to be made respecting it, which was, that the price for the work was much too high. When the charter should expire, he hoped this matter would also be taken into the consideration of Government before they renewed the contract; indeed, on an equitable revision of this part of the bargain, the public ought to save 250,000*l.* a year.—He concluded by moving for the returns.

Mr. *Pearse* had no objection, on the part of the Bank, to the production of these accounts; but he would not on the present occasion go into the merits of the public bargain with the Bank, or the terms which ought to accompany the continuance of their charter. He hoped that important subject would be gravely considered by Government, not as regarded the interest of the Bank itself, but as would best serve the Government and the country. They would at least come to the discussion with the full knowledge of the eminent services performed by the Bank for the public, when that corporation had stood in the gap, and effected what, upon emergencies, legislative interposition would have failed to accomplish. As to the allowances of the Bank, it would be time enough to discuss their amount when the charter was under consideration; but when the hon. gent. thought proper to estimate the services performed by the Bank, he should not have kept back (though no doubt, unintentionally) the immense risks and losses which they incurred, and could not guard against, in transacting the public business. On a late occasion they lost by the forgeries of a single person (Fauntleroy) above 200,000*l.*, and this, too, in the execution of the public business, and so contrived by the individual, that although the strictest inquiry was made into the conduct of the Bank clerks, in no single instance could negligence or impropriety be attributed to one of them for it. He hoped, that when the proper time for discussing the renewal of the charter arrived, their deliberations would not be governed by passion, but by the principles of reason and sound sense.

Mr. *Hume* concurred in the hope that they would be governed by sound principles, for then they would see that the time had come when all these exclusive charters ought to be abolished, by which the community at large always suffered for the gain of a few.—As the word "lottery" was introduced in the accounts now called for, he was anxious to know how it had happened that the pledge given by Government two or three years ago for the extinction of lotteries in that year had not been fulfilled? It seemed to him that these lotteries would be carried on perpetually; two of them were still advertised. How, he asked, had this happened?

The *Chancellor of the Exchequer* replied, that when he had moved the resolution in 1823, upon which the lottery bill was founded, he was not sufficiently aware of the mode in which these lotteries were practically conducted. It was never the custom he had since ascertained, that they should be drawn in the same year, for the service of which they had been voted—the consequence was, that the lottery for one year spread over one or more future years, and hence arose the apparent inconsistency between the pledge he had given, and the fact which the hon.

member had stated, of the prolongation of the lotteries. There were now, however, only two of them remaining to be drawn, which must be concluded within the present year, and he pledged himself that they should be the last (hear, hear).

The accounts were then ordered.

### *State of the Nation\*.*

THURSDAY, MAY 4.—Mr. *Hume*, in rising to submit a question on the present state of the country, claimed a large share of indulgence. On former occasions, the subject had been introduced by individuals, whose talents and consequence entitled them to attention; but as he possessed no such claim, he would crave the favour of their patient indulgence while he laid before them those statements of which he had given notice for more than two months before. On other occasions the object of such motions had been to remove those ministers, whose conduct was impugned in the resolutions they were called upon to adopt. He disclaimed, however, any such intention. The resolutions were worded in the manner he thought fittest to convey the full sense of his view of the subjects they embraced; but as far as his Majesty's present ministers were concerned, although he regretted they did not go to the full extent of what he considered necessary with regard to the expenditure of the country, yet he had no desire to procure their removal from office. On the contrary, he gave them credit for the liberal course of policy which had lately distinguished their administration; and had, he believed, on every occasion, save those connected with the public expenditure, given them his earnest support. He had, however, for a considerable time, taken a view of the country very different from that which seemed to guide their policy, and which induced them to continue imposing a rate of taxation much greater than their resources enabled them to bear. His desire now was to remove from their minds the erroneous impressions they had taken up on that subject, and to shew that the course which they were pursuing would, if not checked, bring ruin and misery upon every class in the kingdom. By the courtesy of the Treasury, he had been enabled to gain access to the documents which were necessary to illustrate his argument; and the result of his inquiries being printed, could be had at the Vote-office, by any individual who felt himself interested in the subject. It was his purpose to go into an inquiry on every thing contained in these statements, except that part relating to the Sinking Fund, which he considered so important and so intricate, that he proposed to leave it for future investigation, when it could be taken without being mixed with any extraneous matter.—He would begin by taking, for the illustration of his subject, the period from the 1st of January, 1817, to the present time, although the Chancellor of the Exchequer had, for what good reason he knew not, drawn his comparisons first from Jan. 1816 to 1823; and at ano-

\* This speech, which has been very imperfectly reported, owing to the minuteness and extent of the calculations, will be best understood by referring to the hon. gent.'s resolutions, *post*, p. 170.

ther time, from 1819 to the present period. He proposed to take his comparisons from the 1st of January, 1817, because that was the period when the Exchequer accounts were freed from that obscurity which had been so long a disgrace to the country; for, whilst the accounts of England and Ireland were balanced together, it was utterly impossible for the most practised accountant to understand them. The first resolution which he would submit was one negating the assertions of the Chancellor of the Exchequer on the 23d of March, 1823, that there had been effected a reduction of 24,766,520*l.* in the capital of the funded debt, from the end of the war to January 1823; and, again, that there was a further reduction of the public debt of 18,401,000*l.* between January 1823 and January 1826, making together a total reduction of 43,167,520*l.* in the capital of the debt since the war. Taking this period of nine years, he was prepared to show, from reference to documents, which would show the real state of the question, and on which he would put no construction, either favourable or unfavourable, to the particular views which he might entertain, that these documents only shewed a decrease to the nominal amount of 27,327,780*l.* This would appear from the following statement:—In 1817, the public debt of the united kingdom, funded and unfunded, was 846,765,078*l.*; this total was made up of the funded debt; the amount of which was 796,200,291*l.*; and the unfunded debt, of which the total was 50,564,787*l.* The total of the funded debt on the 5th of January, 1826, was 778,128,268*l.*, and the total unfunded debt 41,309,030*l.*, thereby making the total funded and unfunded debt 819,437,298*l.* The result would then be, a decrease since 1817, of 27,327,780*l.* Having stated the amount of the decrease in the capital, he would next proceed to an important consideration—the reduction which had taken place in the charge of the debt. The charge of the funded debt, as it stood in 1817, was in round numbers, 23,870,000*l.*, and in 1826, 27,679,000*l.*; and the charge of the unfunded debt, on the 5th January, 1817, was 2,051,242*l.*, and on the 5th January, 1826, 1,256,482*l.*, making the total reduction of annual charge for funded and unfunded debt, of 2,985,757*l.* Of the aggregate amount of the capital of the public debt reduced, there had been effected a reduction in the proportion of 18,072,029*l.* in the funded debt, and of 9,255,757*l.* in the unfunded debt; and further, of the 18 millions of funded debt reduced in the nine years, the capitals cancelled amounted to 6,934,285*l.*, which left only 11 millions of funded, and 9 millions of unfunded debt, which left an aggregate reduction of only 20,393,495*l.* This appeared from the capitals cancelled, which, without reference to loans, were cancelled; for life-annuities, 5,730,212*l.*; for land tax redeemed, 805*l.*; unclaimed, and purchased with unclaimed dividends, 185,542*l.*; 5 per cents. paid off, and by transfer of capital from England to Ireland, 129,789*l.*, which gave the amount he had stated at 6 millions in round numbers. The hon. member then went through an elaborate calculation, shewing that the total reduction of the charge on the unfunded debt was only 2,242,716*l.* After all that had been stated respecting the great reduction which had taken place in the annual receipt of taxes, it appeared from the public account, of the nine years which he had taken as the

period of his calculations, there was very little variation in the receipts of these years. The total amount of the revenue, from 1817 to 1825, amounted to 531,000,000*l.* in round numbers. The total amount of the expenditure, during the same period, was 508,000,000*l.*, leaving a surplus of 23,000,000*l.* Adding to this the sums by the East India Company and by Austria, and 7,000,000*l.* from the Bank, in part payment of the 45 years' annuity, the total surplus would appear to be nearly 26,000,000*l.* The expenses of the military and civil establishments were 234,000,000*l.*, and this he thought should be regarded with feelings of great interest by the representatives of the landed interest, who were now so keenly alive to the question of the corn laws. If they examined this subject as it deserved, they would find another cause than that to which it was attributed for the distress of the country, in the enormous expenses of those establishments. When the country gents had looked at their amount, he would ask them whether they thought that their exertions to lessen the burdens of the nation entitled their present complaints to any attention (cheers). He now asked the house to look at his ninth proposition, which stated, that although the excess had only been 26,000,000*l.*, yet in the finance accounts 125,000,000*l.* appeared to have been applied to the reduction of the national debt. It was too absurd for refutation to attempt to assert that there could be any sinking fund but surplus. The error which Mr. Pitt had fallen into, and the delusions of Dr. Price, might have produced the most mischievous consequences to the country, if they had not been put a stop to. It was possible that a small state, like that of Genoa, for example, might employ its surplus revenue in purchasing the securities of other nations, by which they might obtain a larger rate of interest than in any other country; but it was obviously impossible that a traffic which must begin and end with England could produce any real benefit to the Government, or relief to the nation. He would shew that an actual loss had been sustained by the public of 35,000,000*l.* solely by their dealing in their own securities. The ministers of 1793, whose system was to borrow twice as much money as was wanted, imagined that they were supporting the public credit by loans, when in fact that credit could only be supported by a real surplus in the money market. It became the duty of Government to put an end to the juggling system of the sinking fund, and with it all that unwarrantable and ruinous speculation which it had given rise to. He would give the house an example of the strange mode in which the financial measures of the country had been conducted. In 1819 the Chancellor of the Exchequer gave notice that he would require a loan of 24,000,000*l.* Three sets of persons were bidders for the loan. It was necessary for each party to sell stock, in order to be prepared to pay the instalments on the loan, if these offers should be accepted. This was done on the day preceding the morning when the biddings were to take place, and the consequence was a depression of the funds. When the time for bidding arrived, the offers made bore reference to the prices of the preceding day, and averaged about sixty-five. It happened, however, that the hon. member for Penryn advised the Chancellor of the Exchequer to take 12,000,000*l.* from the nominal sinking fund of 17,000,000*l.* to transfer

the sum from one side of the book to the other, and to borrow only 12,000,000*l.* The Chancellor of the Exchequer adopted the advice, and as soon as it was known that only 12,000,000*l.* were to be raised by loan, the bidders advanced their offers to 69, making a saving of 3,000,000*l.* to the public. He trusted he had said enough on the subject of the sinking fund to induce the house to give him a hearing on some future occasion, when he intended to propose the abolition of the system. The loss arising from the complicated system of the sinking fund would have been decreased if the surplus revenue and other resources had been applied year by year, to the purchase of stock at the average rate of the respective years; and if further proof were wanting of the ruinous system of finance so fatally persisted in, of supporting a sinking fund by loans, the result of the last loan from the Bank, called the dead weight, would furnish indisputable evidence. By that loan, the public debt was increased in 1823, equivalent to the amount of 9,476,110*l.* of three per cent. stock, and the annual charge of 284,283*l.* in perpetuity; whilst the commissioners of the sinking fund applied a corresponding sum to the purchase of 7,808,188*l.* of three per cent. stock, at the rate of 88*l.* of money for 100*l.* stock, cancelling an annuity in perpetuity of 225,745*l.*, by which transaction there had been an actual loss, or addition to the debt of the country, of 1,617,922*l.* of three per cent. capital, and 58,539*l.* of annuity in perpetuity. The country was in a situation which demanded immediate attention from the house; and attention to the only means which existed for its real and permanent relief—to wit, a diminution of the burdens under which it was labouring. While the value of every species of British produce was daily decreasing, our public charges were either at a stand, or growing higher every day. If the quantity of our exports was increasing, their value was decreasing: the remuneration to the producer, or manufacturer, for his capital and labour grew every year less and less. This might be seen by reference to the returns before the house, care being taken that hon. gents. were not misled by the mode in which the accounts were stated. There were two columns referring to value in the returns of exports; one shewing what was called the "official value," which was deduced from the quantity of goods, and the other the "declared value," which contained the amount (with reference to price) actually set upon them. Now, of thirteen of our chief articles of export, the average "official value" for the years 1814, 1815, and 1816, was 36,562,367*l.*, and the "declared value," 44,476,519*l.*; for the years 1823, 1824, and 1825, the average "official value" shewed an increase, being 45,890,927*l.*; but the "declared value"—what was that? Only 36,782,934*l.*, being a diminution exceeding 25 per cent. after allowing for the difference in the value of money for the two periods. The country gents. said that the taxes could not be raised unless their rents were supported: he (*Mr. Hume*) must be pardoned for telling them that he considered them—talk of paying the taxes—perfectly useless in the scale of production (*laughter*). All the half-pay people; all the pensioners; all who received salaries, payments, or allowances of any kind, for which they did not work, were useless in the work of providing for the support of our 58,000,000*l.* of taxes. The hammer—that wielded the

hammer—that managed the loom and the sail—were the only productive hands in the country; all the rest were useless. The finance committee of 1817 had called the attention of the house to the establishments of 1792;—what attention had been paid to that recommendation? The charges for the army and navy, and the civil list, stood at 26,000,000*l.*, four times their amount in 1792. It was the increasing number of pensioners and idle hands—the increased sum taken from those who did labour to maintain those who did not, that really crushed the productive interests of the country. Rt. hon. gents., when reduction was mentioned, objected to the year 1792. Why, they asked, were we to go so far back as the year 1792? But when it was a question of increase of expense—on the debate as to the salary of the President of the Board of Trade, the other night,—then there was a different opinion; and the rt. hon. sec. (*Canning*) had found no objection to going, for a precedent, so far back as the year 1782 (*hear, hear*). Having said thus much by way of preamble (*laughter*), he could assure the house, that he was only now just arriving at what was material in his speech (*excessive laughter*). It was a matter, however, for serious consideration; for if things went on in their present condition, some serious catastrophe would, before long, put a stop to them. It had been asserted over and over again in that house, that there had been a diminution of taxation to the amount of 27,000,000*l.* a year, since the termination of the war; no statement could be imagined more delusive and fallacious. He granted that the taxes had been modified; that some had been cut off which produced nothing; that others which produced little had been turned to good account. The taxes had been made in so far less oppressive, that they had been brought to bear more evenly than before upon the country; but, with reference to the amount actually raised, looking to the difference in the value of the currency, there was an increase, rather than a diminution, since the year 1815. The average amount of taxes raised in the years 1813, 1814, and 1815, was (annually) 69,010,227*l.* But this, it must be recollected, was 69,010,227*l.* of paper—not exchangeable into gold at less than 5*l.* per ounce. In money of the present day, that 69,010,227*l.* of paper would be found equal only to 53,741,714*l.*; the average for the last three years was 52,430,765*l.*—showing a decrease in amount of 1,310,919*l.* only, instead of 27,000,000*l.* And, in fact, this statement did not go far enough. Looking at the price of labour at the two periods, there was no diminution at all in the amount of taxation, but actually an increase. For the money amount of taxes during the years 1813, 1814, and 1815, was only equal, at the prices of that time, to the purchase of 15,853,926 quarters of wheat; while the present taxes, at the prices of 1823, 1824, and 1825, were equal to the cost of 17,434,546 quarters, being an increase of 2,000,000 of quarters, supposing the taxes to be paid in corn, or 13 per cent. upon the whole. Looking to the years 1817, 1818, and 1819, the amount of taxation was greater now by near 700,000*l.* a year (in money) than it had been in those years. The general pressure upon the country was—so far from having been at all lessened—actually greater at the present moment than it had been ten years since. That

the continued pressure of taxation had greatly increased the privations and distress of the productive, industrious, and labouring classes of the community, was manifest from the stationary, if not diminished, consumption of many taxable articles of primary necessity, as well as of enjoyment and luxury, notwithstanding a great increase in the number of consumers. The *rt. hon.* the Chancellor of the Exchequer had come down to the house in 1823, and, in a speech which would long be remembered, had called upon Parliament to sanction the existing system of taxation on the ground of the highly prosperous and flourishing condition of the country. Looking to the increase in the consumption of all taxed articles as regarded that year over the three years preceding, although that was far from being a fair mode of taking the question, the *rt. hon. gent.* had seen cause for nothing but exultation. But what was the real state of the country as to the consumption of these excisable articles, not looked at with a view to any difference between one year and another, but looked at with reference to the amount of that consumption at the present day, and twenty or thirty years ago? No one could look back to the former and the present state of the agricultural peasants, and not be convinced that they were in a worse condition than formerly. The real secret was, that taxation deprived them of the fruit of their labours; and yet the Chancellor of the Exchequer, year after year, deluded the country with his statements respecting the diminution of taxation. (The *hon. member* then read a statement given by the *rt. hon. gent.* last year, respecting the reduction of duty on excisable articles.) On malt, he said, there had been a reduction of 50 per cent. as compared with 1816. Now he could not excuse the *right hon. gent.* for making a comparison which he must consider unfair. The fact was, it would be seen by a reference to the resolution No. 36, that in the last forty years there had been a decrease of consumption, although the number of consumers had been increased 40 per cent. The number of bushels of malt annually consumed, from 1785 to 1794, was 25,751,775; and the average annual consumption for the ten years ending 1824, was only 25,246,940 bushels, being an actual decrease of more than 500,000 bushels per annum. There was therefore a reduction of 40 per cent., instead of an increase of 50 per cent. Nor was it fair and candid to compare a year of depression like 1816 with a year of excitement like 1825. Let the country gentlemen look also at the fact, that when the rate of duty was increased, the consumption diminished; and he (*Mr. Hume*) was sure if they would assist him in forcing ministers to reduce the expenditure, and restore the duty to what it was, the consumption would increase. With respect to the next article,—distilled spirits,—the consumption of these, it was commonly believed, had increased, but the contrary was the fact. The *rt. hon. gent.* had stated there was an increase to the amount of 53 per cent., whereas there was a decrease. The consumption in the period from 1793 to 1795 was greater than during the last three years. The quantity of spirits distilled in England and imported from Ireland, during the last year, was less than in 1806. Including the foreign spirits (brandy, rum, and geneva), there had been a considerable reduction. The average for the last five years was 12,110,281

gallons per annum; for the five years ending 1810, 13,059,522 gallons. Some persons thought a diminution in drinking of spirits was desirable; but he thought that, in this climate, spirits were necessary. He would next look at the luxuries of the rich: the quantity of foreign wines charged with excise duty in 1801, 1802, and 1803, was, on an average, 7,661,270 gallons; in the four years ending 1822, only 5,223,326 gallons; showing a diminution of 2,437,944 gallons yearly, or about 30 per cent. notwithstanding the increased number of consumers; and that there was at least 10 per cent. of inferior Cape wines charged with duty in the aggregate quantity of the last period. Whilst the rates of duty levied on foreign wines were, in the four years ending 1822, 30 per cent. higher than in the three years ending 1823, there was in the same period a reduction in the quantity that paid excise duties of about 30 per cent.; and the amount of revenue received was less in the period of high duties. Another item of prime importance was sugar. He had shown, by a table prepared from the official returns, that in the nine years ending 1816, after deducting 1,600,000 cwt. used for distillation, there was an annual average of 2,406,801 cwt.; and in the nine years ending 1825, an annual average of 2,593,340 cwt., equal to about 7½ per cent., though the population had increased 17 per cent. When, two years ago, he (*Mr. Hume*) had proposed a reduction of the duty on sugar, he was satisfied that the revenue would not be prejudiced, but that all parties would be benefited. It was, in his opinion, a most injurious plan to let a duty, proposed in a time of war, continue in a time of peace. He now wished to bring before the house a specimen of the manner in which the Chancellor of the Exchequer endeavoured to persuade the people to bear the burden of taxation. (The *hon. member* then recapitulated the heads of his preceding statements, observing that if he had committed the mistakes of which the *rt. hon. gent.* had been guilty, he should never have heard the last of them.) In respect to the increase in the article of candles, which the *rt. hon. gent.* stated was considerable, the way in which it arose was this—the labouring men, the artisans and weavers, used to leave off work at the close of day (a laugh); now they worked, instead of 10 hours, 12 and 14 hours: hence the consumption of candles. He would now proceed to consider the extravagance of Government, with reference to what was the feeling of the house in 1821, on the single point of the civil establishment. In the year 1822, the next after the vote of the house, the reduction of the payments into the Exchequer increased and continued to increase annually till the last year, when it amounted to upwards of a million beyond the expenditure of 1822. This was exclusive of other establishments. Such a statement was a complete proof that there was no desire to relieve the burdens of the country. It was lamentable to think of these burdens, with such a heavy tax for the half pay of the army. On looking at the number of officers on full and half pay, it would be found that it exceeded that in the year 1822 by a hundred. This was only to be attributed to the increase of patronage. The exact number of officers, from the colonel to the hospital-assistant, in the year 1822, was 13,721. In 1826, it was 13,827. Here was an increase, instead of a diminution, by absorption from the half-pay. It was there-

fore plain that the army was kept up for patronage, and to support idleness out of labour. He had expected to obtain an account of promotions which he had moved for, but which had not been produced; the object of this was to show the number taken from the half-pay, and the number introduced into the army. There were 6173 officers on half-pay. What other reason was there to continue appointments, but to afford the means of enabling his Majesty to bribe every family in the country? This was a plain intelligible fact. He ought to state it as a very baneful fact, that a large portion of the higher orders were so biased by means of this kind of patronage, that they acted in a very different way than they would if left to themselves. The rt. hon. Sec. for foreign affairs had, indeed, maintained that there should be an opening for the gentry of the country. But formerly the gentry found employment for themselves; though now the country was obliged to provide cadetships and appointments for them; and hence the heads of families were prevailed upon to vote for the ministers. Let the house next look to the navy. In 1793, the officers in the navy amounted to 2063; in 1823, besides admirals, vice-admirals, and rear-admirals, there were 829 captains, and 3720 lieutenants. In the present year, with the advantage of taking in meritorious officers who had signalized themselves during the war, there were nearly the same number of lieutenants, namely 3689; but there were 838 commanders, so that the quality made up for the quantity. Now there was required only 828 officers for the fleet when afloat; so that there was seven times the number required, or sufficient to officer seven fleets at sea. The number of appointments in 1816, was 142; in the last year they were 294. The whole number from 1816 to 1826, was 1534, although there were 5000 officers. Could any one say that these appointments were for the good of the service? Surely not; it was patronage alone which kept up the establishment. On the other hand, the marines were treated in a very different manner; yet if it was fit that one branch of the naval service should be kept in an efficient state, why not the other? In the commissariat and other departments, the expense had not been reduced as a time of peace would have warranted. And, from all the premises which he had laid down, he came to this conclusion, that when there was such a demand, such a drain, on the industry of the community, poverty and wretchedness must be the inevitable consequence. It was quite evident, if this state of things continued, that the whole population, except those who lived by the taxes, must, ere long, be plunged into a state of deep distress. The effect of the system which had been so long pursued, was, he thought, correctly described in the 45th resolution. But since he had arrived in the house, a paper had been laid on the table, which shewed that pauperism prevailed to a greater extent than he had adverted to in his resolution. He spoke of the increase of pauperism with reference to the "money account," but the paper which had been recently laid on the table adverted to the "numerical" extension of pauperism, and placed the picture in a more appalling light. This proved that the comfort and happiness of the people had not increased, and was in direct contradiction to the statements which the rt. hon. gent. had, year after year, made to that house. That crime had latterly increased in a

most alarming degree, no man could doubt who took the trouble of looking at what passed around him. The statement contained in No. 46, put that melancholy fact out of question. It would appear from that resolution, that the commission of crime had increased, in a nearly quadruple degree, between the years 1803 and 1825. Now, it had always been held, that crime was the child of poverty and distress; and if that maxim were true, he had a right to assume that they, the legislature, who laid on the people greater burdens than they were capable of bearing, were the cause of this lamentable increase of crime, as their measures had created the existing poverty. The proceedings recommended by ministers, and adopted by that house, had deranged all the social relations of society. While the country was in a state of starvation, pensioners were allowed to riot on the industry of the people. When such was the real state of the case, it was in vain to suppose that those who abetted such proceedings were not doing mischief—it was in vain to hope that pauperism would not go on increasing. They had, therefore, much to answer for; and they ought, without delay, to set about relieving the country from its burdens. At the last Old Bailey sessions there were no less than 450 individuals set down for trial, many of them for petty thefts, arising purely from distress. It was perfectly evident, from a just view and consideration of the question, that pauperism and crime were produced by the laws which that house sanctioned. They demanded from the people, in taxation, an extraordinary and unnatural portion of the produce of their labour. Therefore, taxation was a primary cause of the sufferings of the country, which sufferings were further aggravated by the operation of the corn laws. Some things had, he knew, been done, which might assist the country in recovering from its difficulties; but, unless they did a great deal more—unless they put their shoulders to the wheel—nothing could prevent the country from sinking under its accumulated calamities. If they would but act prudently and consistently,—if they would retrench the national expenses,—they still had it in their power to save themselves and their country. But it was monstrous, after eleven years of peace, to keep up such enormous military establishments. And if war should happen to occur again, they would look back with regret on the opportunity which had been given to them to husband the resources of the country—an opportunity of which they had failed to avail themselves. He, for one, must acquit himself of having been negligent at that crisis. He had done every thing in his power to prevent the evils which now pressed around them (hear); and he hoped that the delusive statement of the Chancellor of the Exchequer would no longer blind the public to that which was the real fact (hear, hear). He could read extracts from letters which he then had in his pocket, the statements contained in which would harrow up the feelings of the most insensible. The distress which they described was truly appalling. The present was not a partial distress, against which no foresight could guard. It was a case of great and general privation, and it could not be accounted for, except by a great and general cause. Under all the circumstances, he would no longer call upon ministers to interfere. He entertained no hope that any real relief would originate with them. He would,

therefore—and he hoped the house would agree in the necessity of supporting the proposition—request his Majesty to adopt such measures as were calculated to rescue the country from its present perilous situation. The hon. member concluded by moving, “That an humble address be presented to his Majesty, praying that he will be graciously pleased to take into immediate consideration the present state of the nation, and direct an immediate inquiry into the causes that have produced such wide-spreading distress; and also that he will be pleased to direct such measures to be adopted as will terminate, as speedily as possible, the existing embarrassments.”

The *Chancellor of the Exchequer*:—“When I state to the house that it was about eleven o’clock this morning that I first saw the series of those resolutions to which the hon. gent., so much in detail, has called the attention of the house; and when I state, that those resolutions are no less than forty-five in number, and that they occupy 26 printed pages; that they embrace all imaginable questions of finance in all their complicated details; that they relate to matters concerning the funded debt, the unfunded debt, and the sinking fund; that they embrace also the general receipt of the revenue, divided, as it is, into such numerous branches; that they include every imaginable topic that can be introduced into such a question, I think the house will not be surprised when I say that it is absolutely beyond the physical powers of any man to enter fully into the discussion, and I shall therefore take the liberty of entreating the pardon of the house for saying, that with respect to by far the greatest part of that hon. gent.’s statements, I cannot attempt any explanation (hear, hear). When I received this morning the long series of resolutions which the hon. gent. has stated to-night, I had no conception that the conclusion of that hon. member’s address would be a motion like that which he has now proposed, namely—a motion to address the Crown praying that certain measures may be adopted, the first of which is the reduction of taxation. I say, sir, that I had no conception such would be the result of all his statements; and I do not hesitate to say, that I think it impossible for the house to act on what he has brought forward. When these papers containing the hon. member’s resolutions, were presented to me, I felt it to be my duty to read them with the view of seeing how far I could accede to them, and what portion of them I should be compelled to oppose. In doing this, I was, of course, struck with the first resolution, which, I find, charges me with having been guilty of making false statements to the house. (Some member was here understood to dissent from this statement).—That charge is certainly not made in direct terms; but what signify terms, when an imputation is in substance cast upon any one; and when the member making that imputation, both from the substance of what he says, and from the manner in which he says it, does in effect charge me with having been guilty, either of the most gross ignorance, or of practising a wilful and deliberate delusion and fraud upon this house? Sir, I beg leave most positively to deny either of these charges; and I add, that in that very resolution in which the hon. member makes this charge against me, there is a statement of his own of that very self-same kind (hear, hear). I will tell him what it is presently; but, before I do so, I must be

allowed to say, that it is a most unprecedented thing to charge a member of this house with having stated a deliberate falsehood; and to ground that charge, not on any thing which that member had said, but on a report—an unauthorized report—and on that alone. Yet on such an unauthorized report is this charge against me founded—on a report in which I am stated to have made certain assertions, in a speech delivered on the 3d of March, 1823. Now, sir, in the first place, I must observe, that I am not answerable for what is published of me. I did not revise the publication before it appeared, nor did I see it until after it had been published; and on such a report, I say, he has no right to charge me as he has charged me, with deliberate falsehood (cheers). I will not qualify the expression (cheers). I repeat, he has no right to charge me with deliberate falsehood (continued cheering). Sir, if that charge is true, I am unworthy to appear before this house, or to hold the situation with which I am at present entrusted, or, indeed, any situation in his Majesty’s Government (loud cheering). What does the hon. member say in the resolution to which I have alluded? The words of that resolution are as follow (here the rt. hon. gent. read the whole of the first resolution). Now, sir, I am ready to declare, that if the statements I am represented to have made are not consistent with the documents before the house, I am answerable for them; for those documents are certainly furnished by departments with which I have such a connexion, as to make me responsible for their accuracy. But, sir, the allegations in the resolution are founded on no such thing; I never said, that that reduction which took place between the termination of the war and the year 1823 was produced by the operation of the sinking fund. On the contrary, I expressly stated, that it was produced by other means (hear, hear); and when the hon. member charges me with practising a delusion and making false statements, and founds his charge upon unauthorized documents, it may not be amiss to let him see what even that unauthorized document really is. On the day to which his resolution refers, it was my duty to propose to the house certain resolutions, for the purpose of simplifying the operations of the sinking fund; and before I made the motion, I felt it would be proper to lay before the house a description of what was the actual state of the debt, and that I did in terms which, if he had carefully examined, he would have found that the words “sinking fund” were not used in any part of my statement to which his resolution refers. Before, however, I refer to the report of my statement, I must again observe, that I am not bound by words, the publication of which was not authorized by me.”

Mr. Hume said, he did not rely on the words stated in any publication to have been uttered by the rt. hon. gent.; he relied on the statements made by that rt. hon. gent. himself; statements of which he had a perfect recollection: for when the discussion was over he had gone over to the bench on which the rt. hon. gent. sat, and had pointed out to that rt. hon. gent. the errors of his statement.

The *Chancellor of the Exchequer* continued, “The statement which I am represented to have made was this: that “since 1816 there has been an actual diminution of the debt, which, although when compared with the whole

amount, is not of very great extent, is yet enough to shew that there has been a reduction which never could have been effected but by the application of a surplus revenue." I then, sir, proceeded to shew, that on the 5th of Jan. 1816, the amount of the funded debt, was 816,000,000l.; the amount of the unfunded debt, including Exchequer-bills, was 48,000,000l. Total debt in 1816, 864,800,000l. That on the 5th of Jan. 1822, the funded debt was 796,500,000l. The unfunded debt, including Exchequer-bills, was 43,500,000l. making a total for that year of 840,000,000l. which, subtracted from the total debt for 1816, shewed a reduction of 24,700,000l. The total stated is correct, but it is impossible that I should assign the reduction to the operation of the sinking fund; and, on the contrary, I actually stated enough to shew that the reduction was occasioned by other causes; but I did not use the words "Sinking fund," for I well knew that other circumstances had occasioned the reduction; and I purposely abstained from the use of that phrase, because I wished to avoid that delusion which I have been so liberally accused of practising on the house and the country. I repeat, therefore, that the charge of the hon. member is not in any way authorized by the statement which I have been described as making; and this he must have seen, especially if he had taken the trouble to quote the words of my statement correctly. But there is an anomaly in the hon. member's resolution, to which I wish to call the attention of the house. The resolution is in these terms (here the right hon. gent. again read the resolution). So that if you vote this resolution, which the hon. member has proposed, you must first condemn me on the charge of having made false assertions; and then you must come to a vote, declaring the truth of the facts stated in the resolution—a vote to which, perhaps, you may never come at all; but to which, unless you do come, you will have condemned me, and then have refused to credit the evidence on which my condemnation was founded. Surely, sir, I have a right to say that, at least, no charge was ever brought forward in so clumsy a manner. I confess I do not very much fear its consequences; or, I should say, that none had ever been introduced in so unfair a manner as that contained in the first resolution, which first proposes to condemn me, and then to examine the grounds on which I am to be condemned (hear, hear). This, however, is not the only instance in which that hon. gent. has framed his resolution in an illogical manner; for he seems so fond of being illogical, that he has made the other resolutions proceed in the same way, first condemning me, then proceeding to examine the grounds of my condemnation. The 31st resolution is another proof of this. The hon. gent. there again adverts to statements supposed to have been made by me; and after declaring my assertions to be fallacious, he concludes with referring to the grounds on which he makes the declaration. So that, upon this resolution, as on the former one, I appear to be condemned on proof, the accuracy of which is not to be considered till after my condemnation has been pronounced. Whether this is the mode of reasoning which, of all others, he has chosen as that by which he hopes to convince the house, I cannot tell, but I own that it appears to me utterly impossible that you should found any votes on such reso-

lutions. It is equally impossible for me to answer charges thus irregularly stated. God knows, it is difficult enough to follow, nay, perhaps I might be allowed to say, it is actually impossible to follow, the hon. gent. into his discursive statements, which have so little connexion between them, that I can only say, it seemed to me that the words of the poet were verified, and we might exclaim, "Chaos is come again." From the 31st I am obliged to go back to the 2d resolution; there again we may see the fairness with which he has proceeded, and the sort of inferences he has drawn from the facts which he has brought forward. This resolution is intended to dispute my statement, that the funded debt of 1816 has been reduced, in a certain manner, between that period and 1822. This statement he has alleged to be incorrect, and he has proceeded to show its inaccuracy, by reference to a period from which the state of the debt of 1816 is entirely excluded. The periods, then, of my statement and of his supposed refutation are not the same. He begins with the 5th of January, 1817; and if I had stated the reduction as from that year, undoubtedly I should have stated what was not true; but I did not—my statement was of a reduction from the year 1816; and if he goes to the papers from which he appears to have made his charge, he will find a sufficient refutation of it. But instead of referring to these papers, he refers only to his own resolutions—to resolutions which he moved in this house, but which were never carried; to resolutions, too, proposed in the year 1822, before I had any thing to do with these matters, and these resolutions were founded on papers which were disproved. If he had gone to the proper papers of 1816, he would have found my statement correct, to the very letter. I am, therefore, justified in saying, that the charge thus made must fall to the ground, as utterly destitute of evidence to support it. I do not know how to go on in the track of the hon. gent. He has adopted such an extraordinary course, that I feel I should be wasting time in endeavouring to follow him in it. I confess I do not intend to argue the question: it is not necessary; for, after he had spoken full two hours on the sinking fund (hear, hear), he coolly said, he would not detain the house by directing their attention to that point, but would make it the subject of discussion at a future opportunity (hear, and a laugh). Why then, sir, I ask the house not to give him credit on a subject which he has, for the present at least, abandoned. These papers which he has brought forward to-night, refer to ten thousand others, which I shall not attempt to go through now, but shall leave it to his pleasure, when he chooses to name the future occasion for the discussion; when, if I am able even to guess what he may mean, I think I shall be able fully to justify my own conduct. I do not know, sir, that I am bound to justify the conduct of those who have been ministers for the last forty years. I am not responsible for them. The sinking fund was not my invention, and I am not bound to defend Mr. Pitt from the attacks of the hon. gent. The first thing I did with the sinking fund, was to endeavour to put it on a better footing; and all the statements which the hon. gent. has made respecting the absurdity of borrowing with one hand, to pay with the other, are applicable to those who have preceded me, and not to me; although, in his speech, I am

put in the front of the battle, and made to bear the whole weight of his attack. I think, sir, I shall not be treating the subject improperly, if I do not go into the principles of Mr. Pitt, and discuss the subject of the sinking fund. I know there has been a change of opinion since his time, on that subject, but I never operated with the sinking fund, and till I do come into the house and attempt to raise a loan on the pretence of paying off part of what is now due by means of the sinking fund, I say he will not be justified in directing his tirade against me. He has complained, sir, of mystification in the public accounts of this country. Sir, if there is any thing which I consider it useless, not to say ridiculous, for a Government to attempt, it is a system of mystification. I cannot conceive a more absolute piece of hard labour; I am sure I should never get through it, and I am also sure, that if I attempted it, the result would not, by any means, repay the trouble. Still, perhaps, there may be, as he says, some mystery. If there is, it must arise solely from the great extent of our papers; from the number and variety of our laws relating to finance, and from other circumstances which I can conceive may be sufficient to puzzle, for some short time, a man who understands nothing of the matter, and that they may not be easily rendered intelligible to a man who takes up finance papers to amuse himself for half an hour by looking over them. But to men conversant with business, I should think they were sufficiently intelligible, though, if they were not, I would gladly take from that hon. member, or from any one else, any thing which experience may have suggested as capable of rendering them more clear. I would accept this advice and assistance the more readily, in order to shew that those persons are mistaken who think that my colleagues and myself are unwilling to do any thing in the way that we ought. Sir, the hon. member has accused me of coming down to the house, and of calling on Parliament to maintain taxation.—Now, sir, I am happy to say, that I have acted the very reverse of all this. I bless my stars that I have been able to effect some reduction of taxation—that I have been able to take off nearly eight and a half millions of taxes, though the hon. gent. says they have not been reduced; for that, though taxes are nominally less, they are in reality the same as before, on account of the difference occasioned by the change in the currency. Sir, this is not the case; I have been able to effect a reduction of taxes on foreign wines. Why did I reduce them? Because I found that the high duties diminished their consumption. I, therefore, brought them back to the standard of 1801 and 1802; or rather below it; and the result was, that the consumption of wine was increased beyond even the proportion which I had anticipated. I had anticipated that a loss of about 230,000*l.* would be occasioned to the revenue, and I believe that, in consequence of the increased consumption, that loss will not amount to so much.—More wine, therefore, has been drunk, and if I have been the means of giving to any man a bottle of wine, which he had never been able to obtain before, I have had the happiness, so far, at least, to increase the comforts of the people, and surely the merits of such a change, small though it may be, ought not to be denied me. But the hon. gent. contends, because nearly as much revenue is raised by this diminished

rate of duty, that no relief has been given to the people. To me, sir, it appears that it is contrary to all principle, to assert that the reduction of the rate of taxation gives no relief to the people, because the amount raised is nearly as great as before. The hon. member talks of the consumption of spirits having fallen off. Sir, I know it did; and what did I do? Why, finding the consumption of spirits did not increase in proportion to the increase of the people—finding, on the contrary, that it was gradually diminishing, I reduced the duty, and the consumption increased. Whatever may be the full benefit of this reduction cannot yet be known, for in this country it only came into operation on January 5th of the present year, and the hon. member has no right to draw any conclusions concerning it from returns that only come down to that period. Either I have misunderstood the hon. member's argument, or he has misunderstood this part of the subject; and he is quite mistaken in saying that it has been overlooked. Sir, this diminution of consumption has not been overlooked, and I endeavoured to find a remedy for it in a diminished rate of taxation. The hon. gent. finds fault with me, sir, for having stated, during three successive years—with some feelings of exultation, I admit—that the consumption of the people was increasing, and that the revenue had increased; but he finds fault, because he thinks I had no other view in making these statements but to express my satisfaction that a greater amount of revenue was extracted from the pockets of the public. But why did I lay any stress on this?—Because, sir, I felt a full reliance on the system we were pursuing; and I was happy to be able to shew that under it the condition of the people was improving. The hon. gent. says, that it is not, and he founds his assertion on drawing a comparison between the period of 1792 and the present period. I, sir, did not advert to the increase of consumption, and the increase of revenue only.—I called on the house to recollect the greatly decreased distress. I adverted to a proof more convincing, in my opinion, than any statement of the amount consumed—the actual condition of the country—the absence, during these three or four years, of all confusion, disturbance, and distress. I called, sir, on the gentlemen connected with the different parts of the country, to bear witness to its improved condition. Where there had been tumult, violence, and bloodshed, I said there were only peaceful industry and prosperous exertions; and I gave these as plain unvarnished proofs of the condition of the country being improved. The hon. gent. says, there was nothing but flummery and flourish in my statements in 1824—that the consumption of the people was greater; he says the same thing of my statements last year, but those statements were true, and what more striking proof could I give of the prosperity of the people having increased—of their comfort having increased, than that the consumption of all those articles had increased, on which their prosperity, their comfort, and their enjoyments depend? I know no better proof of this, and I can give no other. The hon. gent. finds fault with the comparison I made this session, of the consumption of the year 1823, and he says this was done with a purpose. Sir, I admit it was done with a purpose; but with the purpose of supporting an argument, and the argument was this.—The Government and the Parliament

had, since the peace, reduced taxation very considerably, and the statement was made to shew, by comparing the consumption of 1816 with the consumption of 1835, that, under the reduced system of taxation which was gradually effecting, the revenue of the state, and the consumption and comfort of the people, had all been increased. This, sir, was the purpose of that statement, and on it was founded what I thought legitimate argument. The hon. member taunts me with including wool, and asks, are we to take this, which was a mere speculation, as the test of an increased consumption? Sir, I took care not to include wool as one of the proofs. But it happened to stand one of the last articles on my list; and I said gentlemen would exclaim, "Do you mean to say that the increase is to be taken to have been at that extravagant rate, as upon wool,—for instance, 443 per cent.?" I answered, "Certainly not, but I produce the document to shew, notwithstanding the high rate of taxation, that there is that progressive power of consumption in this country which is indispensable to her greatness, and which forms the most convincing proof of that inherent vigour which enables her to meet and overcome difficulties the most formidable. It is this incontrovertible evidence which makes me rely on her strength for the future." Was there any thing extravagant in this, any thing delusive, or intended only for shew? I say, sir, there was not; and the statement by no means deserves the imputations the hon. member has attempted to cast on it. The hon. member has said much about our expenditure, and I am not now prepared to go into the whole question in detail; I am not prepared to discuss the question with him, whether there are too many army and navy officers appointed or not; but we are accused of augmenting the establishments of the country for no other purpose than the sake of making and giving away places. But, sir, we have a duty to perform, of the difficulties of which that gentleman has no conception, as he most certainly has none of the responsibility. The hon. gent. is not responsible for the situation of the country—he is not responsible that it be always prepared for those fluctuations in events which no man can always foresee, and which, as they arrive, we must be prepared to meet. The hon. gent. has no responsibility; but we, sir, should be abandoning our duty, if we did not frame our establishments according to the necessities of the country, the difficulties of its situation, the state of security, and on a scale adapted to the object in view. Undoubtedly there might be a difference of opinion as to the extent of these establishments which is required; and it is easy enough for the hon. gent. to cast imputations, and say there were too many promotions: it may even be his duty to say so; he has a right to be jealous; but, because his ideas differ from ours as to the extent required of these establishments, he has no right to say of us, that we keep up these establishments only for the sake of patronage. I do not know, sir, that we are bound by the resolutions of the committee to which the hon. member has alluded; but that recommendation only went to an approximation to the establishments of 1792; but there was still a question as to what ought to be the degree of approximation. That depends, sir, on the condition of the country, and on the state of its foreign possessions, compared

with the condition of other countries—the forces they can employ, and the relative situation of their colonies to ours. This involves very important considerations, and I will venture to say, that no man who has considered the question will say, that the military establishment of this country, as proposed for the defence of the country and the colonies, is more than essential for this purpose. All the evils which the hon. gent. lays so much stress on, he urges to the house as reasons for his motion for an Address to the Crown; but it had been shewn last year, and every preceding year, that the hon. member had attacked these establishments, that this force was necessary; and it had been shown, over and over again, why it was necessary, and why a lesser force could not be dispensed with.—On all occasions, sir, whenever gentlemen who are not accustomed to give their support to the measures of ministers vote with them, that hon. member can find no other motive for every man's conduct but that miserable trumpery motive of self-interest (hear, hear). It is somewhat galling, sir, to hear the hon. gent. ascribing the conduct of other gentlemen to those miserable motives, which, I know not how it is, sir, seem the only motives that hon. member ever conceives, in his mind, to influence the conduct of others. The hon. gent. may go on ascribing such motives to other members; but I hope, sir, they will always treat such imputations with that indifference which I shall shew them. I do not mean to speak three hours (hear, hear) on the various topics which the hon. member has introduced—I shall not follow him through the 47 Resolutions on which he has proposed to found an Address to the Crown; but I will say, that no man who has any regard to truth can vote for the first resolution; and if no man can vote for the first resolution, no man possessing common sense can give his assent to the other resolutions, which are contingent on the first. I, sir, for these reasons, most certainly shall not consent to the Address proposed by the hon. member; but I beg it may be understood that I fully admit the propriety and the duty of Parliament to state to the Crown the difficulties and the distresses of the country. I will venture to say, that the hon. gent. is not entitled, by any thing he has said or done, to accuse us of wanting common humanity, because we are not prepared to adopt his views of the scale of our national establishments, and of the expenditure of Government. I feel bound to assert, that no member of his Majesty's Government looks on the present distresses with indifference, or with a sentiment approaching to any thing like indifference; and if there be any person in this house, who does not feel deeply for those distresses, he must be more or less than man" (cheers).

Mr. Brougham:—"Sir, in rising to address the house, I have no wish to detain them long, or to go through all the valuable details which have been so ably brought before them; but I apprehend, sir, the right hon. gent. has misconceived the whole conduct of my hon. friend, and I shall shortly state in what light I view it. As many of the members whom I now see present, were not, I believe, in the house when my hon. friend made his luminous statement, I hope they will excuse me if I now state to them what I understood my hon. friend to say. The right hon. gent. has complained that he received the resolutions only at eleven o'clock that

morning. If this were a subject of complaint, I have much more reason to complain than he has, for I only received them at half past seven this evening. But let the house attend to the candour of the right hon. gent. when he complains of being taken by surprise; for any ordinary occasion, instead of having eight hours' notice of what was to be said, all he would know of the motion would be the written notice of it on the book; and he would first hear the details, the arguments to be used, and the statements on which the speaker meant to rely when he made his speech. But in this case, the right hon. gent. had the printed speech, I may call it, of my right hon. friend put into his hands eight hours before that time; and of this courtesy, this advantage, the right hon. gent. complains as a hardship (hear, hear). The right hon. gent. also seems to think there was a mistake as to form; but though my hon. friend calls them resolutions, he never meant to move them; he only meant to have them put in a printed form, to convey his sentiments more clearly to the house, and lay the foundation for that address to the crown he intended to move. As to the first resolution of my hon. friend, which the right hon. gent. seems to think was intended to make a direct charge against him, my hon. friend, sir, meant no such thing; he only stated and only meant, that from the accounts submitted to the house—and very complicated accounts they are—the right hon. gent. had drawn a very favourable issue, while he (Mr. Hume) had drawn a different conclusion. The right hon. gent. next charges my hon. friend with taking a passage from a report of his speech which he had never authorized, and which was not a correct report. But my hon. friend said he did not take his statement from any printed speech; on the contrary, he had at the time taken a note of what the right hon. gent. had said, and had gone across the table and pointed out his mis-statement to him at the time. It was not taken, therefore, from any printed speech, but from my hon. friend's own notes. As to the sinking fund, sir, the right hon. gent. seems to think my hon. friend charged on him all the errors of all his predecessors, and of all those statesmen who had supported the Sinking Fund. But my hon. friend expressly exonerated the rt. hon. gent., and attacked the system only. In my humble apprehension, my hon. friend has proved, that the Sinking Fund is a gross piece of impolicy, that it tends to augment the disposition to enter into war, and that its promised resources are founded on a plain arithmetical blunder of profit and loss. My hon. friend has demonstrably proved, that borrowing for any other purpose, while we have a sinking fund, is, in fact and deed, borrowing to keep up that fund, that raises the money market against ourselves, when we want to borrow, and is altogether a bungling, losing mode of providing for the public services. This is not now, indeed, denied by the right hon. gentleman. He agrees, sir, with the statements of my hon. friend in principle; but I go much further; and I am rejoiced to hear, that even the men who formerly admired the sinking fund, and agreed in approving of it as a most valuable financial measure, now begin to doubt its efficacy, and that even with them this famous system is now at discount, and has fallen into discredit (hear, hear). My hon. friend, sir, has made no charge against

the rt. hon. gent. for not having the public accounts drawn up in a better form; but he has attacked the system; and I see no reason why the balance sheet of the public accounts should not be as correct, simple, and intelligible, as the balance sheet of any individual trader. I know no reason, sir, why the greater amount, the greater number of figures under each item should make any difference—why thousands should be more difficult to write down than hundreds—why millions should be more difficult to express than thousands. To me, both seem equally easy; and there is no good reason why the balance sheet which is laid on your table should not be as distinct, as plain, and as easily comprehended as the balance-sheet of any private concern. If there is reason to make this assertion *à priori*, it is now confirmed by the experience both of America, and, in later times, of France, in the accounts of which nation there is no mystery—no confusion—no juggling—but the whole are kept plainly and intelligibly. I approve, sir, of the candour of the rt. hon. gent., who has professed his readiness to listen to any suggestion of my hon. friend; and I hope the hon. member will take advantage of this proposal, and submit those suggestions with better success to the rt. hon. gent. than he has once already, I believe, submitted them with to a committee. I must beg pardon for troubling the house at this late hour with some details; but there are some few things mentioned by my hon. friend, as to taxation, which expose to our view an unpleasant truth, and to which I must call the attention of the house. I agree fully with what my hon. friend says of taxation in his printed speech; but I differ from him in what he has said this night; and I fully agree with the Chancellor of the Exchequer as to what he has said of reduction of rate of duty being a relief to the people. I recollect once submitting a resolution to the house, similar in substance to the 31st resolution of my hon. friend, viz. "That the repeated assertions made in this house, that there has been a diminution of taxation, to the extent of 20 millions, since the termination of the war, are delusive and fallacious." The 69 millions, the house will recollect, that were levied during the war, were levied in a depreciated currency. Gold was 51. an ounce in the market, while the mint price was only 31. 17s. 10d.; shewing, if we take the large sum of taxes, a depreciation of 25 per cent.; and if we take the less sum, a depreciation of 20 per cent.; and from this it follows, if we augment the 52 millions, the sum now levied, by the whole amount of the 25 per cent., we shall find, that instead of 27 millions of taxes having been reduced, in fact the whole amount of what has been reduced is only one million and a half. So far I and my hon. friend agree; but I do not agree with him, that as the rate of taxation is reduced, because the people chose to consume more; and therefore the whole amount not being diminished, that no relief has been given by a reduction of taxation. My hon. friend has no right to say, because he can now drink two bottles of wine where he before only drank one, in consequence of the duty being lowered, that he and the country are not benefited by that lower duty. Sir, the man who can now afford to drink two bottles of wine, is benefited by the increased enjoyment, the seller is benefited by an increase of his trade, the merchant and shipowner who import it are benefited; and if we suppose the case of a commodity, grown at

home, the agriculturist or the manufacturer is benefited by the diminished taxation. Sir, the burden on the country is lighter, and the enjoyment more (hear, hear). So far, sir, I differ from my hon. friend, and agree with the rt. hon. gent. But I differ from the rt. hon. gent. as to what he says of consumption. I understood my hon. friend to give a list of articles most generally consumed, some of which, notwithstanding the increase of our people, were consumed in less quantities—others were stationary—and in others there was a slight increase. This is not a flattering view; but my hon. friend having made his statements not from single years, but from an average of years, seemed to be correct. It is now generally admitted that the number of consumers has increased very rapidly; the increase is generally supposed to be about 40 per cent. since 1785, and if we take the average of the consumption of some excisable articles in the years 1785, 1786, 1787, and compare it with the average consumption of later years, not including the last year, we shall find, that instead of the consumption of most articles having increased 40 per cent., that in most of them there is hardly any perceptible increase of consumption. I shall take as an example and standard, malt, which is of general consumption, and I find that the average quantity of malt used in the ten years, between 1785 and 1794, was 25,751,775 bushels, while the average of the ten years, between 1815 and 1824, was only 25,246,000, shewing an actual decrease in this general article of consumption of half a million bushels; and while the number of people between these periods had increased nearly 40 per cent., the decrease in the consumption of malt was nearly one per cent. This is a striking and a melancholy proof of a great diminution of the comforts and enjoyments of the people of this country. And, unfortunately, sir, this is not confined to malt; it includes spirits of all kinds. My hon. friend states, that in the five years ending with 1810, the average consumption of spirits of all kinds in Great Britain was 13,059,522 gallons, while the annual average of the 5 years ending 1824, was only 12,110,281 gallons, shewing a falling off of ten per cent., while the people had increased between those two periods probably above ten per cent. In sugar there has been a small increase of consumption, but not at all in proportion to the increase in the number of consumers. On an average of the nine years ending 1816, the consumption was 2,406,809 cwt. annually, and in the nine years ending 1824, the consumption was annually 2,593,540 cwt., and in sugar, therefore, the prospect was not so bad as in the consumption of malt and spirits. The inference drawn by my hon. friend from these important details is, that in the consumption of all the articles used by the great bulk of the people, there has been a gradual diminution, showing that the comforts, the enjoyments—and these constitute prosperity—of the great mass of the people, have been sensibly diminished. Then as to another point in my hon. friend's resolutions, I observe that my hon. friend has contrasted the number of commitments in different years; and my hon. friend says, that notwithstanding the great increase in the amount of education, and the great improvements which have been lately made in the criminal law, it was a most lamentable and melancholy fact, that the number of commitments for crime has greatly increased. But I rather

Sms. 1826.

think, that in this respect, my hon. friend has not made sufficient allowances for the effects of a sudden transition from war to peace—the effect of the ordinary demand of men for the use of the army ceasing, and the consequences of such a number of men being thrown back upon the population. I think that it would have been but fair that my hon. friend should have drawn a line between the concluding years of the war and the first years of peace. The disbanding of the army was a most material consideration, and ought, certainly, to be taken into the account. If you will only draw the line as I have mentioned, you will immediately see, that after the conclusion of the war, the number of those committed for crimes had almost instantaneously increased in a very considerable proportion. So that it was too much to draw the sweeping conclusion, that crimes had increased, independently of the causes mentioned, notwithstanding the progress of education and improvements in the criminal law, the natural effects of which are to diminish crime. Having stated this much on the subject of my hon. friend's resolutions, I do not mean to detain the house any longer. I have only most heartily to thank my hon. friend for having brought them before the house; and the house and the country have ample reason to thank him, whether the resolutions shall be agreed to or not—for he has gone through a mass of intricate accounts which would stagger any other person; and from these he has drawn accurate and consistent statements, all leading to the conclusion mentioned in his 47th resolution; and the result of the whole is, that we ought to review our expenditure, and not extract from the pockets of the people, not merely thousands, nor hundreds of pounds, but not even a single shilling, more than is absolutely necessary. And the sooner the public burdens can be removed, in the only way in which this or any other government could remove them, the better in every point of view; and the sooner and more fearlessly we set about giving the relief, with the better countenance and grace can we appear before the electors of the kingdom."

Mr. Maberly said, that the debt had not been reduced by the sum mentioned by the Chancellor of the Exchequer, nor by any sum at all; and so it would have appeared if the accounts had been kept as they ought to have been kept. But the custom was to keep them in a most intricate state, so that the fallacies could not be detected without the utmost attention. It turned out, however, that the nominal capital of the debt was 100 millions more than in 1819. But, said the gentlemen opposite, "look at the charge of the debt." He was ready to meet them there too, and referred to a paper drawn up by as good an accountant as any of those gentlemen. The statement given was by Mr. Higham, and the result was, that in January 1819, the debt was 823 millions; in 1826, the amount was 893 millions, being an increase of 61 millions; and then as to the charge of the debt in 1819, it was 29,045,000l.; in 1826, 29,176,000l., being 131,000l. more in the latter period than the former. The object of his hon. friend was to show, that owing to this sinking fund, the country was much more in debt than it would have been without it, and that proposition had been clearly made out. He had heard with great satisfaction, however, from the Chancellor of the Exchequer, that he

Z

proposed to enter into a thorough examination of the state of the public accounts; and he assured the rt. hon. gent., that what assistance the hon. member for Montrose and himself could render him, would be much at his service. That would be a most beneficial act of duty to the public; and his hon. friend would, even in producing that result, have done much for the advantage of his country, by bringing forward these resolutions.

Mr. Hume rose to reply. He began by expressing his regret that the right hon. gent. (the Chancellor of the Exchequer) should have understood any thing that fell from him, as meaning to impute to him a wilful misstatement. He could assure the rt. hon. gent. that he had no such intention; and this must be evident to the rt. hon. gent. himself when he recollected, that when he made the statement to which he had alluded, he (Mr. Hume) went over to his side of the house and stated, that there must have been a mistake; and a few days after he gave him a written statement to prove that the account to which he referred was erroneous, and he was since then confirmed in that opinion.—His (Mr. Hume's) propositions were simple—"Get rid of a useless and expensive sinking fund, and reduce your establishments to a moderate scale, and the object will be effected." Those who thought that our taxation was too high, would vote with him. Those who thought that we were not taxed too much, would of course oppose his motion. As ministers had shown no disposition to economize, he hoped the house would adopt such measures as would have the effect of compelling them to do so.

The house then divided, when the numbers were—For the motion, 51—Against it, 152—Majority, 101.

#### MR. HUME'S RESOLUTIONS RELATIVE TO THE STATE OF THE NATION.

1. That the assertions made to this house by the Chancellor of the Exchequer on the 3d of March, 1823, that a reduction of 24,766,520*l.* in the capital of the Public Debt had been effected by the operation of the Sinking Fund, from the termination of the war up to the 5th of January, 1823; and again on the 3d of March, 1826, that a further reduction of the Public Debt of 18,401,000*l.* had been effected between the 5th of January, 1823, and the 5th of January, 1826, making together a reduction of 43,167,520*l.* in the capital of the Public Debt since the termination of the war, are not consistent with the accounts before the house, as appears by the facts contained in the following resolution:—

#### PUBLIC DEBT.

2. That it appears, by the annual Finance Accounts, that the Public Debt of the United Kingdom, funded and unfunded, on the 5th of Jan. 1817 (after the union of the English and Irish Exchequers), was 846,765,078*l.*; and that on the 5th of January, 1826, the amount of funded and unfunded debt of the United Kingdom was 819,437,298*l.*; showing a decrease, in the nominal amount of capital, of 27,327,780*l.*

3. That the diminution of 27,327,780*l.* in the aggregate amount of the capital of the Public Debt has been effected by a reduction of 18,072,023*l.* in the funded debt, and in a diminution of the unfunded debt of 9,255,757*l.*

4. That of the 18,072,023*l.* of capitals of funded debt reduced in the nine years, 1817-25, there has been cancelled capitals to the amount of 6,934,285*l.*, leaving only 11,137,738*l.* of funded, and 9,255,757*l.* of unfunded debt, or an aggregate

reduction of capital in the nine years of only 20,393,495*l.*

5. That the charge of the funded debt, as it stood on the 5th of January, 1817, was—

|                                  |                      |
|----------------------------------|----------------------|
| For Permanent Annuities - - -    | 27,709,505 <i>l.</i> |
| Long Annuities - - -             | 1,857,904 <i>l.</i>  |
| Life ditto, per 13 Geo. III. - - | 225,255 <i>l.</i>    |
| Management - - -                 | 278,181 <i>l.</i>    |

Total 29,870,853*l.*

And on the 5th Jan. 1826:—

|                               |                      |
|-------------------------------|----------------------|
| For Perm. Annuities - - -     | 25,507,102 <i>l.</i> |
| Long Annuities - - -          | 1,333,257 <i>l.</i>  |
| Life do. per 48 G. III. - - - | 562,669 <i>l.</i>    |
| Management - - -              | 276,818 <i>l.</i>    |

Total 27,679,856*l.*

Showing a decrease in the nine years of annual charge on the Funded Debt of - - - - - 2,190,997*l.*

And that the charge of 50,564,787*l.* of Unfunded Debt on the 5th of January, 1817, estimating the English Bills at 4, and the Irish Bills at 5 per cent. per annum was 2,051,342*l.* And on the 5th of January, 1826, on 41,309,030*l.*, at 2d. per cent. per day, or 3*l.* 0*s.* 10*d.* per cent. per annum - - - - - 1,256,482*l.*

Showing a reduction of charge for Unfunded Debt of - - - - - 794,760*l.*

And total reduction of annual charge for Funded and Unfunded Debt of - - - - - 2,985,757*l.*

6. That out of the 2,985,757*l.* the total reduction of annual charge, as shown by the preceding resolution, the following reduction has taken place without any reference to the surplus revenue, or proceeds of loans, viz:—

|                                                                |                     |
|----------------------------------------------------------------|---------------------|

1,862,907*l.*

And dividends on capitals cancelled And for ditto in 3,807,119*l.* of 4 per cents. dissentients, discharged from the funded and added to the unfunded - - - - - 152,280*l.*

Total reduction of charge on the funded debt - - - - - 2,242,716*l.*

7. That the total amount of the revenue of the United Kingdom, received in the nine years, 1817-1825 (and exclusive of all sums received for loans or dead weight), was 531,266,333*l.* and the total amount of expenditure, including every charge for interest of debt, and civil and military establishments in the same period (exclusive only of payments to the commissioners of the sinking fund), was 508,309,614*l.*, showing a clear surplus of revenue of 22,956,722*l.*, which, with the sums paid by Austria and the East India Company, make an amount of money of 25,965,539*l.*, disposable for the redemption of debt, exclusive of 6,917,569*l.*, received from the Bank of England in the three years, 1822-25, in part payment of an annuity of 585,740*l.*, for 45 years.

8. That the balance of all monies in the Exchequer on the 5th of January, 1817,

amounted to - - - - - 13,019,040l.  
And, on the 5th of January, 1826,  
amounted to - - - - - 5,305,638l.

Showing a decrease of - - 7,807,402l.  
which has also been applicable to the reduction  
of the public debt, in addition to the surplus of  
revenue, as stated in the preceding resolution.

9. That although there has been in these nine  
years an excess of revenue of 25,965,539l. there  
has been charged, during the same period, in the  
annual finance accounts, the sum of no less than  
124,779,340l., purporting to have been applied  
to the reduction of the debt.

10. That during the nine years, 1817-25, loans  
have been raised and Exchequer-bills funded to  
the amount of 98,760,920l., for which there have  
been capitals created of various denominations,  
to the amount of 126,536,037l., and an annual  
charge of 4,074,022l.; in addition to which there  
has been added 7,122,964l. of capital by the con-  
version of 149,449,290l. of 5 per cents. into  
156,921,713l. of 4 per cents.; also 2,965,655l. of  
3 per cents., by compromise of a disputed ac-  
count with the East India Company, at an an-  
nual charge of 70,970l.; and 322,961l., by con-  
version of 968,885l. of 5 per cents. of 1797 and  
1802 into 1,291,847l. of 3 per cents., and 47,767l.  
of 4 per cent. dissentients since assented to, mak-  
ing an aggregate increase of capital in the 9  
years of 136,395,381l., and an aggregate increase  
of charge of - - - - - 4,146,664l.

To which add Life-Annuities by 48

Geo. III. increased - - - - - 323,114l.  
11. That out of the 124,779,340l., charged in  
the annual finance accounts as applied to the re-  
duction of the national debt, the commissioners  
of the sinking fund acknowledge to have re-  
ceived the sum of only 116,022,142l. which they  
have applied as follows, viz. :-

For purchase of Stock in Great  
Britain (a) - - - - - 101,783,712l.  
Ditto ditto in Ireland (b) - - - - 4,511,045l.  
Ditto ditto East India Company - 839,243l.  
Paid for Life Annuities (48  
Geo. III.) - - - - - 3,650,693l.  
For payment of the dissentients'  
5 per cents. - - - - - 2,736,800l.  
Ditto ditto 4 per cents. - - - - 2,390,000l.  
Interest on ditto - - - - - 93,446l.

Total sum accounted for by com-  
missioners - - - - - 116,006,939l.

12. That with the sums (a and b in the pre-  
ceding resolution) applied to the purchase of  
stock, there has been cancelled in Great Britain  
various capitals to the amount of 144,480,680l.  
The dividends on the same being 4,465,073l., and  
in addition to the above there has also been can-  
celled of 4 per cent. dissentients by Exchequer-  
bills - - - - - 3,807,013l.

And various capitals amount-  
ing to - - - - - 6,934,285l.

Making a total of - - 10,741,298l. of cap-  
ital cancelled; the dividends on which capitals  
amount to 379,809l., showing an aggregate dimi-  
nution of capital of 155,221,578l. and an aggre-  
gate diminution of charge of 4,884,882l.

13. That in addition to the sum of 4,844,822l.  
of annual charge of debt reduced as per the pre-  
ceding resolution, there has been a further re-  
duction in the nine years of 1,862,907l. as per  
resolution No. 6, making a total diminution in  
the annual charge of 6,707,789l.

14. That if the increase of annual charge of  
4,146,664l. as per 10th resolution, and 323,114l.,  
the increase of life annuities, be deducted from  
6,707,789l., the decrease, as specified in the pre-  
ceding resolution, it leaves a net diminution of  
annual charge of 2,238,011l. on the funded debt,  
instead of 2,190,997l. as exhibited in the 5th re-  
solution, showing a difference of 47,014l. per  
annum to be accounted for.

15. That although by resolution No. 7, there  
appears to have been in the nine years—1817-25,  
a disposable surplus revenue of 25,965,539l.  
(exclusive of 6,917,569l. received from the Bank  
for annuity, in the three years 1822-5) there has  
only been a reduction in the capital of the funded  
and unfunded debt, during the same period, of  
20,393,495l.; whilst the finance accounts, as per  
resolution 5, do not show any decrease of annual  
charge, that would not have been effected by  
annuities fallen in, cancels, conversions, and  
diminution of interest in unfunded debt, as per  
resolution 6, without reference to the surplus  
revenue.

16. That the increase of life annuities, over  
and above the amount of perpetual annuities  
cancelled, will account for about 130,000l. of  
annual charge; but there is an obvious loss of  
186,703l. of annual charge, by redeeming stock  
on less advantageous terms than creating it; as,  
for example, 4,074,022l. of annual charge was  
created for 126,536,037l. of capital, whilst the  
proportion of annual charge redeemed by the  
same amount of capital was only 3,887,319l.

17. That the loss arising from the complicated  
system of the sinking-fund and the public ac-  
counts, is further proved by the statement,  
Appendixes G and H, which exhibits the result  
that would have taken place if the surplus re-  
venue, and other resources (exclusive of loans,) had  
been applied, year by year, to the purchase  
of stock, at the average rates of the respective  
years; and if further proof is wanting of the  
ruinous system of finance, so fatally persisted in  
of supporting a sinking-fund by loans, the fol-  
lowing result of the last loan from the Bank in  
1823, avowedly for that purpose, will furnish the  
most indisputable evidence.

18. That there has been paid into the Exche-  
quer by the Trustees of Naval and Military  
Pensions, between the 5th April, 1823, and the  
1st of January, 1826, the sum of 6,917,569l.,  
part payment of a loan from the Bank of Eng-  
land, for which an annuity was granted for 45  
years, equivalent to an annuity in perpetuity,  
at the rate of interest of 4l. 2s. 1d. per cent. per  
annum, or 73l. money for every 100l. of 3 per  
cent. stock; whilst the Commissioners of the  
Sinking Fund, during the same period, have ex-  
pended a corresponding sum in the purchase of  
3 per cent. stock, at an average of 88l. for every  
100l. of such stock, being at the rate of interest  
of only 3l. 8s. 2d. per cent.

19. That by the said loan the public debt was  
increased in 1823, equivalent to the amount of  
9,476,110l. of 3 per cent. stock, and the annual  
charge of 284,283l. in perpetuity; whilst the  
Commissioners of the Sinking Fund applied a  
corresponding sum to the purchase of 7,808,188l.  
of 3 per cent. stock, at the rate of 88l. of money  
for 100l. stock, cancelling an annuity in perpe-  
tuity of 225,745l., by which transaction there  
has been actual loss, or addition to the debt of  
the country, of 1,617,922l. of 3 per cent. capital,  
and 58,539l. of annuity in perpetuity.

20. That although the complexity of the finance  
accounts, and the loss to the nation by such a  
system is clearly manifest by the preceding re-  
solutions, yet the magnitude of the evil inflicted  
on the country by the ruinous and absurd Sink-  
ing Fund system, still persevered in by his  
Majesty's ministers, can only be known by an  
attentive examination of the series of finance  
resolutions submitted to the consideration of the  
house in 1822, and by the following short sum-  
mary of these transactions.

21. That by a return made to this house, the  
total nett revenue of Great Britain (exclusive  
of loans), for 24 years, between the 10th day of  
October, 1792, and the 5th day of January, 1817,  
appears to have amounted to 1,126,640,417l., and  
the total expenditure (exclusive of all sums paid  
to the Commissioners for the reduction of the

National Debt) during the same period, appears to have amounted to 1,533,638,631l., being an excess of expenditure over revenue of 406,988,214l.; but as three quarters of a year, from the 5th day of January to the 10th day of October, 1799, appears to have been stated twice, three-fourths of the excess of expenditure in 1799 require to be deducted, making the actual deficiency of revenue to be about 393,000,000l.

22. That although the actual revenue during the 24 years, from 1793 to 1816 inclusive, fell short of the expenditure only about 393,000,000l., it appears by a series of resolutions submitted to the consideration of the house on the 25th of July, 1822, that an amount of no less than 618,163,857l. of money was raised by loans and Exchequer-bills during the said period of 24 years, viz. from 1793 to 1816 inclusive.

22\*. That by the 6th of the before-mentioned series of resolutions, it appears, that whilst 618,163,857l. of money was raised by loans and Exchequer-bills, between the 10th day of October, 1792, and the 5th day of January, 1817, that 188,522,348l. only was paid to the Commissioners for the reduction of the National Debt, leaving the enormous sum of 36,641,517l. totally unaccounted for.

23. That by another account, presented to this house in 1822, it appears, that in the year 1815, annuities of different denominations, all in perpetuity, were created to the amount of 3,083,621l. equal to 102,787,394l. of 3 per cent. stock, for which only 53,819,786l. money was received, being at the rate of 100l. of 3 per cent. capital created for every 52l. 7s. 6d. of money received.

24. That by another account, presented to this house in 1825, it appears, that between the 5th of January, 1824, and 5th of January, 1825, the Commissioners of the sinking fund have purchased 3,627,225l. of 3 per cent. stock, for which they have paid 3,416,031l., being at the rate of 94l. 5s. 5d. for every 100l. of such stock, at a loss of 41l. 16s. 3d. of money, for every 100l. stock re-purchased, as compared with 1815.

25. That no nation, or body corporate, in their collective capacity, can derive pecuniary benefit or advantage of any kind, by merely trading with themselves, and therefore the Sinking Fund system of Great-Britain, established solely for the purpose of the nation trading in its own obligations, was founded in fallacy, and has been maintained by delusion.

26. That the Sinking Fund system is not only useless for any beneficial purpose to the state, but highly objectionable from the loss it occasions, and for its direct tendency to promote a system of speculation and gambling, altogether inconsistent with the well-being of the country, and therefore ought to be forthwith abolished.

27. That the state of our manufacturing, commercial, and agricultural relations, demands the most serious attention, as the evidence before the house proves a progressive diminution in the remuneration for labour in many of the staple articles of manufacture, as well as for agricultural labour, in reference either to the means of subsistence at the present time, or in comparison with the remuneration for labour at former periods, and that although the quantity of the products of British labour annually exported progressively increases, yet their value is progressively decreasing.

28. That the annual average official value of the quantity of products of British labour exported in the three years 1814-16 was 36,562,367l., and their declared value 44,476,519l., whilst, in the three years 1823-5, the annual average official value of the quantity exported was 45,880,927l., and their declared value only 36,782,938l.; showing a depreciation in value, after allowing

for the difference in the value of the money at the two periods, exceeding 25 per cent., and consequently showing an increased pressure of taxation in 1823-5, to that extent, if estimated in the production of British labour.

29. That although the Finance Committee of 1817 called the notice of the house to the low establishments of the year 1792, and recommended that as near an approximation as possible should be made to the scale of establishment and expense of that year; yet the taxes raised in the united kingdom in 1825 exceeded 58,000,000l., or treble the amount of 1792, and the expenses of the civil list, the naval and military establishments and civil Government, exceeded 26,000,000l. (exclusive of the charge for the debt,) being four times the amount of the expenditure of 1792.

30. That a reference to the great amount of the civil list, to the number of pensioners, sinecures, and highly paid placemen, to the unnecessary number and expense of the army, navy, ordnance, and civil establishments, will sufficiently prove that due regard has not been paid to the recommendations of that committee; it is, therefore, imperative on this house to demand an immediate reduction of taxation, in conformity with that recommendation, as the best means of relieving the country from its present embarrassments.

31. That the repeated assertions made in this house, that there has been a diminution of taxation to the extent of 27,000,000l. since the termination of the war, are delusive and fallacious, whether as applied to the amount of money actually collected from the people, or the value of the currency in which the taxes were collected, as will appear by the facts stated in the following resolutions.

32. That the money amount of taxes raised in Great Britain on the average of the three years, 1813-15, the largest receipt of any period during the war, was 69,010,927l. per annum; but as that amount was in paper money of nominal value, and not exchangeable into gold, on an average of the three years, at a less rate than 5l. per oz. (the maximum having been 5l. 11s. per oz.) the average annual taxation, if valued in gold, the established standard value, was equal only to 13,802,015 oz. of gold, or to 53,741,714l. of money, exchangeable into gold at 77s. 10½d. per oz.; while the annual average amount of taxation in the last three years, 1823-5, was 52,430,765l. convertible into gold at 77s. 10½d. per oz. showing a diminution of only 1,310,919l. per annum, of money of standard value, instead of 27,000,000l.

33. And if a comparison be made of the amounts of taxation at these two periods in labour, or the products of labour, the pressure in 1823-5 will prove to be considerably greater than in 1813-15, as the annual money amount of taxes, on an average of the three years 1813-15, was only equal to 15,853,926 quarters of wheat, at 80s. 9d. per quarter, the average price of that period; whilst the money amount of taxes, on an average of the three years 1823-5, was equal to 17,434,546 quarters of wheat, at 60s. 2d. per quarter, the average price of that period.

34. That if the money amount of taxation, on an average of the three last years 1823-5, be compared with that of the three years 1817-19, the money amount is greater in 1823-5 by 668,426l. per annum; and, if valued in gold or the products of labour, the pressure of taxation on the country in the years 1823-5 will very considerably exceed the pressure either in 1813-15, or in 1817-19.

35. That the continued pressure of taxation has greatly increased the privations and distress of the productive, industrious, and labouring classes of the community, as is manifest from

mary, if not diminished, consumption of such taxable articles of enjoyment and notwithstanding a great increase in the number of consumers.

But in taking a review of the annual consumption of malt for the last 40 years in England and Wales, it appears that the annually consumed has actually diminished notwithstanding an increase in the number of consumers of about 40 per cent.

At an average of ten years, 1785-1824, number of bushels of malt annually consumed was 25,751,775; and on the average of the years 1815-1824, the annual consumption only 25,246,940 bushels per annum; an actual decrease exceeding 500,000 per annum; whilst, if the consumption had increased in proportion to the increase of population, the consumption would have needed 35,000,000 of bushels per annum. If a comparison of the consumption in the year 1825 (a year of great excitement) made with some other single years, the last forty years, a greater consumption appears in the years 1792-7 and 9, than in 1821, than in 1825; but a fair comparison could only be made on an average of years.

It is although it is generally believed that the consumption of fermented or malted liquors from an increased consumption of spirits, yet it appears that the average consumption in Great Britain, of all kinds of British and foreign, in the five years 1804-4, was 13,059,522 gallons; and in the five years 1810-4 was 12,110,281 gallons; showing an increase in the 18 years of 949,241 gallons only, notwithstanding an increase in the number during that period of about 30 per

cent. The quantity of foreign wines annually with excise duty in Great Britain, on an average of the three years 1801-3, was 1,000,000 gallons, and the average annual quantity in the four years 1819-1822 was 1,000,000 gallons, showing an actual diminution of 2,437,914 gallons yearly, or 17 per cent., notwithstanding the increase in the number of consumers during that period, there was also at least 10 per cent. of inferior, of very inferior quality, charged at a higher rate in the aggregate quantity in the last

period whilst the rates of duty levied on wines were, in the years 1819-22, 30 per cent. higher than in the years 1801-3, there was, in the same period, a reduction in the quantity of the excise duties of about 30 per cent., the amount of revenue received was less in the same period of high duties.

As to the quantity of sugar consumed in Great Britain, on an annual average of the nine years 1808-16, was (after deducting 1,600,000 cwt. for distillation in the six years 1809-14)

10 cwt., and in the last nine years 1817-25, an annual average, 2,593,540 cwt., showing an increase of only 196,731 cwt., being about 7 per cent., whilst the population has increased in the same period at the rate of 17 per cent.

As to the quantity of tea consumed in Great Britain, on an annual average of the four years 1810-13, was 21,023,155 lb.; and the quantity, on an annual average of the four years 1821-4, was 21,023,155 lb., showing an increase in consumption of only 12 per cent., whilst the number of consumers have increased in that time about 40 per cent.

As to the annual average consumption of spirits in Great Britain, in the five years 1800-4, was 25,246,940 bushels, and in the five years 1820-4, was 25,246,940 bushels, showing an annual increase of consumption at the rate of 10 per cent. in the last

five years; but, if the annual average consumption of 14,155,166 lb. in the five years 1810-14 is taken, it will appear that since that period there has been an actual decrease of consumption at the rate of 8 per cent. per annum, notwithstanding an increase of population of 17 per cent.

45. That in addition to the progressively increasing privations amongst the great body of the people, as manifested by the preceding resolutions, pauperism and crime have progressively increased to an alarming extent; and, notwithstanding the progressive diminution in the scale of allowance to paupers, the aggregate amount of the parochial assessments expended for their relief since 1785 has trebled; and although the money amount has decreased in the three years ending Easter 1824, compared with the three years 1812-14, and the three years 1817-19; yet pauperism, whether considered in relation to its degrading and demoralizing effects, or in relation to the pressure of the assessments, estimated either by the amount in money, (if the difference in the value of the currency at the respective periods be taken into account) or the products of labour, has considerably increased since 1812 or 1817, the years of the largest money expenditure.

46. That the progressive increase of crime is even more alarming than the increase of pauperism, as there were 4,692 persons committed to gaols in England and Wales for trial, charged with criminal offences on the annual average of the five years 1805-9, whilst the numbers committed on the average of the years 1819-4 were 13,005, showing an increase at the rate of 178 per cent.; and if 14,437, the number committed in 1825, be compared with 4,605, the number committed in 1805, the increase will exceed 200 per cent. in 21 years, exclusive of 22,106 committed under summary process in 1823.

47. That whether the state of the nation be regarded in reference to the unparalleled extent of taxation,—its application,—the delusive and ruinous consequences of the Sinking Fund,—the extension and complication of the accounts,—the present situation of our manufacturing and commercial relations, or the degraded and wretched condition of the great body of the people, all evince the urgent necessity of an immediate investigation of the causes which have produced those existing evils, and the adoption of comprehensive and decisive measures, to avert the calamitous consequences that must otherwise ensue.

### *Tobacco Trade.*

WEDNESDAY, FEB. 22.—Mr. C. Calvert presented a petition from the dealers in and manufacturers of tobacco and snuff in London, Westminster, and Southwark, praying for a reduction of the duties on those articles, for the purpose of checking illicit trade.

Mr. Bennett said, that last year several petitions were laid on the table of the house, praying for a reduction of the duties on tobacco, by which, as was then stated, the consumption and the revenue would be considerably increased. The returns that had since been laid before the house had proved the correctness of that statement. He wished to learn whether the dealers in tobacco were called upon this year for the 1s. duty proposed to be reduced last year?

The Chancellor of the Exchequer said, that it would be better not to go now into any partial details on particular branches of the revenue. He would therefore reserve himself until he brought the whole subject of the duties under the consideration of the house.

The petition was then brought up.

THURSDAY, FEB. 23.—Mr. *Hume* presented a petition from the manufacturers of tobacco and snuff in Belfast. The petitioners complained in the strongest terms of the injury which they sustained from the extensive system of smuggling which was carried on in their trade; and they added, that unless the duties were reduced, they could not much longer carry on their business. It was impossible to dispute the argument of the petitioners, that the reduction of duties was the only certain way of diminishing the traffic of the smuggler. Facts were conclusive of the point. In 1810 and 1812, when the duty was only 2s. for the pound weight of tobacco, payment was made upon 41,000,000 lbs. In 1821 and 1823, when the duty was raised to 4s. it was only paid upon 33,000,000 lbs.; so that there was a reduction in the consumption of the article at the one period, as compared with the other, of 8,000,000 lbs. The decrease in Ireland during the same period was from 19,000,000 lbs. to 8,000,000 lbs.; and in the last year, owing to the reduction of the duties from 4s. to 3s. an increase in the consumption was obtained of 1,800,000 lbs. He had no doubt that if the duty were further reduced to 18d. smuggling would be extinguished, the legitimate trade increased, and the revenue improved.

Mr. *Hart Davis* supported the prayer of the petition, and expressed his conviction that a reduction of the duty would be attended with considerable benefit to the country.

Sir *J. Newport* observed, that the reduction of the duty on tobacco would have the same effect in preventing smuggling, as the late reduction of the duty on spirits had produced.

The petition was ordered to lie on the table.

### *Paper Currency;—Commercial Distress.*

(The discussion on the Address, ante, p. 4, forms, properly speaking, the commencement of this series of debates.)

### *Small Note Stamps.*

WEDNESDAY, FEB. 8.—Mr. *Calcraft*, as he did not see the Chancellor of the Exchequer in his place, begged to ask a question of any of the gentlemen on the Treasury bench, upon a subject, as it seemed to him, of considerable public interest. He understood that Government was now taking upon itself, of its own authority, to refuse the issue of any stamps for one and two pound country notes. If this was the fact, which he begged to know, he thought it was a great stretch of power on the part of the Government.

Mr. *Herries* said, that Government had taken upon itself to refuse stamps for one and two pound country notes. It had been imagined that the understanding was general which had taken place a few nights since (in the debate on the Address) upon the subject of the local paper; and that, if necessary, a short bill should be brought in to provide for exigencies, until the plan of the Chancellor of the Exchequer was regularly stated. As the matter, however, was to come on so soon as Friday next, Government had deemed it expedient, at

once to take upon itself the responsibility of refusing any further stamps for the country small notes. The necessity of such a step was obvious, to prevent the issue of very large quantities, which would no doubt have been called for in the interim.

Mr. *Calcraft* expressed himself by no means satisfied with the answer of the hon. gent. It was the first time in the course of his parliamentary practice that he had known Government take such a responsibility upon itself; and this too, without even taking the opinion of the law-officers of the Crown. If the exigency were so pressing, a short bill ought to have been brought in; and the forms of the house might have been dispensed with, for the purpose of carrying it through the house in one night, as they had been before. For himself, he thought the course most unjustifiable; and took it to be one which would expose the promoters to actions for damages, if they were not protected hereafter.

### *Paper Currency.*

LORDS, THURSDAY, FEB. 9.—The Marquis of *Lansdowne* said, that in moving for certain returns relating to the late commercial embarrassments, he was desirous of offering a few observations for the purpose of expressing the opinion he entertained on the subject. He was desirous of doing so, both because he thought it right to express the impression on his own mind relative to this important question; and because he entertained an apprehension that in the opinions he had formed on the subject, he might have the misfortune to differ respecting the causes of the crisis from persons in that house, and out of it, for whose opinions he entertained the highest respect. Before he proceeded farther, he begged that it might not be understood that he intended to suggest, or that he expected through any of the documents for which he should move, to reach any thing like a remedy for the evil. His opinion was, that it must be allowed to work its own cure. The evil had been occasioned by the alteration which had taken place in prices. Men who had purchased at a maximum were compelled to sell at a minimum price; whereby those whose fortunes enabled them to pay the difference were deeply injured, and others, who could not pay, were ruined. The embarrassment would continue until corrected by that increased demand which would be produced by the reduction of prices; and not till then would that real prosperity return which the country was capable of attaining under its present state of taxation. He believed it was the opinion of ministers themselves that no adequate remedy could be applied to the evil. But although he concurred in this opinion, he nevertheless thought that no time should be lost by parliament in investigating its cause, and if no remedy could be found, in endeavouring to discover a preventive against the recurrence of one of the most tremendous and searching disasters ever experienced in the commerce of the country, and which in its course had visited every part of the community, and that in a time of profound peace. There were two classes of evils arising from the state of the currency, both of which might be referred in some degree to the same cause, though essentially different in their consequences. The first was its excess, which produced the exportation of the precious me-

tals, by affecting prices and the exchanges. These constituted a class of evils by itself, but one which it was the duty of parliament strictly to investigate, in order to prevent its return. Another class of evil attending the state of the currency was the insecurity with which it visited the lower orders of the community, by depriving them of the value of their labour and the profits of their industry. Important as the first class of evils was, the latter was by far the most serious grievance of the two. When he recollected the important prerogatives of the Crown—and all prerogatives of the Crown existed only for the benefit of the subject—none appeared to him more valuable or more efficacious than that of coining money, which, interposed as a shield between ignorance and fraud, protected that class of the community, and secured to them their humble gains. Those who depended upon their labour ought to be protected from being involved in the ruinous consequences of speculation. The state of the currency, however, exposed all classes of persons to ruin, who had no share in speculation, and who ought not to be placed within the reach of the evils which it occasioned. He would ask any of their lordships who had happened to be present in a country town at the time when one of the recent failures had taken place, whether he could bring to mind the scene of complicated misery and distress which he must have witnessed, without feeling that it was incumbent on him to do all in his power to prevent a recurrence of so dreadful a calamity? If the same hundreds or thousands of persons who had been exposed to this evil had been stopped in the highways and robbed of their property, such an event would have justly fixed the greatest stigma on the energy of Government, and the foresight of the legislature. But where was the difference between being so robbed, and being despoiled of property by the operations of an excessive paper currency? There was this difference—that the persons attacked on the highway would have the means of defending themselves from attack, whilst the community had no means of escaping from the consequences of an abuse of a paper currency. In country towns, local paper was usually the only currency in which the poor were paid for their labour. If they refused to receive the paper in payment, they must go without the reward to which their labour was entitled. The state of the currency as connected with the issue of small notes was, therefore, a subject which called for serious attention. The motion with which he meant to conclude, was not intended to attack in any way the measures which it was the intention of Government to propose; for as he thought it would be more difficult for ministers to show good grounds for having authorized the continuance of the issue of small notes, at a time when the benefit of a metallic currency had been obtained, than to prove the necessity for putting an effectual stop to any further issue, he trusted, that their lordships would second the views of Government by repealing a measure, which in an ill-advised hour parliament had, upon the recommendation of ministers, been induced to adopt. He believed there was no person who had read the papers laid upon, or about to be laid upon their lordships' table, but must now be of opinion that the excessive issue of small notes had had the effect of driving the precious metals out of the country, as well as of raising prices generally, during the last two

years. This observation applied more particularly to the notes of country bankers. The effect produced by an excessive issue of small notes had been most correctly described in a pamphlet, which could not be too highly praised, and which proceeded from a gentleman who united the highest degree of practical knowledge with the greatest theoretical accuracy—he meant Mr. Tooke (hear, hear). That gentleman justly stated the operation of an over-issue to be this—the first effect was to create an artificial abundance of capital; the accumulation of capital caused a reduction in the rate of interest; by the reduction in the rate of interest facilities were afforded for speculation; speculation produced a rise in prices; the alteration in prices checked the progress of mercantile exports, and so caused the precious metals to be sent out of the country. Then ensued that lamentable and extensive distress which arose from an accumulation of stock purchased at high prices being obliged to be sold at greatly reduced prices, under the influence of alarm. That, he believed, was a correct statement of the train of events which was always liable to proceed from a paper currency, such as that which Parliament had permitted to exist until 1833. He therefore thought that it was the duty of Parliament to check the issue of small notes as speedily as possible, consistently with safety to the country and existing transactions: and the mode in which the noble earl (Liverpool) proposed to effect that object, by allowing no more one and two pound notes to be issued, and by limiting the currency of those already in circulation to three years, seemed entirely unobjectionable. He must, however, take that opportunity of stating, that whilst he concurred with the noble earl as to the expediency of stopping the issue of small notes, he had heard with great surprise, within the last four-and-twenty hours, of a step taken by Government which he conceived to be quite unnecessary, and which he considered to be most unconstitutional. He alluded to the steps taken for the purpose of defeating an existing law, during the sitting of Parliament, without any communication whatever having been made on the subject. He could not see why, if Government had the power to dispense with an existing law without the intervention of Parliament, the same dispensing power might not be applied to other laws, and, though perhaps judiciously exercised in the first instance, grow up into a system of interference with established laws on the part of the Government, which would have the most dangerous results. It was, therefore, the duty of Parliament to reprobate the first instance of the exercise of such a power. He entertained a hope that ministers, upon reviewing the transaction, would, for the sake of precedent, feel it incumbent on themselves to come to Parliament for a bill of indemnity, for having done that which, however expedient, was constitutionally wrong. With respect to the consequences of suppressing the issue of small notes, he entertained no apprehension whatever. It was, he knew, the opinion of some of their lordships, and of many persons out of doors, that a paper currency, whatever might be the evils to which it must be admitted it was liable, was nevertheless a species of accommodation, of which the country in its present situation, and with its existing amount of taxation, stood in need. That was a most important point for considera-

tion. It would become their lordships, before they concurred in the continuance of so great an evil, to weigh well the value of the accommodation which it was calculated to afford. After the most attentive consideration which he had been able to give to the subject, he could not bring his mind to believe, that it was at all advantageous to enable a person to do that without capital which should only be done with capital—that it could be beneficial, by throwing artificial capital into the market, to produce a rise of prices, which must, upon the artificial capital being withdrawn, be followed by a corresponding fall. He knew of no legislation which would prevent such an artificial rise of prices from being followed by a revolution, as certain as that of the planets round the sun, and bringing ruin and destruction along with it. — It being admitted that the effect of an issue of paper was to raise prices for a time, it remained to be considered whether the average rate of prices might not be as great under a metallic currency. Suppose a commodity, which, under a paper currency, sold at one time for 100*l.*, and at another for 50*l.*, should, under a metallic currency, sell at two different periods for 90*l.* and 60*l.*; the average was the same, and it was certainly more advantageous to the interests of the community that a steady scale of prices should exist, than that a constant fluctuation should take place, occasioned by a system of paper issues, which had the effect of driving the precious metals out of the country, and thus producing a sudden vacuum, under the influence of which prices fell much lower than they ever could under a metallic circulation. Some persons, he knew, held the opinion, (and it was one of the most extraordinary opinions he had ever heard) that this, the most opulent country in the universe, could not procure such a share of the precious metals as would enable her to carry on her commercial transactions. He knew that such an opinion was contrary to fact; and he derived his knowledge from accounts on their lordships' table, and from others not to be found there, but which were within the reach of every one who wished to make himself acquainted with the subject. It was proved by experience, that when any occasion for it existed, a flow of gold into this country never failed to take place. In deference to that species of mystery with which the Bank of England liked to surround itself, to a greater degree, perhaps, than was expedient, he would not particularize dates, but he would state as a fact, which could not be contradicted, that on one occasion the Bank was able, in the course of two years, to increase a treasure of less than three millions of gold to fourteen millions. He therefore felt no apprehension of a scarcity of the precious metals. He, however, wished it to be understood, that he reserved himself with respect to the question of the effect of the amount of taxation taken in connexion with a metallic currency on the general means of the country.—Whilst he entertained the opinion which he had expressed, of the propriety of checking the issue of the small notes of country banks, he was equally desirous to see the Bank of England deprived of the power of circulating notes of the same kind; and this brought him to the consideration of the share which the Bank was supposed to have had in contributing to the transactions of last year. Having arrived at that part of his subject, it would be most unfair to pass by the

opportunity of stating, that in the recent transactions between Government and the Bank, with respect to the surrender of part of the privileges of that body for the purpose of facilitating the formation of solid banking companies, the readiness with which that body had displayed to meet the public necessities, did them very great honour. So far, also, as he was informed on the subject, the Bank deserved great credit for the promptitude with which they endeavoured to arrest the effects of the late panic by a great issue of small notes: but it would not be candid in him if he did not add, that the Bank, in the first instance, so far from having arrested the progress of the late evils, had increased them by the extent of its issues. He believed it would appear, that in 1825, but more particularly in 1824, whilst the country bank paper was being increased, considerable additions were made to the issues of paper and discounts of the Bank of England. After the language which was held by the highest authority of the Bank some time ago, he had a right to state that the period to which he had alluded was not the proper time in which such issues should have taken place,—it was a time when an efficacious check upon the paper circulation might have been administered by the Bank, and could not have failed to produce a salutary effect. During the progress of that inquiry in which their lordships were engaged some time back, and the result of which was known by the name of the bullion report, one of the highest persons connected with the Bank, when asked what he considered to be the criterion (independently of the exportation of the precious metals) of an excess in the issue of paper currency, replied, “A state of trade in which money is hawked about every where, and in which many persons are induced to undertake uncertain and imprudent speculations.” He would ask their lordships whether, independently of the exportation of the precious metals, which was actually taking place in 1824, to South America, a more accurate description could be given of the state of trade and speculation in England at that period than was to be found in the words which he had just quoted. Money was hawked about everywhere, and the most imprudent speculations were going on. He was inclined to hope much from the abandonment of part of the Bank privileges. There were some persons who did not anticipate any benefit from that measure, because it had seldom happened that the full number of partners allowed to carry on banking business, under the existing law, had established themselves as a firm; but he did not attach much weight to that argument. With respect to another part of the measure which he understood was to be proposed,—namely, that which would require country bankers to give securities—he must confess it did appear to him, so far as he had been able to consider it, to be attended with so much difficulty in its application, that he very much doubted whether it could ever be carried into effect. He thought that much more good would be effected by giving some degree of publicity to the transactions of public banks than by requiring securities. A periodical statement of their affairs would operate as a check upon improper conduct, whilst it would leave them in full possession of their funds, which would in a great degree be tied up under the proposed system of securities. He hoped, therefore, that the noble earl would, upon reconsidering the

subject, be inclined to abandon that part of his plan which related to the requiring of securities. He ventured to suggest that it would be expedient to provide, that wherever country bank notes should be issued, there they should be made payable. Such a provision would remedy the inconvenience which had been found to result from country banks establishing branch banks in different towns, which issued notes payable only at the original bank. He had now stated generally the observations which occurred to him with respect to the measures which it was the intention of ministers to propose. There were many persons, he was aware, who were of opinion that the effect of those measures would be to bring back the currency to the state in which it was placed by Mr. Peel's bill; and that it would, in that event, be impossible for us, with the existing load of taxation, to fulfil our pecuniary obligations. These same persons approved of the artificial paper currency, because they considered that it enabled them to fulfil those obligations which otherwise they could not do. He was unwilling to admit the possibility of the country being incapable of fulfilling all its engagements (hear, hear). If he could entertain such an opinion,—if he could bring himself to believe that the country was unable to meet the demands upon it,—he would say, in God's name declare the fact, and adopt a system of policy applicable to the situation in which we were placed. Proceed upon fixed principles, but abandon a system which caused perpetual revolutions,—creating at one moment a state of artificial prosperity, and at another plunging the country into a state of unnatural depression,—a system which scattered ruin not only amongst the commercial classes, but to the right and to the left through every part of the community, depriving every man of any certainty in calculation, and of the means of knowing, as he was entitled to do, the value of the currency, and liable to have his whole stock, the produce of years of industry, left almost valueless. He hoped and believed that the measures to be proposed by ministers would have the effect of putting an end to a system of currency which produced such calamitous effects, and would also place the banking establishments of the country on a firm and solid foundation. He concluded with moving for the following papers:

" 1. An account of the number of Bank of England notes in circulation on the 15th of Feb., the 15th of May, the 15th of Aug., and the 15th of Nov., in each year, from 1819 to 1825, distinguishing the notes for 5l. and under; and a like account of notes of the banks of Scotland and Ireland.

" 2. An account of all the notes issued by country bankers in England, Scotland, and Ireland, from 1819, up to the latest period at which the returns could be made, distinguishing the amount of the notes, and the period at which they were issued.

" 3. An account of the number of bankrupts in England, Scotland, and Ireland, from 1819 to the latest period at which the return could be made, distinguishing those who were bankers.

" 4. Copies of all charters granted to banking establishments during the same period."

The Earl of *Liverpool* did not rise for the purpose of opposing the motion, nor did he feel it necessary to trouble their lordships with more than a few words on the present occasion.

His lordship said: first, because it would be his duty at a very early period to submit to the consideration of the house certain measures, which would afford him an opportunity of stating his opinions with respect to the present posture of affairs; and, secondly, because there was hardly a sentence which the noble marquis had uttered, from beginning to end, with which he was not disposed to agree.—He had, however, felt it necessary to rise for two reasons: first, to state the grounds on which he agreed to the motion.—As long as the Bank of England continued under restriction, he thought that parliament not only had a right, but that it was their bounden duty to call from time to time for the accounts of the Bank, in order that they might be fully acquainted with the proceedings of that body; but the restriction having expired, and the Bank being under no control from Parliament or the Government, he did not conceive that Parliament was entitled to call for information from them as a matter of course. The information which the noble marquis sought for might be obtained, though perhaps not so completely as would be desirable with regard to dates, from the stamp-office. Upon the stamp-office, Parliament had a perfect right to call for such information. But though he agreed to the motion, in this shape, under the particular circumstances of the case, he did not think it one which should be made as a matter of course in every session.—The other point upon which he felt it necessary to trouble their lordships,—one with respect to which he felt that a considerable degree of responsibility attached to him and to his rt. hon. friend (the Chancellor of the Exchequer)—was the refusal for the present to stamp any one or two pound country bank-notes. The measure was not adopted until notice had been given to parliament of the intention of Government to effect such an object by legislative enactment, and it was only resolved upon in order to prevent the views of Government from being defeated whilst the bill was in progress through parliament. Government had positive information that there existed an intention of doing that which would have thrown considerable obstacles in the way of the measures which it was the object of ministers to recommend to parliament. If he were asked, why he had not adopted the course of applying to parliament for a short bill to sanction the proceeding, he would reply that that step could not have been taken without the greatest partiality and injustice. The bankers near the metropolis would have got their notes stamped whilst the bill was passing, an advantage of which the bankers at a more distant part of the country could not avail themselves. Under these circumstances, it was considered advisable to adopt the measure which had been alluded to without any previous application to parliament.

The Earl of *Lauderdale* said, that the late distress was not so much the effect of an over-issue of paper money, as of the extravagant speculations which had lately prevailed throughout the country, and which the learned lord (*Eldon*) had, in a court of law as well as in that house, done his best endeavours to put an end to.

The Earl of *Caernarvon* approved of the plan of extending the number of partners in banking establishments, as a measure calculated to give them increased confidence throughout the country; and agreed also in the propriety of each of the partners in such establishments

being made liable in the whole amount of his property for the concerns of the bank. This would create a class of merchant bankers, who would have an interest in attending to the affairs of the bank, and would operate as a check against over-issues. Accompanied with these measures, he would gladly see the country return to silver as the standard of the currency, such as silver was at the old mint-price. This would, in his opinion, place the currency of the country on the most solid and satisfactory footing. As to the proposed measure of withdrawing the one and two-pound notes, that was in his opinion, by no means calculated to remove present evils. Such a measure would operate injuriously to the farmer, and to the humble class of agriculturists and dealers in the country, who principally carried on their business by means of the one and two-pound notes. Besides, great injury would be done generally to the community, by withdrawing so large a sum as six or seven millions—the amount of these small notes—from the circulation of the country, and that at a time, when it was desirable to give it an extension. That the withdrawing the one and two-pound notes, and the substitution of a metallic currency, would not go to the root of the evil, appeared, not from his statement merely, but from the letter of the First Lord of the Treasury, and his Colleague the Chancellor of the Exchequer, to the Bank Directors. It was there stated, that “though a recurrence to a gold circulation in the country, for the reasons already stated, might be productive of some good, it would by no means go to the root of the evil.” The letter proceeded thus:—“We have abundant proof of the truth of this position, in the events which took place in the spring of 1793, when a convulsion occurred in the money transactions and circulation of the country, more extensive than that which we have recently experienced. At that period nearly a hundred country banks were obliged to stop payment, and parliament was induced to grant an issue of Exchequer Bills to relieve the distress. Yet, in the year 1793, there were no one or two-pound notes in circulation in England, either by country banks or by the Bank of England.” As the distress prevailed, therefore, when one or two-pound notes were not in circulation, as well as at a period when they were, the house ought to pause before it gave its assent to a measure which would withdraw so large a sum from circulation, and deprive the country of the accommodation it afforded. At the period of the South Sea scheme, there were no one or two-pound notes: yet then and in 1782 and 1783, and at various other periods, was there not distress as great, and even greater, than the present? As, then, these evils existed when small notes were not in existence, he owned he was disposed to attribute them to other causes, and was unwilling to give his assent to the abolition of these small notes, without some further information than the house was already in possession of, as to the expediency of such a measure. For his part, he did not see the evil of a paper-currency. At the time of the bank restriction, in 1797, the business of the country was mostly transacted in paper, and during the subsequent progress of the war, down to the resumption of cash payments, at the close of it, a paper-currency was maintained, without any great inconvenience, or without our experiencing such distress as we did at present. Means should certainly be devised to prevent a greater circulation of

than there was metal in the country to meet; and if this were provided for, he saw no objection to the circulation of notes, whether of great or small amount. An objection had been made to small notes, that by extending our circulation, they had a tendency to diminish the interest of money. Now, though that were the case, it did not weigh as an objection with him; for in all states which were in a state of prosperity, and where there was much money and much commerce, money was held at a low rate of interest; whereas, the interest of money was always high, where there was little money (bear, bear). In all the discussions, and all the proposed alterations of the currency, we should never omit to bear in mind that enormous weight upon the country—the National Debt. When it was considered that the interest of that debt was to be paid, and when the distresses of the country were at the same time borne in mind, what must be the effect of withdrawing six or seven millions from circulation? The effect of such a contraction must be, that the Chancellor of the Exchequer would go down to the house of Commons next year, and would with difficulty be able to state that the revenue of the country was sufficient to discharge the interest due on the national debt, and to defray the current expenses. And it should be remembered, that we were now in the tenth year of peace, and that there was no likelihood of our being able to do more, during the probable period we might continue at peace, than supply our immediate exigencies.—The currency of the country had gone through every variety of fluctuation—it had been over and over again tried in the crucible—paper was converted into gold, and gold again into paper, and still a new change was found necessary. In Scotland, an approved system of banking had been brought to the test of experience. This was admitted in the letter of the noble Earl (Lord Liverpool).—“In Scotland, there are not more than thirty banks; and these banks have stood firm amidst all the convulsions in the money-market in England, and amidst all the distresses to which the manufacturing and agricultural interests in Scotland, as well as in England, have occasionally been subject.” And it was not a little extraordinary, that whilst ministers were inducing us in England to abandon a system which sanctioned a small note circulation, they admitted the efficacy of such a system in Scotland. He would wish to see banking establishments of equal solidity in this country; at all events, he hoped the house would come to no resolution without the fullest information. With a view of supplying that information, he moved, “That there be laid before the house an account of all the notes issued by the Bank of England and the country banks since 1790.” The motion of his noble friend (Lord Lansdowne) went only so far back as 1819, but he was desirous of reverting to an earlier period, for the purpose of considering the issues of that period, and particularly of 1793, 1795, and 1797, and of comparing them with those of the present time when similar distresses prevailed.

These motions were then agreed to.

### *Country Banks.*

COMMONS.—Mr. Hume moved for an account of the number of country banks issuing notes, which had become bankrupt in England 1816; stating the places at which had been carried on, the

number of partners in each establishment, the amount of debts proved against each establishment, and the dividends paid. The house would then have before it, as it ought to have, pending the discussions which were about to take place, a statement of the amount to which the public had suffered by the country-banking system.—At the suggestion of Mr. Pascoe Grenfell, the account called for was extended to Scotland.

Mr. *Maberly* thought the motion altogether objectionable, as an interference with the affairs of individuals, in which the house was not warranted. If it was once established that any member might move for an inquiry into the private concerns of parties, it was difficult to see where the principle would stop.

Mr. *Pascoe Grenfell* said, that he saw no objection to the motion. He had added the suggestion of extending the account to Scotland, merely because he understood that the return from that country would be nil, for he believed no bankruptcy had occurred in that part of the kingdom.

Mr. *John Smith* said, that when an interference with the private affairs of individuals was spoken of, it ought to be recollected that the country bankers stood in a very different relation with the public—that theirs was a different case from the case of merchants or ordinary traders; and he was therefore disposed to support the motion. While he was upon his legs, however, he wished to put one question to the Chancellor of the Exchequer. He had not until that morning read the correspondence between the Treasury and the Bank of England; but in reading it he had been much struck with a paragraph which stated that the country banks—all of them, and without reservation or exception—had for some time fostered, supported, and encouraged, a rash spirit of speculation. Now, in the name and on behalf of very many country bankers who claimed to be considered and treated as men of honour, prudence, and integrity, he begged to say that they expected the Chancellor of the Exchequer, in the course of his speech upon the subject generally, would name the evidence and grounds upon which he had made that sweeping observation. At the same time, too, it would perhaps be convenient to the rt. hon. gent. to show to parliament the advantage and the policy of directing public odium against the country-banks so peculiarly at the present crisis.

The Chancellor of the Exchequer saw no objection whatever to the motion of the hon. member (Mr. Hume). Such a return, as far as it was needed, could do no mischief to parties who might have failed and were in business again; and if any part of the detail proposed was likely to be painful, no doubt the hon. member would consent to have his motion altered. With regard to what had fallen from the hon. member (Mr. J. Smith) he could only say, that with reference to the language in which the country bankers were spoken of in the correspondence between the Government and the Bank of England, he could have no objection to give every explanation and satisfaction to those who might fancy themselves injured thereby. Most certainly, it never had been the intention of ministers to convey the slightest imputation against individuals. Their argument was merely to the general system of country

banking. But even if the charge had been against individuals, he could not look at it with the hon. member who possessed,

and traded with, considerable capital, was, more or less, an encourager of speculation; and to say so, was neither an impeachment of his honour or his integrity.

Mr. *Calcraft* said that without the rt. hon. gent.'s explanation, he certainly should not have understood the expressions, "rash speculations, aided, fostered, and abetted, by the country banks," as exactly placing the country bankers upon that high and advantageous ground which it seemed they really occupied in the rt. hon. gent.'s opinion. For himself, however, he denied the fact that it was by the issues of the country banks that the rash spirit of speculation, as it was called, which had existed in the country, and the enterprises to which that spirit had led, had been supported. Seventeen millions of paper could not have been issued by any country banks for purposes of speculation, and that speculation carried on in London; for, as fast as a country note made its appearance in London, what was the effect? It was instantly converted into a Bank of England note, or into gold, or the banker was discredited. It was well for ministers to talk of country paper: the rt. hon. gent. had as much accommodation paper in the market as heaven knew how many of the country banks put together; and nothing had more contributed to do mischief in the late panic than the immense amount of Exchequer bills afloat. Government, deal as it would with the system of the country banks, would do little good until the issue of Exchequer-bills was limited. He supported the motion of the hon. member for Aberdeen.

Mr. *Hudson Gurney* said that the whole system of country banking was opposed to speculation, which the country bankers, of all mankind, were most interested to prevent. When the whole country was carried away with a rage for speculating, then, indeed, they had no choice or discretion to use; they must facilitate the views of their customers. The rt. hon. gent., as it was understood, wished to have the Scotch system of banking introduced, as one less favourable to speculation. The Scotch system did not discourage speculation. He was convinced that the introduction of it into this country would lead to more bankruptcies, though it might not lead to the breaking of more banks. Bankers, as he said before, must direct their operations by the wishes of their customers; and to whatever extent speculation might go, the operations of banking must go on to that extent also. Being compelled to assist the general transactions of their customers, they must of necessity add to the general confusion. If speculation prospered, they must help it with advances, increase the quantity of the general circulation, and raise prices, and thereby encourage speculation; while, on the contrary, if speculation went back, the bankers, for self-security, were under the necessity of retracting, and so increasing the general embarrassments. He next adverted to the depreciation which had affected the currency in 1812, and which was generally allowed to have reached full 35 per cent. That depreciation had acted upon the general interests in different methods ever since, and mainly by affecting prices. In any case, it was clear that a sufficiency of circulation should be kept floating to secure a rise of prices equal to that depreciation of the currency under which the bulk of the burden of the national debt was undertaken; otherwise the engagements of the country must fail throughout. For his own part, he did not approve of

the circulation being left at the discretion of country bankers—he could wish to see it taken out of the management of private hands. But it was impossible to do away with the paper-currency of country banks, unless measures were taken in accordance with the depreciation of 35 per cent. which, if not kept up by some sort of additional currency, would bring on universal bankruptcy, and a state of distress, to which the distresses of 1816, 21, and 22, would be as nothing. The depreciation must be met by measures which would sustain prices in the same proportion of 35 per cent. or prices must fall; and in that case, how the country could meet its multiplied engagements was more than he could tell.

Mr. Robertson praised the Scotch system of banking, which had raised Scotland, from being one of the poorest countries in the world, to the highest pitch of prosperity.—He chiefly condemned the new, rash, and adventurous system of commercial policy which ministers were avowedly pursuing. Let the house consider what it was for the country to send out 24,000,000*l.* of its wealth annually in exports, without any return, and then say whether or not they could do without the aid of country bank paper. By the country banks the nation had been enabled to sustain this draining upon its resources without absolute exhaustion. Should they draw in their one and two pound notes, the evil which was stalking through the land would be aggravated tenfold. He was astonished that the house could submit, in the face of their own experience, and solely on the credit which they gave to ministers, to sanction them in their fixed resolution of pushing forward their new commercial system, to the disadvantage of all the more important interests of the country—agriculture and manufactures. What was the commercial interest, compared with these? It was yet in the power of the landed and mercantile classes to do something in the way of prevention. How could they so quietly agree to the course which threatened them with such dangers? The evils which threatened the country were glaring, yet no man stepped forth! no, not even to challenge inquiry. While thousands of families out of doors were threatened with destruction by the proceedings of ministers, the house appeared to be perfectly insensible to those sufferings which, if not averted, must ultimately fall upon themselves.

Mr. Tierney wished to ask a question of the Chancellor of the Exchequer, in order to resolve a doubt suggested by the correspondence between the Bank of England and Government, concerning branch banks. In the answer of the Treasury committee of the Bank to the communication from ministers, they said, "Finding also, that the proposal by the Bank of establishing branch banks is deemed by his Majesty's ministers inadequate to the wants of the country, &c." what he wished to ask was, whether the Bank of England had made any proposal of itself to establish branch banks, what was the nature of that proposal, and why it was not before the house?

The Chancellor of the Exchequer said, that no such proposal had in fact been made in the written communications of the Bank. Something of the kind had passed in the course of the discussion; but no direct proposition to establish branch banks of their own had been advanced in writing by the Bank of England.

Mr. Pearse said that no such proposition had been expressed in writing by the Bank. The subject might have been touched upon verbally

and incidentally; but in point of fact no specific proposition had been made. The expressions in the answer of the Bank went too far; although for years past that plan had been repeatedly a subject of conversation as well in the house as elsewhere.

The Chancellor of the Exchequer wished to add one word of explanation, in order to set right the hon. member (Mr. Calcraft), who had perfectly misunderstood what had fallen from him on a former night. That hon. gent. spoke as if he (the Chancellor of the Exchequer) threw the whole blame of the excessive issues of paper on the country bankers. It was quite incomprehensible how the hon. gent. could so far misunderstand him. He might have wanted precision in the language which he had used, but if he recollected rightly, judging also from the impression on his mind at the time, it was not possible that he could have charged upon the bankers the whole of the over-issuing of paper, or even the originating of the causes or transactions which led to that excessive issue. His opinion then was, and it still remained, that excessive speculation had brought on that crisis in which the country was yet partially involved; but that such excessive speculation must always remain incidental to, and inseparable from, the affairs of a country of great commercial enterprise. He had instanced the distresses of 1819, which, when passed, only had the effect of increasing public confidence, from which increased speculation again arose.

Mr. Calcraft explained.—The motion was then carried.

### *Small Notes Stamps.*

Mr. Calcraft said that the stoppage of the stamping of country bank notes was on the part of ministers a glaring violation of the existing law, and ought not to have been perpetrated without notice. Did Government mean to continue the instructions already sent to the board, to prevent the farther stamping? If they did, he would tell the rt. hon. gent. that the publicity of such a proceeding would immediately cast so great a discredit on the country bank-notes, as to throw the local circulation in every corner of the kingdom into the greatest confusion. The effect would necessarily be, and it never could have been contemplated by ministers, that the panic which was said to have been on the eve of subsiding, must be perpetuated.

The Chancellor of the Exchequer replied, that he had taken the step alluded to on public grounds, and if it were proper so to take it, it would be quite inconsistent, indeed absurd, were he not to continue it. It would be remembered, that it had been thrown out in debates that this course must be taken, or it would be impossible to withdraw the small note circulation in the country. Ministers had, therefore, no alternative. That they had violated a law must be admitted, and so far they must be strictly said to have acted wrong; but they were prepared to meet parliament, and he judged upon the wisdom and justice of the course which they had thus taken.

Mr. Calcraft did not mean to say that the ministers were in this business actuated by improper motives; but he believed that in this, as in many other instances, they had committed a great error in judgment, and fallen into heavy mistakes (hear, and a laugh). Why not have mentioned their intention, and the parties would

have then known their situation? They might rely upon it, that this harsh and abrupt measure would deteriorate the local currency, and keep alive the panic which they thought had subsided.

Mr. *Ellice* said that it might have been better if the parties could have been apprized of the intention of Government; but, perhaps, the notice would have only had the effect of causing a greater stamping of notes at the moment, which might have ultimately defeated the main object they had all in contemplation. The act, however, must be estimated upon an actual review of the existing state of things, and not upon a remote apprehension of contingent dangers. He should very much lament if the panic were continued by this measure; but the house must judge, whether the suppression of the small note circulation could have been effected without some such proceeding.

### *Bank Charter and Promissory Notes Acts.*

FRIDAY, FEB. 10.—The order of the day for the house resolving itself into a committee of the whole house, to consider of an alteration in the Bank Charter\* and Promissory Notes† acts, having been read,

Lord *Folkstone* said, that the question then to be considered was one upon which the house ought to have had information beforehand, so that each member might have known that he was safe in engaging in whatever the house might be called upon to do. In his opinion the right hon. gent. (the Chancellor of the Exchequer) had stolen rather an unfair march upon them. On the first day of the session he had given notice of a motion upon the subject generally, which was to come on at an early day. On a subsequent day the right hon. gent. had explained more fully that his motion would go to a consideration of the Bank Charter acts in a committee of the whole house, which order was fixed for this day. On Monday last the right hon. gent. came down, and moved that the acts respecting the Bank Charter and Promissory Notes should be entered as read. They now passed at once to the order of the day for going into the committee. The objection which he had taken, might appear technical only, but it comprised something very essential to the order of their proceedings. The house might be very right in agreeing to go into the committee; but, as the case stood, they had been led into an admission, which perhaps they might not have made upon a more regular discussion. He, for one, was not at all prepared for the discussion of the measures to be proposed in the committee; he was without the necessary information. If, indeed, the right hon. gent. would begin now, on the question that the Speaker do leave the chair, and detail his plan, and show clearly the nature of what he intended to propose in the committee, his objection would be obviated. But if he required the house to go first of all into the committee, then would the house be treated, in his opinion, most unfairly, because they were driven forward to an undertaking, the reasons or necessity for which were not yet explained or decided upon. And this was one of the inconveniences arising from the

practice which now constantly prevailed in voting for an address in answer to the speech on the first day of the session—that they always found themselves pledged to the measures of Government in a degree which was found to restrain them afterwards. He well remembered that several gentlemen protested against being pledged by that address to the support of the measures which might be proposed upon the various subjects to which it referred; his learned friend (Mr. Brougham) especially exempted himself from any pledge of concurrence as to what might afterwards be made the construction of any sentiment contained in the speech or the address. His was not, then, a technical or formal objection, but one which was of general consequence.

The Chancellor of the Exchequer was not aware that he had stolen a march on his lordship, the house, or the public. He had before intimated that he meant to state the views of Government in detail in the committee on the Bank Charter and Promissory Notes acts, and neither on the first or second days of the session, had he heard any objection to this course, nor at any other time, so that he had no reason to anticipate that such an objection would be made then. The proposed course of proceeding was the proper one, and they never would be able to enter with advantage upon the consideration of any great public measure, if they were to be stopt, *in limine*, by these objections. The course was the usual and most convenient one; for he might frequently be called upon to make additional statements and give explanations, which he could not formally do in the house, whereas, in the Committee, he would be quite unfettered.

Mr. *Baring* complained that the course taken was only suitable to subjects of a common and obvious kind. Were they about to consult on a subject of the most insignificant or frivolous nature, they could not proceed with greater levity; whereas this was a subject which should have been preceded by every possible means of intelligence; many papers and documents ought to have been produced, some of which were actually moved for by members, no doubt with a view to their usefulness on this occasion; all the lights which could be acquired ought to have been produced to help gentlemen to a clear apprehension of that which it was so difficult for them without it to understand. But at the same time so urgent and pressing was the whole subject, so sensitive was the whole country, so anxious did they feel to know what the Government were going to propose, that he could wish his noble friend on this occasion to waive his objection. After all, if they should not find themselves in a condition to go on with the discussion, they might dismiss the motion altogether, or report progress, and ask leave to sit again.

Mr. *Calcraft*:—The noble lord was right in his objection to the course taken; but it would not have the effect of precluding objections to the plan, even in its preliminaries (hear, hear).

The Speaker then left the chair.

The Chancellor of the Exchequer:—If he did not feel that he was acting in the discharge of a great public trust, however unworthy or unfit he might be, he should be appalled at the magnitude and difficulty of the subject on which he had now to address the house. He was well aware, that notwithstanding the impression on his own mind was clear as to the real causes, and the proper remedy for the evils

\* 8 and 9 Will. III. c. 20, and 4 Geo. III. c. 52.  
† 3 Geo. IV. c. 70.

which had lately visited the country, that he was likely to meet with no light hostility to his propositions. He perfectly understood the feelings of some individuals on the agitation of any topics of this nature; and to any observations which might flow from him in the course of this discussion, he was prepared to meet no small degree of misunderstanding as to the principles and grounds on which he proposed to rest the projected measures. One source of reliance at least he found in himself—he came to this deliberation with a good conscience; and he hoped that he might venture to ask the house for their gravest attention (hear, hear): more particularly, because he felt a fear within himself, that he could not compress within those limits which the house usually expected to be observed, the various parts of so intricate a subject. He entreated the indulgence of the house, therefore, to the extent of a patient hearing; not deprecating any hostile observations, in whatever spirit pronounced; but only asserting his claim to that forbearance and attention which the subject demanded, and without the extraordinary exercise of which it would be utterly impossible for him to discharge the duty which he owed to Government, the house, and the country (hear, hear). Before he stated at large the views of the Government, or gave any exposition of the facts connected with the case, or the grounds of the measures which he had to propose, and which, according to the conviction of ministers, the best interests of the people and the safety of the country required, he would make a few observations, in reply to one objection of a very general kind which had been made in various quarters—that it would have been more prudent had Government altogether abstained from making any decided allusions to the causes of the late general distress. He wished those who were of that sentiment would reflect on the situation in which ministers were placed, and reflect, not only on their situation, but also—which was a consideration of a thousand times greater importance—on the situation in which the country was placed. If they had not taken this course, it would have been impossible for them to have refrained from some other mode of interference. Had they abstained, and held themselves aloof, would they have been sure of silence in other parts of the house? Was it conceivable that upon a subject which roused the whole country, and occupied its feelings with the most intense alarm and anxiety, that such forbearance would be construed into any thing but criminal indifference? Would not the greatness of the subject, and the universal interest of the question, have been brought against them? Was it not well known that they were called upon repeatedly to state if they meant to do any thing, and, if so, what that something was? He would say that ministers would have deserted their duty, would have blinked the question, would have degraded themselves, would have betrayed their public trust, had they not deeply considered the causes which led to the general distress, and come forward with such propositions as they conceived most applicable. To enable the house to judge clearly; first, whether they ought to do any thing; and, secondly, if the thing about to be proposed by Government was the fittest thing to be done,—it was essential that they should have in their minds a clear apprehension of the causes of the evil; otherwise they could form no just idea of the remedy, they would legislate in the dark, and

perhaps do greater mischief than that which they designed to cure. He must observe beforehand, that it would be the grossest self-delusion were they capable of flattering themselves into a belief that any measures to which they could resort would act as an infallible remedy as to the future. Whatever they might think it necessary to do, they must not hope to apply a lasting remedy to the fluctuations of trade, the rise and fall of prices, or the ebb and flow of public and private confidence. These were the inevitable consequences of the transactions of great societies, and in a state of society like ours they must always act with peculiar force, increased as that force was by the superior activity and spirit of enterprise which prevailed among us. Our own national experience, and indeed the multiplied examples furnished by all history, proved that such derangements were to be considered as being of constant, he had almost said of periodical, occurrence. He was aware how this argument might be turned against him. It would be said, that if circumstances were so varying—if these distressing changes in the relations of property were so unavoidable—then any measure, whether of the kind about to be proposed, or any other, must be wholly useless. There certainly seemed an inconsistency; but he would attempt to meet it. Under whatever circumstances a currency existed—whether it were wholly metallic, or chiefly of paper, or partly metallic and partly paper convertible into metallic money, fluctuations of price must occur, from causes unconnected with the quantity of the circulating medium. Take the first case,—that of a country in which the currency should be wholly metallic: then suppose a succession of unfavourable seasons, which was a contingency often felt in every part of the world. Suppose that the supply of produce, from the nature of the laws and other circumstances, should be found deficient; during this series of years, it was plain that the prices of produce would have a tendency to rise; and the increase of profits would tempt the agriculturists to apply capital to those species of soil, which could not have been done had produce remained at its former price. The profits of this increased cultivation would place the owners more at ease; they would consume more themselves, and so stimulate other branches of industry to an increased production, of which the natural tendency would be, first to promote speculation, and then over-speculation, until it reached its farthest point. But the course of years, with the ordinary revolutions of the seasons, would restore prices to their original level. They all knew by experience how suddenly and frequently the prices of agricultural produce were raised and depressed; they all knew the immense occasional differences in the profits which were enjoyed by those who cultivated the soil, without any other causes intervening than the changes and variations of the seasons. The return of abundant seasons would throw them back again, and with them all those who had expended capital on speculations connected with the land: the consequences must be those fluctuations which had visited all communities in turn, and of which we had perhaps had in our own turn, and among our own people, more than our own share. But if these fluctuations were incidental to a country whose circulation was exclusively metallic, they were still more likely to occur in countries like this, where the circulation was partly me-

tallic, and in part composed of paper convertible into metallic money. Such a currency gave facilities both to the borrower and the lender; of which the inevitable tendency was a quicker rise of prices; and, upon any reverse, a more precipitate downfall. This tendency, then, in our own country, must expose us, whatever the legislature might do, to the most active species of fluctuation. Its results, too, would be infinitely aggravated, though not caused—he would take that distinction (hear, hear)—by a circulation like ours; because, when the paper circulation was not confined to notes of the larger denomination upon any increase of that commercial speculation which it inevitably encouraged, the tendency was to aggravate the insecurity of the bodies from whom the paper circulation issued (hear, hear). Gentlemen had said—and he believed those who knew a great deal about country banks; some of them, indeed, if he were not mistaken, connected with such establishments—that they did not care a farthing for the power to issue one or two pound notes—that they were not of the slightest importance to them; and one hon. gent. (Mr. H. Gurney) protested that he was anxious to get rid of them—that they were no profit to the country banker; but that, if the power to issue them were vested in every petty firm which might think proper to take upon itself the name of a bank, establishments of credit and respectability were obliged to send them forth from the competition which was necessary for their protection. If, then, they were neither a source of profit, nor an object of necessity, and if they had a direct tendency to increase the circulating medium beyond the point it would at any time be likely to reach without them, by the mode in which they operated upon the currency, affecting the exchanges, and rendering the Bank of England, and the country banks themselves, unable to meet their payments under any sudden demand, or any extraordinary alarm, he thought they were still farther to be deprecated, as directly controverting the tenor of the act of 1819; an act which, he trusted, no man could deny was passed, if ever any act in that house was, with the unanimous approbation of all the parties of which it was composed (hear, hear)—an act which had been solemnly resolved upon as the only measure which could enable the country to meet any future danger, which was to place the circulating medium upon a permanent and stable footing, and regulate permanently and effectually the whole of our commercial transactions. That they counteracted the tendency of that act was not to be disputed; and, if so, where was the new principle?—where was the innovation?—where was the departure from former practice?—where was the new and untried theory which some gentlemen had accused ministers of pressing upon the approbation of the house (hear, hear)? Was it not the mere carrying into more rapid practice the very system under which it had been declared the country could alone permanently flourish? He would say, that it was the hon. gents. opposed to them who were the theorists (hear, hear); they were the speculative men who were now about to pull their own house about their ears (hear, hear); they were the persons who—opposed to that system, which, he declared God, he considered of such absolute utility for the well-being of the country,

that he could not contemplate any derangement of it without the plea of the most overpowering necessity,—a plea which should even then be received with the greatest caution, whether it were urged against the use or abuse of any measure which they had so solemnly adopted. But, then, he was met by the assertion, that to touch the small notes would affect the paper credit of the country generally—would stop the public accommodation, and deprive every third or fifth man of the proper opportunities which he might otherwise have of transacting his business in the way most useful to himself, and convenient for the community: when this was said, let the matter be fairly argued. Would any man say, that it would be prejudicial to the currency, that those who had the management of it should be called upon to give security for its stability,—and was or was not that security wanted in the case of the notes of small denomination? These were the very notes which entered into the more ordinary business of the people; they were the notes which generally fell into the hands of that class who had nothing, perhaps, in the world but their labour to depend upon—into the hands of poor and hard-working persons, who might perhaps providently acquire out of the produce of their industry three or four of those one-pound notes, which they were holding to fall back upon in a time of need. What became of the prospects of that useful and praiseworthy class, when this source of supply was cut off from them by the failure of a country bank? Were it not for these notes, they would have had by them three or four sovereigns,—they would have had something solid to cling to in the hour of distress, instead of these worthless pieces of paper. At present, the poor man must depend on the operation of general speculations, of which he knew and could know nothing; or upon the effect of an over-issue of paper, of which he was equally ignorant, and had no power to avoid. And, then, when any panic arose, who was the first to rush forward to secure his property? The poor man (hear, hear);—he hears of distrusts and failure; and was it not natural that he, who had invested his little all, (to him of inestimable importance,) in bank notes, should be the first to press forward for payment,—the first to guard against consequences, which to him would be absolute ruin (loud cheers)? And thus was the panic commenced. Example, however, was contagious. The possessors of the larger notes were not so susceptible of the panic as the poorer classes, but they soon yielded to the common temptation, and so assisted in realizing all the dangers which they sought to guard against. The man who might have lain by—who felt none of the alarm—who entertained no doubt of the solidity of his banker—who was not agitated or affected by the busy rumours or bubbling of the day, became influenced by the contagion of example; and, while his superior information and more extended knowledge might prevent him from being the first to feel distrust, yet in the end he became unable to resist the temptation of grasping at that which further forbearance might endanger (hear, hear). It appeared, therefore, that the power of issuing these notes was one great source of the insecurity of country bankers. Men placed in such situations, and liable to such influences, could not be said to hold their credit upon permanent and secure foundations. Now, what

was the advantage of retaining these in circulation? Did it in the slightest degree atone for the danger they were capable of producing? So far from their being of real use to the sound portion of the country bankers, it appeared obvious, that their withdrawal would afford a greater surety for their concerns, although leaving them a smaller profit. It was this secure and solid part that was more intimately interested in the general stability of the whole; for, when the time of panic arrived, they were not in the first instance so much affected by the operation of their own issues, as they were by the general shock occasioned by the rush upon the immense number of less solvent banks, which, individually, had hardly a name, but collectively issued large quantities of paper of this description, which, at the same time that its reaction involved themselves in ruin, extended the violence of the shock to others around them, whose higher character could not avert the injurious effect which the general want of confidence inspired. Was not, then, the remedy to be found in getting rid of the dangerous part of this paper circulation, and in making the attempt was he proposing any thing new? Would the withdrawal of those notes take from the banking establishments any thing which in their formation had been deemed necessary for the transaction of their business, or for enabling them to conduct the commercial concerns of the country? Quite the contrary. The propriety of restricting the circulation of small notes was never questioned (hear, hear). Fifty years ago parliament, in taking into their consideration the manner in which the currency might be affected by the issue of paper, passed an act (in 1773) prohibiting the circulation of any notes under 20*l*. In 1777 this restriction, for the better accommodation of the increasing trade and manufactures of the country, was removed, and permission granted to issue notes not under 5*l*.; and in 1787, that act, which had been passed for a temporary purpose, was made perpetual—a proof that our ancestors, sometimes cited as bright instances of consummate wisdom, and sometimes as monuments of absurdity, upon the subject of political economy, thought at least, that it was not advisable to permit an unlimited issue of paper. In that state the law continued until 1797, the year of the Bank Restriction, when one and two pound notes were first brought into circulation. When the Bank restriction act of 1797 was passed, it was clear, that unless the prohibition were withdrawn from the circulation of the smaller notes, the country would be altogether deprived of the means of carrying on its business. It was, however, then intended, that the suspension of the law, which suppressed the small notes, should be always commensurate with the duration of the Bank restriction act; and in the year 1819, when the Bank restriction act was under discussion, the strongest opinions were pronounced, the united declarations of the parliament and of the whole country were proclaimed, that cash payments should, as soon as possible, be restored to the ancient basis. They would also bear in mind, that the committee which had then sat upon the subject, composed as it was of men of exceedingly different political opinions, who entertained adverse notions also upon the principles on which the currency ought to be governed—they would bear in mind, that in that very report, framed by men such as he had described, not one word could be shown

could a syllable be found in the evidence on which it was founded, indicating any such opinion as that the circulation of the small notes was a thing so desirable as it was now attempted to be declared, for the agricultural interests of the country or for its commerce, or essential in any way for its real transactions—not one word escaped from that committee to sanction any opinion that the suspension of the old law ought to be made perpetual. When his rt. hon. friend (Mr. Peel) had brought in his bill, than which there never had been a more important measure under discussion, or one which had been more ably considered in all its details—even then the parliament, in making provision for the resumption of cash payments two years afterwards, namely, in 1821, never dreamt of the possibility of allowing the circulation of these notes for a series of years after the Bank were allowed, or compelled, to pay their notes in cash. With respect to the subsequent act of 1822, which allowed the circulation of this class of notes, he now confessed, as he had indeed admitted the other night, that he had always felt regret, and still did regret, the step taken on that occasion by parliament (hear, hear). It was, however, then understood in the different communications that had taken place between the Government and the country bankers, and more particularly in those which had occurred on the subject of their making deposits as a security for their credit, that though they objected throughout in the strongest manner to the deposits, many of them were content to surrender the issue of the 1*l*. and 2*l*. notes. So far as the bankers were concerned, then, they could not now turn round and affect to set a prominent value upon that which they had on former occasions treated so lightly. As the law now stood, these notes might be issued till 1833. Was he proposing any new principle, when all he contended for was, to revert to the system which was sanctioned in the year 1819, as the future basis on which the currency was to rest, at a somewhat earlier period? Those, then, who were prepared to argue that the circulation of these small notes was essential to the country, as an hon. member (Mr. Gordon) had done, and that the rents of the landed proprietors could not be paid without them, were driven to this position—if their arguments were right, they were bound not to stop with opposing his proposition, but to call for an eternal continuance of the circulation of the small notes (hear, hear). Then who would be the parties calling for a change? Not, as he had said before, the Government, but those who, contrary to a repeatedly established principle, demanded the perpetual duration of a small paper currency. He was astonished at the hon. member's attempt to establish a connexion between rents and these notes: he wondered what new light had broken in upon him; he should be glad to learn whence the flash came, for no ray of it had sparkled in any of their previous discussions, and his own belief was, that so far from this species of circulation assisting in the maintenance of the country gentleman's rent-roll, it would be impossible for rents to be paid at all, should it be long continued (hear, hear). It was possible, however, that the arguments to which he alluded might not be pushed to their extremity by all who were opposed to his plan; but that

manner in which it must practically cramp the circulation, lower the price of produce, embarrass all the transactions of agriculture and commerce, and paralyze the industry of the people." Now he would reply, that these apprehensions, alarming as they sounded, were purely visionary. The experience which could be quoted against it was decisive of the argument; for in 1819 it became necessary for the Bank of England to take measures to meet the operation of the then approaching law, which provided within a short period for the payment of their notes in cash on demand. The mode which they adopted was, to contract their issues as speedily as possible, so as to bring the foreign exchanges, which were running against this country, to a more favourable point, to lower the price of gold. It appeared from certain documents that after the Bank had made these arrangements, there had been coined at the Mint a sum of not less than 25,236,000*l.*; and he would explain the periods when this coinage took place, from which it would be seen, that a very large proportion of it was introduced into this country in the three years that immediately succeeded the passing of the act of 1819. In 1820, there were coined at the Mint 949,000 sovereigns; in 1821, 9,520,000; in 1822, 5,250,000. So that in three years, the Bank succeeded, after righting the foreign exchanges, and reducing the price of gold, in having coined 15,000,000 sovereigns. He did not mean to say that this process was conducted throughout without distress. In 1819 some difficulty certainly prevailed, as also in 1820, and again in 1823; but upon turning to the prices of commodities, which indicated more activity in trade, and greater capacity in the people to purchase, they would find that in 1822, notwithstanding this great operation respecting the currency, affairs had greatly mended; and this was apparent while the paper of the country banks and of the Bank of England had become greatly diminished—the latter necessarily, for otherwise they could not have carried their contemplated measures into effect. This diminution was apparent from the following returns of the Bank circulation within the period he had mentioned. In 1820 the Bank paper circulation was 23,875,000*l.*; in 1821, 21,759,000*l.*; and in 1822, 18,000,000*l.*, when the pressure was less than in the two preceding years, notwithstanding the reduction of the circulating medium. No doubt the paper withdrawn by the Bank was in some degree supplied by the gold, for which it had been exchanged; but after that substitution he would ask whether credit fell, and whether every man was looking at his neighbour and asking, what was his condition, and how long could he bear up against the depression? On the contrary, every thing went on smoothly; a clear proof, in his mind, that the formidable danger apprehended by some, from the substitution of gold for the 1*l.* and 2*l.* notes, was much exaggerated, and that by far too much importance was attached to the operation of that process. Still it might be said, that however practicable it might be to convert this paper into specie, it was an operation of such magnitude as could not be carried into effect without an increased pressure upon existing means. Now, to a certain degree, he was ready to admit that these apprehensions were not unfounded. Some interests must always be sacrificed; but in calculating the condition to sub-

stitute the necessary quantity of gold for the country bank paper to be withdrawn, they must consider that the present case was not like that of 1819, in which the basis of the metallic circulation had to be laid. There would certainly be less difficulty in enlarging a currency already half metallic, than was experienced in introducing the metals when nothing but paper was afloat. The gold coined at the Mint, up to the present time, amounted, as he had mentioned, to 25,236,000*l.* There had been exported, since 1819, 7,269,000*l.* of gold, although how much consisted of coin it was difficult to say, as no account of that nature was kept at the customs. However, within the last half year, the foreign exchanges becoming favourable, a large proportion of the exported gold had returned—not in ingots, but in gold coin, to the amount of 1,000,000*l.* sterling; so that the total loss upon the export of gold, might be taken at 6,000,000*l.* Hence 19,000,000*l.* remained for the uses of the country. But it was possible that some coin, of which no accurate returns could be made, had gone abroad in the pockets of individuals, and also in the payments of those who prosecuted the trade of smuggling, in which almost all the transactions were carried on in specie—a sum which, if estimated at 2,000,000*l.* would still leave no less than 17,000,000*l.* of gold available for the country at this moment. The exchanges were now so favourable as to prevent any of this stock from going out, and it was in point of fact profitable to import the metals. Taking this general estimate, they had a pretty large basis to build on; and if they turned to the state of the paper currency, they would see with tolerable accuracy the nature of what they would be required to perform. There was some difficulty in ascertaining, with any positive accuracy, the amount of country bank paper in circulation, but they could approximate to an estimate on which they could safely act. He spoke not of the aggregate paper circulation, but merely of the smaller notes. The number of these notes which were stamped from 1820 to 1825 inclusive, and this while the bank of England was withdrawing its small paper currency, was in 1821, 1,683,524*l.*; 1822, 2,214,623*l.*; 1823, 1,868,939*l.*; 1824, 1,969,739*l.*; 1825, 2,501,849*l.*; and up to the 5th of January, 1826, 3,172,477*l.* He believed that if they estimated the amount of the country bank paper by tripling the amount of one year, it would not be under-rated. The average of three years, taking 2,000,000*l.* annually as the principle of the calculation, would make 6,000,000*l.* of this kind of circulating medium. But although that amount was probably in circulation in 1825, there could be no doubt that the amount had been recently much reduced, particularly from the events which had occurred during the latter half of the year, beginning, indeed, so early as last July, when, owing to the interposition of some difficulty by a Bristol banker, in the payment of a one pound note in specie, a considerable sensation of uneasiness on one side was created, and of caution on the other—he meant that prudential caution on the part of solid and solvent bankers, who foresaw that, in such a state of things, it was desirable to control their issues, and who evinced an unwillingness to go beyond the amount which a provident view of their affairs would warrant, and who, in fact, made silent and cautious arrangements for the gradual withdrawal of the small notes which they had issued. When great apprehension be-

came afterwards more general, though not in contemplation of any intention of the Government to alter the law, but because these notes were found to have been issued by country bankers to a greater amount than they ought to have been, the consequence was a re-action, before which some bankers failed, and the convulsion of public credit in its turn affected the confidence of the solid and solvent bankers. These latter bankers, therefore, immediately controlled their issues as well as they could. Referring to what had taken place in the committee of 1819, they should remember also, that the solvent bankers were in the habit of cautiously guarding their issues of 11. and 21. notes; for it appeared that they were in the habit of keeping a great number of the newly stamped ones by them, and not putting them into circulation till the old ones were called in, for which the new ones were substituted. Supposing, then, that in 1815, 6,000,000l. was the total amount of these notes in circulation, the number now must be greatly less, and could not possibly be estimated at more than 4,000,000l. In this view, the utmost necessity which could result from his proposition, in the course of the next three years (the time to which he meant to restrict the circulation of the 11. and 21. notes), would be to supply the vacuum with four millions of gold. Now, if he were right in supposing—what nobody, he thought, could question—that in 1824 and 1825 a greater abundance of this paper was in circulation than was consistent with the stability of the currency, it followed that the years 1822 and 1823 were much safer times, the quantity not then being at so high a rate. He conceived, therefore, that all the notions which prevailed of the difficulties and obstacles that must, it was said, attend the filling up of this paper vacuum, would be found visionary and groundless in the end (loud cheers). Were they to startle at the mere sound of difficulties? Were they so pusillanimous, because their path might have difficulties which must be surmounted, as to refrain from treading it, and with such feelings to leave things as they were, blinking the whole danger, for fear of measuring those apprehensions which wavering minds might suggest? He implored them to brave this imaginary danger; and if they must, as they ought, take sound principles for their rules of action, to take them in a time of peace, when sound principles were, if they were worth a farthing, proper to be acted upon; and not hope to postpone their trial till less favourable moments, when dangers might thicken upon them, and when the chance of success was less practically attainable (cheers). Something had been said with respect to other causes which had contributed to the excess of paper circulation in 1824 and 1825, to the circumstances which had carried off a portion of the gold previously imported, and to other matters, the tendency of which was said to aggravate the pressure of the times. It was farther said that the panic was not (as he thought) at an end, and that the country would still have to bear up against greater difficulties. He would not deny the existence and the prevalence, if they would have it so, of those difficulties, though he could not think them of a permanent nature. Other causes had been alluded to, besides the excess of paper currency, arising out of various measures adopted by the Bank of England, some of them adopted on account of the bank itself, and for which they were alone responsible, and

others with the direct concurrence and in furtherance of the objects of Government. In looking at the bank circulation, as it appeared from papers which had been just laid on the table, the average amount of Bank of England notes in circulation in 1823 was 19,137,000l., whilst the country banks, in the same year, maintained much the same circulation as they had done in the preceding one. In 1824, the bank of England circulation was 20,616,000l.; which shewed an increase of about a million and a half on the issue of 1823. But in 1825, it again fell to 19,751,000l. The increase which was apparent in 1824, was partly charged as creating many of the difficulties which belonged to an over issue of paper, and as turning the exchanges against this country; for the Bank and the country circulation were assumed as having a concurrent operation. Now, it by no means followed that the Bank issue had the effect on the foreign exchanges which was attributed to it, for that year; because it would be found, on a reference to facts, that there was an impossibility of assuming any direct relationship between the amount of Bank of England notes in circulation, and those of the country banks; since, singularly enough for such calculations, it frequently happened that when the former were great, the latter bore no relative proportion, and *vice versa*. But it was supposed, that assuming this increase to have contributed to the difficulties, it would follow that part of the blame was attributable to ministers, owing to the arrangements which had taken place between the Bank and the Government. So far as regarded the arrangement for the advance on the half-pay and pension list, and the payment of the 4 per cent. dissentients, it might or it might not be true that those arrangements had led to an increase of the Bank issues: but he thought that the argument would lose all its weight when it was recollected that the Bank had, at the same time, proceeded on the new principle of advancing money upon mortgage, to the amount of more than a million. The arrangement alluded to between the Bank and the Government could not, upon a fair comparison of all the circumstances, have raised the amount of Bank issues more than 200,000l. or 300,000l., comparing the years 1824 and 1825, and including the effect of the mortgage advance. So that the arrangement could not in itself have caused that extensive issue of paper. In making these remarks, he begged not to be understood as wishing to screen the Government by throwing any blame on the Bank, or by skulking under any miserable shifting of responsibility from one side to the other; for if the Government had done wrong, it ought to abide the consequences (hear, hear). Let the thing be examined; and if its principles were found erroneous, let them profit by the example, and hereafter abandon the precedent. If he could but flatter himself that the Government had acted rightly, then he could have no motive for wishing to retrace his steps. If, on the contrary, his course had been erroneous, let them do what they pleased in animadverting upon it, and let them make him the object of their censure. This was, after all, so insignificant a subject of inquiry as, compared with the great object to which they ought at present to apply themselves, that he would not weary the house by going into irrelevant details.—He had gone into a greater length of discussion upon principles than he had at first intended, but he

had been led into it from an understanding that it was upon these principles the more serious ground in disputation would be taken. He would now proceed to detail the plans by which Government proposed to effect the withdrawing the small notes from circulation, and establishing a safer basis for the currency. There were two modes by which this alteration could be effected: the one, by declaring at once that no small notes should be circulated after a given period; the other, by permitting those already in circulation to run their course, and allowing no new ones to be issued, at the same time assigning a period for their positive cessation. The first mode appeared undoubtedly liable to this great objection—that at the end of three years (taking that as the time of cession), the country would be left in an extremely inconvenient state, for the execution of the plan itself; for if, during these three years, the country banks could accumulate their stamps at will, then there would be the same difficulty in carrying into effect the main object as was now interposed, and could again be urged against it *ad infinitum*. The most proper, the most effective, and at the same time not inconveniently expeditious mode, would be to adopt the latter plan—that no new small notes should be issued from the opening of the present session of Parliament, and that none of those already in circulation should be allowed to remain current after the end of three years from that time. He meant to conclude by moving a resolution to that effect. As to the particular details of this plan, he did not know that at present he had any thing further to state.—He had been asked the other night, what measure he intended to propose with respect to Scotland, as to the extension of the banking system; and he was asked a similar question as to Ireland. In Scotland, until 1765, there existed no prohibition as to notes under 5*l.*, but in that year an act passed prohibiting the issue of notes under 20 shillings. This continued in force till 1785, when it was unconditionally repealed. In Ireland, there was no legal restriction; although in some parts of the north, the small notes, being refused as payments for rent, could not be pushed into general circulation, and gold, therefore, was in common use; but in the other parts of that country, the circulating medium was paper. In 1799, the Irish parliament adopted a principle the very opposite to that which was followed by this country after the restriction of cash payments; for an act was passed there, prohibiting the issue of small notes, while they were allowed with us; one effect of which was to keep gold in circulation there for a longer period than it remained with us; but in 1804 an act was passed, assimilating the laws on the subject of paper issues in both countries, and they had since continued the same. It should be observed, that the whole system of banking in Scotland was quite different from that in England. In the first place, there was no restriction as to the number of partners. There were three chartered banking companies in that country, but none of them had any exclusive privilege: they consisted of numerous partners, each of whom was only liable to the amount of his shares, but they possessed no exclusive privilege. In Ireland, an alteration took place in the law respecting banks in 1822, so far as related to that part of the privileges of the Bank of Ireland which prevented the es-

tablishment of other banks with more than six partners, and banks of that description were allowed to be established, but at distances not less than 50 miles from Dublin. Now, supposing that an issue of small notes was not to be allowed as a permanent system in England, he could not see why Scotland and Ireland should not be put on the same footing (hear, hear); and though it might not be advisable to make such an alteration at present, yet, as a prospective regulation intended to be permanent, he did not see why a difference should be allowed to remain between one part of the United Kingdom and the other (hear, hear)—giving, however, a sufficient time for effecting the change in the system. At present, the circulation of Scotland was exclusively paper; in Ireland it was almost entirely so; and in neither had it a metallic currency for its basis: it would therefore be evident, that the plan now before the house could not be applied to either of those countries at the present period. It was not his intention on this occasion to submit any specific resolution on this part of the subject; he would, however, take an early occasion of calling the attention of the house to it, and stating his reasons in detail.—He was not aware that he had any thing else to offer on the general question, except a word as to what fell the other evening from an hon. member (Mr. Gordon), who had said that he could not consent to a restriction of the issues of 1*l.* notes, because it would have an injurious effect on the landed interest; and he had called upon the country gentlemen to come forward in their own defence to defeat the plan. Now, he (the Chancellor of the Exchequer) would contend, that if there were any class of persons in the country more interested than another in preventing the circulation of small notes, it was the country gentlemen. He would ask any man who had lately had an opportunity of witnessing the scenes that took place in some of our small towns, where crowds were seen daily running to the country banks to exchange their 1*l.* and 2*l.* notes for gold or Bank of England notes,—he would ask any such man of property, what security could he have for the payment of his rents? what security he had, that his own tenants were not to a considerable extent the holders of such notes? what security he had, that they might not suffer; or what security, that he could get any rent at all? This was one of the evils of the small note system—that an alarm among the holders of 1*l.* notes (and they were, for the greater part, of that class who were most likely to be affected with sudden panic, without ever considering whether it was well or ill founded) was calculated to excite fears respecting the security of larger notes, and thus it frequently happened, that a sudden run was made on banks for the payment of their larger notes in gold, or Bank paper, the security for which was otherwise as firm as that of the Bank of England. From such causes as this, many most respectable houses were obliged to suspend their payments, with more than assets (though not at the moment available) to meet all demands on them. It was, he thought, and he said it with great respect for those who held the contrary opinion, almost absurd to think that the interests of the country gentlemen would be upheld by an unrestricted issue of small notes, or that the restriction of such issues in the way he had proposed it, would be attended with effects injurious to

those interests. The country gentlemen were, he thought, bound to support the present proposition, and would be running blind to their true interests to oppose a measure calculated to benefit themselves and all other classes of the community.—He would now beg to call the attention to the committee to the second part of this subject,—he meant the propriety of limiting the privileges of the Bank of England so far as to allow the establishment of private banks with more than six partners. He confessed when this measure was first suggested as one which would considerably tend to the relief of the country, he did not expect any serious objection to it, as he did not see how the concession could act injuriously to the interests of the Bank. When the Bank of Ireland was requested, in 1822, to concede a part of its privileges, for the attainment of an object similar to that now proposed, it did not seem to be considered by that body that the concession would be injurious. On the contrary, it was rather looked upon as a source of greater security to all parties. This was the general impression in that country; and indeed so greatly did that feeling extend among the members connected with Ireland, that when in the last year a bill was introduced for the purpose of giving greater efficacy to the former measure, it had been his endeavour to prevent gentlemen from carrying the principle farther than was intended by the act of 1822. He was afraid, lest, seeing the advantage that had already arisen from the plan, speculation might be carried on by it, so far as to curtail the privileges of the Bank of Ireland more than had been contemplated when the privilege was first conceded. It was clear from what he had stated, that the concession on the part of the Bank had been productive of considerable advantage; and he confessed he did not see why the same principle should not be extended to this country. In Scotland the principle had been long in operation, and the effect there was, that bank failures were unknown. It might be said that this plan would not prevent speculation to any great extent, or be an effectual check to over-issues. He did not say it would, but he contended that the issues would be rendered more secure by a species of banking conformable to that of Scotland. He knew it was objected, that the mere permission to increase the number of partners beyond six would not necessarily cause more than that number to associate in one concern; for that though six partners were allowed at present, yet in the great majority of banks the number did not exceed three or four. He knew there was no magic in the number six. Six partners might be too many for some purposes, as they would be too few for others. All he contended for was, that there should be an opportunity, by an extension of partners in cases where it was required, to give that security, the benefits of which had been so much felt in Scotland. The extension of the privilege, as to the number of partners in private banks, had been productive of great benefit in Ireland. Since the passing of the act in 1822, the greater part of the banking business of that country had been carried on by banks of that description. In one bank the number of partners was 60 or 70; in the Provincial Bank the number was even larger; and it was admitted that the business was conducted in a prudent manner, which gave confidence to those who had trusted their deposits with them, and to those who had

availed themselves of their notes.—He would now observe, that although he would move a resolution declaring the utility of such establishments in England, it was not his intention to propose a bill on the subject to that house. It was the intention of Government that a bill for that purpose should originate in the other house. Of course it would be for that house to reject or adopt it when it came down; but it was considered a matter of public convenience that it should originate as he had stated. He had been asked, whether, if the measure should be adopted by the house, ministers had fixed any time when it might be carried into execution—whether any period would be fixed before which it would not be competent for any of the new partnerships to commence their issues of notes—and it was thrown out that sufficient time should be given for the purpose of allowing the present bankers to connect themselves together in new partnerships, or adopt other plans for their future regulation. He would now say, that he did not see any inconvenience which would arise to existing interests from the immediate establishment of the proposed banks. He could not see what any respectable bank of good credit and conducting its business on a solid basis could have to fear from such immediate permission, and he should therefore be reluctant to postpone it to any distant day. It would, however, be obvious, that some considerable time must elapse, in the nature of things, before the plan could be put in practice. He, therefore, had no objection to fix the 5th of next July as the period before which it should not be competent to any of the new companies to issue their notes.—Having given this detail of his plan, he must say, that if the house should refuse to entertain it, it would be giving countenance to a serious evil, by leaving the country at all times exposed to those fluctuations in credit and confidence, the effects of which had on a recent occasion been productive of so much distress—to an evil which must become greater every day that its remedy was delayed—to an evil which, unless parliament interfered, would give encouragement to speculations of the most dangerous kind. The system to which he now proposed a remedy had already fostered many such speculations, and though a great portion of the recent undertakings had arisen from causes over which parliament had no control, yet they were greatly aggravated by the imprudent issues of notes from many private banks. Whatever might be the result of the present motion, he should feel satisfied that he had done his duty in proposing it. Should the house reject the measure, he should not envy any man who might have to fill the situation which he had then the honour to hold, the responsibility that must attach to him in endeavouring to struggle against difficulties which must daily increase on him from the present system in proportion as some efficient remedy was delayed. The only remedy which in his view of the case would meet the evil he had now explained to the house. It would be their duty not to blink the question—not to imagine, that by deferring any remedy the evil would pass away of itself. By coming boldly to the discussion of the remedy, it would be seen that the difficulties of the plan which he had suggested had been considerably overrated, and that the fears of the country bankers had been carried to an extravagant length. When he mentioned the country bankers, let him not

be misunderstood. He condemned the law under which they acted, but he did not condemn them. It was to the system, and not to the men, that he alluded; and it was the system which he wished to alter. As to the individuals connected with the present private banks, he believed firmly that they were justly entitled to the highest praise for honour and integrity—for stability—and for general fitness for business (hear, hear). He would now propose his first resolution:—“That all promissory notes, payable to bearer on demand, issued by licensed bankers in England, or by the Bank of England, for any sum less than 5*l.*, bearing a date previous to the 5th day of Feb. 1826, or which may have been stamped previously to that day, shall and may continue to be issued, re-issued, and circulated, until the 5th day of April, 1829, and no longer\*.”

The resolution having been read from the chair,

Mr. Baring said, that the resolution before the committee did nothing at all. It went only to say, that all the small notes actually in circulation should continue to circulate till 1829, and no longer; but it made no provision for any new notes which might be issued in the interim. This, he thought, was a point which the rt. hon. gent. ought not to have omitted. The rt. hon. gent. had deprecated any observations as to the time when this matter was introduced by government. He (Mr. Baring) thought that ministers, seeing the distress which lately prevailed in the country, instead of excusing themselves for the introduction of this measure now, were rather to be blamed for not having called parliament together sooner for the purpose of devising a remedy. The rt. hon. gent. seemed to expect some hostility to his measures from that (the opposition) side of the house.

The Chancellor of the Exchequer explained, that he did not allude to any party hostility, but to such opposition as he had been led to expect from the remarks of one or two hon. members on a former evening.

Mr. Baring continued:—If there were any one thing on which the country might congratulate itself in the present period of difficulty, it was that of the absence of all party-feeling from discussions of public affairs (hear, hear). The present feeling was very different from that which had existed on former occasions—on the treaty with France, the Irish question, and other subjects where a strong opposition was made from his side of the house to the measures of Government: at no period of modern

times was there less of party feeling evinced in the discussion of matters proposed by ministers, and he was certain that if the rt. hon. gent. was not at present convinced of that fact, he would be fully so before the conclusion of the session (hear, hear). There might be some gentlemen in the house who were disposed to legislate for the present difficulties on the pure principles of political economy; some whose remedies would have reference to the protection of the agricultural interests; some who would look chiefly to the commercial interests, and others to the banking interests; but he did not believe that there were any who would offer a remedy for the evils under which the country suffered, with a view to party purposes (hear, hear). The country was too enlightened to allow its distresses to be made a handle for party purposes. At the same time it must be admitted, that if any party were disposed to make a stand as a party against ministers, they never had a better opportunity than the present. What man could read the paper which had lately appeared, addressed by the rt. hon. gent. and his noble colleague (Lord Liverpool) to the Bank of England, without being convinced that if it were wished to oppose them as a party, there was a most important ground on which to found an opposition? That paper, he would venture to say, betrayed an ignorance of the real situation of the country, which could not be expected from any man who had paid common attention to the passing events of the last few months. Was it not astonishing that any set of men, who had their eyes open to what was passing around them, much more those men who had the advantage for two or three months past of almost daily interviews with the Bank Directors, should send forth a paper in which they said “now that the distress has subsided, it is fit that some remedy should be applied to prevent a recurrence of the evil?” Why, did any man in the country, except the rt. hon. gent. and his colleagues, believe that the distress had subsided? He was sure that no man who really knew what was passing in the country could subscribe to such an opinion; and he was equally certain that any remedy against the recurrence of the distress, founded upon the assumption that it had for the present passed away, would be altogether inoperative. The speech of the rt. hon. gent., and the remedy which he had proposed to the house, did absolutely nothing. The proposed remedy was mere milk and water, and would tend rather to aggravate than relieve the distress; and if ministers were to appeal to any body of commercial men—to men who really knew the state of the country—they would be told that the authors of such a paper as he had alluded to, were altogether unfit to propose a remedy for the evils which really existed. He said this without meaning the slightest disrespect to the rt. hon. gent., for whom he had the greatest esteem; and he could assure him that he had no wish to see any other occupy his place; but he must tell him that in his speech and his resolution he had not touched the evil. He had scarcely gone more than skin-deep. It was a very different thing to suggest what might be sufficient to allay a temporary disorder, from that of providing a permanent system under which the country should hereafter be placed, with a view of preventing the recurrence of that disorder. The permanent state in which it might be desirable to place our banking system

\* The two other resolutions were,

2. “That it is expedient to make provision by law for preventing the issuing, re-issuing, or circulation, in England, of promissory notes, or undertakings in writing, payable to the bearer on demand, by licensed bankers or banking companies, for any sum less than 5*l.*, other than such as may have been issued, dated, or stamped, previously to the 5th day of Feb. 1826.

3. “That the provisions of any act or acts of parliament now in force relating to the charter for the Bank of England, whereby the number of partners of which any bank or banking companies may consist is limited to six, be altered and amended, so far as they may affect the establishment of any such banks or banking companies situated at a distance not less than sixty-five miles from London.”

was very different from that which the exigency of the present crisis might demand. It was for not making this difference that he blamed the *rt. hon. gent.* There were in all cases to be found men so wedded to theory, that when a particular emergency arose, they immediately resorted to their book, and to the set of rules there laid down, without ever considering that it would be necessary to adapt the remedy to the actual situation of things, and not to what might be their future condition. Such men cared not what interest they rode over, provided they arrived at a given principle. He was not indifferent to the general principles to which the *rt. hon. gent.* had that evening adverted, or to the end he proposed to attain, but he thought that to attain that end general principles alone would not be sufficient. Those principles must, if possible, be fitted to present circumstances. A man must go round to his object according to the obstacles which were interposed, and not attempt to get at it as the crow flew. This was an error which had defeated many well-intended and really good projects, because they were not adapted to the circumstances under which they were to be called into operation. He remembered another instance of attachment to theory in that house. When the report of the bullion committee was discussed, a large party in the house were so convinced of the abstract expediency of resorting to cash payments, that because the house had resolved that it would be desirable to resort to such payments, they moved as an amendment that it would be desirable to pay in gold in the succeeding January, and he believed of this number were the Secretary for Foreign Affairs and the President of the Board of Trade.

Mr. Canning observed, that the *hon. member* was mistaken in applying the remark to him.

Mr. Baring continued:—What he wished to impress on the house was, that in endeavouring to accomplish the end in view, they must keep in mind the difficulties which opposed themselves; and the first step necessary to be taken was, to ascertain the nature and causes of those difficulties. As to the latter, he agreed generally with the *rt. hon. gent.*, except that he had rather studiously kept out of view the share which the Government had had in their production. If he were asked his opinion on the subject, he would say, that the Bank of England (and when he spoke of the Bank, he begged to repeat what the *rt. hon. gent.* had said of the country banks—that it was not the individuals, but the system, of which he complained; for the individuals who composed the directory of that establishment, he had personally the highest respect, from his recollection of the time when he was associated with them, and from his intimate acquaintance with their private worth) had, in some degree, contributed to the present difficulties. The course which the Bank had pursued, however laudable in intention, was, in his mind, most erroneous in principle. Gentlemen would bear in mind the great facility which existed at the end of the war of obtaining a metallic currency. There was at that period a facility of obtaining gold and of returning to a metallic currency, which had not existed to the same extent since; but it did not follow, that because there was a facility of procuring gold, it would therefore come into the country. Gold and silver would not come unless we had something to give for them,

and unless that something was in demand with those countries where it was in plenty. It had been a favourite theory with some to say, that by contracting its issues the Bank would cause gold to come into the country; but that alone would not be sufficient, for unless we sent commodities for it, we could not procure it, and they who acted upon the mere principle of a contraction of the Bank issues, as a means of bringing in gold, would find those issues might be very inconveniently contracted, without producing that effect. However, to return: gold was in great plenty on the continent at the end of the war, and might have been very easily obtained in this country, because at that time there was a demand for our manufactures, which, he was sorry to say, did not exist at the present day. Almost every country was now rising in opposition to us in some branch of manufacture. It was particularly the case with America; and day after day we were excluded from a market in some one article or another of our former trade. If asked why the House of Commons had not taken some step at the end of the war to restore the currency, he would answer, that the blame, if any, was attributable to ministers, for not having submitted such a proposition. No doubt they would have then met with a strong opposition from the country banks; but had they taken a bold, decisive step, it was certain they would have succeeded. From the facilities he had mentioned of procuring gold, the Bank of England, in 1823 and 1824, had accumulated a large store of gold and silver in their coffers. They had increased their dividends from 8 to 10 per cent. (though they had since reduced them to eight), and had divided a large bonus. Such, however, was the secrecy observed towards the public with respect to the real grounds of many of the proceedings of that body, that any observations upon them by persons out of doors must, for the greater part, rest on conjecture. They had, nevertheless, as he observed, at the beginning of 1823 and 1824, an immense accumulation of gold. They thereupon made large issues of paper, and at the same time the country banks issued in an extent nearly in proportion, for though it would not appear at first, the issues of the latter were considerably affected by the former. One consequence of this excess of circulating medium was, a fall in the rate of interest. Mortgages fell from 5 to 4 and  $3\frac{1}{2}$  per cent.: and such was the anxiety of most capitalists in the country to get any interest, that they placed their capital out of their reach, and took for it securities, which though valuable, were not at all available on emergencies. The Bank saw and felt what was going on—for in cases of over-issues on their part, they were certain to receive a check by the reaction in other quarters, which check they well understood. They therefore all at once gave a sudden jerk to the horse on whose neck they had before suffered the reins to hang loose. They suddenly contracted their issues; and the change was at once felt through the country. A few days before, no one knew what to do with his money; now no one knew where to get it. He did not mean to say that the Bank had acted with a want of good faith to the public. They no doubt felt justified in the course they adopted; but the effect was not the less felt by the public. The London bankers found it necessary to follow the same course towards their country

correspondents, and these, again, to their customers, and each individual to his debtor. The banks in town and country, by advancing money on mortgages and other inconvertible securities, had put it out of their reach; and now they all sought to supply its place by every means in their power. The consequence was obvious in the late panic. Every one desirous to obtain what was due to him, ran to his banker, or to any other on whom he had a claim; and even those who had no immediate use for their money took it back, and let it lie unemployed in their pockets, thinking it unsafe in others' hands. The effect of this alarm was, that houses which were weak were at once ruined. Then came second-rate houses, and lastly houses which were really solvent, although their securities were unavailable at the moment. All confidence was lost; and in this country commercial confidence was carried to an extent never exceeded in any nation. Such a state of panic and alarm had hardly ever before existed amongst us. It might perhaps be said, that those who had been such fools should be left to go to the dunghill, and that others better would supply their places. But the fact was, that many who were really substantial suffered in the general alarm. Men were known to seek for assistance, and that, too, without effect, who on the examination of their affairs, were proved to be worth 200,000*l.*—men, who held themselves so secure, that if asked six months before, they would have said that it was just as likely that the sky should fall, as that they should be involved in difficulties.—He wished to keep the two questions distinct:—first, the general system on which it would be expedient to act: secondly, the course to be pursued in order to rescue the country from its present difficulties. With respect to the small notes, he admitted that as a permanent system they ought to be called in. They had objected to the small notes of the Bank of England on account of the numbers which their forgery had led to the gallows. They ought now to object to the small notes of the provincial banks, on account of the numbers whom they consigned to the poor-house and to all the miseries of a living death. It was therefore in his opinion, a great pity that the house had not got rid of this deluge of paper at the time when it had the power to do so, and that it had not resisted, as it ought to have resisted, the importunity of the country bankers. As soon, therefore, as they could get rid of the present system with perfect safety, he agreed that they ought to do so; but at present they ought to recollect that the house was on fire, and that the persons who were trembling for their lives in the garrets ought to be got out of it as soon as possible. When the fire was extinguished and their safety provided for, then, and not till then, might the house set about legislating upon general principles. He could not help giving it as his opinion, that of late the Bank had lost sight, in a great degree, of that to which it ought to be instantly recalled—namely, a true sense of the system on which its affairs ought to be conducted to entitle it to a charter of any kind whatever, and without which it ought not to be permitted to enjoy any privileges of an exclusive character. The main cause of the difficult situation in which the Bank was now placed, was, that it had choked up its resources too much, in consequence of its connexion with Government. In the first

place, the Bank had to provide for what was termed the "dead weight," which he believed now required 8,000,000*l.* Now, if there was ever any plan founded upon an absurd principle, it was this plan of the dead weight. As some gentlemen might be imperfectly acquainted with it, he would observe, that it was a plan by which certain long annuities for 45 years were created for the purpose of showing we had a sinking-fund of 5,000,000*l.*, when no thinking man, who had his eyes about him, could see a sinking-fund to any thing like that amount. In addition to this, the Bank held Exchequer-bills to the amount of 7,000,000*l.* He would not pretend to assert it as fact, but he must say he was rather apprehensive that the Bank had bought Exchequer-bills in the market for the purpose of putting its money out to the best advantage, and that they had found it impossible to recall that money in due time when it was wanted. Besides the 8,000,000*l.* locked up in the dead weight—and the ingenuity of man could not have devised a better name for this absurd plan—and the 7,000,000*l.* in Exchequer-bills, the Bank was bound to advance 7,000,000*l.* more for the Government on what were technically called deficiencies—a measure, which he believed, was one of Lord Bexley's sapient contrivances. The Bank had now 7,000,000*l.* to advance for these deficiencies.

The *Chancellor of the Exchequer*:—Not so much; five millions and a half.

Mr. *Baring*:—He would take the sum to be that which the right hon. gent. had stated. It was advanced by the Bank to enable Government to pay the dividends. The practice was for the Bank to advance the sum necessary to pay the dividends before the Government received it; and then to have it repaid shortly afterwards when the Government had received it. Now the misfortune of this system was, that the advances were again called for in so short a period after they had been repaid, that no advantage was reaped by the Bank from the employment of the money in the interim. The reimbursement was so quick, that the Bank had no time to lay it out in, and what was worse, it was liable to all the inconvenience of having a large quantity of its paper in circulation. Besides these three items, the Bank had undertaken to pay off 2,000,000*l.* on 4 per cents, so that altogether, what with the dead weight, what with the Exchequer bills, what with the deficiencies, and what with the 4 per cents, it had 22½ millions locked up by the demands of Government. Further than this the Bank had lent 1½ million to the country gentlemen on the mortgage of their land, a measure which he held upon principle to be most improper and impolitic. The sum, it was true, was not large, but it aggravated the case against the Bank, as it added to the amount of its inconvertible capital. He had now shown, that of the capital of the Bank 24 millions were rendered utterly inapplicable to its general purposes as a commercial establishment. The Bank was less able to meet any casual demand that might be made upon it, in consequence of its holding, what it was in the essence of all banking establishments to avoid, a large number of inconvertible securities. The principle on which all banking establishments should be conducted, was to employ as much of their capital as they possibly could,

but always to employ it upon available securities.—It was the custom upon all questions—and it was very expedient upon this question—to consider what had occurred in former times. It would appear upon such a consideration, that at all periods of difficulties the embarrassments of the Bank were mainly attributable to Government. The year 1783 was a period of great commercial embarrassment. The Bank was all but stopping payment, in consequence of its dealing with Government; and yet all that the Government then owed was only seven millions. In 1797, another period of distress, the Bank attributed to its transactions with the Government the necessity under which it laboured of applying for a suspension of cash payments. However that statement might once have been disputed, he believed there was nobody who would now deny it. The Government undoubtedly caused that suspension—it had been anticipated for some time previously to its occurrence; but the *coup-de-grace* was given to it by that Austrian loan which they had recently seen brought to so pitiful a termination. He did not mean to say that with such a war as that in which the country was engaged in 1797, the country could have avoided coming, sooner or later, either to that suspension of cash payments or to a peace; no such thing;—what he meant to say was, that that result was hastened by the manner in which the Government had locked up all the available resources of the Bank. And yet, with all this experience before it, the Government still persisted in its former objectionable measures, though in 1783 and 1797, when the Bank was obliged to play the pranks it had done, it had not been mixed up with it to any thing like the sum of twenty-four millions. One of the first measures which he thought that the Government ought to adopt to make the Bank efficient to the public, was to set it at ease in this respect, and to give it elbow-room, if he might use such an expression, for its future operations. He considered that such a measure would be advisable as a permanent measure, but he was well aware that it could not give immediate relief to the evils which at present sat heavy on the country. He had heard it suggested in some quarters, that the issuing of a quantity of Exchequer-bills would be of great effect in mitigating the existing distress; but it was his opinion, that such a measure would inflict more unsparing ruin on the community than any which had yet been inflicted upon it. Sure he was, that the funding of those bills would aggravate the present evil, and spread alarm and confusion in every direction. The Bank, as it was managed at present, was the heart of the circulation of the country, and it was evident that if that circulation was not perfect, a derangement must ensue in all its subordinate functions. The derangement which existed at present in all the relations of commerce, had arisen from the unsteady conduct of the Bank acting suddenly upon the country bankers, and had been much assisted in its operations by the wild mania of speculation which had spread over the country like a whirlwind, of which nobody knew whence it came or whither it was going. For he would say, that unsatisfactory as the state of the circulation was, it never could have given rise to such evils as now pressed upon the country, had it not been attended with such an unprecedented excess of speculation. But independently of the danger

to which the Bank was necessarily exposed by the choking up of its resources, there was a political evil arising out of it which it was the grossest folly on the part of Government to tolerate at all. In a time of peace the object of a wise Government was to have its monied institutions, like the ships of war at Portsmouth, ready for a start on a moment's notice. Now, from a bank which had 24,000,000*l.* of its capital choked up in the support of silly conceits and idle devices, the Government had taken away the means of a start, if such a start became necessary. In such a contingency the Government would find, to its detriment and disgrace, that it had not only choked up the resources, but had even paralyzed the powers of the Bank. If they supposed, that because they had got a return of all the ships of the line at Portsmouth being in a sea-worthy condition, they were therefore in a situation to go suddenly to war, they would find, when it was too late, that they were mistaken, and that the state to which their impolitic measures had reduced the Bank had deprived them of the means of carrying it on. The power of this country was well known to be in its treasury; it was far beyond any thing to which its military force intitled it to aspire; it rested not upon its bayonets, but upon its money. The last contest in which it was engaged was decided entirely by its money. Forty or fifty thousand men were the largest army of Englishmen which were ever upon the continent, under the command of that great and illustrious captain, who had delivered Europe from the thralldom of Napoleon. The rest of our military force consisted of the natives of other countries, and principally of Germans. The powers of Austria, and Russia, and Prussia, were all successively put in motion by our money. The great arm of our country, its power, its influence, and its consideration, was in its treasury. Those, therefore, who had left the country in such a state that it would be impossible for it to avail itself suddenly of that arm of its strength, had acted as absurdly as it was possible for any set of men to act who arrogated to themselves the name and character of statesmen. First of all, then, they ought to relieve the Bank from its present difficulties, and when that was done, they should make it understand that it ought always to be ready with four, five, six, or even eight millions, for the service of the Government. It was his opinion that if the First Lord of the Treasury had recently sent to the Bank, and after informing the Directors that Treasury-bills were at a considerable discount, had desired them to buy up from four to eight millions of Exchequer bills, it would not have been in the power of the Bank to have acceded to his request. He believed that if the Bank had been unincumbered with the Government, it would have been relieved from the difficulty, or, as some called it, the liberality of making the issues it lately had done. If it had possessed more elbow-room to turn itself about in, it would have come forward with alacrity to assist the public, and thus the whole difficulties which had recently occurred would have been obviated. Three-fourths of those difficulties arose entirely from panic; a fourth of them might, perhaps, have arisen from actual distress. Like people in a theatre, who sometimes crushed one another to death, in the alarm occasioned by imaginary and not by real dangers, the several members of the community had hurried one another into

distress and bankruptcy, by the violent efforts they had individually made to avoid them. The Bank, however, it ought to be recollected, was the banker of the Government. In private life, any individual who wanted a temporary pecuniary aid, applied to his banker for it, and in general obtained it. The Government, like a private individual, might often be in want of similar assistance, and should always be able to procure it without leaving the Bank an opportunity of saying, "We cannot give it you without choking up our resources and becoming less independent of you than we ought to be;" especially in a time of peace, with stocks at 94 and 95. His own private opinion was, that the Bank, if it were relieved from its difficulties, would be fully able to discharge all the functions for which it was intended, and would soon relieve the country from the panic which now prevailed as to its sufficiency to maintain the currency. If the Bank were conducted upon proper principles—if it would not drive such hard bargains, and would be content with less profits than it sought to obtain at present—if it would be satisfied with a profit of 5 instead of 8 per cent.—and if, when its charter expired, it would adopt some prudent and liberal measure to limit the emoluments upon its capital, he was convinced that the system would stand upon a better footing than it did now, and that some preventive would be found against the recurrence of such evils as had lately befallen the country. He was well aware that ever since the resumption of cash payments doubts had existed in the minds of very respectable persons, as to whether there was a capacity in the country to maintain those payments. He was well aware that many persons apprehended that the pressure of our national debt, of our taxation, and of various other circumstances, would render the continuance of such a system impossible; but for his own part he had never participated, neither did he participate now, in those apprehensions. He thought that if the Bank were properly administered, it would be capable of giving full and permanent effect to such a system; but at the same time he must in candour confess, that he should like to see the Bank rendered more perfect than it now was. If any bank could be formed upon such principles as would give greater security to the Bank of England, not only in respect of securing the commercial interests of the country, which had recently been in considerable jeopardy, but also in respect of advancing its political interests abroad, he for one should be very glad of it. The desideratum for such a bank was to erect it on a wider basis. It might be done, when the charter of the Bank expired, either by extending its capital, or by raising rival banks to it, for which there were not wanting several specious projects. He should listen with great attention to any thing upon that subject, because, though he thought that the present system might be made efficient, if it were favourably and honourably carried into effect without any tricks, contrivances, or meannesses, still he was free to confess that he should have no objection to improve and strengthen it. The first plan which he had heard mentioned, was to erect a second bank. Now he must say that he knew of no plan on which a second bank could be erected without augmenting the present confusion. One bank would be jealous and fearful of the other, and would take every opportunity of acting against it. Neither the public nor the

SEAS, 1826.

banks would know precisely what they were about. At present the Bank of England was perfectly acquainted with the nature of its transactions; it knew the risk which it ran, and the responsibility which it incurred; but if a rival Bank were established by its side, the competition would create confusion, and in the eagerness for profit the recollection of its liabilities would be lost. But if they strengthened the old establishment by widening its basis and extending its capital, he was of opinion that they would confer very substantial benefit upon the community. He had been in hopes that the *rt. hon. gent.* was going to usher in that evening some plan better than any which had hitherto been devised; but a speech of greater promise and of less performance he had never heard in the whole course of his parliamentary experience. The object of the *rt. hon. gent.*'s measure was contained in the simple annunciation that the Bank had agreed to concede that part of its privileges by which banking establishments were prevented from consisting of more than six members. He must tell the *rt. hon. gent.* in the outset, that he had made his own answer to his own scheme, though perhaps he did not think so, quite conclusive against it. For, though at present the members of a banking establishment might consist of as many as six persons, it appeared that only 26 out of the 700 banks which now existed had availed themselves of that privilege. For his own part, he saw nothing magical in the number six; and if six persons could not now be found, except in rare instances, who were willing to trust themselves together in banking establishments, he did not conceive it very likely that more than six persons would be found anxious to associate themselves together for such purposes, when the privilege of doing so was given them by law. If any country gentlemen should avail themselves of that privilege, he should say that it was the greatest act of folly they could possibly commit. If the *rt. hon. gent.* had allowed persons to combine together on condition of depositing their capital, and of limiting their responsibility to that capital, he would have found plenty of individuals ready to engage in such associations. Landed gentlemen would put down their five, their ten, or their twenty thousand pounds, as might be convenient; and banks would then be formed all over the country on the very best principles. He saw no objections at present to such a system; but if it were sifted as it ought to be, it was probable that some objections might be discovered. He thought, however, that they would be of a very trivial nature, and would be more than counterbalanced by the advantages to which such a system would give rise. He was sure that by adopting it, solid establishments would be created all over the country, in which prudent men with families would be very willing to connect themselves. They might be created either on the principle of a *commandite* or a joint stock company. In the first case, he would make it incumbent on every person who joined it to make a public record of their capital, and to balance their books once a year. Then if any partner owed any thing to the Bank, and touched his capital, he should be made liable to all the debts of the establishment—a regulation of which he could not complain, as he would not be involved in them without his own direct participation.—There was another point on which he wished to express his sentiments to the committee. It was one of extreme importance

2 C

to all banking establishments, and contained a principle, which if it were adopted, would put them out of all apprehension of such danger as they had recently incurred—he meant the propriety of making silver as well as gold a legal tender. He was not going to state any novelty upon this subject; silver was a legal tender in every country but our own; and in point of law, up to a very late period, it was even a legal tender here, when of a fixed fineness. The proportions having been ill-regulated here, it became the interest of the debtor to pay in gold rather than in silver, and thus a practical tender of gold was established among us. We had now had it so long, that we had almost forgot how we came by it; but what he had stated was matter of history, and not of speculation. The question, when it was determined in that house at the time of the Bullion Committee, was determined too much in accordance with the views of philosophers and theorists, who looked to a fanciful perfection in the standard of value, and lost sight of a consideration which they ought always to have had before them—not to establish a more imperfect, in their anxiety to establish a more perfect standard. If one point was better established than another, it was this—that the perfection of a standard consisted in its invariableness. Gentlemen might say, “If that be so, how can the standard boast of its invariableness, when it consists of two different metals, and when, to the general mutability of each, is added the mutability between gold and silver; surely, instead of diminishing, such a plan will increase the variability of the standard.” Now if he could show that by admitting the two, the currency, as distinguished from the standard of value, would in point of fact be rendered less variable, they would have a less variable standard to measure all commodities by. In the first place, the Bank of England, if it had the power to pay in silver, would be able to get it out of every country in the world. Gold on the continent is a mere article of merchandise, whereas silver, being the current medium, is always to be procured. If a man had a bill of exchange upon Hamburg, Amsterdam, or Paris, where silver was the legal tender, he might get either gold or silver for it; but if he got silver, and with that was obliged to buy gold, it was evident that by rendering gold scarce, he would create a difficulty in procuring it. He had no doubt that if they could get at a knowledge of the operations of the Bank, it would appear that the Bank had sent silver to the Continent to procure gold. Now if the Bank had been possessed of the power to pay in silver, it would have had no occasion to resort to any such measure. The evil of a single standard was clearly perceptible. The Bank, obliged to pay in a metal which is not the currency of any other country, but a matter of merchandise, is liable to be speculated against in every direction, and nothing would be easier than for a person with very inferior capital to stop the Bank from getting even a single ounce of gold. It might be said, perhaps, that the present system had worked well in former times—he denied it. The country did not go on well with it. We were obliged to terminate the American war, because, if we had continued it, the Bank must have stopped its payments in gold. When the French war came, it was of such a nature that we could not stop it, because the French would not make peace. The Bank in consequence

suspended its payments in cash, and the country went on with the war. The system, therefore, did not work any better for us in former times than it did at present. The whole history of the past proved it beyond disputing. The country was now in a state of embarrassment in which it would not have been placed if it had possessed the same metallic standard with every other country in the world. Its present difficulties arose from its taking a metallic standard which no other country took. Why was this country the only sufferer? Because the variability of our standard depended on the variability of a currency of paper and gold mixed; whereas the variability of the standard in other countries depended on a currency of silver and gold mixed, and it had always been found that paper and gold mixed were more variable than silver and gold mixed. Take, for instance, the case of France, where gold and silver lived together in perfect harmony, and where there was seldom more than a variation of 10 centimes between them. They sometimes differed from  $10\frac{1}{2}$  to  $10\frac{1}{2}$ ; but he was told that now for the first time since the establishment of the gold and silver currency, the difference had increased  $1\frac{1}{2}$  per cent. in consequence of the demands of the Bank for gold; and that in consequence of our wish to have this beautiful and philosophical standard, the price of it had risen in every country of Europe. Against this variation of ten centimes, he would place the variation of 20 or 30 per cent. which existed in the value of commodities in England, and even in that of the pound sterling. This variability in the standard cramped the measures of the Bank and narrowed its power of assisting its customers. Some persons imagined that there would be considerable difficulty in establishing this double standard; but he knew others on whose judgment he could rely with confidence, who thought that it could be established with ease and safety, and that it was absolutely necessary to relieve the country from its present difficulties. His plan was to leave the smaller silver coins in circulation, as the half-crowns, the shillings, and sixpences; to call in the crown-pieces, which at present were little used, and could well be spared from the general circulation; to recoin them, and to make the crown-piece a legal tender to any amount, not taking it at the present value of silver, for that would be depreciated, and he should be sorry to propose any depreciation in the standard. The proportion of gold to silver was in England 15 to 1, and in France  $15\frac{1}{2}$  to 1; but he trusted that by making both legal tenders, they would approach nearer together, and that the disproportion between them would ere long cease to be so great as it was at present. He was quite sure that the smaller coins which he should leave in circulation would not be injurious to the success of his plan. It might perhaps be objected that with 10 sixpences of the current coin he could buy 12 of the present standard, and that a depreciation of it would consequently ensue. But that was the case even now, as silver could be bought in the market. The standard of the 11, sterling, however, would remain the same, and the Bank would have greater facility than it had at present for protecting itself against danger. Gentlemen might perhaps suppose that they would be incumbered by the difficulty of carrying about such a medium; but they would find that they would be able to get 100l. of gold for 100l. of silver for an agio of two shillings,

as in France it was now done for an agio of two francs. He had still one observation more to make. Gold went out of the country much faster than silver. Most things in life were attended by their disadvantages as well as by their advantages. They had now got a beautiful coin of peculiar fineness, which, as the exportation of it was permitted by law, went with great rapidity out of the country. The old principle was, that the moment the exchange turned  $\frac{1}{2}$  or 1 per cent. against England, the gold was exported; but now the case was entirely altered. Formerly it could not be exported without considerable fraud, and some risk; for when it was once out of the country, it was liable to seizure by the officers of the customs. Now, it could be put openly into a bag, and be carried away; and in times of difficulty like the present, a man would prefer taking a coin abroad with him to taking a bill of exchange, as there was risk with the one and not with the other. It was exported too, in infinitely larger sums than it was heretofore; for it was now sent out in hundreds of thousands of pounds by men of large capital, who formerly refused to export it, as it was contrary to law, and so left the trade to Jews and the smaller dealers in contraband commodities. The Bank, therefore, had formerly a greater power of protecting itself against danger than it had at present; and it was therefore requisite to furnish it with fresh powers for its security and preservation. A further advantage of establishing a double standard would be, that if the gold went out of the country, the Bank could pay in silver; and if the silver went out, it could pay in gold; so that, admitting that there might be some slight imperfections in this system, the advantages of it would do far more than counterbalance them. It would be the best method of relieving the country from its present embarrassments; and if it would prevent, as he maintained that it would, the recurrence of similar distress, there was no sacrifice which we ought not to make for the adoption of it. No slight difference in the standard ought to deter us from taking measures to prevent the recurrence of similar measures to those which had recently convulsed the country.—With respect to the amount of the country issues which the rt. hon. gent. now proposed to call in, it should be observed that a considerable diminution had already taken place. On a recent occasion the rt. hon. gent. had stated them to be 6,000,000*l.* now he called them 4,000,000*l.* and not long since they were said to be 8,000,000*l.* They had been proceeding in this inverse ratio "of the men in buckram," that it was not improbable they might at no very distant period be rated as *nil*. Now, although the sudden calling in of any of these sums, whichever amount might be ultimately fixed on, would be the cause of great distress, yet that must not be considered with reference to the effect which the measure might produce in the metropolis. What would scarcely be felt here would be the cause of infinite mischief in the country, because the scale upon which it would be applied would be so much larger. Here such a sum would be nothing—there it would be every thing. He would further suggest to the rt. hon. gent. that it would be prudent to pause before the plan which he had proposed should be adopted, for this reason—that although the issue of the small notes had already been partly restrained, it had been done at the price of increasing the exist-

ing distress. The country bankers had already begun to dun all their debtors, and to call somewhat clamorously for all that was owing to them. It was true that the rt. hon. gent. meant to give three years for the completion of his plan; but it was obvious that for what was to be done three years hence, preparations would be begun now. He knew very well that when the proposed scheme should be effected, that we should come back to sound principles, upon which there would be no danger in acting; but his anxiety was to know what was to be done in the meantime, and, unless this should be ascertained, he thought the house could not safely proceed. He wished that the rt. hon. gent. could be prevailed upon to postpone his measure for another year, or to leave it alone altogether. He was not less anxious than any man that a remedy should be applied to the distress which now prevailed universally; but he could not bring himself to see that remedy in the plan which the rt. hon. gent. had suggested. On the contrary, he thought that the rt. hon. gent. was going too fast, if not too far, in his present motion. If, on the contrary, things should be let alone, the distress would certainly not be aggravated, and the people would probably find out that three-fourths of it had been the result of mere panic and alarm, which was in many respects unfounded. The measures which he wished to see adopted, and which were recommended by their obvious expediency and safety, were, that banks should be established either upon the principle of joint-stock companies, or in such other way as might induce persons of capital to go into them; that a double standard should be resorted to; and that ministers should relieve the Bank of England from that incumbrance which its present connexion with the Government occasioned.

Lord Falkstone said, that the rt. hon. gent. had come to the house with a proposal for applying a remedy to an evil, the nature of which he had not yet ascertained. For his own part, he (Lord Falkstone) thought that the present crisis was much more serious, and the consequences with which it was fraught would be much more injurious, than ministers seemed to imagine. Melancholy as the prospect was at this moment, there was no certainty that it would improve in any very short time. He agreed with his hon. friend (Mr. Baring), that the rt. hon. gent., in the plan which he had suggested, was going much too far. The only remedy which he proposed was, in fact, to repeal the measure of 1822. It would be remembered, that the bill of 1822 was proposed after some years of intense pressure, and when a wide-spreading calamity had prevailed over the whole of the country. The distress, he must remind the house, had been most severely felt in 1819, 1820, and 1821, and it had then pressed most heavily upon the manufacturing interests; but it was not until 1822 and 1823 that the agriculturists suffered, and then it was stated that the bill was brought in to assist the circulating medium; and what was the consequence?—why, prices immediately rose, and had continued at a high rate from that period to the present. In 1819, that measure, which was commonly called Mr. Peel's bill, passed, which enacted that after 1823 no small notes should be issued; the consequence of which was, that the Bank began collecting gold, of which they got a large quantity in a short time at a considerable expense. By

this operation an immense difference was effected in the currency, which began to be felt in 1820 and 1821; and long before the time limited by the act, all the small notes of the Bank of England had been withdrawn from circulation. The country banks were upon this compelled to follow the example as far as they could, and to narrow their issues. To remedy the distress consequent upon this measure, the bill of 1823 was passed; prices immediately rose, and the distress was thus relieved. It was now proposed to repeal that bill; but he would ask whether the present circumstances of the country afforded the least reason for believing that to do so would not bring back again the distress? It was impossible to doubt that this must be the result of such a measure. In his opinion, nothing could be more injurious to the country than this eternal fluctuation of prices, which had now been going on for several years. In 1815 and 1816 there was distress; in 1817 and 1818 that distress was relieved by the large issue of bank-notes; then came Mr. Peel's bill, and after that a fall of prices; then the bill of 1823 was passed, and then the prices went up. Now, it was proposed to repeal that bill, and the consequence must inevitably be another decline of prices. The most mischievous of the many evil consequences which attended these fluctuations was, the loss which they occasioned to the poor man; not only because they caused him to lose whatever little property he might have laid up, but because they bore heavily upon him in every article of necessary consumption. He contended that the poor man was now in a worse state than he had been twenty-five years ago. He had examined the returns of the allowances made to the poor in the county of Berks, and he found that at the period to which to which he alluded the weekly allowance had been 2 loaves and 1s. for a man, 1 loaf and 1s. for a woman, and 1 loaf and 6d. for a child: now, the same allowance was 1 loaf and 1s. for a man, 1 loaf and 6d. for a woman, and 1 loaf only for a child: the condition of the poor man was, therefore, worse now than it had been twenty-five years ago; and he was convinced, that whatever effect the fluctuations might produce upon other classes of society, the lower orders always suffered.—With respect to the proposed establishment of joint-stock banks, he did not think that they would do much towards relieving the present or preventing future distresses. It was generally supposed, and, for his own part, he believed, that the existing evils arose in a great measure from the immense quantity of paper in circulation; and, as these banks must in any case have a greater power of forcing paper into circulation than those now in operation, he did not see the great benefit which was to be produced by them; but, on the contrary, he saw that a power would be granted which might prove injurious to the country. A great deal had been said respecting Scotland, where such banks existed; but it did not appear from what he had learned on the subject, and from that book which had been so much read and commended of late\*, that the distress in Scotland was less than that which prevailed in England. He could not help believing that the rt. hon. gent. had not examined into the ex-

tent of the calamity which prevailed, nor of the remedies which it required; these facts were evident to him, not less from the language which had been addressed to the house on the first day of the session, than from that notable document which had lately been made public in the shape of a correspondence between the Bank of England and the Lords of the Treasury. A more extraordinary document he had never seen. It began by stating that the difficulty was all over, and that the pecuniary transactions had reverted to their accustomed course: then, after having laid all the blame of the distresses on the rash spirit of speculation which had long prevailed, it proceeded to say that the remedies must be so and so. It was true that his Majesty's speech said the remedies were out of the reach of Parliament; but this was only another of those inconsistencies which characterised the conduct of the rt. hon. gent. in many respects.—He (Lord Falkstone) did not intend to offer any opposition to the measures now proposed; but he wished the house to be much better informed than they were at present before they agreed to them. Every one must be astonished that only a year had elapsed in that state of brilliant prosperity about which so much had been said, and at the end of it we found ourselves plunged in the deepest distress. It might be true, that a wild spirit of speculation had been one of the causes of that distress; but he must remind the rt. hon. gent. that no one had encouraged that wild spirit more than himself, and that the speeches which he had delivered in that house had promoted it far more than any other circumstance could have done. Formerly, any one would have been scouted who should have been hardy enough to suggest that there might have been any thing hollow or unsteady in his glowing predictions. But the rt. hon. gent. himself knew very well that they were hollow,—he had the means of knowing it,—his situation must have acquainted him with it; and the measure which the rt. hon. gent. now proposed, as a remedy for the distress which had ensued upon the dream of prosperity, was the best proof that could be given of its emptiness.

Major Maberly said, that he disagreed with almost every thing that had fallen from the hon. member (Mr. Baring), except the praise which he had bestowed on the liberal conduct of the Bank during the late emergencies. But for that conduct, he (Major Maberly) should have been tempted to accede to almost any proposal which might have disjoined the connexion between the Bank and the Government.—With respect to the substitution of a silver standard, or one of silver and gold, instead of that which at present existed, he should have no objection to it, if it were in the nature of a silver currency, to advance as that of gold might happen to recede; but, as he believed that no such effect attended it, he should hesitate to approve of it, though he might do so at the risk of being classed with that sort of philosophers of whom the hon. member was once a member, but on whom he now cast his censures whenever the occasion offered.—He regretted that the rt. hon. gent. (the Chancellor of the Exchequer) had not given a more accurate account of the evidence on which he had been induced to propose the remedy now suggested. Among those persons who were best informed on the subject, two opinions prevailed as to the cause of the present distress:

\* Mr. Tooke's "Considerations on the State of the Currency, &c."

the first was, that it had been occasioned by the connexion between the Bank and the Government; and the second attributed it to the over-trading, and to that mania for speculation which had existed in so extraordinary a degree. He declared himself to be of this latter opinion (hear, hear); and, while he stated the grounds which confirmed him in that opinion, he should point out the considerations on which he thought the other erroneous. It had been stated that the low rate of interest had been the chief cause that had promoted the speculations, and this low rate of interest was attributed to the over-issues of the Bank; but these over-issues, as they were called, had existed for a year and a half before they affected the rate of exchange. Now, he put it to any gentleman who understood this subject, whether an over-issue could take place without its having the immediate effect of returning the paper upon the Bank, altering the exchanges against this country in favour of other nations, and causing the exportation of gold. The first men who would observe and act upon such a change, would be those persons on the Exchange, to whom the variations in the money-market, as they would elevate them to fortune, or plunge them in ruin, were of the first importance. This acute and intelligent body of men, whose interests were so inseparably connected with these affairs, were constantly watching them; if any over-issue had taken place, these persons would have known and instantly taken advantage of it, and that they had not done; and this was a plain proof that there could have been no over-issue. To this important point he called the attention of the house, and he begged it to be recollected, that the alleged over-issues took place in 1823, while it was admitted that no change had taken place in the rate of exchange until 1825. In 1822, the Chancellor of the Exchequer had reduced the interest of the debt. The same thing was attempted about the same time in France, but was defeated in the Chamber of Peers; and, if they looked to the speculations at present ascribed to the over-issue, they would be found to have been on foot long before any over-issue was indicated by the rate of exchange, towards the close of 1823. Persons who had derived a small income from the interest of their money, were unwilling to lose the comforts they had previously enjoyed, and readily embarked in speculation as the means of keeping it at the same rate. Mr. Tooke had pointed out other causes which operated, with the spirit of speculation, to produce the recent convulsion. That writer stated, that about the end of 1824, the stock of manufactures of almost every description on hand was shorter than usual. The consequence was, that immense speculations took place in various articles. Cotton and silk were imported in immense quantities. To such an extent was the speculation in cotton carried, that it increased in price from 150 to 200 per cent. In 1825, it was found that there was an accumulation of stock on hand. Prices were daily falling, and sales were effected with greater and greater difficulty. Then came the senseless and unreasoning panic with respect to the bankers. From the nature of their business, bankers were totally unable to pay at one moment all the money which was deposited with them; if they paid all the money on their books, they could not carry on their business. The panic hourly increased, and what the con-

sequences might have been if the Bank of England had not come forward to check the evil, no one could tell. This was a short history of the recent distress. He attributed it entirely to over-trading. It was an evil to which no legislative remedy could be applied. It could be cured only by the experience and example of those who had suffered.—The two measures brought forward by Government had very little reference to the causes of the distress. The first measure would prove inefficient. If there were now only twenty-six banking establishments in England which possessed the full number of partners allowed by law, by what charm did ministers expect that their measure would be able to raise up banking establishments composed of a still greater number? Besides, the evil was not that the present banking establishments wanted solidity. This was proved by the fact that the number of bankers who failed who were unable to meet all their engagements was very small. The evil in our present banking system was the imprudence of bankers in the carrying on of their business,—their want of knowledge, in fact, of banking.—With respect to the second proposition of the *rt. hon. gent.*,—namely, that, to enable the Bank of England to establish branch banks,—it met with his hearty concurrence, and he sincerely hoped that it would be carried into effect. Those establishments would naturally be more cautious with respect to the amount of their issues than country banks.—One of the measures which ministers had in contemplation was, the putting a stop to the issue of 11. and 21. notes. The reasons which ministers gave for this measure were to be found in the correspondence which had lately passed between the First Lord of the Treasury and the Chancellor of the Exchequer on the one hand, and the Bank on the other. In one of the papers composing that correspondence, the *rt. hon. gent.*, and the noble lord his colleague, say, "It appears to us to be quite clear that such a measure would be productive of much good, that it would operate as some check upon the spirit of speculation, and upon the issues of country banks; and whilst, on the one hand, it would diminish the pressure upon the Bank and the metropolis, incident to an unfavourable state of the exchanges, by spreading it over a wider surface; on the other hand, it would cause such pressure to be earlier felt, and thereby ensure an earlier and more general adoption of the precautionary measures necessary for counteracting the inconveniences incident to an export of the precious metals."—The allusion to the state of exchange in the paragraph which he had just read, was, in his opinion, quite beside the question. The unfavourable state of exchange was the effect of over-speculation. It was, he understood, part of the plan of the Government to invest commissioners with the power of regulating the issue of small notes. To that he most decidedly objected. When he saw the manner in which commissioners of the sinking fund were schooled by Government,—how they were at their beck and call, purchasing and selling only as Government pleased, he should object to any arrangement which would give ministers the power of interfering directly with the currency. On this political ground, therefore, he would oppose the measure. He did not anticipate from a metallic currency those advantages which some persons seemed to think would be derived from it. Money had been

happily compared by Dr. Smith to the high-roads, which did not produce a single blade of grass or grain of corn, but which served to circulate all the grass and corn in the country. The office of money, however, might be performed by paper as well as by gold; and the substitution of paper in the place of gold was, in fact, equivalent to so much gold gained; whilst the substitution of gold for paper diminished the capital of the country, and reduced the means of employment. It was, in fact, the imposition of a tax to the amount of the capital which it displaced. He denied that there was greater security to be found in a metallic than in a paper currency. The *rt. hon. gent.* had himself destroyed that proposition by the sentence which immediately followed that which he had already quoted from the correspondence upon the table. The passage to which he alluded was this:—"But though a recurrence to a gold circulation in the country, for the reasons already stated, might be productive of some good, it would by no means go to the root of the evil."—The *rt. hon. gent.* went on to say, in the same document,—"We have abundant proof of the truth of this position in the events which took place in the spring of 1793, when a convulsion occurred in the money transactions and circulation of the country, more extensive than that which we have recently experienced. At that period, nearly a hundred country banks were obliged to stop payment, and Parliament was induced to grant an issue of Exchequer bills to relieve the distress. Yet, in 1793, there were no 11. nor 21. notes in circulation in England, either by country banks or by the Bank of England. We have a further proof of the truth of what has been advanced, in the experience of Scotland, which has escaped all the convulsions which have occurred in the money-market of England for the last thirty-five years, though Scotland, during the whole of that time, has had a circulation of 11. notes; and the small pecuniary transactions of that part of the United Kingdom have been carried on exclusively by the means of such notes." He did not require a stronger proof of the insufficiency of a bullion currency to afford security than the statements contained in the *rt. hon. gent.*'s own paper, from which it appeared, that in 1793 the greatest convulsions took place under a bullion currency, whilst Scotland, which had possessed a paper currency for the last thirty-five years, had never experienced any convulsions whatever. He was willing to rest his argument in favour of a paper-currency entirely on that document. If he looked at the present time, however, he should find ample proofs of his opinion. Compare the situation of London and Lancashire, which possessed a metallic currency, with other parts of the country where a currency of paper prevailed, and it would be seen that the former had been exposed to greater fluctuations than the latter. He sincerely believed that the whole of the recent distresses had been caused by over-trading (hear, hear). Such periods of speculation were not of very frequent occurrence, but they had occurred from time to time, and were recorded on the page of history. The period of the South Sea scheme was distinguished by speculations far more extravagant than any which the country had recently been witness to. Those speculations, as described by an eye-witness, appeared so enormous and so wild, that, compared with the recent schemes,

they were as a drop of water to the ocean. A very interesting description of the period to which he alluded was given in Macpherson's *Annals of Commerce*. "From morning till evening," said the writer, "dealers in speculations, as well as in South Sea Stock, appeared in continual crowds all over Exchange-alley, so as to choke up the passage through it. Not a week passed without fresh projects, recommended by pompous advertisements in all the newspapers, thereby swelled enormously, directing where to subscribe to them. On some, sixpence per cent. was paid down; on others, a shilling per cent; and some came so low as one shilling per thousand at the time of subscribing. Some of the obscure keepers of those books of subscription, contenting themselves with what they had got in the forenoon by the subscriptions of one or two millions, (one of which the author particularly well remembers,) were not to be found in the afternoon of the same day, the room they had hired for a day being shut up, and they and their subscription-books never heard of more. On others of those projects, 2s. and 2s. 6d. per cent. were paid down; and on some few 10s. per cent. were deposited; being such as had some one or more persons of known credit to midwife them into the alley. Some were divided into shares, instead of hundreds and thousands, upon each of which so much was paid down; and both for them and the other kinds, there were printed receipts signed by persons utterly unknown. Persons of quality of both sexes were deeply engaged in many of them, avarice prevailing at this time over all considerations of either dignity or equity; the gentlemen coming to taverns and coffee-houses to meet their brokers, and the ladies to the shops of milliners and haberdashers for the same ends. An impudent impostor, whilst the delusion was at its greatest height, needed only to hire a room near the alley, for a few hours, and open a subscription-book for somewhat relative to commerce, manufacture, plantation, or some supposed invention, either newly-hatched out of his own brain, or else stolen from some of the many of the abortive projects of which we have given an account, in former reigns, having first advertised it in the newspapers the preceding day, and he might, in a few hours, find subscribers for one or two millions, and, in some cases more, of imaginary stock. Yet many of those very subscribers were far from believing those projects feasible: it was enough for their purpose that there would very soon be a premium on the receipts for those subscriptions; when they generally got rid of them in the crowded alley to others more credulous than themselves; and, in all events, the projector was sure of the deposit-money. The first purchasers of those receipts soon found second purchasers, and so on, at still higher prices, coming from all parts of the town, and even many from the country. And so great was the wild confusion in the crowd in Exchange-alley, that the same project, or bubble, has been known to be sold at the same instant of time, 10 per cent. higher at one end of the alley than at the other end. Amongst those many bubbles, there were some so bare-faced, and palpably gross, as not to have so much as a shadow of any thing like feasibility. The infatuation was at length so strong, that one project was, in the newspapers, advertised thus,—'For subscribing two millions to a certain promising or profitable design, which will

hereafter be promulgated\*." He would only mention two or three of the extraordinary speculations which were at this period set afloat. Amongst them was a scheme for improving malt liquors, and for breeding silk-worms (laughter). For this purpose 20,000*l.* was actually subscribed, and several large buildings erected. There was likewise another scheme, which must have been peculiarly attractive,—that of making salt-water fresh; and another, which appeared somewhat extraordinary, was to bring fresh fish to London by sea (a laugh). To such an extent did the spirit of speculation then prevail, that 60*l.* was frequently paid for permission to subscribe to an undertaking. He would beg the attention of the house to a passage, in which the author described the termination of the frenzy:—"The frailty of the whole South Sea scheme now hereby also appearing to all, the stock on the 29th of September had fallen to 175 per cent., and their bonds were at 25 per cent. discount; whereupon there appeared great uneasiness and clamour amongst the monied men, which produced a great run or demand for cash at the Bank, and a greater one on the private bankers, who had generally lent out much of their cash on South Sea stock and subscriptions, whereby several very substantial ones were obliged to stop payment for some time. And now, just when drowning, all people began seriously to reflect on the calamities brought on France, but a few months sooner, by the famous Mississippi stock or bubble; and to draw a melancholy parallel, which reflections made a few months sooner, would have saved many a worthy family from distress: great clamour was also raised on account of contracts at high prices, for the third and fourth money subscriptions performable on the delivery of the company's receipts, though no receipts had ever been issued for them†.—Was not this account sufficient to prove that the spirit of wild and ungovernable speculation was sufficient to produce a state of things such as existed at the present moment? He had hoped that he should have been able to give his support to the measures proposed by ministers on the present occasion. On all questions of commercial policy, however he might differ from them on other subjects, he had desired to concur with them. He believed in his conscience that the *rt. hon. gent.* and his colleagues had adopted a system by which the commerce of the country would be fostered and extended. That system was not perfected at present; but it was an approximation to the only just and substantial basis which reason had long proclaimed and advocated, and which the interests of the country had long imperiously required.

Mr. Huskisson said, that his hon. friend (Mr. Baring) had indulged in some animadversions on what he was pleased to call the insensibility of the First Lord of the Treasury and the Chancellor of the Exchequer, in respect to the present state of the country. He was not sure, indeed, whether his hon. friend had not included the whole of the members of Government in his censure. It was not necessary to vindicate the noble lord at the head of the Treasury from the imputation of a want of feeling, either for the difficulties of the country,

or the distresses of individuals. But his hon. friend had commented very strongly on a passage in the correspondence between Government and the Bank, without distinctly understanding the way in which it applied. The passage to which he alluded, was that commencing with the words, "The panic in the money-market having subsided," &c. He need not ask his hon. friend, who was in London about the middle of December, and was a witness to what was passing, whether there did not exist at that time, for two or three days, a state of affairs in the money-market, (contradistinguished from commercial distress,) which rendered it impossible to procure money even upon the most unobjectionable security? He appealed to every gentleman present connected with the city, whether it was not a fact, that during forty-eight hours it was impossible to convert into money, to any extent at least, the best securities of the Government? Persons could not sell Exchequer Bills; they could not sell Bank Stock; they could not sell East India Stock; they could not sell the public securities. That difficulty did not arise from any national idea of the insolvency of the Government, or of the Bank, or of the other great corporate body, but from the panic alluded to as having existed and been removed, in the passage which had been referred to. Was the statement true, then, that the panic,—that state of things which he had just described—had been removed? No one now heard of two or three London bankers stopping every morning. It was no longer impossible to convert public securities into money. The operations of the Royal Exchange had resumed their ordinary course. Did Lord Liverpool suppose that when the panic in the money-market was over, the commercial transactions of the country would not be affected? No such thing. In the conversations which he had with Lord Liverpool, his lordship had stated that the convulsion in the money-market must inevitably derange the transactions of commerce, and involve them in difficulties. The hon. member (Major Maberly) had made the distinction between the operations of the money-market and those of commerce. If the difficulties which existed in the money-market a short time since had continued for only forty-eight hours longer, he believed that the effect would have been to put a stop to all dealings between man and man, except by means of barter. The hon. member had truly observed, that the Bank, by their prompt and efficacious assistance, put an end to the panic, and averted the ruin which threatened all the banking establishments in London, and through them the banking establishments and monied men all over the country. He would take upon himself to say, that the Bank, throughout their prompt, efficacious, and public-spirited conduct, had the countenance, advice, and particular recommendation of the first Lord of the Treasury, and his right hon. friend (the Chancellor of the Exchequer) to assist them. He had a right, therefore, to say that his colleagues, in their communication to the Bank, alluded to the state of the money-market only. They knew the extent of the distress which existed in the commercial interest, but they did not allude to it, because it was not immediately connected with that part of the subject to which they were directing the attention of the Bank. His hon. friend (Mr. Baring) had inferred from what appeared in

\* Vol. iii. p. 88,9.

† Vol. iii. p. 102.

the correspondence, that Government was ignorant of what passed in Scotland. Could it be supposed that his noble colleague and his rt. hon. friend were so ignorant of the state of the country, as not to know that the greatest commercial distress at present existed in Scotland, and that the Scotch bankers, by their mode of affording discounts, were aggravating that distress? It was, however, quite consistent with that fact, that the system of Scotch banking afforded greater securities than the English system, and therefore it was desirable to introduce the former here. He did not know whether the noble lord (Folkestone) intended to subject the whole of the members of Government to the charge of insensibility for the distresses of the country, but he could assure the noble lord that there was no part of his speech in which he so cordially concurred, as that in which he stated that a system of currency which produced great and violent fluctuations in the price of commodities, was one which, however it might affect the opulent merchant or the man of landed property, was most to be deplored on account of the manner in which it operated to aggravate the distresses of the labouring classes. That opinion he had uniformly maintained. It would be found recorded in the report of the bullion committee of 1810, and it had been stated by him on every occasion when he had been called upon to deliver his sentiments on the subject. His hon. friend (Mr. Baring) had observed, that he had never heard a speech so calculated to create disappointment—so inadequate to the occasion, as that of his rt. hon. friend. His hon. friend followed up that remark by a dissertation—a very able one certainly, to which he had listened with great attention, and in some parts with great satisfaction—on the general system of banking in the abstract. His hon. friend then entered upon a statement of the difficulties under which he supposed the Bank to labour on account of the advances on Exchequer bills and other advances more or less of a permanent nature, made by the Bank to Government. As the question was one of fact, it was material that it should be set right. His hon. friend had stated the advances made by the Bank on account of the half-pay annuity at 8,000,000*l.*, forgetting that considerable sums were paid by Government to the Bank twice a-year on account of that transaction, which, if deducted, would reduce the amount advanced by the Bank to 5,400,000*l.* He was not going to discuss the prudence of that arrangement; but his hon. friend, who had himself contracted for loans with Government, and had had the management of them, need not to be told that this was a loan on the part of the Bank, though it might not please his hon. friend that the Bank had kept it all to itself, without doling out any part of it to the public. With that, however, he had nothing to do. The Bank were the best judges of their own interests. He could take upon himself to say, and no Bank director present could contradict him, that there was nothing done on the part of the Government to prevent the Bank from disposing of the contract in any way they might think proper at any period. His hon. friend complained that the whole of the capital of the Bank was lent to the Government. If he meant that the whole of the capital which the Bank possessed at the period of its foundation was lent to Government as the price paid for their charter, he

(Mr. Huskisson) would not dispute the truth of that proposition; but his hon. friend ought to distinguish between that capital and that which had been since accruing to the Bank in consequence of their operations, and with which they were at liberty to deal as they pleased. His hon. friend stated that the Bank were in the habit of issuing 7,000,000*l.* upon Exchequer-bills at one time, and 9,000,000*l.* at another, and that those advances swallowed up all their capital, and left them without any means at their disposal. In the first place, did any one suppose that the 7,000,000*l.* which constituted the charge on the consolidated fund, was all demanded in one day? The money was drawn out in separate portions at different periods. At the same time the accruing receipts of the new quarter were daily paid into the Bank; so that, after all, the alarming statement made by his hon. friend respecting deficiency bills, which he was surprised that he should have put forth at a period of such excitement, amounted to nothing more than this—that the Bank was in the habit of paying daily to and receiving daily from the Government, in the same way as a private banker would deal with his customer. Instead of the Bank advancing 24,000,000*l.* to Government, as his hon. friend had stated, they advanced only the sum he had mentioned on account of the half-pay, (which they might get rid of if they thought proper,) and about 6,000,000*l.* on Exchequer-bills; for with respect to the deficiency bills he considered it no advance at all.—He was not a little surprised at another part of his hon. friend's speech. He stated that at an early period after the conclusion of the war, the market which existed on the Continent for our manufactures afforded a favourable opportunity for obtaining a supply of gold, which would have enabled Government to have got rid of the 1*l.* and 2*l.* notes. Did the hon. member recollect the state of distress in which the continent was placed by the operation of the tremendous war of which it had been the theatre for a quarter of a century? The continent had not then means of paying for our manufactures. There was at the present moment a much greater export of manufactures than at the period to which his hon. friend had alluded; and his hon. friend could not so far forget those principles of trade which he had so often professed as not to know that, as our exports were greater than our imports, so the payments to be made in bullion increased; and that this was the only way of procuring the precious metals. The quantity of exports last year was greater than in any previous year in the history of the country—their total value was greater than in any previous year. What signified it to him, whether those exports went to Cuba, or the United States, or the New States of South America? They might go there and be paid for by bills drawn upon Europe, which would bring gold thence hither, as well as if the goods were sent thither. The operation of bills was now so extensive that he had known bills drawn in South America on the East Indies, where they were paid in bullion, which thus found its way to England. To talk, then, of our having been shut out from the continent, and having lost the opportunity of obtaining bullion, shortly after the peace, was a misrepresentation of facts. The real cause of the distress of the country—as had been stated by his hon. friend—was over-trading; that was the immediate cause.

Mercantile men were, of course, aware that there was published, twice a week, in London, a *price current* of the different articles on sale in the city; and to this the editor was in the habit of giving, at the end of the year, a summary of the rise and fall of prices, adding his own opinions of the manner in which the markets had been conducted during that period. The paragraph which he was going to read from that paper had reference to the year 1825. The writer, after some observations and comments on the general state of the markets, went on to say, that such was the mania for speculation, which had taken hold of persons of all classes at the latter part of 1825, that even in the article of *nutmegs*, the price rose, in the space of one month, from 2s. 6d. to 12s. 6d. per lb. He added, that the speculation in other spices had the effect of producing a corresponding rise in their prices. But the mania was not confined to these articles; in cotton, coffee, sugar, and tallow, the rage for speculation was equally great, and merchants, traders, shopkeepers' clerks, and apprentices, equally partook of the phrenzy, vying with each other in their endeavours to secure a monopoly in each different article; so that the prices were raised higher than ever could have been expected, and higher certainly than they could be long expected to continue. And this state of things, be it observed, was not included in the audacious, puffing, bedlamite schemes, with which the market had been inundated; but had its rise amongst those, who were considered the sober, steady merchants and traders of the metropolis. These speculations attached themselves to every staple commodity of our imports, for the purposes of manufacture, as well as to the foreign articles of consumption—cotton, wool, timber, wine, tobacco; in fact, every article which it was necessary to draw from foreign countries. And when, he would ask, did all this take place? At a period when the exchanges were against this country, and when gold was necessarily going out. Now, he would repeat,—and he was anxious to submit his statement, upon this point, to any set of practical men—that the natural effect of an unfavourable state of the exchanges was to encourage an increase of exports, while it checked imports. Well, then, if any set of practical men saw that, at a period like this, when our coin was finding its way out of the country, every corner of Asia and America was ransacked for cotton and for wool; and if, at such a period, money was so plentiful in the country, as to be hawked about, and offered at a depreciated rate of interest, would they not naturally conclude that there was something wrong in our currency? And if so, he would ask any sober man—certainly there were not many sober men in the city at the period to which he alluded; but he called upon any sober man to say to what such a state of things, if unchecked, must come at last? As to the state of the currency, there had been, unfortunately, much difference of opinion upon it. But the Bank felt called upon to provide for its own safety, by narrowing its issues; and what was the result? The spirit of speculation was checked, and as a necessary result, those country banks which had been most rash and immoderate in aiding speculations by advances, were ruined (hear, hear). But the evil did not stop here; for the ruin of a few bad and unstable banks involved in difficulties many establishments of a similar nature, which were

Sept. 1826.

otherwise placed upon the most stable footing. A panic was spread throughout the country; the country banks, amounting to 700 or 800, applied to the Bank of England as their only resource, so that the Bank of England was assailed upon every side. Seven or eight hundred drains were at once opened upon her—gold was to flow from her into the country. The Bank of England was, in consequence, placed in a state of the greatest difficulty and embarrassment. He would ask whether it was safe or convenient that the country banks should remain upon such a footing? His opinion, after watching carefully the course of events, was—that cash payments and the circulation of 1l. and 2l. notes could not permanently co-exist (loud cheering). He would put his proposition more simply. If there were in any country a paper currency of the same denomination as coin, the paper and the coin could not circulate together: the paper would drive out the coin. Let crown notes be made, and we should never see crown pieces; make half-crown notes, and a half-crown would not remain in circulation. Allow 1l. notes to circulate, and we should never see a sovereign. Every banker was anxious to put into circulation the greatest possible quantity of his notes. The majority of bankers, he believed, were not cautious and prudent men; but, whether cautious or not, they relied, more or less, upon the Bank of England; and not only the seven or eight hundred country bankers of England, but the banks of Scotland and Ireland. Was it the duty of the Bank of England to provide gold upon all occasions, not for ordinary demands, but for any panic which might occur? Were they to provide gold for the adjustment of the foreign exchanges? It was impossible that the Bank could do this; it was unfair that they should be asked to do it: so long as they possessed their former exclusive privileges in banking, there might be less unreasonableness in such a demand; but now that they had surrendered those privileges, they had a right to ask of the house to be relieved from the task heretofore imposed upon them. Why was the Bank of England alone to be called on to ensure its solvency? And why should not country bankers be required to do the same?—Allusions had been made to the effects of unfavourable harvests, and the operation of the corn laws on the currency. But he would ask what must that system be, which had been followed by such distress in a period of profound peace, and after a favourable harvest? If the house did not entertain the present proposition—if the alteration of the currency was left to the chapter of accidents, the mischief might be greater than it now was. One of the great evils which they were called upon to correct was, the excessive issue of paper; this had been productive of the greatest distress; it had caused the ruin of thousands of innocent individuals. It had given rise to fluctuations in the currency which were sometimes in favour of the debtor and sometimes of the creditor; but frequently involved both in misery and distress. Nothing but disgrace and danger would attend any deviation from the principles of currency which the house had recognized. He said that the continuance of the circulation of 1l. and 2l. notes, was neither safe nor advantageous; and he begged to ask, whether, when it was found that such a system was productive of so much general and individual suffering, there was any particular branch of our com-

2 D

merce which could justify its continuance? He was surprised to hear his hon. friend (Mr. Baring) assert, that if this measure were carried, it would involve the whole of the agricultural interests in distress equal to that which had prevailed before 1822. Need he tell his hon. friend, that there was a necessary connexion between those who consume and those who supply agricultural produce? Was it necessary that he should point out the fact, that a fall in the demand for the labour of manufacturers must necessarily produce a decrease in consumption; and that the one must of necessity regulate the other? What was it that created the revival of the agricultural interests in 1822? Principally the revival of the manufacturing interests, and the employment of thousands who had for a considerable time before been deprived of an opportunity of supporting themselves by their labour. The increased means with which they were furnished necessarily produced an increase of consumption, and, looking to the opposite side of this argument, he felt convinced that the manufacturing distresses which were now so generally felt, must have the effect of diminishing the demand for agricultural produce. It was the natural course of things, that, in such a fluctuating state of our currency, all classes of society must, in their turn, be affected by it, and, therefore, the sooner we got rid of that fluctuation, and returned to a sound circulating medium, the better for the community at large. If they wished to prove the value of a steady and unchangeable currency, they had it in the history of France. That country had been twice invaded by a foreign army; her capital had been twice taken possession of, and she was obliged to pay large sums to foreign countries; but she had a steady metallic currency, and however such visitations might have affected the great—however the extensive contractor might have been injured or ruined, the body of the population remained unoppressed. This was to be attributed to the permanent footing upon which the currency of that country had been established. If the object of his rt. hon. friend was carried into execution, it would have the effect of making the country bankers as sensitive on the subject of the exchanges, and as watchful of any unfavourable turn which might take place, as the Bank of England now was. He would be obliged to watch the circumstances calculated to bring gold into, or send it out of, the country; and this caution being timely impressed upon him, there would then be no fear of any convulsion or agitation in the country, as the interest of each banker would compel him to provide himself for any coming emergency; or, in other words, every country bank would feel an equal interest with the Bank of England in watching the state of the currency, and guarding against its fluctuations (hear, hear). He was far from being hostile to these banks; he thought, on the contrary, that they would be of great service to the country if placed under proper regulations. But they must be prevented from issuing paper as low as the highest denomination of the metallic currency of the country. They must not be permitted to issue these 11. notes. Such issues amounted in reality to assuming the powers of the prerogative. Let them continue to issue paper, and to extend and act upon their credit; but they must not be allowed to issue these notes, which was trenching upon the preroga-

tive. He now came to the point, whether this was a proper time for providing for the gradual withdrawing of these notes. Those notes were at present already greatly curtailed by the failure of one hundred country banks, and other causes. The country banks had, at this time, great stores of gold in their hands, drawn from the Bank of England, and Bank of England notes; and now, therefore, was the most convenient time for providing, by law, for the gradual extinction of the small note circulation. If they waited until the present difficulties were passed, they would soon find that these notes, which were now withdrawn, would soon be issued again. And they must also remember the difficulties they would experience from the country banks, in any attempt to intermeddle with their notes and profits, in case the issuing of these small notes were resumed. If they postponed the commencement of this measure, could they be assured that they would ever begin at all (hear, hear)? At present, too, whilst these country banks had only a small number of partners, they were naturally led by views of private interest, to neglect the just principles of banking. But when a bank consisted of, suppose two hundred partners, their business would be differently managed. They would be tied down by rules which would not admit of these ruinous speculations, and their affairs would be conducted on the genuine principles of banking. He allowed that it would be a great improvement, if, under a proper system, chartered banks were established, with only a limited liability. It would, no doubt, induce many persons of great credit and fortune, to invest their money in shares of such banks. But still these banks, with an unlimited liability, would be of great service. His hon. friend (Mr. Baring) had recommended the giving to England a metallic currency on a more extensive basis than could be obtained by the recal of the 11. and 21. notes; he (Mr. Huskisson) agreed that it would be desirable that the currency should be rested on a firm and secure basis. For himself, he was bound to confess that he entirely differed from his late friend, Mr. Ricardo, as to the basis upon which the currency of the country ought to rest; and he believed that if that gentleman, ingenious as he was, had been the sole director of the bank of England, the country would, before this moment, have witnessed the stoppage of that establishment. He had paid some attention to the subject of currency generally, bestowed some labour upon it, and he thought that Mr. Ricardo's view had been wrong; and, while he was upon the subject, he might as well at once observe, that he should be glad to pursue, and would pursue, some further inquiry, perhaps before the board over which he had the honour to preside, into the best mode of improving the suggestion thrown out by the hon. member (Mr. Baring); and introducing, in some shape or other, silver as a legal tender, so as to give an additional security to the country—as far as human prudence and foresight could go to give security—against being again placed in the dangerous predicament of even a temporary suspension of cash payments (hear, hear). There was very little more which he had to address in the house; but upon one point a few words should be said in his own justification, and in justification of those with whom he had acted. An hon. member had said, in rather sweeping terms, that for much of the late wild specula-

tion which had been carrying on throughout the country, ministers were chiefly to blame. Now, the house would remember when it was that the great bulk of these speculations had commenced: it was in the spring of last year. In February last—in the very commencement of those speculations—he had used this particular expression in speaking of them—"That the lottery was a safe adventure compared with the mass of those in which persons were engaging." Again, in the month of March, speaking of the speculations, he had distinctly declared his opinion that those who had engaged in them would find themselves disappointed. Unfortunately, those to whom this advice had been addressed had disregarded all warning. They had rushed on, in contempt of all caution, to their own undoing. Although it would be irregular in him to refer to the precise terms in which Lord Liverpool had spoken upon the subject of those unfortunate speculations, yet the opinions delivered by that noble lord had neither been less unfavourable to them, nor less strongly expressed, than his own; and so far from having adopted any measures calculated to foster or assist dealings of that hazardous character, he most distinctly affirmed that Government had done every thing in its power to discourage them (loud cheering).

Mr. Gordon begged to remind the house, that the rt. hon. gent. (Mr. Huskisson) who now so fiercely attacked the 11. and 21. notes, had been, in 1822, a member of that very cabinet, which, when the members of that house were declaring that they could not pay their rent, their labourers, and their taxes, had proposed, as a remedy for the evil, that very measure which they now desired to abrogate. Now, he (Mr. Gordon) was charged with having got new lights upon the subject; that was a mistake, for it was the hon. gent. opposite whose views had been changed. He had chosen to remain in a very small minority upon the question of Mr. Peel's bill, because he thought, as he thought still, that it would be impossible to pay in gold what had been borrowed in paper; and therefore he wished ministers again to pause and reconsider the steps which they were taking, particularly as the rt. hon. gent. (Mr. Huskisson) professed himself ready to take his share of blame for the measure which he had formerly introduced. The fact was, that the rt. hon. gent. would come down three years hence, and say just the same of the measure he was now introducing, in order to obtain permission to re-issue the small notes. He was glad to hear the rt. hon. gent. speak in the terms in which he had expressed himself of country bankers; but certainly all the gentlemen who sat near him had not treated that class of individuals quite so fairly; and, in his humble opinion, so far from the present distress having arisen from the issue of 11. and 21. notes by the country banks, he thought that the country had derived great relief from that issue. The observation, too, which had been made about prerogative, seemed wholly unintelligible; for he could not perceive how the royal prerogative was a jot more endangered by a country banker's issuing a one pound than a five pound note. He greatly regretted the measure which was to reduce the circulation of the country banks; and he thought that, after the failure of near eighty of those establishments had withdrawn a million and a half of notes from circulation, any further diminution would embarrass, instead of assisting, the country.

Mr. Canning then moved that the question should be adjourned; which was agreed to; and the house adjourned at half-past twelve o'clock.

MONDAY, FEB. 13.—The order of the day for the committee on the Bank Charter and Promissory Notes acts, having been moved, the question was put, that the Speaker do leave the chair; whereupon,

Sir John Wrottesley rose to oppose the motion. He said, that before he entered more at large into the reasons why he wished to take the sense of the house upon the Speaker's leaving the chair, he would state why he had not taken this course at an earlier moment\*. There was a rational objection to such a step on Friday last; for then (properly enough) gentlemen were anxious to hear the statement of the Chancellor of the Exchequer; but at this moment the case was materially altered. All those who thought, as he did from the outset, that the project was impolitic—that the right hon. gent.'s plan was fraught with danger, ought to take their stand against it at the earliest opportunity. Upon all who entertained such opinions, he now called for support, while he resisted the motion for the Speaker's leaving the chair (hear, hear). Never was there a more important question than this, and whilst he felt the important duty of opposing it, he was never equally impressed with his own incompetency to perform that task. He knew, indeed, that there existed a great difficulty both in the house and in the country, on the point, whether this subject ought or ought not to have been brought forward at the very opening of parliament. One of his Majesty's ministers had taken credit for having introduced it into the King's Speech, and many thought that if it had not been mentioned there, it would have been started by some member of parliament, so that there was no way of avoiding the debate. He, for one, thought differently. Had the subject been left alone, the panic would have subsided, the energies of industry would have resumed their action, and the good sense of the people, when permitted to manage their own affairs, would have gradually and surely brought matters round to their proper footing; things, instead of getting worse, as they now were, would have gradually mended, and though private calamity must always attend a change of system, yet the experience of the past would have proved useful for the future, and people would have taken the best means themselves of managing their own affairs hereafter. That the question would have been incidentally mentioned in the house, he had no doubt, but then it should not have been mentioned by ministers;—there was the mischief: it was their authoritative statement which caused all the danger (hear, hear): it was that letter, that cruel letter, which he should have suspected to have been some foul copy drawn out by an awkward clerk in office, rather than a grave original, framed for transmission by the First

\* An amendment was ultimately proposed by Mr. Baring (see *post*, p. 225) to leave out the words, "the Speaker do leave the chair," in order to add the words, "it is the opinion of this house (that, in the present disturbed state of public and private credit, it is not expedient to enter upon the consideration of the banking system of the country."

Lord of the Treasury and the Chancellor of the Exchequer. One would have thought at least that a formal communication from such high quarters, and to a public body like the Bank of England, would, if it did not contain sense, have at least contained grammar (a laugh). Surely the verb should have agreed with the nominative case; any school-boy would have taken care of that (a laugh). That letter, he would repeat, was as unjust in the observations it contained, as it was ungrammatical in the terms in which it conveyed them. The first thing it averred was an accusation—a sweeping indiscriminate accusation—against all the country bankers, asserting, that they had aided, fostered, and abetted, the speculations which had proved so disastrous to public credit. Now, it was singular enough, that ministers had thought proper to send forth this accusation against almost the only monied body in the country who had not speculated during the great rage which had agitated the public mind. When a country banker found a customer drawing fast, he immediately inquired what pursuit he was engaged in, and if he found it to be one of these speculations, he first warned him of the consequences of his course, and next closed his account. This, he would repeat, was the general principle, which regulated the conduct of the country bankers. Was it not, then, cruel to turn the public eye, with the finger of official authority, towards these men, as the instigators of speculations which they had done all they could to prevent? What was the fact with respect to these speculations? They were begun and carried on where no local notes were in circulation. It was in Manchester and Liverpool that the spirit of speculation first raged in the article of cotton; where there were no country banks at all (hear, hear). The next place was the Stock Exchange of London. What country banker, he asked, circulated notes there? They had done all they could to prevent it—none had tried more to avoid it—none had done more to warn their customers against the dangerous delusion of these speculations. But ministers said, "It was we who did all in our power to warn the public against the danger." Where had they done so? He was prepared to show that they were the parties to blame, for at least a part of those difficulties. It was in the latter end of 1824 that these speculations began to show themselves in their more striking colours, and it was then that doubts arose, whether it was not necessary to pass a bill explanatory of the Bubble Act. The house knew that upon the breaking up of the celebrated South Sea Scheme, the parliament of that day enacted a law, which if put into full operation, rendered it almost impossible for any man with safety to embark in these wild schemes. In consequence of the severe penalties of the Bubble Act, many years elapsed without the appearance of any of these delusive schemes. At last, in a time of scarcity, when the public thought the bakers and millers were taking advantage of the dearth, mills of a particular construction were set up by companies to grind grain, and to bake bread on a saving scale. A case arose out of these, he believed it was that of *The King v. Webb*, in which Lord Ellenborough was called upon to revive the penalties of the Bubble Act; but that high judicial personage declined doing so, and rather put a different construction upon the law than that which was previously understood to attach

to it. Things stood in this shape till the year before last, when the Lord Chancellor expressed his dissent from the opinion of Lord Ellenborough in Webb's case. Under these circumstances, it was the duty of Government to declare what the law really was. The effect of such a declaration would have been, if not to crush, at least to restrain, these wild speculations, and so to correct the system that tended to their establishment, as to expose the parties who engaged in them to the penalties which Lord Ellenborough refrained from directing against them. Government, so far from doing this, in fact did just enough to prevent anybody else from doing any thing; for the Attorney-General brought in a bill to explain the Bubble Act, left it on the table of the house, where it remained during the whole session, leaving at the same time this spirit of speculation spreading wider every day, for which the country bankers were now so unjustly called to answer.—The next subject to which he wished to call attention was, the proposed repeal of that part of the Bank Charter act which authorized until 1833 the issuing of small notes. When would the Bank Charter expire? In 1833. When would the small country notes cease to be legally issuable? In 1833, also. The privileges of the Bank of England, and the country banks being equally sanctioned by the faith of parliament, how happened it that that faith was to be kept with the Bank and not with the country bankers (hear, hear)? Had parliament in 1822 repealed the privilege of issuing small notes, as it was intimated they meant to have done, the country bankers would have been prepared for that result; but this was not the course pursued: they were, on the contrary, entrapped and drawn into a snare, and now the whole system thus formally and definitely sanctioned, was to be reversed without the smallest valid reason for the change. It was ridiculous to talk of giving them three years time; for now that the stamping of their notes was refused, those at present in circulation were not calculated to last eighteen months, so that the bankers must at once prepare to withdraw their small paper, and make instant arrangements for cash payments. He supposed it would be contended, as indeed had already been the case, that the country banks had forfeited their claim for equal justice,—that they abused their power of circulating small notes, by the excess to which they had carried it. Well, then, let the same test be applied to the Bank of England. Could the Chancellor of the Exchequer deny, that what with the Government, and what with the Bank, the paper-circulation of the country became at one time so depreciated, that the relative value of the guinea in gold and in paper, was as 27s. or 28s. to 21s. Why not, then, if this were a valid ground for depriving a party of a charter, have not broken up the Bank privilege? But he denied the assertion that the country banks had over-issued. The country notes in circulation in 1825 were double in amount those of 1822: be it so; and he could tell the reason why. Almost all the small notes were employed in carrying on the provision trade; for general mercantile transactions were notoriously conducted through the medium of bills of exchange, the amount of which far exceeded that of all the small country notes in the kingdom: then if these notes represented, as they did, the value of these provisions, they must necessarily partake, in their amount, of the changes in the

price of the commodities for which they were exchanged. Look, then, to facts, and it would be found that the price of corn in 1825 greatly exceeded its price in 1822—in some places it was double; and the value of cattle more than doubled in the same period. This rise in the value of commodities necessarily increased the amount of the notes which were to be paid for them.—Belamented that in this discussion appeals should have been made to their feelings. He hoped he was as alive to these feelings in a proper sense as any other gentleman in that house—he who did not participate in them deserved to be called the lowest of mankind. But he would ask, had not the house already legislated for the protection of the humbler classes of society, as far as laws could secure them in this respect? In the first place, the labourer was not obliged to take the one pound note, if he did not please to do so—he could go at once and exchange it for gold at the counter of the country bank. If he wished to buy provisions, he would get the same value for his note that he would obtain for his gold, without the liability to suffer by the fraud of counterfeit or light coin. If his object were to lay by his few pounds, he could at once deposit his country notes safely and profitably in the savings' banks.—But the great difficulties which must attend the contemplated change were that the one pound notes (except in Lancashire) formed the great medium of payment by which the ordinary transactions of life were carried on throughout the kingdom. Now, he did not mean to say that the business of the country could not be carried on at all without these small notes; but he was satisfied that, were they withdrawn, a very different quantity of business would be transacted (hear, hear); and if the latter could not be transacted on the same scale, then what became of the labouring poor who must be thrown out of employment? Was there no sympathy, he asked, for the large classes who were dependent for support on manufacturing industry (hear, hear)? What medium of circulation did they propose to substitute for that which would be withdrawn by the departure of these small notes? None that he could understand. He had certainly heard a good deal of the improvement which was to arise in the banking system from this change, and that in a short time joint-stock companies would rise up in the country. He did not believe a word of it (hear, hear). They might probably have branch banks from the Bank of England in Lancashire—they might have them also in some of the manufacturing districts of Yorkshire; but in any of the other manufacturing counties such establishments were not likely to appear, unless Government granted a charter—(and this the Bank of England would take care to prevent)—or unless a parcel of adventurers were found ready to act together in the banking trade, with little or no property at stake. A pretty system this would be for the country—one which, so far from mitigating the existing evil, would greatly aggravate and extend it in every quarter.—Hoping to have the assistance of every gentleman who apprehended danger from the proposition now under consideration—a danger which was every twenty-four hours growing worse, and its progress alone capable of being stopped by an abandonment of the proposition—he reiterated his appeal to all those who thought as he did upon the question, for their support in resisting the Speaker's leaving the chair for their going into a com-

mittee; but should he stand alone in the division, still he would do his duty to the utmost of his power, in averting the evil which must follow the adoption of the present plan, and the extent of which it was impossible for any human being to foresee (hear, hear).

Mr. Alderman Thompson agreed that the present embarrassments were partly attributable to an over-issue of paper-currency, as well as to a connexion with the general spirit of speculation which had so unfortunately prevailed. He was inclined to think that the excess of this bank paper had increased all these speculations, from the superabundance of money which they threw into the market. On reference to the stamp returns for the country banks, for 1823, 1824, and 1825, the issues of their notes appeared to have doubled, as compared with the three preceding years, that of 1825 being by far the largest of all. The country banks, in this state of things, readily accommodated the manufacturer, who gave a high price in his turn; and thus, at the close of 1825, the paper circulation had been carried to a forced and unnatural height. In this state a reaction occurred, which was first visible in the failure of an extensive banker in a western district, followed by a similar occurrence in a northern; and these were attended by a general rush upon all bankers, whether solvent or otherwise. Seventy bankers either failed at once, or their paper was thrown into a state of abeyance: calculating their issues at 50,000*l.* each, which was, he believed, much under the mark, 3,500,000*l.* of the circulating medium was withdrawn in the short space of 3 months. Assuming 20,000,000*l.* to be (as had been said) the whole circulation of the country, and add to the 3,500,000*l.* already withdrawn, the additional amount of the paper money which must have disappeared in consequence of the recent shock, there would be a reduction of nearly 50 per cent. within six months in the currency of the country. At all events, he thought himself safe in assuming that there were now 6,000,000*l.* of paper-currency less than the public possessed six months ago. How was the vacuum thus created proposed to be supplied by the Chancellor of the Exchequer? He said by gold: where was this gold to be obtained? There was no way of obtaining the precious metals but by the growth of the exports: what exports had they now to provide them? Their own manufactures were not in demand on the continent, neither were the foreign commodities which they possessed: cotton was not in request abroad, nor sugar, nor coffee; in fact, none of their colonial produce. Though prices had fallen 20 per cent. business was still in a state of great stagnation. Every body acquainted with the commercial business of this great metropolis, knew, that within the last week, not one man in ten could negotiate upon the Exchange the most undeniable bill he had to offer for discount. How, then, was this new measure to operate? They all knew that the avowed intention of it, was the speedy suppression of small notes; but they equally knew, that by far the greater portion of the trade of the country was carried on through the medium of these notes, and the largest circulation of them was in the most active manufacturing districts. He could, from his own knowledge of one of these parts of the country, name one manufacturer whose total monthly payments amounted to no less than 200,000*l.* and this was chiefly paid in the one

and two pound local notes. They could easily imagine what would be the effect of withdrawing this amount of circulation from one spot of the country (hear, hear). Besides, they should remember, that notwithstanding the general want of confidence which prevailed so recently respecting these local notes, how few comparatively had failed, though the demand upon all must have been immense, from the nature and extent of the panic (hear, hear). They ought to consider whether the manufacturer was at all likely to carry on his trade if the assistance of the country banker were thus suddenly withdrawn. It might be said, that the same accommodation would be given to the solvent applicant after the resumption of cash payments as before. This he denied, for the banker would feel a very different disposition to discount the manufacturer's bills, when he had to advance the money in sovereigns, from that which he had evinced when his notes would answer the same purpose. Entertaining these opinions, he must oppose the present proposition, believing it to be one which, instead of having a beneficial tendency, was more likely to create a convulsion from one end of the country to the other (hear, hear). As to the idea of throwing open the Bank charter, in expectation of the establishment of joint stock companies, it was a mere delusion. It was a great mistake that the solvency or solidity of a bank would be measured by any estimate formed upon the number of its partners. No: the prudence and resources of a firm, rather than its numbers, would govern the opinion of its stability. Undoubtedly much good would arise if the Bank of England established branches; but, till that event occurred, it would, in his opinion, be an act of great folly in the house to curtail by measures of this sort the circulation of the country still further than late events had accomplished. To proscribe the country bank paper at the end of three years by a new law, was practically to put an end to it at once; for every banker must instantly withdraw his small notes as fast as he could. For these reasons, he felt it his duty to oppose the proposition (hear, hear).

Mr. *Leycester* differed from the two hon. members who had preceded him, upon, what he thought a mischievous anomaly, the prerogative of every man who thought proper to call himself a banker, and to issue paper-money. Only one body should be allowed in the country with so great a privilege. They had in the recent events seen some of the consequences of the conduct of country bankers, and worse might still happen, if a check were not put to the evil. He thought that a mob at the Mint was as bad as a mob at the helm of the state. The monarchical principle might be thought to be very properly extended to the issue of notes, as well as to other measures of our policy. As a friend to a sound currency, he rejoiced in the proposed measures; and the only thing he had to regret on the subject was, that they did not go far enough. Why should not the rt. hon. gent. extend the principle farther, and sweep away the 5l. notes also? The house might rely upon it, that the issues of those notes without any check, would tend to the same disastrous consequences as those which they had now to deplore from the over-issue of the smaller notes; and unless some such step was adopted, they would have the Chancellor of the Exchequer coming down to them at some future day, and making

the same confession of distress, and imploring their assistance. Better, then, do it all at once while it was in our power, and while the whole evil might be guarded against in its greatest extent. One national Bank would obviously have great advantages over the system of numerous country banks. Such a bank could regulate its issues by attending to the exchanges, and so preserve the country from the effects of a fluctuating currency. As to that part of the proposition which related to the establishment of joint-stock banking companies, he thought that over-issues would arise as well in such banks as in those of other descriptions; and in cases of bankruptcy, the situation of the poor holders would be worse than before;—they would be cut off with a shilling. With respect to the enlargement of country banks, he did not think that it was likely to take place. The substantial would not be likely to take in new partners, because they would not wish to lose so good a thing, and the unsubstantial would not, because they would be unwilling to let their real circumstances be known. But suppose that large numbers were to enter into co-partnerships as bankers. Large numbers would not necessarily produce large capital. Six men might be as rich as twenty, and the very increase of number would increase the chance of insolvency; for there was a greater chance of having a black sheep found among twenty than among six (hear, hear). Against this he knew that the banks in Scotland would be quoted; but how was it known that the success of those banks might not be imputed to local causes, and those very different from a mere extension of partnerships? Might not the cause of it be found in the national character of the Scotch for prudence and sagacity in their commercial transactions? In this country there was an universal cupidity amongst all classes of capitalists for borrowing and lending, and for lending and borrowing. All rushed precipitately into the vortex of speculation—some to undo, and others to be undone; but in none was there the same prudent foresight which marked the money-transactions of Scotland. He had no reliance upon this part of the plan.

Mr. *T. Wilson* said, that he did not view this question as a party man: he merely looked at it as a representative for the city of London, who was in the habit of hearing, day after day, of the ruin and distress in which so many of our merchants, manufacturers, and traders were involved. It was his wish to see, if possible, in the measure before the house, some remedy for those distresses—some palliative of the evils—something which would have the effect of restoring confidence; but he confessed that turn it which way he would, he could find none (hear, hear). He would say that the first step would be, if possible, to restore confidence. This was not to be done by force. People were not to be dragooned into confidence. The milder means taken to ensure such a result, the more effectual would they prove. On the situation of the country, and the remedy most effectual for restoring a sound state of currency, he entirely concurred in the views of the hon. member for Taunton (Mr. Baring). One part of his speech which he thought particularly deserving of attention, was that which was relating to a mixed currency. Why not, he would ask, as we had such large importations of silver from South America, bring it into circulation as a part of our currency, instead of being obliged

to purchase sovereigns at a premium of one and a half per cent.; or, what was the same, to purchase them by Bank paper, while the bullion of the Bank was uselessly hoarded up? Its issues of paper were thus increased, and the country injured by it, when if the plan of the hon. member was adopted, we might have the two currencies together. One word as to an argument used in support of the present plan. It was urged, that if we did not come to the consideration of the evils of paper issues when in a state of suffering, we could not be induced to do so in a flourishing condition of our trade and commerce. This was the argument of the right hon. gent. (the Chancellor of the Exchequer). The argument was an extraordinary one. He would contend, on the contrary, that the proper period for an alteration would be one of prosperity. The remedy which he would propose would be to let the issue of our small notes alone, and to take security to the extent of the issues (hear, hear). To the substantial banker, this could be no inconvenience. That security would tend to his own advantage; because the greatest danger of panic and alarm in times of distress arose from the holders of the small notes. These were found, in most cases, to begin the run, and the alarm they created extended itself to the holders of large notes; but if the payment of the former was secured, such a danger would be altogether prevented. He would not press on the attention of the house farther. The sum of all his remarks was this—that the proposition of the right hon. gent. (the Chancellor of the Exchequer) would be ineffectual; that instead of allaying, it would tend to increase the alarm; that it had already been productive of some, and would be productive of still greater mischief.

Mr. John Smith admitted that this question was one of considerable difficulties; but after having heard the speeches of some gentlemen on that and the former night, he must say that the difficulties which he had felt were removed, and he was now prepared to vote with Government in support of the proposition before the house (hear, hear). Before he entered upon the general question, he must say a few words as to what fell from an hon. member (Mr. Leycester) who had condemned the issue of paper *en masse*. He did not mean to justify the issues of paper, more particularly the small notes, to the extent to which they had been carried; but he would appeal to the experience of all who were acquainted with our manufacturing districts, whether the issue of notes in those districts had not had a most powerful and vivifying effect upon industry. On the other hand, he could not agree with an hon. bart. (Sir J. Wrottesley) who had said, that with reference to the one-pound notes, the labourer, or small trader, had the option of taking or refusing them, and that having taken them he might at once go to the bank and demand gold or Bank of England paper in payment. The labourer or small trader dared not in general refuse those notes when tendered to him. It was well known, that in the country towns the bankers were for the most part men of some influence—that they were magistrates of the county. It was also well known that their notes were the chief if not almost the only circulating medium in the particular town or district. If the labourer or tradesman had no fears of any ill effects from the banker or his friends, a motive of self-interest would induce him to take those notes, for

there were few or none others offered in payment. So that in fact he had no option but to take, and he dared not refuse—except perhaps in a period of general panic, when such motives as he had alluded to would not affect him, and when he would be governed by his fears alone (hear, hear). He had long been of opinion that this species of circulation had been productive of great injury to the poorer classes—an injury, the nature of which no man could contemplate without the most painful emotions. For what was the effect of the present small note bill? It was, that any man, whether possessed of property or not, who took out a banker's licence, could issue 11. and 21. notes; and there were instances known of persons who had taken out such licences, and become bankers, for no other purpose but that they might be able to issue notes to pay their own workmen (hear, hear). In proof of this he could refer to what occurred in 1815 and 1816, and it would be found, on inquiry, that numbers of individuals had taken out licences as country bankers who were so in no other sense of the word than that which he had described, and for the reasons which he had stated.—He would now say a word on a topic on which several hon. members had addressed the house—he meant the correspondence between ministers and the Bank of England. If he might use a common mode of expression, he would say he would lay a wager that the rt. hon. gent. (Mr. Huskisson) had nothing to do with the drawing up of the long statement sent to the Bank. He was certain that the right hon. gent., who understood the state of commerce as well as or better than any other man in the country, could have had nothing to do with the production of that document which betrayed so great an ignorance of the real state of the country, or at least the cause of part of the present distresses. In the second paragraph of that paper, blame was laid in very plain language on the country banks, as being the causes of all the speculations which they had seen in the course of the last year. What, he asked, had they done to merit so serious a charge? He most distinctly denied the fact; and he could say, for he knew it, that the respectable bankers of Manchester and Liverpool had given no encouragement to the speculations which had taken place in those towns. In those speculations which had made us the laughing-stock of other countries, and of each other, the banks had nothing to do. It was not fair then to hold up the country bankers, at such a crisis as the present, when their credit might be seriously endangered by the fact, as the authors or abettors of the evils which had come upon the country from a mischievous system of speculation.—Much had been said both for and against the expediency of a single standard. He could not understand the opinion of those who so confidently advocated the expediency of gold, to the exclusion of a silver standard. All other nations in Europe were satisfied with both. It would be no difficult matter at present; at least it would in a short time be easy to obtain silver in considerable quantities. He would observe, that country bankers were not fond of issues of silver, not because they preferred the circulation of their own notes, but because they were very much annoyed by the extensive circulation of counterfeit coin; and this evil was, in a great measure, caused by the imperfect state of our criminal code on the subject. Of this he would state an instance. Some

time ago certain persons were going about with an immense quantity of counterfeit coin. It was carried in a cart with a false bottom, and disposed of at fairs and markets, to the great injury of thousands of the poor, on whom the loss in such cases generally fell most severely. They were at length detected, and about 2500 pieces of counterfeit coin were found in their possession. They were tried and found guilty, and sentenced to only twelve months' imprisonment. This punishment, for a crime involving such serious evils in a moral and political view, was, as the house would admit, wholly inadequate; and unless the law in this respect were altered, it could not be expected that the evil would cease, should silver form a part of our currency as well as gold. He might add, that the very beautiful coin of crown pieces, which was some time ago in circulation, had not been counterfeited in any one instance that he had ever heard of. The reason was, that this coin had an inscription round the edge, which it was extremely difficult to imitate. He mentioned this with a view of encouraging an attempt to re-introduce that coin into circulation, and at the same time he would suggest the propriety of extending the legal tender of silver from 40s. to 5l., which would have the effect of producing a considerable circulation of silver. That this was wanted in many parts of the country, was well known. It was within his own knowledge that within the last fortnight silver was so scarce in a manufacturing town, that a great many of the workmen were paid by orders on publicans and others who supplied articles of food and drink—a mode of paying the wages of labour, the injurious tendency of which on the morals of the workmen it was unnecessary to point out.—Considering the present state of the country, he thought it was most important that the house should bring the question before them to an issue. The state of doubt and anxiety in which the public mind was placed, with respect to it, was almost incredible. Various reports were going forth as to what was passing and what was intended. He had heard that day, that it was reported and believed in several parts of the country, that the 1l. notes were to be altogether suppressed, and there were a variety of other rumours calculated to add to the degree of alarm already existing. These doubts and surmises, he hoped, would be put an end to by the decision of that night (hear, hear).

Mr. C. Grant was glad to perceive that there were no objections to the merits of the proposed plan (hear, hear). The chief that he had heard were as to the time. One hon. member said that, at such a crisis as the present, it ought not to be introduced; and another objected to its not having been introduced before. Another gent. feared that it would have the effect of an inconvenient diminution of the circulating medium. He did not concur in these opinions. He thought the time was proper; and under the circumstances in which the country was placed, he thought that ministers would be shrinking from their duty if they did not endeavour to grapple with the difficulties of the case as well as they were able. Sensibility for the distress which existed, they all felt; but true sensibility was that which, while it felt the evil, endeavoured at the same time to devise some means by which it might be averted. It was on this ground that he was anxious for the progress of this measure. They all acknowledged that great distress had existed; but it could not be denied

that their situation was becoming better every day; and he hoped that, in a short time, public confidence would be altogether restored. But it was always found, that in recovering from a state of great and sudden depression, the country rose with even greater rapidity than it had descended. What would be the consequence of the sudden change? The spirit of speculation would again take possession of men's minds, over-trading would follow, and depression would once more be the result. Now he would ask, was it not the duty of the legislature to guard against such frequent and sudden revulsions in our system—to prevent the over-trading of one period, from being the consequence of too sudden an ebb of our commerce in the succeeding? And what more effectual course could be adopted than by removing at once the temptation to such over-trading, by taking away the unsound basis on which it rested? An hon. member (Mr. T. Wilson) had complained that this measure would not meet the evil. This was because the hon. member had not looked to what was the real object proposed. It was never expected that the plan now before the house would of itself relieve the immediate distresses of the country. Neither was it expected that it should embrace every improvement of which the state of our currency was susceptible. Let the house judge of it, then, only by what it proposed to effect, and not by applying it to matters to which it was not intended to have, and really could not have, any direct application. It was totally foreign, for instance, to the suggestions thrown out by an hon. member (Mr. Baring), on the subject of a double standard. That plan, he might observe, had for some time been under the consideration of ministers; but that was a matter which should be left for discussion on a more fit occasion, and would be introduced by his rt. hon. friend (the Chancellor of the Exchequer) in its proper time. Neither was it hoped that this resolution would effectually guard the country against those fluctuations in both species of currency, to which the country might, from a variety of causes, be liable in the best of times. These were matters which could not be foreseen or prevented by any human prudence; and when they did occur, must be left to remedies which would be suggested by the circumstance under which they arose. The measure before them did not profess to deal with every evil which might arise in the state of the currency. Its object was simply this—to prevent the ruinous effects of a system of over-trading, to which temptations would be held out under particular states of our currency, if left unchecked. It had been said, that there was a tendency in every species of paper currency to displace gold, unless its progress should be arrested by some check; and the great problem was to provide some check which would operate by way of prevention rather than cure. One hon. member seemed to think that the convertibility of paper into gold on demand, would afford this desirable check. In that opinion the hon. member concurred with many eminent men, including the members of the bullion committee. This, perhaps, was the general opinion at that time, but it must be admitted that the science of political economy was still almost in its infancy, and further investigations were daily throwing some new light on the subject; and we were as yet in a state of experiment with respect to it, as compared with what we might be

in the course of some future time. There were some who thought that there was a kind of preventive check to the displacing of gold, by which the approach of the evil might be known; and the rate of exchange as regulated by our issues of paper, was said to be of that description; but this would operate so tardily as to admit of the evil going to a great extent before it operated as a remedy. Besides, the opinions of those by whose will paper issues were regulated, might differ as to the effect of those issues on the rate of exchange; or they might think that they had a sufficient quantity of gold in their coffers to allow them to continue those issues longer. He could easily conceive how, under such circumstances, the rate of exchange against us might be allowed to proceed to a very injurious extent before the remedy was called into effective operation. Some hon. gents. had, the other evening, given it as their opinion, that the present state of things had been brought about by over-issues: others had attributed them to over-trading. For his part, he conceived that both these causes had operated simultaneously; that, in fact, over-trading had created over-issues, and over-issues had, in turn, created over-trading. It was clear, then, from what had occurred, that the check provided by the convertibility of notes into gold, operated so tardily as to be inadequate to avert the evil; and it ought to be the leading principle in every sound currency, to provide the means of arresting the evil before it arrived at the highest. In this alternate state of depression and elevation, what were the circumstances which aggravated the evil? One was, that the persons who generally held the small notes were the bulk of the population, who were, of course, the most liable to panic, and from whose minds the panic, when once formed, was the most difficult to be removed. Another of the causes was, that the quantity of gold in circulation was gradually reduced to a point far below that which was adequate to the emergencies of the country. Now, if they could meet these two circumstances—if they could secure the great bulk of the consumers from panic, and ensure a fund of gold in the kingdom, sufficient to maintain public confidence—great progress would be made towards diminishing the frequency of the recurrence of the existing distress; and when it did recur, of abating its violence (hear, hear). If he were not mistaken, the proposed measure, if carried into effect, would introduce into our system of currency this corrective and renovating principle—it would remove the apprehensions of that class of the people who were most obnoxious to danger, and would create and maintain a fund of gold in the country, so palpable, that even should a panic seize the lower classes, the better-informed ranks of the community would know there was sufficient gold in the kingdom to meet all exigencies, and would thus prevent those alternations which were now so ruinous in their operation. He believed it had been urged against the adoption of the present measure, that it would be an arbitrary interference by the legislature with what they had no right to interfere in at all; but if the question were to be decided by authorities, there were very high names in support of such a measure. A distinguished individual (Mr. Ricardo) indeed had been against it; but had he lived in the present times, there could be little doubt but that he would have seen reason to have changed his

SESS. 1826.

opinion. Adam Smith was in support of it; for he had laid it down as a maxim, that the best state of currency was that where the circulating medium between the dealer and consumer was gold, and that between dealer and dealer paper. It had also been supported by the bullion committee, the very able chairman of which, the late Mr. Horner, although in early life he was opposed to it, at a later period, and when his judgment had been more matured by reflection and experience, was fully convinced of its beneficial tendency. Mr. Tooke also was in favour of it, and another rt. hon. person (Mr. Huskisson), whose capability of judging on the present question was universally acknowledged, but whose presence prevented him from alluding to him by name. Besides, this principle had already been recognized and acted upon by the legislature; for at one time ten shilling, indeed five shilling notes, were in circulation in Scotland; but these had been put a stop to by act of parliament. Should there, then, be any insuperable objection on the ground of arbitrary interference on the part of the legislature in the present case, such objection ought to have had equal weight when the act for suppressing the circulation of these ten and five shilling notes was proposed. The United States bank, which had had considerable experience in these matters, had been obliged to have recourse to a similar measure of restriction. It had been urged in opposition to this measure, that it would have the effect of reducing prices to too low an ebb, and that in the present artificial state of the country, and burdened as we were with debt and taxes, it would render our finances insufficient to meet our exigencies. For his part, he anticipated no such calamitous consequences: we had only to place our currency on a firm and solid basis; we should thereby speedily restore confidence, and the industry, wealth, and resources of the country would instantly be called forth, and very shortly disperse the cloud which at present hung over us; whereas, should we continue to go on in the old system, the alarm would increase, and, increasing, necessarily bring fresh misery along with it. Public credit, instead of recovering, would sustain a fresh shock, and there was no knowing where the evil might ultimately end. For these reasons he should give his hearty support to the resolution of his rt. hon. friend (loud cheers).

Sir John Newport said, that the present system of banking was equally dangerous to bankers and their customers: it induced the former to issue notes beyond their capital, and thereby left them at the mercy of every individual who, either through fear or malevolence, might raise an alarm against them. It had been contended, that in the present state of our affairs, the commerce of the country could not be carried on, at least not to its present extent, without having recourse to this species of circulating medium. For his own part, he did not at all believe that this was the case; but even if it were, it would be much better that this extra portion of commerce should be sacrificed, than that the present pernicious system of banking should be suffered to continue. The present was as favourable an opportunity as could possibly occur for carrying this important and most desirable measure into execution; for the recent alarm had already withdrawn the greater portion of these notes from circulation, so that their object was already more than half

2 E

accomplished. He begged pardon for having claimed their attention, but from the situation in which he had been placed, he considered it his duty, and thought it would be expected of him that he should state his opinion on this question.

Mr. Alderman *Heygate* said, that the present question was not whether this was a prudent or an imprudent measure, but whether this was the proper time for interfering with the most delicate of all things—the currency of the country. Nothing lately had caused more astonishment in his mind, than the first sentence in the letter recently sent by the first Lord of the Treasury to the Bank, in which he found it boldly stated that the panic was over, and that the pecuniary affairs of the country were once more flowing from their wholesome and accustomed sources, and running through their wonted channels. Could any man say that things had reverted to their usual course, when they heard daily of failures and distresses in every part of the country? Could any man say that the panic had subsided, when even the securities of the state, the *rt. hon. gent.'s* Exchequer-bills, were at 12s. discount? Was that the time for agitating new-fangled questions of political economy, or for listening to the suggestions of a set of dry philosophers, who did not care at what cost of misery or distress their experiments were tried upon the country (hear, hear). Whatever might have been the state of things before, ever since these new and high-sounding doctrines had been brought forward, the panic and the distress had been visibly on the increase. At the opening of parliament, confidence had been nearly restored. The exchanges were turning as much in favour of this country as the most rigid *Bullionist* could possibly desire. Gold was pouring in as fast, and perhaps even faster, than it was required. But at the present moment the currency of the country was not sufficient, and in consequence of such insufficiency, there was a stagnation in all kinds of business. Ought the currency, then, at this critical period to be still further diminished? Was it wise in the Government, when such was the state of the pecuniary affairs of the country, to issue a manifesto to the Bank of England reflecting on all the country bankers in the kingdom, and to threaten to compel them to withdraw their 11. and 21. notes from circulation, in direct violation of the understanding in 1823? He was no advocate for the country bankers, or the system of banking which had prevailed for the last fifty years, to the disgrace of the country: there could be no doubt that a metallic was much preferable to a paper currency, and yet this latter currency had been strongly recommended by Mr. Pitt, in 1797; but he must say that much obloquy had been cast on country bankers when they were not the parties who deserved it. This class of individuals had never generally objected to the plan of giving deposits as a security for their notes: the dislike to this measure amongst the more numerous and respectable portion of them arose solely from the clumsy mode in which it was proposed to be effected. If it had been proposed in a practicable manner, there would have been no difficulty in effecting it. This question had been treated on far too narrow grounds: it had been discussed as if it merely related to the profits of the bankers, whereas it concerned the whole nation. It should have been well considered whether the country

could at present afford to provide eight or ten millions of bullion to supply the paper currency, which had and would be withdrawn from circulation to that amount. He believed several theorists, who had written books on this subject, had stated that it might be done, and that it would be a beneficial measure. For his own part, he did not understand much of political economy (laughter), which, he confessed was a matter of some difficulty (laughter): but when he considered that Mr. Tooke, who was a great man amongst them now in the science, as it was called, differed from Mr. Ricardo, who had left a great name behind him; and then when he saw a Mr. McCulloch, who had descended from heaven to set right the opinions of both (great laughter), and that no man among them seemed to be of the same opinion with another, but that they spent their whole time in writing books to contradict the best established positions of their contemporaries—he could not but feel some distrust of their knowledge. Should this resolution be passed—and he had no doubt it would be—the blessed effects of it would soon begin to discover themselves: but it would ill become hon. gentlemen, who were now receiving the speeches of ministers with cheers, hereafter to complain of them. He made this observation because he had known such circumstances occur more than once in that house. He had seen the same landed interest, who passed, with the most triumphant cheers, the bill for returning to a gold currency in 1819, turn about only two years after, and actually bully the Government into the enacting of a law for the issuing of those small country notes (hear, hear). Let those who now wished to get rid of that bill take care; for he would say, that if the bill was repealed, the time would come when the right hon. gents. opposite would not hold their seats by such an agreeable tenure as at present. To be sure, they had the sweet, and they must take the bitter when it came. If that were all, it would not matter much (laughter); but the labourer, the farmer, the mechanic, and the manufacturer, would be the victims of that short-sighted policy as well as the right hon. gents. (hear, hear). What had been the conduct of the ministry on this occasion? When Parliament had been sitting the day before, and the day after, they sent forth a decree, declaring that no more stamps should be issued for small notes; thereby disregarding the licence of the bankers, breaking the law, and violating the principles of the constitution. When Mr. Pitt took upon himself to act without the authority of parliament, it was upon some urgent necessity, and during the recess of parliament; but as soon as ever the house re-assembled, he came before it to explain the circumstances and to pray for an indemnity. But what was the urgent necessity for the present extraordinary proceeding? Why, forsooth, to prevent the direful consequences which would have ensued from a few bankers issuing two or three thousand one or two pound notes. To avoid this dreadful disaster, individuals had been deprived of their legal rights, and the constitution of the country grossly violated. He would wish any practical man, he did not mean one of those gentlemen who wrote books, to be asked what were likely to be the effects of this resolution? It was evident that it must compel the immediate withdrawing from circulation of all the country bankers' notes. Did Government

know the consequences which were entailed on the community at present by the refusal of discount, they would hesitate before they further curtailed the currency. He had seen a letter from Lancashire, giving a deplorable picture of the state of that part of the country, where he remembered there were no banks issuing notes (hear, hear). Trade was there said to be at a stand—robberies frequent, failures every day, and the distrust every man had of his neighbour, beyond all conception. Thirty families in one week had been consigned to the workhouse, making at four in a family 120 persons. And yet this was the time when it was thought proper to lessen the circulation of the country banks. He had supported ministers on many occasions when they were not very popular (laughter). He meant, he had supported them when a vote was worth something (loud laughter). He had never received anything for this, neither money nor place; but he had voted with them when he thought them right. He differed from them now; and yet he had seen the propositions of the Chancellor of the Exchequer and the President of the Board of Trade cheered by the bitterest enemies of administration. If the right hon. gent. had 40 or 50 joint-stock banks ready to come into immediate operation, so as at once to fill up the void which would be created by the destruction of all the country bankers, he should not feel such decisive objections to the measure; for although it might bear very hard upon, and be most unjust to, a single unoffending class of individuals, still it would not be injurious to the public at large, as it would make little difference to them whether they got their supplies from an individual or a joint stock bank. But it must be recollected, that a considerable interval must necessarily elapse before these joint banks could commence their operations, and what was to be done in the meantime? During this interval, the embarrassments of the country must inevitably be increased to ten times the extent that they prevailed in even at present, though it was now most deplorable. They had, moreover, very little reason to consider joint stock companies with a favourable eye. The Irish joint banking company shares, about which so much had been said, and upon whose shares, 10l. premium had been paid, were now at 6l. discount. But suppose they should succeed, what would be the consequence? Why they would deluge the country with the very paper which ministers wished to repress. America might teach them something on the subject of such establishments. There, banks of joint stock swarmed in every province, and yet it was no uncommon thing for them to fail, and the paper of one province was frequently at a discount of 7 or 8 per cent. in the next. Their establishment, too, would have the effect of causing all the respectable portion of the present country bankers to give up their business, and those only would remain to whom the winding up of their accounts would be formidable. At any rate, if this joint stock plan was to be adopted, it would be but fair that the present country banks should have due notice, and a proper period allowed them before these companies should be permitted to commence their operations. The country banks deserved protection; for there were other parties, besides them, to whom the recent convulsions in the commercial world ought to be attributed, although it was not impolitic in Government,

when it had once got into the scrape, to attribute that misfortune to those who, from their situation, were incapacitated from saying much for themselves. What, he would ask, were the chief causes of the distress which now prevailed? He had no hesitation in saying, that one of the causes of the late panic was produced by the operation of Mr. Peel's bill. It was the fashion at the time to praise that bill in the highest terms of panegyric. Now, it was his opinion at the moment of passing it—and he had acted upon that opinion by forming one of the minority of 23 who had divided against it—that it was one of the most hasty measures of legislation that had ever been passed by any grave deliberative assembly. It was ushered into the house by a speech, to which he had listened with delight and attention—for refinement and eloquence always commanded them—but which dealt in many topics which had no connexion with the subject matter of debate, and utterly neglected those which bore upon it. They were told that they were then returning to a reformation of the coinage equal to that which had been effected in the reign of Queen Elizabeth. But, though such was the language then held out to them, not one word was said about the 800,000,000l. of debt under which the country now laboured, all of which was unknown to Queen Elizabeth (a laugh);—nor one word about its immense load of taxation, its exchequer bills, its navy bills, its treasury bills, and its various other bills, of which Queen Elizabeth had not the faintest idea (laughter and cheers). It was said that other nations, and especially France, had a currency of gold and silver; and it was thereupon asked, why this country should not have a similar currency? The reason was evident. We had spent our money; France had not. In 1793, we had engaged in a war, which was called just and necessary, but which he was not certain that he should have supported had he been in parliament; and we had subsidized, during its continuance, every power in Europe to fight our battles against the French republic. We had sent our gold out of the country, day after day, notwithstanding the warnings which the Bank had given to Mr. Pitt, of the evil which it most eventually occasioned. Mr. Pitt had said that it was no matter, as it was absolutely necessary to save the country from the dangers which environed it. In the meanwhile, what was the conduct of France? Her governors were making her friends, at one time, and her foes, at another, defray the amount of her war expenditure. Her armies were plundering, in turn, every country which they visited, and were bringing back gold in enormous quantities. The peace which followed, found us in that state of embarrassment which was the necessary consequence of a protracted war prosecuted in the manner he had stated. Whilst we were yet smarting under this distress, the resolutions of the rt. hon. sec. (Peel) were carried, as if pompous representations could have freed us from the difficulties that encompassed us. The rt. hon. sec. would have us act like a man who inherited 5000l. a year, and having spent more than his income, ought to have reduced his establishment to 500l., but instead of doing so, was determined to live on as he had done. The rt. hon. gent. was determined we should go on with gold, without duly weighing the means that were within our reach. If the bill of 1819 had been accompanied with the plan

—the very sensible plan—recommended by Mr. Ricardo, whose opinions had always great importance attached to them in that house, namely, that the Bank should pay only in bars of gold—then the panic would not have arisen. Persons would not have been running with their pound notes to have them exchanged for sovereigns: the exchange of paper for gold would have been confined to persons who knew the real value of gold, to those who knew that gold was dearer in Paris than in London, who would know where to apply for ingots, and how to dispose of them. If this qualification had been introduced into the bill, it would have been a comparatively safe measure (hear, hear). At that period he had recommended that silver should be the standard of our currency as well as gold. The proposition was at the time, universally laughed at. But he was disposed to believe that there was some reason in what he then said, as an hon. member (Mr. Baring), who was an authority upon this subject, strongly enforced the propriety of recurring to a mixed currency. Whilst gold remained the sole standard, by allowing it to be legally exported, the standard was practically raised. This contracted the circulating medium, and caused prices to fluctuate according to the quantity of gold in the country; whereas, if the currency was a mixed one of gold and silver, the evil of a quantity of gold being removed out of the country would not be so suddenly and sensibly felt; and by the accession of new bullion, greater facilities would be afforded to the metallic currency we had thought proper to adopt. These opinions were urged at the time of passing this bill, but they were then treated with ridicule and contempt. "Oh no!" said the Government, "we will give you something better! we will introduce and establish a more perfect standard of currency;" and they determined upon gold, and gold alone. The country was assured that the new measure would form the basis of permanent prosperity; and certainly that prosperity continued till last year. But then an alteration took place; and what produced it? Not the issue of country bank notes; for the difference in the amount of them was but trifling, and even that difference, such as it was, was ascertained from the most fallacious of all criterions—the number of stamps issued. It was impossible, in the first place, to know how long the notes of bankers circulated; and then nothing varied so much as the number of stamps taken out by them at different periods. In seasons of adversity, when the circulation was diminished, a banker had not occasion for new stamps; but in seasons of prosperity, when his notes were in demand, he was obliged to take out a multitude of fresh stamps. But suppose that the country bankers had increased their circulation to the amount stated, they had an excuse for what they did, because they did not know that they were doing wrong. The Bank of England had likewise increased its issues, and as he thought unwisely and improperly; for the quantity of paper in circulation had certainly an effect on the exchanges, though not to the extent which the bullionists contended. But with regard to the increased issues of the Bank, Government had seen them, and had not remonstrated against them; at least he inferred so from the fact of their having made considerable use of them. They sold to the Bank the dead weight as it was called, and by so doing gave the Bank an opportunity for sending forth

an additional issue. Why had the Government resorted to that scheme? Because a cry had been raised throughout the country against the weight of taxation by which it was oppressed, and they saw no other way of getting rid of it. It was his opinion that the public had received considerable benefit from the Bank issue. It had led to a reduction of some of the assessed taxes, and also to converting the 5 per cent. stock into 4 per cent. stock, and the 4 per cent. stock into 3½ per cent. stock. There was some sense in this argument (laughter). The house would further observe that Government had entertained some fear that it would not be able to pay the dissentients to their plan of reducing the different stocks, and had therefore asked the Bank to pay them. The Bank, he believed, had done so to the amount of six millions, which occasioned another extensive issue. The house would likewise observe that Government reduced the interest on Exchequer-bills to 2½ per cent.—a circumstance which, combined with the issues of the Bank, had driven all the gold out of the country. All persons who held these bills during the war, when they found that they could no longer receive the high rate of interest which they had formerly received upon them, engaged in foreign loans, and risked their capitals in the various wild projects which rose up one after the other with unexampled rapidity. He recollected, that at the time when all these reductions were effecting, the rt. hon. gent. was holding out to the country, that the prosperity of which he boasted so much was founded on a substantial basis. That declaration, coming from so high a quarter, had excited a confidence which would not otherwise have existed among the dealers in shares. The repeal of the Bubble act increased that confidence, as did the vote which two or three of the ministers gave in favour of some of the new companies. The conduct of ministers in voting for such measures was very reprehensible, and the remarks which so humble an individual as himself had made upon the subject, had had the effect of driving the rt. hon. Sec. for Foreign Affairs out of the house (a laugh). That confidence was still farther augmented by the circumstance of the rt. hon. gent. (Mr. Huskisson) having become president of a company for the breeding of silk-worms—very innocently, he had no doubt, and without any interested motives—and by the daily announcement in the newspapers that several of the ministers patronized other schemes for the improvement of national resources. Conduct like this could not fail to produce an effect upon the country; and he therefore thought, that when they were discussing the cause of the present difficulties, and were laying all the blame of them on the country bankers, they ought to reserve a little share of it for those who had not turned the mind of the public in a proper direction, when they were enabled to do so by their talents, their eloquence, and their information. As to the security which banks should be obliged to give, he thought it sufficient either that they should be obliged to pay in gold, or that they should give a solid security for the amount of their small notes. But whatever change in the banking system might be introduced, it ought not to be introduced hastily. The question was, in a great degree, one of time. There was no occasion for hurry; delay would do good, and precipitation would certainly occasion mischief. If the house would let it go forth to the country that it was not at

employed in manufactures; but the evil of the system was felt in a different, though not in a less severe shape by the agricultural labourer. He did not know whether the committee which had been presided over by the noble lord (Lord John Russell) had gone very deeply into this subject: but, for his own part, he was satisfied that the payment of agricultural labourers rested upon as unsatisfactory grounds as possible. He would not take upon him to say in what respect this should be altered, because the subject required a more serious consideration than he was at this moment prepared to give to it; but he was quite sure that a system could not be sound or politic under which a man in perfect health and strength was unable to earn a sufficient sum for the support of himself and his family (hear, hear). Without, therefore, going into the causes of this state of things, he was quite convinced that the restoration of the circulation of the country to something like its ancient standard, would have the effect of permanently ameliorating the condition of the labouring classes of every description. It was upon them that the distress produced by the recent failures had fallen most heavily. The man who had 500*l.* or 1000*l.* of country bank-notes, could afford to wait until the affairs should be wound up, or the dividend paid. It was not so with the poor man, who held a 5*l.*, a 3*l.*, or a 2*l.* note. To him to wait would be to lose the money altogether; the inconvenience to which he was exposed, the expense of proving his debt, and other obstacles which such a failure always produced, were fatal to his claim; and he who was most in want of compensation was often the only one who did not receive it. Perhaps he (Mr. Peel) was induced to dwell on this subject, in consequence of the impression which had been made on him by the scenes of distress he had witnessed from the failure of the banks in Ireland. He verily believed that the history of no country could display instances of more aggravated suffering than those which he had himself seen in the province of Connaught. The breaking of Lord Ffrench's bank alone produced in that part of the country which was most intimately connected with it, more poverty, and more of that misery and crime which spring from poverty, than any other event within his recollection. Any plan, therefore, which would enable the country to get rid for the future of these disastrous results, should receive the countenance of the house. Having thus stated the reasons which satisfied him that the present system had a positive tendency, at some times, to increase that spirit of speculation which ran to so mad a height, and at others to make the languor which prevailed still more debilitating, he would proceed to consider whether the remedy proposed by his *rt. hon.* friend would prove effectual; and further, whether this was the proper time at which it should be applied. The last topic seemed to require no less consideration than the former; because, as an *hon. member* (Mr. Baring) said on a former evening, an operation might be necessary, but the moment for performing it must depend upon the nature of the danger. He was first led to examine the objection which had been alleged against the principle of the joint-stock banks, proposed by his *rt. hon.* friend; namely, that persons would not be found willing to risk their property in such experiments, and that the people in general

would not place sufficient confidence in those by whom the new establishments would be managed. He believed that gentlemen of property would be found, many more than enough to execute the proposed plan, who would be actuated not by the mere desire of profit, but by the wish to see a better, firmer, and more useful system of banking in their districts, and that they would lend the assistance of their capital and their exertions to ensure the success of such establishments. He hoped and most sincerely trusted, that the great obstacle to the proposed institutions, the want of a charter, would be removed. He hoped that the directors of the Bank of England would seriously consider whether any great advantage could result to themselves from the absence of a charter in the proposed establishments; and whether, on the other hand, great advantages would not be experienced by the country from their having that facility afforded to them (hear, hear). He declared that he could see no one advantage which the directors of the Bank of England could derive from the refusal to grant charters to country banking establishments. It was unquestionable that they had the right to refuse the grant if they chose; but he trusted that they would refrain from exercising that right (hear, hear). Having had occasion to mention the directors of the Bank of England, he would add that the conduct they had displayed during the recent crisis had increased the respect which he had before entertained for them. They had been placed in a most difficult situation; they had to perform an arduous and a double duty—to act at once for the advantage of the country, and for the protection of the interests of those persons who were more immediately connected with them. He could not conceive it possible for any body of men to have acted better, or to have exercised more judgment and liberality than the directors of the Bank of England (cheers). He wished that they would give one further instance of liberality by waving their right to withhold from the proposed establishments the charter which they would require. There would then be none of that want of confidence which had been anticipated; and the extended scale upon which the new banks would be established, would satisfy persons of their security, and they would not hesitate to give the direction of them to persons who would be chosen by themselves (hear, hear). This, he thought, would furnish a complete answer to the objections which had been raised as to the want of confidence. The success of such institutions was sufficiently shown by the example of Scotland, where they had subsisted for so many years, and of Ireland, where two banks of this nature had been established since the passing of the act of last session, and which presented every prospect of success.—He now came to the conclusion of his *rt. hon.* friend, in which he concurred,—that it would be impossible to maintain the circulation of 1*l.* and 2*l.* notes, together with a metallic currency (hear, hear). There could be no security till this system was altered, and a gold currency established. He had always thought that Mr. Ricardo had underestimated the amount of gold which was requisite to maintain a healthy currency. On the other hand, he was not inclined, as had been said by an *hon. member*, to saturate the country with gold. The *hon. member* (Mr. Baring) had overrated the currency in stating it at thirty or

forty millions. Whatever it might be, he had no fears of their being able to find gold enough to conduct all their ordinary affairs. What was wanted, was a supply of gold to make up for the country bank-notes. An hon. member had said, that it was impossible to ascertain the actual number of country notes in circulation, because all the returns that had been made were fallacious. Upon this point the hon. member's opinion differed from that of another hon. member (Mr. J. Smith), who had stated in his evidence before a committee of the house that the average circulation of country bank-notes was three years. The smaller notes the hon. member thought were usually in circulation about two years and a half, and the 5l. and 10l. notes somewhat longer; so that the average might perhaps be taken pretty accurately at three years: and the evidence of all the country bankers, and of the engravers of the notes who had been examined, confirmed this estimate. In the last three years, from the number of notes stamped, it appeared that the amount of the circulation had been 7,600,000l. This was the maximum as it appeared from the stamp-office returns; but no deduction was made for that proportion of the circulation which was always in the banker's own coffers. Every banker had frequently a considerable amount of the notes of other country bankers, which had been given in exchange for his own. Some deduction must be made too from the maximum on both these accounts, on account of the reduction in the circulation in consequence of the recent disastrous events. Perhaps for these and other reasons it would be considered an outside estimate of the country circulation to take it at 6,000,000l. But even if it should be rated at 7,000,000l., there was no reason to believe that it would not be possible to supply this sum in gold. Since 1819 there had been coined and issued from the Mint 25 millions of gold. Suppose that seven or eight millions had been exported, which was indeed an extravagant supposition, there were 17 millions remaining. He believed too that the prohibiting the issue of country bank notes would be the means of introducing into circulation many sovereigns which had been kept in the coffers of country bankers, partly from a prudent motive of precaution, and partly because they chose rather to see their own notes in circulation wherever they could accomplish it. The reasons which he had stated were those which induced him to think the remedy of his rt. hon. friend was a good one; and he had heard nothing stated in favour of postponing its present application, which induced him to think that desirable. The hon. member (Sir J. Wrottesley) thought that the country banks had the same right to issue notes as the Bank of England. But it should be remembered that the Bank charter was granted for a valuable consideration, at a time when the Bank of England lent its capital for the exigencies of the state. The only distinct proposition for postponement which had been made, was that the subject should be deferred for a month. He saw great objections to such a course. It would be holding out a notion that it was the intention of parliament to adopt the present measure at the end of that time; the whole of the session would probably be consumed in hearing evidence, until it would be too late to act upon it at all, and the embarrassment and confusion would be prolonged to a most injurious extent (hear, hear).

He was fully convinced that this was the time for putting the measure into practice, and that it had come to the question of "now or never." Either the remedy must be applied at the present moment, or it must be abandoned for ever. If it were proposed to wait until a time of greater prosperity, he should say, that such a time would, in his opinion, be less favourable than the present. In 1818, when a proposal had been made for taking security from the country bankers, great exertions had been made, and successfully made, to defeat that measure. It could not be expected, when a time of greater prosperity should arrive, that the country bankers would acquiesce in any similar measure if it should then be proposed. If it were true, as stated by an hon. member (Mr. T. Wilson), that the reduction of the country bank-notes had increased the circulation, and that gold was flowing into the country day by day in a larger stream, it was the more advisable to avail ourselves of this opportunity (hear, hear). This was a favourable time for effecting that restoration of the currency which was admitted to be so desirable, and it would be impolitic and unsafe to wait the moment of returning prosperity, which would make the country bankers more reluctant to agree to it, and more able to oppose it. To stand gazing on the bank in idle expectation, now that the river was passable, would be an irreparable mistake. The time would come when its tide would have increased—when

"Monte decurrens velut amnis, imbres

"Quem super notas aluere ripas,

"Fervet, immensusque ruit."

His conviction that the passage would then be impossible, induced him to urge it now; and if not made now, all hope of accomplishing it must be abandoned for ever (loud cheers).

Mr. Attwood said that great injustice had been done in many speeches made in the house, by referring the first symptoms of distress which had appeared, to the failures of the country bankers. It should be remembered that several London bankers had failed before any of the country bankers had stopped, and that their stoppage had rather been the consequence than the cause of the distress. He was inclined to believe that the cause was much nearer to the heart of the system than would be readily acknowledged. Before the panic commenced there was a suspicion afloat that Government were greatly embarrassed with respect to their pecuniary engagements with the Bank. It was known that they had applied to the Bank for accommodation under very dangerous circumstances. The rt. hon. gent. (Mr. Huskisson) had stated, that at one period, recently, Exchequer-bills and Government securities were not convertible into money. How did that happen? There must have been something very extraordinary in the state of the country when those securities became inconvertible. An hon. member (Mr. Baring) had complained that the capital of the Bank had been rendered unavailable by its transactions with Government. He should like to know how they could be made more available. The Bank were placed between these two difficulties—if at the close of the last year, they had pressed the merchants for repayment of the advances which they had made to them, they would have ruined them; and if they had proceeded to sell, as they ought to

employed in manufactures; but the evil of the system was felt in a different, though not in a less severe shape by the agricultural labourer. He did not know whether the committee which had been presided over by the noble lord (Lord John Russell) had gone very deeply into this subject; but, for his own part, he was satisfied that the payment of agricultural labourers rested upon as unsatisfactory grounds as possible. He would not take upon him to say in what respect this should be altered, because the subject required a more serious consideration than he was at this moment prepared to give to it; but he was quite sure that a system could not be sound or politic under which a man in perfect health and strength was unable to earn a sufficient sum for the support of himself and his family (hear, hear). Without, therefore, going into the causes of this state of things, he was quite convinced that the restoration of the circulation of the country to something like its ancient standard, would have the effect of permanently ameliorating the condition of the labouring classes of every description. It was upon them that the distress produced by the recent failures had fallen most heavily. To stand gazing on the bank in idle expectation, now that the river was passable, would be an irreparable mistake. The time would come when its tide would have increased—when

"Monte decurrens velut annis, imbris  
 "Quem super notas aluere ripas,  
 "Fervet, immensusque ruit."

His conviction that the passage would then be impossible, induced him to urge it now; and if not made now, all hope of accomplishing it must be abandoned for ever (loud cheers).

Mr. Attwood said that great injustice had been done in many speeches made in the house, by referring the first symptoms of distress which had appeared, to the failures of the country bankers. It should be remembered that several London bankers had failed before any of the country bankers had stopped, and that their stoppage had rather been the consequence than the cause of the distress. He was inclined to believe that the cause was much nearer to the heart of the system than would be readily acknowledged. Before the panic commenced there was a suspicion afloat that Government were greatly embarrassed with respect to their pecuniary engagements with the Bank. It was known that they had applied to the Bank for accommodation under very dangerous circumstances. The rt. hon. gent. (Mr. Huskisson) had stated, that at one period, recently, Exchequer-bills and Government securities were not convertible into money. How did that happen? There must have been something very extraordinary in the state of the country when those securities became inconvertible. An hon. member (Mr. Baring) had complained that the capital of the Bank had been rendered unavailable by its transactions with Government. He should like to know how they could be made more available. The Bank were placed between these two difficulties—if at the close of the last year, they had pressed the merchants for repayment of the advances which they had made to them, they would have ruined them; and if they had proceeded to sell, as they ought to

have done, the Government securities, he in his conscience believed that they would have ruined the Government (hear, hear). Had the Bank, towards the close of the last year, before the panic commenced, when the question was not with respect to the bankers, but with respect to the Government and its embarrassments, carried the Exchequer-bills into the market, and made them available at whatever price they would bring, the Government paper would have suffered a depreciation to an extent which it was impossible to conceive—to such an extent that they would have received no payment for taxes except in their own paper. As it was, Government were unable to fulfil their engagements except by going to the Bank, and humbly requesting them to consider the state of the country, and afford their assistance—in fact, they placed themselves in a state of vassalage to the Bank (hear, hear). For many years a great mass of debt had existed on the part of Government to the Bank. In 1822 that mass was enlarged. In that year ministers increased the debt of Government, as a means of affording relief to the distresses of the country which had been occasioned by Mr. Peel's bill. The bank then issued notes to a considerable amount—a measure totally inconsistent with the permanency of the state of currency established by that bill. To that bill all the present embarrassments were attributable. The object of the measure was to make the country pay debts in a currency different from that in which they were contracted (hear, hear). At the present moment, however, they were not a step nearer to the effecting of that object than when they first set out. A similar measure was tried in 1792, and failed. On both occasions the country had been totally unable to proceed under the pressure of its burden. On both occasions the country was placed in a condition of calamity, in which it appeared doubtful whether the people would sink under the ill-advised attempt of Government, or Government would be overturned by its own rash undertaking. Twice had this state of things occurred, and twice had the country been relieved from depression, by the adoption of measures totally inconsistent with the principle, by acting upon which the depression had been produced. The cause of the distress on both occasions was the attempt to establish a metallic currency, and the remedy had been found in issues of paper. Ministers were now about to try the experiment again, and he warned them that it would occasion still greater calamities than any which it had previously occurred. He begged to call the attention of the house to the nature of the measures which were adopted in 1822, and by which the country procured relief. In 1821, the circulation of the Bank was at its lowest amount. In 1822 and 1823 they considerably increased their circulation. This increase was forced; it bore all the character of Government money, and was founded on Government securities. This augmentation of the circulation of the Bank, it should be remembered, was not called for by the mercantile part of the community. On the increase of the Bank of England's circulation was founded the increase of the country bank paper. The latter followed the former, and was no more than proportionate to it (hear, hear). This was the real speculation and overtrading of which rt. hon. gent. had said so much. The paper which had been forced on the country by the measures of Government adopted for

Sess. 1828.

that express object, was drawn in by the operation of Mr. Peel's bill. To this contraction of the circulation were owing all the recent calamities; and a further contraction by the measures proposed would as the rt. hon. sec. (Peel) seemed to anticipate, create a wider scene of still greater calamity and danger. It was impossible that the circulation could be increased without raising the price of commodities, or diminished without causing a proportionate fall of prices. It had been stated that the Bank of England notes found their way back to the Bank. He would be glad to know how it was possible that any of the six millions of notes issued by the Bank since 1822 could return to the Bank. The session of 1823 commenced with the precious project for relieving the country by increasing the circulation by means of borrowing from the Bank. The plan formed a principal topic in the speeches of the noble lord (Liverpool), and the rt. hon. gent. (Mr. Huskisson). It was openly avowed that the Bank lent the money to Government for the express purpose of increasing the circulation. The rt. hon. gent. spoke of it as a "measure of accommodation," calculated to "afford some relaxation of the pressure of Mr. Peel's bill." Then came the project of raising money upon the dead weight, the real object of which was to obtain an issue of Bank-notes. The issue of notes accordingly took place. Now, it was impossible that the notes thus sent forth could ever get back to the Bank until there was a demand for gold (hear, from Mr. Peel); but the demand for gold would not exist until the rate of exchange had been altered, and that alteration could not take place until the value of money, and consequently the value of all commodities throughout the country, had undergone a change. There were persons who contended that no depreciation of the value of money had taken place, because the price of gold had not advanced. In order to measure the depreciation of money by the price of gold, it was necessary to consider what the effect would be if the Bank were to shut its doors, and keep out its twenty-one millions of circulation. He had no doubt that under such circumstances, the price of gold would advance 20 or 30 per cent. (hear, hear). That was the way to measure the depreciation of money; and if they did not adopt that mode of measuring it, how could they form any calculation on the subject? The depreciation would be in proportion to the increase of the circulation. The addition of a million of notes would cause a sensible depreciation, but the addition of six millions would produce a very violent one. The rate of prices was the best criterion of the value of money. The end of 1821 was, as he had before stated, the period when the circulation of Bank of England notes was at its lowest amount. The average price of grain throughout 1822 was 43s. per quarter. The Chancellor of the Exchequer then said, that the country was reviving—that it was recovering from its difficulties. Gentlemen should consider whether it was possible ever to obtain a higher price for grain than 43s. per quarter, under a state of the currency such as that which ministers were endeavouring to establish. The house had heard much about the importation of gold, and doubts were expressed as to the possibility of obtaining enough for the use of the country. The quantity had nothing at all to do with the question. A country like this could as easily procure 20 millions of gold as 5 mil-

make any such sudden and violent alteration in its issues. He, for one, was, on that occasion, for withdrawing the one pound notes from circulation, because he felt that it was proved by the experience of years, that small notes and a metallic currency could not circulate together (hear, hear). He thought it right that they should adopt the wholesome advice of the hon. alderman (Heygate), and tread in the steps of their forefathers. There was no period of our history at which there was greater distress or greater difficulty and dismay than in 1793. At that period, there was published by Mr. Burke, a gentleman of no mean or doubtful authority, a book, every point and sentence of which was questioned at the time, but of which every prophecy was subsequently most fully established. Mr. Burke, in describing the French revolutionary proceedings, pointed out the mistakes into which they fell with respect to our paper currency, and observed, that they seemed to imagine that the prosperity of Great Britain grew out of her paper currency, whereas, in point of fact, the paper currency grew out of her prosperity (hear, hear). An hon. member (Mr. Baring) had stated an opinion, to which he had listened with surprise and regret, that Government had so clogged and embarrassed the Bank, that that body were no longer fit and proper agents to manage the circulating medium of the country (hear, hear). It was said, in the first place, that the advances made by the Bank to Government, amounted to 7,000,000*l.* It was added, that what were called "the deficiencies"—namely, the advances on the faith of the receipts of the current quarter, made by the Bank to the Government, amounted to 5,500,000*l.* The hon. member (Mr. Baring) had fixed the sum necessary for paying off the  $4\frac{1}{2}$  per cents. at 3,700,000*l.* The "dead weight," as it was termed, he described as swallowing up 8,000,000*l.* though in fact it appeared only to require 6,500,000*l.*; and lastly, he had noticed the sum laid out by the Bank on mortgage, which amounted to 1,500,000*l.* Now the objection of the hon. member did not seem to be so much directed against the amount as against the nature and principle of the different charges. The tendency of the hon. member's speech went to this point—that Government had laid this heavy load on the Bank, and that the Bank, in consequence, was rendered incapable of performing its proper duties. He would therefore examine how far the proposition of the hon. member could be fairly sustained. He would, in the first place, observe that the sums lent by the Bank on mortgage were no more a concern of the Government than of the hon. gent. himself. The Bank thought fit (and certainly he did not blame them), in a period of very great pressure, to do what appeared to them to be a great public good, at the same time that, by making use of their resources, they benefited themselves. They thought they had a right to obtain a just advantage for the body of proprietors, by advancing, on landed estates, the sum of 1,500,000*l.* Whether they acted wisely or unwisely in entering on this speculation, was a matter with which the government had nothing to do. It was entirely in their mercantile capacity, and with reference to their mercantile discretion, that they made the advance in question. Then as to the "dead-weight," he would profess fairly for himself, that he did not understand the system. The attempt to understand a subject

—and, in saying so, he meant nothing offensive to the hon. alderman (Heygate)—did not always enable men to arrive at that understanding (a laugh). He was serious—and he must honestly profess, that he did not understand the plan, though other gentlemen might. But, whether the Bank made a prudent bargain or a foolish one with the Government, or whether the Government struck a wise bargain or an improvident one with the Bank—had nothing to do with his argument. The Government sold an annuity to the Bank. The Bank took up the transaction in their mercantile capacity. They might, if they had pleased, have gone into the market the very next day, and disposed of their purchase to the best advantage; and the Government were no more responsible for the Bank holding in their hands that which they had bought from Government, than they were accountable for any indifferent transaction of that body. They had no more to do with it than they would have had with the conduct of the hon. member (Mr. Baring), if, having taken a share in a loan, he chose to keep that share entirely in his own hands, when, if he pleased, he might have sold it. This was the true state of the case, and he (Mr. Canning) must therefore withdraw the sum connected with the dead-weight from the hon. gent.'s argument; because, if in consequence of their bargain, the Bank were incapacitated from doing any act beneficial to the country, it was their own fault, and not the fault of the government. He had now, he thought, fairly disposed of 6,500,000*l.* out of the burden of 24,000,000*l.* with which the hon. member alleged that the Government had loaded the Bank. The next sum to which the hon. member had adverted, was that of 3,700,000*l.* to meet the dissentients on the 4 and 5 per cents. But it should not be forgotten, that that sum was in regular course of payment, at the rate of 750,000*l.* per quarter, or 3,000,000*l.* per annum. So that, in the course of this year but 750,000*l.* would be due. Indeed, as his rt. hon. friend (the Chancellor of the Exchequer) intimated, the debt would be entirely done away in the present year. There came the amount of Exchequer bills, and what was denominated "deficiencies." With respect to the deficiencies, what, he asked, was the fairness and justice of the hon. gent.'s argument? The hon. gent. thought fit to complain, because the Bank was called upon to pay quarterly dividends on certain days, for which advance the Bank was repaid by the growing produce of the revenue; that therefore that great body must be considered as out of pocket during the whole of each quarter. The hon. member took no notice whatever of the gradual reduction of the sum required. As he (Mr. Canning) was not much versed in matters of this nature, he would endeavour to find an illustration of his view of this case in private life. Suppose, then, that any gentleman were in debt, and thought proper to set aside 4000*l.* a-year, to be advanced in quarterly payments, for the arrangement of his affairs: suppose this gentleman should say to the agent employed in managing the payments, "All you have to do is to make the quarterly payments, and reimburse yourself out of my rents as they come in. If you are in advance for the quarter beyond what my rents may satisfy, then you may charge interest on the advance; but, if it happen that you have rents of mine in your possession beyond what is required for the pay-

ment of the annuity, I shall ask you no interest for the use of that money" (hear, hear). Now he would ask any man, if this would not be a profitable contract on the part of the agent? But this was precisely the situation of the Bank; and he should be glad to know whether the Bank did not derive a profit from this transaction with Government (hear, hear)? Was it not most erroneous to say that the Bank was out of pocket, when that body was receiving money for the discharge of the quarter's dividends six weeks, perhaps, before the payment was made; and when, on the one side, the Bank charged interest if that body happened to be in advance; while, on the other, if they had public money in their hands, they paid no interest at all? The simple fact was, that in making these advances, the Bank of England were the bankers of the Government, dealing just as the private banker would do with reference to a private gentleman. The Bank made advances, as the private banker would do, and, like him, they were indemnified for it. And how, he asked, had this system worked for the last year? On the 5th of Jan. 1824, the sum advanced by the Bank was 1,540,000*l.*, odd, all of which was cleared off by the end of the next quarter—and, during the interval, interest was paid on the money advanced; on the 5th of April, there was an advance of 1,690,000*l.*, which was liquidated by the 28th of May, and from the 28th of May, till the 5th of July, the Bank remained in possession of a certain portion of the revenue of Government, with which it was to deal as it deemed most conducive to its own profit, without being called on for the payment of interest. On the 5th of July, the advance on the part of the Bank was 1,600,000*l.*, which was cleared off by the 3d of September; and from that period, to the 10th of October, the Bank held a part of the revenues of the Government in their hands, which they might use in the most profitable manner. On the 10th of October the advance made by the Bank was 1,400,000*l.*, which was cleared off on the 10th of December; so that the Bank had, from that period to the 5th of January, a portion of the public revenue in their hands, on which of course they would endeavour to realize as much profit as possible. On the 5th of January, in this year, the advance made by the Bank was 5,500,000*l.*; and on the day on which he (Mr. Canning) was speaking, 2,800,000*l.* of that sum was paid, and the whole was in the course of daily reduction. Was this, then, a course of proceeding that could fetter the transactions of the Bank? He would maintain that it was an aid, instead of an impediment; and if the Government could withdraw their custom from the Bank, and place it elsewhere, so far from being relieved from a burden, the Bank would be deprived of a source of profit. He found in the bullion reports of 1812 and 1819, a distinct recommendation, that the advances of the Bank to Government ought never, in fairness, to be stated, without at the same time taking into the account the balances which the Government were in the habit of leaving in the hands of the Bank. And what was the average of those balances? The average of the balances which the Bank derived from the Government, and which the Bank was authorized to use for its own profit, was no less than 7,000,000*l.* a-year. He had thus reduced the 24,000,000*l.* (which were described as cramping the exertions of the Bank), item by item, till nothing of the burden said to

be imposed by government remained except the 6,000,000*l.* or 7,000,000*l.* of Exchequer-bills which were held by the Bank (hear, hear). He was sure the hon. member did not mean to say—nay, he could not mean it—that this last was an objectionable item. The original charter of the Bank recognized it. That loan was coeval with the constitution of the Bank; it was the foundation of the whole superstructure; and when the period might arrive, to strike the advances of the Bank on one side, and the balances of the Government on the other, it must not be left out of the account, that the Bank were dividing 8 per cent. on a capital of 14,000,000*l.* instead of 7 per cent. on the original capital of 12,000,000*l.* The hon. member was aware at what time, and under what circumstances, this change had been effected. It had accrued from a series of bonuses, divided amongst the Bank proprietors, during the period of the suspension of cash payments. This was the very fact on which, in his (Mr. Canning's) speeches on the bullion question, he founded this plain and simple proposition—that, during the continuance of the restriction on cash payments, the Bank should not be allowed to increase its dividends. Why then, looking to all the circumstances, he thought there was nothing in the state of the Bank that required or justified the complaints of the hon. gent. He thought it was a misfortune that the hon. gent. should have made out his proposition, even to the extent of this last item; because, as he gathered from one part of the hon. gent.'s speech, he seemed to look to some other measure, to some plan not yet divulged, for affording temporary relief; and it appeared to him that it would be the greatest imaginable misfortune, if any thing were proposed, that should seem to induce an idea, that this mighty establishment was not fit to wield, with advantage, the great powers which were entrusted to it. But, as far as they had gone, he would contend they were in a situation greatly to benefit the country; nay, he would declare, that they were more disembarassed, at the present moment, than they had been for a long series of years.—If, then, there were no difficulty, as between the Bank of England and the Government, in carrying into effect the proposition of his rt. hon. friend, what were the difficulties militating against that proposition, which existed with respect to the country banks? It was admitted, that they only had an approximation to the amount of country bank notes in circulation. They would, perhaps, rate the amount rather too high at 6,000,000*l.* and rather too low at 4,000,000*l.* Well, then, what was the effect of his hon. friend's proposition? Why, that this amount, be it 6,000,000*l.* or 4,000,000*l.* should, in the course of three years, be withdrawn from circulation. There were, they had been told, about 800 country banks—that number was perhaps diminished by the late unfortunate events. But if they divided between the number of country banks he had mentioned, the amount of 1*l.* and 2*l.* notes which it was calculated they had in circulation, it would give a proportion of about 8000*l.* to each bank; and to withdraw this sum of 8000*l.* from circulation, it was proposed to allow a period of three years, or in other words, time was given to enable the bankers to withdraw something more than 2000*l.* and something less than 3000*l.* per annum, from their small note circulation. After all they had heard of the solidity and re-

make any such sudden and violent alterations in its issues. He, for one, was, on that occasion, far from withdrawing the one pound notes from circulation, because he felt that it was proved by the experience of years, that small notes and a smallish currency could not circulate together well. He thought it right that they should accept the wise counsel of the hon. member (Hoygate), and stand in the steps of their limitations. There was no period of our history at which there was greater distress or greater difficulty and misery than in 1793. At that period, there was published by Mr. Burke, a gentleman of no mean or doubtful authority, a work, every point and sentence of which was questioned at the time, but of which every prophecy was subsequently most fully established. Mr. Burke, in describing the French revolutionary proceedings, pointed out the mistakes into which they fell with respect to our paper currency, and observed, that they seemed to imagine that the prosperity of Great Britain grew out of her paper currency; whereas, as a point of fact, the paper currency grew out of her prosperity, *hear, hear*. As hon. member Mr. Baring had stated an opinion, to which he had listened with surprise and regret, that Government had so clogged and embarrassed the Bank, that that body were no longer fit and proper agents to manage the circulating medium of the country (*hear, hear*). It was said, in the first place, that the advances made by the Bank to Government, amounted to 7,500,000*l.* It was added, that what were called "the deficiencies"—namely, the advances on the faith of the receipts of the current quarter, made by the Bank to the Government, amounted to 3,500,000*l.* The hon. member Mr. Baring had fixed the sum necessary for paying off the 4½ per cents. at 3,750,000*l.* The "dead weight," as it was termed, or described as swallowing up 5,000,000*l.* though in fact it appeared only to require 6,500,000*l.*; and lastly, he had noticed the sum laid out by the Bank on mortgage, which amounted to 1,500,000*l.* Now the objection of the hon. member did not seem to be so much entered against the amount as against the nature and principle of the different charges. The tendency of the hon. member's speech went to this point—that Government had laid this heavy load on the Bank, and that the Bank, in consequence, was rendered incapable of performing its proper duties. He would therefore examine how far the proposition of the hon. member could be fairly sustained. He would, in the first place, observe that the sums lent by the Bank on mortgage were no more a concern of the Government; than of the hon. gent. himself. The Bank thought fit; and certainly he did not blame them, in a period of very great pressure, to do what appeared to them to be a great public good, at the same time that, by making use of their resources, they benefited themselves. They thought they had a right to obtain a just advantage for the body of proprietors, by advancing on landed estates, the sum of 1,500,000*l.* Whether they acted wisely or unwisely in entering on this speculation, was a matter with which the government had nothing to do. It was entirely in their mercantile capacity, and with reference to their mercantile discretion, that they made the advance in question. Then as to the "dead-weight," he would profess fairly for himself, that he did not understand the system. The attempt to understand a subject

—and, in doing so, he meant nothing offensive to the hon. member (Hoygate)—did not always enable men to arrive at that understanding a subject. He was serious—and he must honestly confess, that he did not understand the point, though other gentlemen might. But, whether the Bank made a prudent bargain or a foolish one with the Government, or whether the Government struck a wise bargain or an imprudent one with the Bank—had nothing to do with his argument. The Government sent an advance to the Bank. The Bank took as the transaction in their mercantile capacity. They might, if they had pleased, have gone into the market the very next day, and disposed of their purchase to the best advantage; and the Government were no more responsible for the Bank dealing in their hands that which they had bought from Government, than they were accountable for any indifferent transaction of that body. They had no more to do with it than they would have had with the conduct of the hon. member (Mr. Baring), if, having taken a share in a loan, he chose to keep that share entirely in his own hands, when, if he pleased, he might have sold it. This was the true state of the case, and he (Mr. Canning) must therefore withdraw the sum connected with the dead-weight from the hon. gent.'s argument; because, if in consequence of their bargain, the Bank were incapacitated from doing any act beneficial to the country, it was their own fault, and not the fault of the government. He had now, he thought, fairly disposed of 6,500,000*l.* out of the burden of 24,000,000*l.* with which the hon. member alleged that the Government had loaded the Bank. The next sum to which the hon. member had adverted, was that of 3,700,000*l.* to meet the disbursements on the 4 and 5 per cents. But it should not be forgotten, that that sum was in regular course of payment, at the rate of 750,000*l.* per quarter, or 3,000,000*l.* per annum. So that, in the course of this year but 750,000*l.* would be due. Indeed, as his hon. friend (the Chancellor of the Exchequer) intimated, the debt would be entirely done away in the present year. Then came the amount of Exchequer bills, and what was denominated "deficiencies." With respect to the deficiencies, what, he asked, was the fairness and justice of the hon. gent.'s argument? The hon. gent. thought fit to complain, because the Bank was called upon to pay quarterly dividends on certain days, for which advance the Bank was repaid by the growing produce of the revenue; that therefore that great body must be considered as out of pocket during the whole of each quarter. The hon. member took no notice whatever of the gradual reduction of the sum required. As to Mr. Canning's was not much versed in matters of this nature, he would endeavour to find an illustration of his view of this case in private life. Suppose, then, that any gentleman were in debt, and thought proper to set aside 4000*l.* a-year, to be advanced in quarterly payments, for the arrangement of his affairs; suppose this gentleman should say to the agent employed in managing the payments, "All you have to do is to make the quarterly payments, and reimburse yourself out of my rents as they come in. If you are in advance for the quarter beyond what my rents may satisfy, then you may charge interest on the advance; but, if it happen that you have rents of mine in your possession beyond what is required for the pay-

which he held in his hand), a meeting of the magistrates, the Boroughreeve being in the chair, was called, and a strong protest was put forth against such an issue. A general determination prevailed to oppose the introduction of that system, in the absence of which some gentleman seemed to suppose the ordinary business of the country could not go on. There was a population of nearly 2,000,000 in and around Manchester. In the metropolis and its neighbourhood there was also an immense population, amongst whom the circulation of small notes was unknown. Here he might say there was a population of 4,000,000 of Englishmen who knew not what a 1l. note was, and yet they were gravely told that that species of circulation was essential to the well-being of trade and commerce (hear, hear). Why, it was not many weeks ago since a deputation from one of the dockyards waited on his Majesty's government, with the information that they had not the means of paying the wages of the workmen. Every bank in the neighbourhood had failed; not a bank-note was to be procured, and the consequence was, they were obliged to seek for relief in the metropolis. Was not this a situation the recurrence of which ought to be guarded against? Surely this was a sufficient proof of insecurity to induce the legislature, when they examined the basis of the circulation, to put it at once on a secure and sound footing. It could not be placed on a sound footing unless its basis were the precious metals. He did not speak of payments in gold alone; he used the phrase "the precious metals," in order that he might not exclude from due consideration at the proper time the suggestion which had been thrown out by the hon. member (Mr. Baring). It was in vain to think of forming a gold circulation so long as the 1l. paper remained. While that remained the gold must necessarily disappear. That minor paper circulation would choke up the channel of trade, and when the gold attempted to flow into it, the paper would resist it; but clear away that paper circulation, give bills of exchange to an amount infinitely greater than the notes themselves; they might pile such securities mountains high; but if in the ordinary commerce of life they irrigated the base of those securities with gold, they would answer every purpose, and would amply uphold public credit and public confidence. Some gentlemen were surprised that the same persons who condemned the smaller species of bank-notes should declare themselves in favour of that of a higher denomination. The surprise, however, was, that any body should be surprised at the distinction. The 1l. note had qualities which the larger note had not. The larger note covenanted to pay the equivalent in metal; but, with respect to the 1l. note, the promise was uniformly broken. When they came to this lower denomination of notes, and found that they could get nothing but paper in return for paper, what was the consequence? It produced a rise of prices, which destroyed the reward of labour, and consequently deprived the working classes of the means of subsistence. The 1l. note differed in those respects from the larger note. It was, in fact, a substitute for the sign and superscription of the sovereign: it was an assumption of the prerogative of the Crown, and it touched the nearest interests of the labouring classes. The resolution of his rt. hon. friend would correct these evils. It had

every recommendation to the confidence of the house; and he believed that the passing of that resolution would do more to restore confidence and credit, and to show that it was determined to maintain the circulation of the country on an established, permanent, and immoveable basis, than could be effected by any other measure (hear, hear). He was perfectly convinced that the legislature could not do the same quantity of good in any other way with such a slight effort, and in so easy and tranquil a manner. It was, however, impossible to have heard the opposition to this measure without discovering that the opponents of it were divided into two classes. One, and he was afraid the larger class, while they objected to the time, the mode, and the degree, did, in effect, cover under those grounds of opposition a rooted, fundamental, unsparing, and undistinguishing objection to the circulation of any other currency except that which was adopted during the whole period of the war. It was not necessary to argue with that class on the proposition of his rt. hon. friend. That was too narrow a point. The difference between them and those who supported his rt. hon. friend's measure, was so large, that it would be fighting a shadow to oppose them on that simple question. They were favourable to an unbounded and irresponsible currency—that sort of currency in which the promise might be made to the eye but never kept to the understanding (hear, hear). There was, however, another class of opponents, at the head of whom was the hon. member for Taunton (Mr. Baring), who, he would say, was imbued with as just an idea of a sound circulating medium, as any of the supporters of the proposition. Some of this class, however, objected to the alteration, because they considered that there was something peculiarly bad in the time. The present time could only be compared with the past and the future. If the hon. member (Mr. Baring) wished this measure to have been taken long ago, he (Mr. Canning) entirely concurred with him in the justice of his opinion (hear, hear). Had such been the case, there would have been no necessity for the bill which was brought in in 1822: the matter would have gone by, and they would have been spared the present discussion. But with regard to the future, he confessed he felt that no time was more likely, or could be more happy for such an effort, than the present moment. How stood the law on the subject? And here he called on those gentlemen who, under the mask of an opposition to this resolution, wished for a perpetual prolongation of the issue of small paper, to recollect that the law, as it at present stood, would ultimately put an end to the 1l. notes. That extinction, however, under the existing law, would be coincident with the expiration of the Bank charter; and he would appeal to those gentlemen, whether that would be a convenient time to have a question of this important nature taken up? He presumed those gentlemen would not attempt to extend the issuing of small notes beyond the period to which the Bank charter was limited, unless they had the avowed intention of making the system perpetual. All that was proposed was, to get rid of this system four years sooner than had been contemplated. The abundant space of three years was still to be allowed for carrying into effect the alteration; and not one of the many gentlemen who wished for a little more delay—only a little more de-

spectability of the country banks, surely it was not to be said, when they were called on in the course of three years to withdraw so inconsiderable a sum, that it would be such a strain on their capacity, that they could not comply without drawing ruin and confusion on the country. He was quite sure that his *rt. hon. friend's* proposition was one, that, when reduced to its dimensions, and gauged by the rules of arithmetic, would shrink into so small a compass, that individuals would be surprised to think that it could, by any power of argument, be swollen to such apparent magnitude and importance. But while he denied that the effort was one which the country could not easily bear, and while he observed that some gentlemen treated the proposition as one of too narrow and confined a nature to produce any great effect, he deemed it necessary to remind the house, that however diminutive the immediate object might appear, the proposition was mighty in principle. It was, he repeated, mighty in principle, if its effect should be to restore, in the opinions of men, the fixed and unerring principle of a metallic standard for the country. If it produced such an effect, this effort, weak and puny as it might appear, would have achieved a mighty good, and conquered a growing and incalculable evil. It had been his (*Mr. Canning's*) fortune to hear and know *Mr. Burke*. He (*Mr. Canning*) had come into parliament two years before that great man had quitted public life, and he had received a letter from him on this subject—the only letter which he had ever received from him—and which he had treasured ever since as a memorial of departed wisdom and greatness. The letter was written at Bath, from that bed from which he never afterwards rose. *Mr. Burke* concluded his letter with a qualified approbation of the great measure which was then under discussion. His last expression, however, was, "Tell Pitt not to issue 11. notes, for if he does, he will never see a guinea again (hear, hear). *Mr. Burke* was admitted to have been a great politician, and this letter showed that he was no ordinary prophet. Few, very few persons at the time took this view of the subject, and they thought that those who prognosticated ill of the system were guilty of exaggeration. One-pound notes were abundantly issued, and at length when he (*Mr. Canning*) and the *hon. gent. (Mr. Baring)* were active in the debates on the finance of the country, a resolution was brought forward, which still stood on the records of that house, which "hedged" the pound note with a "divinity" which was never before supposed to belong to it (laughter). In the division of that day, he and the *hon. gent.* opposed that resolution to which his noble friend (*Lord Bexley*) was, he believed, the god-father rather than the father (a laugh). Now he would argue, seriously, that the existence of that resolution formed a very good reason for acceding to the proposition of his *rt. hon. friend*. This was evident to every thinking man; and the fact became still more manifest from something which passed in that house in the course of last year. There was a sort of obscure notion prevalent through the country, that the one-pound country bank-note was not convertible into cash on demand. This appeared from a petition presented by an *hon. member (Mr. Hume)*, in which it was stated that a country banker refused cash for a one-pound note. The banker mistook the law. It was upon this occasion

that the declaration with respect to those notes, which an *hon. member (Mr. Attwood)* was pleased to term so uncalled for, was made. That *hon. member* said, that in passing the present resolution they would be doing more mischievous things than they could imagine at present. Now that *hon. member* must be a very inattentive observer, if he did not perceive in the mistake which he (*Mr. Canning*) had noticed,—a mistake existing in the mind of an educated and practical man—a germ of danger which rendered it necessary that the legislature should interfere for the purpose of its removal, and for the security of the public. As to whether ministers had or had not repented of the declaration made at that time, that they never would agree to another suspension of cash payments, he would speak his opinion boldly. The *hon. member* seemed to think that some period might arrive when the propriety of that resolution might be shaken. For himself, he would say that he never thought of such a thing; and if any person supposed that that resolution had at any time been shaken, he would answer for himself and his colleagues, that such had never been the case, no, not even for a moment (cheers). An *hon. member (Mr. Baring)* had observed that the time might come when hard necessity might compel ministers to depart from that resolution. That *hon. member* was mistaken. What ministers said was:—"We will not fix on the Bank a coercive measure to prevent them from paying in specie." The *hon. member* added, that times might arrive which would induce the Bank to refrain from paying in cash. That was another proposition. He had no more idea, however, of the arrival of such a state of things than he had of a general convulsion of nature. Still he would not assert that such a time might not come; but this he would say, that no time would ever come when, to ward off the danger apprehended by the Bank, he and his colleagues would consent to interpose the powers of Government for the purpose of suspending the metallic currency of the country, and introducing in its place a spurious issue of Bank paper (cheers). If, then, there were no difficulty in taking away the small notes from circulation; and if, on the contrary, it would appear that benefit would result from that proceeding, he would ask of those who opposed the measure, to point out what good could be derived from supporting the issue of such paper,—he would even ask them whether its continuance was so harmless as to demand no notice? Was there nothing beyond the swelling of prices, and the raising the value of commodities, on which he would not touch, for fear of giving offence? Was there, he would ask, no practical reason which came home to their breasts, to call for an alteration in the system? Were there no opinions in favour of those who supported this proposition? Was there no great district where those small notes never were admitted? Did not gentlemen know that a project for the issue of one-pound notes had been unsuccessfully tried some time ago at Manchester? The parties wishing for a circulation of that kind comprised names of so high a character as to put beyond all doubt their power of discharging any demands that might be made on them. He need only mention the names of *Lloyd* and *Hayward* to show that no doubt or distrust could be entertained of the leading parties. Nevertheless, when they endeavoured to issue 11. notes (a specimen of

which he held in his hand), a meeting of the magistrates, the Boroughreeve being in the chair, was called, and a strong protest was put forth against such an issue. A general determination prevailed to oppose the introduction of that system, in the absence of which some gentleman seemed to suppose the ordinary business of the country could not go on. There was a population of nearly 2,000,000 in and around Manchester. In the metropolis and its neighbourhood there was also an immense population, amongst whom the circulation of small notes was unknown. Here he might say there was a population of 4,000,000 of Englishmen who knew not what a 1l. note was, and yet they were gravely told that that species of circulation was essential to the well-being of trade and commerce (hear, hear). Why, it was not many weeks ago since a deputation from one of the dockyards waited on his Majesty's government, with the information that they had not the means of paying the wages of the workmen. Every bank in the neighbourhood had failed; not a bank-note was to be procured, and the consequence was, they were obliged to seek for relief in the metropolis. Was not this a situation the recurrence of which ought to be guarded against? Surely this was a sufficient proof of insecurity to induce the legislature, when they examined the basis of the circulation, to put it at once on a secure and sound footing. It could not be placed on a sound footing unless its basis were the precious metals. He did not speak of payments in gold alone; he used the phrase "the precious metals," in order that he might not exclude from due consideration at the proper time the suggestion which had been thrown out by the hon. member (Mr. Baring). It was in vain to think of forming a gold circulation so long as the 1l. paper remained. While that remained the gold must necessarily disappear. That minor paper circulation would choke up the channel of trade, and when the gold attempted to flow into it, the paper would resist it; but clear away that paper circulation, give bills of exchange to an amount infinitely greater than the notes themselves; they might pile such securities mountains high; but if in the ordinary commerce of life they irrigated the base of those securities with gold, they would answer every purpose, and would amply uphold public credit and public confidence. Some gentlemen were surprised that the same persons who condemned the smaller species of bank-notes should declare themselves in favour of that of a higher denomination. The surprise, however, was, that any body should be surprised at the distinction. The 1l. note had qualities which the larger note had not. The larger note covenanted to pay the equivalent in metal; but, with respect to the 1l. note, the promise was uniformly broken. When they came to this lower denomination of notes, and found that they could get nothing but paper in return for paper, what was the consequence? It produced a rise of prices, which destroyed the reward of labour, and consequently deprived the working classes of the means of subsistence. The 1l. note differed in those respects from the larger note. It was, in fact, a substitute for the sign and superscription of the sovereign: it was an assumption of the prerogative of the Crown, and it touched the nearest interests of the labouring classes. The resolution of his rt. hon. friend would correct these evils. It had

every recommendation to the confidence of the house; and he believed that the passing of that resolution would do more to restore confidence and credit, and to show that it was determined to maintain the circulation of the country on an established, permanent, and immovable basis, than could be effected by any other measure (hear, hear). He was perfectly convinced that the legislature could not do the same quantity of good in any other way with such a slight effort, and in so easy and tranquil a manner. It was, however, impossible to have heard the opposition to this measure without discovering that the opponents of it were divided into two classes. One, and he was afraid the larger class, while they objected to the time, the mode, and the degree, did, in effect, cover under those grounds of opposition a rooted, fundamental, unsparing, and undistinguishing objection to the circulation of any other currency except that which was adopted during the whole period of the war. It was not necessary to argue with that class on the proposition of his rt. hon. friend. That was too narrow a point. The difference between them and those who supported his rt. hon. friend's measure, was so large, that it would be fighting a shadow to oppose them on that simple question. They were favourable to an unbounded and irresponsible currency—that sort of currency in which the promise might be made to the eye but never kept to the understanding (hear, hear). There was, however, another class of opponents, at the head of whom was the hon. member for Taunton (Mr. Baring), who, he would say, was imbued with as just an idea of a sound circulating medium, as any of the supporters of the proposition. Some of this class, however, objected to the alteration, because they considered that there was something peculiarly bad in the time. The present time could only be compared with the past and the future. If the hon. member (Mr. Baring) wished this measure to have been taken long ago, he (Mr. Canning) entirely concurred with him in the justice of his opinion (hear, hear). Had such been the case, there would have been no necessity for the bill which was brought in in 1822: the matter would have gone by, and they would have been spared the present discussion. But with regard to the future, he confessed he felt that no time was more likely, or could be more happy for such an effort, than the present moment. How stood the law on the subject? And here he called on those gentlemen who, under the mask of an opposition to this resolution, wished for a perpetual prolongation of the issue of small paper, to recollect that the law, as it at present stood, would ultimately put an end to the 1l. notes. That extinction, however, under the existing law, would be coincident with the expiration of the Bank charter; and he would appeal to those gentlemen, whether that would be a convenient time to have a question of this important nature taken up? He presumed those gentlemen would not attempt to extend the issuing of small notes beyond the period to which the Bank charter was limited, unless they had the avowed intention of making the system perpetual. All that was proposed was, to get rid of this system four years sooner than had been contemplated. The abundant space of three years was still to be allowed for carrying into effect the alteration: and not one of the many gentlemen who wished for a little more delay—only a little more de-

lay—in passing the measure, had attempted to assign any reason for the particular period of farther delay demanded. And it was difficult, too, to imagine what reason, or cause approaching to a reason, could apply equally to all the different extents of delay which different arguers required (hear, hear). An hon. member (Mr. Baring) wished the measure to be put off for a year. Another hon. gent. wished it to be put off for a month (laughter). As the discrepancy was rather considerable, which side was to be attended to? His (Mr. Canning's) objection to delay, no matter for how short a period, was—that, accompany it as the house would with comment or explanation, out of doors delay would be considered as defeat (hear, hear); they might rest assured that, by all those persons whose interests looked to the indefinite prolongation of the circulation of 11. and 21. notes, as such it would be understood and represented (hear, hear). Those gentlemen who were most sincere in their declarations that all they desired was to obtain some farther interval before the passing of this measure, would they answer that such interval should be used for withdrawing the notes gradually from circulation? Would it not be employed in preparing new difficulties in the way of carrying the measure? The hon. member (Mr. Baring) seemed by his manner to admit that it would be so employed, and his countenance was too ingenuous to indicate any thing but what was passing in his mind (a laugh). Now let gentlemen go back a little, as delay was asked, and see what had been gained by delay upon other occasions. Ministers had been assailed month after month with the reproaches, favoured session after session with the entreaties, of the hon. members on the other side, to open the commerce of the country to all the winds of heaven—to leave it free to all the wants of men. Take off, they had been told, the restrictions which cramped and incumbered our trade, and let it be launched anew with strength increased and wider liberty. If there were any one branch of trade more than another as to which this advice had been pressed, it was the silk trade, upon which Government had at length adopted it—adopted it certainly with the approbation and assistance of those by whom it had originally been given. But let gentlemen mark what had followed the passing of the new silk measures through the house. After the defeat of the opposition, all that had been asked was delay—a farther time. The time was given. How had it been used? In preparing for the change which was to come—in taking steps to adapt the trade to that state of things which would arise under the new law? No; but in raising every possible obstacle to the operation of that law; taking every course that prevention could devise to make the new arrangement which was contemplated to commence in July next, impracticable; and now, upon those very difficulties which had been thus wilfully and purposely got up, it was said that a new appeal for farther time was to be grounded (hear). Was not this a proof that, as regarded the measure now contemplated, to give time would be to give up the purpose? If it were but reasonable to suppose that the grant of that delay could be safe, he would think of it; but, for the house to fall twice into the same error, would be to stultify, and to nullify, its own measures (hear, hear). He hoped that it could not be necessary for him—for any mi-

nister of Government—for any member of parliament, at this time to avow that he felt deep regret—the deepest regret and anxiety for the state of the commercial interests of the country. And he was bound to confess, however he might differ in opinion from some gentlemen who had taken part in the present debate, that there had been almost on all hands a candid abstinence from the introduction of topics which would have been unfairly brought into discussion; but which, nevertheless, might have been dragged into it, had the object been to create opposition, and to inflame. It could not be necessary for an assembly of Englishmen to declare that they felt for the distresses of persons with whom every individual of that assembly must be more or less intimately connected and acquainted; and far less to make protest of their sympathy with all privations endured by that more humble, but not less valuable, class of labourers, upon whose security and welfare the strength and the prosperity of the country depended. He did not mean to tell the house that the measure now proposed was levelled entirely at the protection of the higher interests; but this he did say distinctly, that it aimed directly and specifically to effect the safety of the poorer classes. It had been the wish of the most favourite monarch of France, that every peasant in his realm should have a fowl in his pot on a Sunday: the measure before the house would at least do so much towards realizing that wish for the peasantry of England, that it would ensure them the possession of their fowl after they had earned it. The poor man, when it was passed, would at least be certain, at the end of his week's toil, not to find himself left with a piece of paper in his hands for which he could obtain no value; but to receive—the value of his labour great or small—the real payment which he had exerted himself to gain (loud and continued cheers).

Mr. Pease defended the conduct of the Bank of England, and complained that justice had not been done either to the motives or interests of that establishment. The public had been taught to form a very erroneous estimate of the profits of the Bank of England: they were by no means so large as some hon. members had insinuated. Allusion had been made by more than one gentleman to the subject of the dead weight, and to the loans upon mortgage: the fact was, that public establishments could not always act as they pleased. Both those undertakings had been reluctant measures on the part of the Bank. For the first, when it was found that the plan could not be carried into effect without their assistance—without saying whether it was more or less complex, or whether indeed they understood it all—sanctioned as it was by parliament, they were anxious to give their aid towards putting it in execution, if possible. Then it was said that the Bank might have disposed, at some time past, of a part of this incumbrance; but so let it be recollected, the Government might have funded part of their Exchequer-bills, and they had not done so: if there was any fault, one side had as much of it to answer for as the other. Large balances of the public money, it was said, had lain in their hands, and by these they profited largely; but it was not remembered that they had also lent the public a sum of 3,000,000*l.* for eight or ten years without security. Of all the profits which the Bank was charged to have made during the war, he could under-

take to show, upon figures, that the greater portion had reverted to the public. The Bank charter too, had, on several hands, been held up as an exceeding grievance: all he would say was, that if the terms of that charter were to be materially changed, he should think it a very unfortunate thing for the country (laughter). All he wanted from the charter was, that it should secure the bankers from having a rival establishment set up in London (increased laughter). But let him explain why (hear, hear). If there were two rival banks in London, the contest would immediately be which should get the greatest quantity of paper out: the responsibility would be quite another question. Let the house regulate the privileges of the Bank by its charter as they would, but let them guard against having a competition between two establishments in London. He felt quite certain, nevertheless, that neither the circulation of country bank notes, nor the issues of the Bank of England, had in any degree worth mentioning contributed to the late commercial speculations. England was a country in which every thing like mercantile speculation was sure to be pushed to the utmost. Only open a new field for effort of any description, and the effort was sure to be made. The fact was, that it was by bills of exchange, and not by any country notes or bank issues, that the enormous capital used in the late speculations had been provided. He believed that he could address himself to one banker who was a member of that house, and who, at one time, had held in his possession from three to four millions' worth of merchants' acceptances, which he had discounted. That which had been called abundance and surplus of capital, had, in fact, been abundance and surplus of paper; not country or London bank notes, but bills of exchange—some good, some indifferent, and some very bad indeed.—The country was still rich and powerful, and all might do well if ministers would apply themselves mainly to the restoration of that confidence which had been interrupted.

Mr. Baring said, that he was convinced that discussion from day to day, whatever might be its result, would have the certain effect of aggravating the difficulties under which all interests at present were labouring. What the country wanted mainly was, that the question should be set at rest: but if the house were to go into a committee, and argue the subject at length, so long as that discussion lasted, the country would be kept upon the rack. Under such circumstances he felt it his duty to take the sense of the house at once upon the proposed measure. He felt most strongly that it was an ill-advised measure—that it would add to the distresses of the country, but that whether carried or rejected, the sooner it was dismissed the better; and he should therefore move as an amendment, the following resolution—"That it is the opinion of this house, that, in the present disturbed state of public and private credit, it is not expedient to enter upon the consideration of the banking system of the country." What he meant to embody in this resolution was an opinion common, he believed, to all the opponents of the proposed measure, and as to which therefore there could be no dispute among them—to wit, that the state of the country at the present moment was an unfit one for making experiments. As far as he was concerned, if the house supported ministers against him upon this division, he would consider the issue as decisive, and give

Sam. 1836.

no further opposition to the measure, which, if it was to pass, he desired should pass as speedily as possible. Before dividing, however, he thought it his duty to say a few words, and would in the first place desire to call attention to the very peculiar situation in which the country stood. No man who had known the country, however long, and its commercial affairs, had ever, he would venture to assert, beheld so entire an absence of confidence as existed at the present moment. For though a very clever speech, like that of the right hon. gent. (Mr. Canning) delivered in the House of Commons, might conciliate and give confidence to those who heard it; yet to the country at large (who did not hear it) that confidence would not extend; and the practical necessity which many people would find, notwithstanding that speech, of paying up immediately all sums that were due from them, would tend very much to interfere with their admission of the right hon. gent.'s flattering and conciliatory views. Let it be recollected that, in spite of all eloquent speeches, the house stood in this situation—the men of business in it, from one end to the other, told the right hon. gent. to beware. He (Mr. Baring) did not think there was one banker or merchant in the house, on whatever side he might be accustomed to vote, who ventured to say he thought this measure could be carried without injury to the country. On the other side there was great strength in the way of talent—great reinforcements from the Temple, and from Lincoln's Inn—great force of those who studied from books, and held practical men in very great contempt—but no other man of business but the hon. member for Midhurst (Mr. J. Smith); and all he said, even after the eloquent address of the rt. hon. gent. (Mr. Huskisson) was, that, upon the whole, he should be inclined to vote for the measure. And moreover, with all the brilliant eloquence of the rt. hon. gent. (Mr. Canning) who was a great orator, a profound statesman, and possessed a hundred other qualities calculated to persuade and to attract admiration, that right hon. gent. would not feel offended if he (Mr. Baring) said, that, upon a point like the present, he would prefer taking the opinion of the right hon. gent. on his right hand (Mr. Huskisson). The right hon. gent. (Mr. Canning) seemed to him to stand pretty much in the situation in which Lord Chesterfield, in part of his correspondence, expressed himself once to have been placed. "Some plain man," said his lordship, "from a corner, made a long, heavy discourse upon the matter, which he understood very well; but he mumbled and stammered so that nobody cared to listen to him. I then got up, and without knowing any thing of the subject at all, made a brilliant and dashing speech upon it, and, on concluding, carried every thing before me." Let the house, however, resist the effect of this kind of fascination, as far as they could do so, and look at the question coolly. What he said was—do not lose sight of what should be done eventually; do not forget what it will be wise to bring our currency to; but first sooth and quiet the country, and then come, if you will, with your experiments, which, however ingenious they may be, if put in practice at the present moment, must be brought about at the expense of very considerable suffering. The chief difference, in fact, between him (Mr. Baring) and right hon. gent. opposite was, as to the question of time: and upon that question,

2 G

he thought the men of business in the house were better qualified to judge than the abstract reasoners. The one-pound notes, which there was this hasty anxiety to get rid of, had a great deal laid upon them for which they were no way bound to answer. The country bank notes were charged as having caused or aided the late unreasonable and visionary speculations. This was all a mistake: the fact was, that the bubbles, every one of them, were town made. It was the country booby who was the dupe to the London sharper. London, Manchester, Liverpool—these were the spots in which the vile schemes of speculation had been invented—places in which no country one-pound bank notes existed. If the notes had nothing but the speculations to answer for, he would venture to say that they stood entirely clear. With reference to what had been said of the offence against the prerogative of the crown, he was entirely at a loss to imagine, upon what principle it could be shown that making a one-pound note was a greater offence against prerogative than making a five. But he neither defended nor supported these notes upon principle; he agreed that they were a nuisance, and a nuisance which ought to be abated: and, if no other argument could be adduced against them than the danger to which they exposed the working classes, that alone was sufficient. Besides, he agreed that, by taking away the notes, it would be possible so to saturate the country with gold and silver that we need not mind the loss of any quantity which would be carried away by such an accident as a fluctuation in the exchange. The only question between him and other gentlemen was, that of time. Some of them put the case as if the present instant were all that was to be considered. It had been argued that now was the time or never. The argument seemed to treat them like children. If they had a duty to perform—if the country bank small note circulation was inimical to the welfare of the country, who could doubt but that when the proper period should arrive, the house would do that which would become its dignity and functions? What need, then, of this precipitancy? The case was put always as if the paper circulation had grown up purely by the connivance and contrivance of the Bank and the Government. It was the parliament who had raised the paper circulation; and then came the new theorists calling upon the house to reverse all their former proceedings. These persons, when once they got the patient within their power, proceeded with their operations upon him, whilst his agony and suffering caused no remorse or abatement in the rigour of their practice. If any practical man would get up and say that this measure could be carried into effect without great suffering, he would give up the point. But until then, he must conclude that the *rt. hon. gents.* were taking great responsibility upon themselves, by urging on so bold and speculative a measure. Two years ago he had expressed the opinion which he now held, that in the manufacture of silk the English artist could not compete with France and Switzerland. The *rt. hon. gent.* (Mr. Huskisson) and his colleagues entertained a different opinion. Suppose now, that the Government, and those who sided with them, should finally discover themselves to have mistaken the subject. Was not one mistake enough at once? A great deal was expected from that measure

of taking off the restrictions on the importation of foreign silk. He was convinced that those who entertained such expectations would be deceived. But why, in the same year, should it be necessary to do something else which must aggravate the distress which was now felt in almost every country town in the kingdom? The *rt. hon. gent.* (Mr. Huskisson) could not possibly be aware of the real state of the country; he could not—it was plain from his declarations, that he did not—understand the cares and anxieties which beset thousands as to their ability to pay according to their undertakings. But suppose they should be right in one of those measures, why should they persist in making this great experiment on 300,000 or 400,000 manufacturers, who would in all probability be deprived of the means of existence? Why not be content with one difficulty at one time? To say the least, either of those measures was a novelty. If they resolved to try this novelty in regulating the currency, why choose that very time for trying, the first time in the lives of any of them, the experiment of a competition with France in an open trade in silks? Suppose that they should afterwards see their mistake. Ruin would fall on millions, while at the same moment the country would be labouring under the accumulated distress which must be incidental to the withdrawing of a considerable portion of the currency. Trade, already in a state of great confusion, would be still more confused; and by the middle of the year they might witness such scenes as were acted throughout the country in 1819. The Blacking-man (Mr. Henry Hunt) would go round, aided by crowds of itinerant patriots. The stomachs of the unhappy people being empty, their credulous ears would be open to all suggestions of sedition and discontent. He must pronounce this policy to be the most foolish risk ever incurred by any administration.—Now for a few words on a very important part of the case. When this discussion opened, he had stated the awkward and ill-managed contrivances of Government in resorting to the Bank of England for aid, when they might have raised money far more easily and economically, the 3 per cents. being at that very period at 95. He had stated that at the end of the American war, the Bank had all but stopped payment—in 1797 it did actually stop payment. In both these cases the causes assigned for the pressure on the Bank, both by the Bank and the Government, were the aids given by the Bank to the Government. The Bank had subsequently made money abundant, and, when abundant, had very suitably and safely contracted that abundance. The *rt. hon. gent.* (Mr. Canning) found fault with the statement which he had made of the Bank having 24,000,000*l.* locked up by Government, as being uncandid and unfair. How did the case now stand, according to the admissions of the *rt. hon. gent.*? The amount of Exchequer-bills he did not attempt to overset. As to the dead weight, however, which (Mr. Baring) took at 8,000,000*l.*, the *rt. hon. gent.* took it at 5,500,000*l.* The dead weight actually paid in July, 1825, was 6,917,000*l.*; the dead weight paid in January of the present year was 1,100,000*l.* The *rt. hon. gent.* deducted the advances made by Government towards the current payments, but did not seem to take into the account that these advances were, in fact, already disbursed by the Bank; though it might be very true that upon a scale of four years, during which the

annuity continued, they would be refunded with sufficient advantage to the Bank. But how did this disprove that the Bank had already 8,000,000*l.* of their present capital locked up in the dead weight? With respect to the payment by the Bank of the dissentients on the reduction of the 4 per cents., he had taken it at 2,000,000*l.* The *rt. hon. gent.* gave it at about 4,000,000*l.*; so that here he had been mistaken, and had calculated it at too little by 1,500,000*l.* As to the deficiencies, they were, it was true, received again and again, and perhaps most frequently within the quarter. What he had said was, that at a particular period, and one of great difficulty, the Bank was in advance with those deficiencies: so that altogether it had locked up, by the wants of Government, no less than 24,500,000*l.* It was true that Government had cash at the Bank usually to the amount of 6,000,000*l.*; but that money was continually subject to be recalled, and appropriated by the vote of parliament. He begged the house to recollect that his comparison had been drawn between the present period and 1797; at present the Government had 24,500,000*l.* of the capital of the Bank engaged in its transactions; in 1797, the Bank had only 10,000,000*l.* locked up by the wants of Government, and then the Bank was obliged to stop payment. He differed from those who thought that the country could not go on under its present burdens. He did not wish to urge his own sentiments beyond an amicable difference of opinion; but he thought that with care and management in the state, with a rigid economy enforced in every department of Government, and a disposition on the part of the people to bear something more than the mere burden of providing an income, all might yet go well. It had been said that though the Bank had so largely accommodated Government, yet that there could be no embarrassment, because it held Government securities and Exchequer-bills to an equal amount. In a time of difficulty the Bank could not raise 5*l.* upon these securities. He was convinced, when he heard that the Bank was disposing of Exchequer-bills, that it would lead to considerable embarrassment, and the result had shown that the derangements of the money-market were aggravated by the Bank just at the time of selling their Exchequer-bills.—As to the immediate question, he would say, leave the thing alone for the present. Whatever number of bank-notes had been out, they were now very considerably diminished; and the state of the country rendered any precipitate contraction of the remainder highly inexpedient.

Mr. *P. Grenfell* differed from his *hon. friend* (Mr. Baring), upon the question of time. As a practical man, his opinion was that, not only might this measure be carried with safety, but that there could be no permanent safety for the country without it (cheers). There was not a single practical man who would attempt to deny that the one pound note system was a nuisance which ought to be abated; that the evils which now afflicted the country originated in those notes, and that one of the remedies for those evils was to do away with that circulation (cheers).

Mr. *Brougham* did not wish to take up the time of the house at this late period of the discussion; but in a question of such importance he could not satisfy his mind by giving a silent vote. He begged his *hon. friend* (Mr. Baring)

to excuse him for stating the reasons which caused him to differ from those sentiments which he had so candidly professed—though for any real difference between them the question seemed to offer scarcely any ground. His *hon. friend* admitted that a recurrence and a speedy recurrence to a metallic circulation was necessary to the safety of the country, and he was also of opinion that all the small notes should be drawn in, because without this, his *hon. friend* fairly admitted that it would be utterly impossible to arrive at that most desirable and necessary reformation of the currency. Thus far they were agreed, and the only question, as his *hon. friend* very handsomely avowed, between him and those who differed with him was, as to the point of time. To that he directed his attention, and he hoped to convince his *hon. friend* as a practical man, that the reasons which were urged for postponing that measure were those which were most strongly in favour of carrying it immediately. Without denying the consequences of over-trading and the effects of the panic which was consequential upon its failure, it was manifest that the mischiefs of that panic and over-trading were greatly aggravated by the circulation of 1*l.* and 2*l.* notes. It could not escape their observation, that when a run upon a country bank took place, and fear overtook the minds of its customers, it did not begin among those who had large balances to claim, and who held notes of a superior denomination, but the run came first from the poor holders of 1*l.* and 2*l.* notes—persons who had scraped together 20*s.*, 30*s.*, or 40*s.* The failure of the banks had led to a diminution of that circulation. It was not possible, then, for a more favourable opportunity to occur: and if the resolution were not now taken to abolish the small notes altogether, how were they to entertain the shadow of a hope that it would ever be taken at all? Further, upon the question of time. He thought he had heard his *hon. friend* mention the period of a year. The resolution of the Chancellor of the Exchequer gave from two years and a half to three years for this operation. But suppose it should be now deferred—how were they ever to hope for a more opportune season? Should things go worse, then the same argument would recur of the inexpediency of aggravating the existing distress. The *hon. gent.* did not condescend to show the house how they were to mend matters by this delay. Was it, he wished to know, by increasing the indisposition of the bankers to accommodate their customers? It was true, that the doing away the small notes could not leave either the banker or the customer in exactly the same circumstances. But he apprehended that any man of credit, of untainted credit, might have from his banker, not the illimitable supplies which had followed after the period of 1819, but such aid as his circumstances would justify a prudent man in advancing—namely, in proportion to the means which he really might have in possession to secure repayment. He apprehended, also, no such extinction of the currency as was anticipated, but rather that the small note circulation would be gradually replaced by the coming in of the metallic currency. And if it were to happen otherwise, and according to the predictions of those who would delay the extinction of the small notes, then the postponement would have no other effect than that of bringing out the small notes again, and again driving back the gold: so that,

whether they advocated the delay of a year and a half, or three years, or the whole time up to 1833, the answer would be equally effectual. To whatever period they might postpone it, the paper, as before, would immediately displace the gold. This was against theory, but their own experience had shown it to be fact. Gold and paper would not hold together in the same circulation; the 11. notes would infallibly take the place of the gold. Then, as he said before, at the expiration of the period, whether a year or three years were assigned, they would have to combat the self-same objections. Should distress prevail, or even the apprehension of it, they would be warned not to aggravate the evils. If, on the contrary, the country should be going on smoothly, "Oh! we are so well at present, that we could not desire to be better. Do, for goodness sake, take the advice of your forefathers, and the wise men who have gone before you, and let well alone." It was a cardinal rule with them not to change when things were going right—"don't try to mend what is right already: if you do, you will make it worse," and so forth. The present was the proper period for effectually securing a return to a purer currency, which they had so often and so anxiously attempted, but never with a prospect of accomplishing it so easily.—He had observed that the opinion of the theorists went in favour of a paper circulation convertible into gold, it being supposed by them (and he confessed that experience alone had shaken his firm belief in the same theory) that a paper payable in gold by law, on demand, could never exist in excess. In the 11. and 21. notes he had found a manifest and most undeniable exception to the rule. Whether it arose from the liability of the holders to be prevailed on to accept such an issue in consequence of their mean circumstances, want of experience in money affairs, or that their minds were more powerfully acted on by the opulent people about them in the way of intimidation as well as persuasion, certain it was that by that channel the small note currency did flow in and fill those crannies in the circulation which could not take in, much less contain, the paper of larger denomination.—As to the preference given by his hon. friend to silver instead of gold for the standard, his reasons for objecting to it were briefly these:—Gold was less variable, there being scarcely any thing to account for in its use, besides the wear and tear of the coin. Whereas silver was produced in much greater abundance; and what with the application of the skill and capital of the old world to the mines of the new, and the discoveries of mineralogists, the value of silver was likely to undergo a very considerable diminution.—He wished, in whatever they did, that care should be taken to prevent the country from being led away by false and delusive hopes, as if the danger had wholly passed away, and the recurrence of it having been completely prevented, that there was nothing to wait for but the return of sunshine and prosperity. He expatiated on the prospect of the difficulties which the country had, in all probability, yet to go through, which might be found yet scarcely to fall short of those dark and dismal scenes which had been witnessed within the last three weeks. It would be for those who pretended that any distress which might hereafter arise would be ascribable to this measure, to reflect, that if they were to stop short in their career now, and

do nothing more,—nay, if circumstances were to be suddenly restored by some miracle to the same state in which they were six weeks ago, the mischief that had already occurred must produce a diminution of consumption which, he had no doubt, would ere long, he was sorry to say, be felt in other quarters. He looked forward with dismay, and it gave him pain to mention it, to the distress of the agriculturists; and all the consolation he could offer them for the sufferings they were about to undergo, and all the comfort they could offer another class who were now undergoing misery which was deeply to be deplored, and for which misery this measure did not pretend to be a remedy—all they could offer as compensation to this most numerous and honest class,—he meant the poor working class, was a steady and unvariable currency in which they would in future receive and make payments; one which would not expose them to those risks to which they were at present obnoxious, and which, it was well known by every person who had resided in the vicinity of those banks which had failed, had produced miseries with which those that the lowest state of wages, caused by the greatest depression of trade, occasioned, were not to be put in comparison, inasmuch as the former amounted to an absolute loss, and the latter, to whatever extent it might be carried, only amounted to a diminution.—These were the observations which he had to offer to the house; and, concurring with his hon. friend (Mr. Baring) in believing that whatever difference of opinion might exist respecting the principles and details of the measure itself, they were all agreed in this—that suspense upon the subject, in the present state of the capital of the country, was the worst evil to which it could be subjected, he was most anxious that the question should be set at rest as speedily as possible.

Mr. Canning expressed a hope that as they were all agreed that the sooner the present suspense was put an end to the better, they would adopt the understanding that the present division should be considered as decisive of the main question.

The house then divided, and there appeared for the amendment, Ayes, 39—Noes, 222—Majority for the original motion, 183.

The house then went into a committee, when

Mr. H. Gurney proposed, as an amendment to the original measure, that the small notes of the Bank of England should be excluded from its operation. He urged this proposition on the grounds that the same inconveniences did not attend the circulation of Bank of England notes which were alleged against country notes, whilst the issuing of the former in emergencies like that which had lately taken place was calculated to produce essential benefit to the public.

The Chancellor of the Exchequer, although he admitted that the circulation of the Bank of England small notes was not liable to produce the same inconvenience as small country notes, because it possessed a greater control over its issues, was nevertheless not disposed to acquiesce in the present proposal: for it would be invidious and unjust towards the country banks to put them in an inferior situation, when if there were any truth at all in the arguments used against the principle of the present measure and the time of its adoption, it would be most inconsistent to exclude the Bank of England from its operation.

Mr. *Maberty* referred to the state of the paper currency, and its effects in Scotland, to show that the consequences ascribed to the circulation of 11. and 21. notes did not attend it there, which they would have done, were the principles of the *rt. hon. gent.*, which were general in their application, correct. He wished to know what course the Chancellor of the Exchequer intended to pursue towards that country.

The Chancellor of the Exchequer referred to his former statement for the grounds on which he had shown that the same principles did not at present apply in Scotland and Ireland as in England, and therefore he had not mixed them up on this occasion.

Mr. *Hume* said, he rose to protest against being supposed to agree with the principle which had that night been adopted. He thought paper convertible into gold by law, as under Mr. *Peel's* bill, the very best kind of currency.

Mr. *Peel* said his bill was founded upon the principle of Mr. *Ricardo*, of paper convertible into gold, but its object was frittered away by the permission granted two years afterwards to country banks to issue 11. and 21. notes at pleasure; but for that there would not have been at the moment a 11. note in the country.

Mr. *Baring* supported the amendment; for, although it might be expedient to restrain the country banks in the circulation of 11. notes, yet a power might with propriety be reserved to the Government, to direct the issues of small notes by the Bank of England, in an emergency similar to that which lately occurred.

The Chancellor of the Exchequer was unwilling to reserve an exclusive privilege for the Bank of England. The Bank had the power of issuing them now, and would continue to have it, up to the period at which it was deemed advisable that their circulation should cease altogether. Besides, he hoped that no such emergency for issuing them would recur.

Mr. *H. Gurney* said, that had it not been for the issues of the 11. notes by the Bank of England at the time, the recent calamity that befel the country would have been greatly aggravated. These issues had done the greatest good; and in the event of a similar emergency, he thought that means of a similar assistance should be available to the exigencies of the country.

The house then divided.—For the amendment, 7—Against it, 66—Majority against the amendment, 59.

The resolutions of the committee to be reported to-morrow.

TUESDAY, FEB. 14.—Mr. *R. Gordon* rose to present a petition from Cirencester, which, though not numerous, was yet as respectably signed as any which had ever been laid upon the table of that house. He could personally speak to the great respectability of the subscribers, who were bankers, lawyers, manufacturers of the highest character and reputation, together with a large body of yeomanry, very worthy and reputable in their class, and several substantial farmers. All these classes of men had for the first time agreed in opinion that the ministers were wrong in the course which they were about to take respecting the currency. The petitioners prayed, that the house would postpone any measures affecting the currency, until the effects of the late panic should have subsided. He would not now trouble the house with a repetition of his own opinions upon this important subject, though

he hoped it was not yet too late to have it better understood. He feared, however, that farther opposition would be useless, and he agreed with those who thought, that as the movement was irrevocably determined upon, the sooner it was settled the better. "If it were done, when 'tis done, then 'twere well, it were done quickly."

Mr. *Benett* bore testimony to the great respectability of the petitioners, and concurred in their opinion, that a more unfortunate time than the present could not have been taken for agitating this important question. He knew it would be in vain, after the large majority of last night, to shake the determination of the Government,—a result which he had only the privilege of ineffectually regretting.

Sir *T. Lethbridge* differed from the hon. *gents.* and thought the time had arrived, when it was imperative upon the Government to do all in their power to place the currency upon a solid basis. The panic was passing away, and what was now doing would tend very much to allay the want of confidence which prevailed in money matters. He was satisfied the plan now in progress would tend to lower prices, and secure to the poor man the full produce of his industry in a coin which could not be depreciated. He had also no doubt, that the return to a metallic circulation would be carried into effect with very little difficulty, for there was gold enough in the country to fill up the vacuum, as it was formed by the disappearance of the small paper currency. There was, however, one part of the consideration which had been entirely overlooked by the distinguished speakers who had so ably discussed the question last night—he alluded to the possibility of a restriction of Bank cash-payments should a war arise, and the Government find themselves unable to uphold a circulation in specie. That was a material part of the subject, which, he repeated, had not been sufficiently discussed.

Sir *John Brydges* thanked ministers for the course they had taken respecting the currency, and more particularly for having taken it at this moment. The most fallacious system which this country had ever acted upon was that of the small note circulation.

The petition was laid on the table.

Mr. *Brogden* appeared at the bar with the report of the resolutions of the committee on the Bank Charter and Promissory Notes Acts.

On the question that the report be brought up, Mr. *Calcraft* could assure the house that his opinions were not at all altered, after hearing most attentively the whole of this protracted discussion; and, with the greatest wish to concur in the sentiments of the majority on this occasion, he felt, after giving the question the best consideration in his power, that they were going to legislate in a most improvident and imprudent manner. He wished as much as any man for a sound metallic currency; but he thought the house was proceeding to legislate without sufficient inquiry into the causes of the present disastrous situation of the country; and he was sure there was no instance on record, where the legislature, at an equally momentous crisis, had acted with equal precipitation. Some hon. *gents.* had attributed our present calamities to one cause; others had ascribed them to another. Surely, then, as they were not agreed upon this most important point, it became them to examine into and ascertain it, before they could hope to be able

to remove the effects that had been caused by it. He could scarcely convince himself that he was addressing the same body of gentlemen who constituted the house in 1822, and who almost unanimously concurred in passing the act for continuing the issuing of one and two pound notes for ten years from that period. No one had insisted that the issue of those small notes was the primary cause of our present distress; and yet the issuers were told, in despite of the act of 1822, that the only remedy for the distress was a diminution of the notes. From the best information which had been received from different parts of the country, it appeared that manufacturers were every where obliged to discharge their workmen, because they had no currency wherewithal to pay their wages. Yet, in the face of this state of things, they were called upon still further to contract, or, more properly speaking, entirely to withdraw the issues of the country bankers; for such must, in fact, be the immediate effect of the resolutions, although by the letter the continuance of the circulation of small notes was permitted for three years. He was happy that, in the course of this discussion, nothing had been said that could in any way affect the character of the country bankers as a body, although the banking system itself had met with most liberal abuse; and yet it was somewhat remarkable that hon. gents., who had for years fostered and encouraged this system, should now all at once have discovered its pernicious tendency. The whole system of trade might just as well be found fault with as the banking system, for a most nefarious system of gambling had of late prevailed to an alarming extent in most of our commercial transactions, and some of these wild speculations, he was sorry to say, had been countenanced by members of that house (loud cheers); and, owing to their having been so countenanced, had caused more disastrous consequences than the breaking of twenty or thirty country bankers.—He must confess that the division last night had surprised him extremely; but he would make bold to say, that notwithstanding the majority of votes was so great in favour of the resolutions, that the sense of the house was against them. He had never seen a majority where their votes were so opposite to their opinions. The course, in his opinion, most proper for the house to have adopted, would have been, in the first place, to have instituted an inquiry as to the cause of the distress. He himself attributed it principally to the Bank, the bubbles, and the over-trading. A pause ought at any rate to be made, until the present ferment had subsided; for, proceeding to legislate on this point in the present agitated state of the country, was like beginning to rebuild a house which had been burnt down before the rubbish had been removed. A *rt. hon. gent.* (Mr. Peel) had contended that this measure must be carried now or never; but he (Mr. Calcraft) would say, not now, because they were not prepared to legislate; he would not say, never, because he wished the country ultimately to return to a metallic currency. As far as the country bankers were concerned, he was sure that the issuing of these small notes was the most troublesome part of their business; and he was convinced, that if they were left to themselves, they would by degrees withdraw them of their own accord; but it was galling to them to have such resolutions as the present passed, which cast a stigma upon them, and

obliquely insinuated that the present distress was wholly to be ascribed to these issues. With regard to the proposed plan of joint-stock banks, he was convinced that country bankers of good credit had nothing to apprehend from it; for, after having passed safely through the late severe ordeal, the confidence in them would be so strong as to enable them successfully to compete with any joint-stock banks; and if there could be found gentlemen willing to enter into these last mentioned establishments, he saw no objection to their formation.—He hoped that Government would do nothing to impede the operations of the Bank. Although the statement of his hon. friend (Mr. Baring), that the Bank had been choked by the Government, had certainly received a shaking, still he thought that it was true in some degree.

Mr. *Hudson Gurney* objected to the including the Bank of England in the first resolution; for he contended the six millions of country bankers' small notes, which would be withdrawn from circulation, ought to be supplied by the small notes of the Bank of England, and that it would not be possible to return to a metallic currency until the ministers wholly changed their present system of policy,—that to attempt it before this should be done, would cause a stand-still throughout the country, and plunge it into a most dreadful situation. It would also be most desirable to circulate a large quantity of silver; for, during the operation of the Bank restriction act, he knew one county where there was so great a deficiency of silver, that the workmen could not be paid their wages.

Mr. *E. Ellice* concurred with his hon. friend (Mr. Attwood), as to the distressing examples which the history of our currency afforded of the effects of that nefarious system which now, thank God, they were about to get rid of. When the Bill of 1819 passed, he (Mr. Ellice) was in a small division; not because he objected to a metallic circulation, but because he wished to have a standard accommodated to the circumstances of the country, and the contracts of individuals. However, the house passed that bill, determined, at all events, to make the experiment of compelling the country to meet all their engagements, and individuals to fulfil all their contracts, according to the ancient standard. Now, what were the consequences of departing from the principles of that resolution? Every departure from it made it more difficult to approach that period when its provisions could be carried into execution; and if the postponement which his hon. friend had recommended were adopted, that difficulty would be still more increased, and we might, in fact, despair of arriving at all at the great object so much desired. A great deal had been said about the impropriety of consulting books and theorists upon this subject; for his own part, he would never decline attending to the opinion of a sensible man, merely because it happened to be in print. His plan was to attend to the views and theories of men whom he considered wiser than himself; and, from what he had observed in the debates, he was satisfied the house had legislated in utter ignorance of the probable consequences of the measure. He agreed that it was much better to have an honest solid standard; for, under such a system, the country was more secure. It was true, that every time an attempt had

been made to approach a payment in cash, the pressure was so severe as to create general alarm. The agricultural distress in 1816 was cured for the time, by a great flood of paper in 1817 and 1818. The Committee of the *rt. hon. gent.* (Mr. Peel) sat in 1819; the consequence of which was, that we were to return to cash payments. Every one remembered the distress which ensued: the country bankers again issued their notes, whereby the pressure was removed, and was followed, in 1824 and 1825, by what was called great prosperity; but we were still farther removed from the object we had in view. He thought the Bank had been hardly dealt with. The Bank had a difficult part to perform; the merchants were pulling it one way and the Government another; and, when it was recollected that in 1819 it was declared that the Bank could not return to a metallic currency, unless the Government could repay it ten millions of the nineteen then due to it, it would be readily conceived that it would have no easy task in returning to such a currency now, when its demand against the Government amounted to eighteen millions. In his opinion, the present distress was in a great measure owing to the reduction of interest, and the increase of circulation, which had led to overtrading. If they made gold so cheap, as it must inevitably become by such measures, it would all find its way out of the country; over-issuing must go on, every one would discover there was no method of employing his money which could yield a decent rate of interest; and foreigners from every quarter of the world would step in to relieve them from the superabundance of capital. Austrians, Russians, Portuguese, Spaniards, Brazilians, Chilians, and Colombians,—all contending for the honour of taking away, under the promise of a high rate of interest, the capital so created. They would part with their good money; and, when they came to look for it, as his *hon. friend* had observed, they perceived too late that it was a very difficult matter to get it back again. He did not ascribe much effect to the domestic bubbles; for, although one individual might have cheated another or a thousand other individuals in these transactions, still the money had not gone out of the country. It was in the loans to all the nations of Europe, and all the republics of America, to every petty state, from the ideal Poyais and Greece to France and Russia, that the capital was really spent; to them was the gold exported, which the over-issue of paper had driven out; and here he would state his firm conviction, that although those countries might go on paying the interest of their loans for a while, not one penny of the original capital would ever be recovered. With their establishments, whether of war or peace, they could not pay them; and not one of the whole list, with the exception, perhaps, of France, could in any way raise the amount of their revenue so as to discharge an extraordinary demand. He looked upon the whole question then before them as a struggle between paper and a something better than paper; and although he did not consider it very safe to touch upon any part of a subject so every way full of difficulty, and in which opinions were so divided, and sentiments so liable to misrepresentation; yet he could not think himself doing his duty to his country, or his constituents, if he permitted the ideas, lately expressed by more than one *hon. member*, upon

the subject of the financial state of the country, in case of war, to pass without an observation. Members had said, what would be the state of the country, if they went to war? The *hon. member* for Aberdeen said, they could not go to war. It was impossible. Now, what, he humbly begged to ask, could hinder them from going to war, if war unfortunately became necessary? The French, in the midst of a national bankruptcy, not only went to war, but actually carried it on for many years with no ordinary success. If they went to war on assignats, what was to hinder this country from the same course (*hear, hear*)? Did *hon. gents.* suppose, that because there was a panic among commercial men, and a difficulty in raising money, the capital and means of the country were wholly gone? Did they suppose any man ruined, because he could not immediately command the means of paying all demands against him? He had frequently said to gentlemen, who had desired him to look at the financial state of the nation, and the overwhelming amount of the national debt, to whom was that debt owing? Why, to themselves,—to the nation. They were debtor and creditor; and if ever, unhappily, there should be a national failure, although there might be undoubtedly some cases of great individual distress arising from such a calamity, yet the nation would still, for all the purposes of war, retain as much power as ever. But although there might not be any diminution of power from financial difficulty, as far as regarded their external relations, he saw many reasons against postponing any longer the return to a sound state of the currency. This was the fittest of all times; a great portion of the bank paper had been changed already into gold; they had gone a great way towards the very circulation they wanted; and, although the returns were not very accurate, he believed he could venture to say, that a very small portion of the country transactions at present were carried on in private bank paper. If, therefore, they did not pass the bill for a year, they would find, at the end of that year, the whole of the country bank paper in as vigorous circulation as ever. The over-issues would again take place; the gold would return to the metropolis, and they would see people once more on the look-out for foreigners, to relieve them of their superabundant capital, by way of loan—one very great reason, in his opinion, against any postponement of the present measure. Another thing he begged to observe was, that he thought Government had obtained little or nothing from the Bank of England, when it had not acquired the power to grant charters of partnership to individuals with a limited capital. He believed that system of banking, as an *hon. member* (Mr. Baring) had observed, to be one of the most likely to tempt individuals of respectability to engage in the banking business. Many, he was convinced, would be more willing to engage in a concern where they only hazarded a certain sum, even for half the usual profit, than in the present or proposed system, when they would, for a little more profit, run the risk of losing all they possessed, by the errors or mismanagement of those to whom they necessarily entrusted the conduct of their affairs (*hear, hear*). He could not, therefore, look at the least addition to the respectability or solidity of country banks, even by the system proposed, unless they were permitted by

the Bank to make a limited capital one of the conditions on which banks might be formed. Let them look to the Scotch establishments. If the constitution of the Scotch banks was inquired into, it would be found there was as much mismanagement and loss in many of them as in those more southern ones, which had been so much abused. They had, from the idea of their composition, immense credit; and as they allowed interest for money placed in their hands, large sums were vested with them. These sums, in time of war, they placed in the public funds, then very low—say perhaps 48—and when, at the return of peace, the same funds got up to 90, then the Scotch banks were flourishing—then they were pointed out as models of good management, although the whole might be very readily explained, as the result of mere chance; but when, in times of peace, people sought to realise the profits derived from their funded property, and much larger sums were pressed upon the Scotch banks, then with the funds falling, and the rate of interest low, Scotch banking became as hazardous, and as much or more liable to loss than even that of the sister kingdom. Large sums, for which they paid a rate of interest, were to be applied in some way which would make them advantageous, and as the funds, when falling, were not to be thought of, the only way which presented itself for the return, was a discount of long bills—some even running to two years; and from thence came a series of failures, which had proved as injurious to the Scotch banks as to the English ones, and which, if rumour was to be trusted, had numbered many of them among those who were applicants to the bank of England for assistance, that they might not be compelled to sell out their deposits in the funds at the present falling price (hear, hear). That was the history of the Scotch banks, and from the experience it taught them, they might very reasonably doubt the propriety of permitting large bodies of individuals to have the power of affecting the currency (hear, hear). If they did, however, give men a license to deal in the currency, he contended that, with reference to the ground taken against the interference of parliament, they had a right at any time, not only to stop the issue of the notes under that license, but also to take into their consideration the whole system of policy pursued by those to whom they entrusted that power (hear, hear), whenever the country was overpowered by the quantity of their paper. He could not agree with the hon. member (Mr. H. Gurney), that they should put an end to the issue of country small notes, and spare those of the bank of England; for he could not avoid stating it broadly as his opinion, that the measure they were now about to adopt, was neither more nor less than the full execution of that bill passed by the unanimous consent of parliament in 1819. He had not hesitated to assert that the bill then passed would add full fifty per cent. to all the taxes and engagements, whether agricultural or commercial, of the country (hear, hear), but he had, in common with many others, consented even to that sacrifice, in consideration of the vast advantages to be derived from a sound and stable currency; the question was then, as it was now, whether they should consent to part with a little to save all, and whether, as at that very moment, they should suffer themselves to be brought to the verge of ruin, or grasp at any thing as a means of security (hear, hear). He

really could not, therefore, understand the principle of agreeing to the restriction of the issues of the country banks, and continuing those of the bank of England. There might be more security perhaps in the Bank; but there was, as they had seen, no more security of their paying in cash.—With respect to Ireland and Scotland, which he understood were to be included at some more remote period in the operation of the present measure; if it was, as he hoped, the intention of the Government to establish one general and permanent currency, why should they be excepted, even for a short period? What possible injury could be sustained by either, in the withdrawal of their paper circulation, and the immediate substitution of even a smaller quantity of specie? If they established a metallic currency in England, how could they reconcile the anomaly of a paper currency on the other side of the Tweed? Even at that moment Scotch notes were in circulation over the greater part of the north of England. That circulation did not, perhaps, amount to more than a million, or a million and a half; but the smaller the quantity, the easier its conversion into gold; whereas, if they did not take that step, the chance was, that it would very much increase, and they would find that the paper currency in the one country would place very much in jeopardy the gold in the other. Scotland, he knew, had many powerful advocates in that house; but he earnestly hoped, that if England was to pay, as had been said, a great penalty for the benefit of a metallic currency, Scotland would not be allowed to enjoy any unfair advantages from their sacrifices. If they were to have the free trade principles carried into full operation, with what consistency could they leave that trade struggling against all the difficulties necessarily dependent upon a great change, to be yet farther impeded by a circulation, which at one time might raise wages and all the necessities of life to a price higher than those of any nation with whom they had to compete, and at another reduce them so low as to produce misery and wretchedness amongst every class of society, and unsettle, in either case, all the contracts which might have been concluded before these revolutions took effect? Well had the rt. hon. gent. (the Chancellor of the Exchequer) observed, that such a state of things unsettled all the engagements between man and man, and led to those ever issues and reactions which produced such evils as they at that moment experienced. In the case of the silk trade, he was one of those who had hoped that the resolutions of the rt. hon. gent. (Mr. Huskisson) would not have been rigidly adhered to, until they had seen the benefits which were expected to flow from the alterations of the currency then proposed, and that they would not have pressed the full completion of their principles until they had bread at such a price as was paid by those nations with whom they were in that trade to contend. Without that forbearance, he feared that those principles could not be carried into execution without first involving many of the operative classes in misery, and even starvation. If they looked to the standard of prices for the last three hundred years before 1797, they would find the price of corn as often at a cheaper as at a dearer rate than that which prevailed on the Continent, and depending very much upon the nature of the seasons; but by some extraordinary cause connected with the fluctuations of the

currency since 1797, provisions of every kind, as well as corn, had been always higher here than they were abroad. When, however, they had removed the occasion of these changes, by destroying that artificial state of the circulating medium which had existed, it would appear to him very strange if, with the same standard as other countries, and their skill in agriculture, prices did not right themselves (hear). In that case there would be no necessity for bawling or petitioning for a repeal of the corn laws (hear); those laws would repeal themselves (hear). It would not then be his task to press upon the attention of the house the deplorable condition of his constituents, the silk weavers of Coventry, and humbly implore, in their name, the repeal of the corn bill. No!—The hon. member for Suffolk (Mr. Gooch)—the most virulent of its advocates, and the head of the agriculturists, would be one of the most earnest in his supplications for relief from the consequences of that act (hear). Seventy shillings would be a frightful price, with a gold circulation, at 31. 17s. 10½d. an ounce; and could only be supported by a scarcity, which would almost amount to starvation. The present measure therefore possessed, in his eyes, the double advantage of not only being a remedy for distress, which existed now, but still more as guarding against the probability of evils to come—amounting, as it did, to a virtual repeal of the corn bill (hear, hear).—There was another reason why he desired the immediate execution of the act—and that was the weakness which it caused the country to exhibit in the eyes of all Europe. It would seem as if the fabric of their credit was built on sand. Who could suppose that, after eleven years of peace, interrupted only by a few rumours at the time of the French invasion of Spain, the English funds could fall from 97 to 74, in the short space of eight months? Why it displayed a feeling of security in their credit, less than was allotted to any other nation on earth. France had been said to pay a high interest, and people were advised to beware of the danger, yet the French funds had not varied more than two or three per cent. The Austrian—the Prussian—the Danish—and even the Russian, were considered more to be depended on, and less liable to fluctuation. What could, indeed, be said, but that it proceeded from the vices of a system, which they were now, he ardently hoped, about to end for ever? For who could see, without pain, the funds of England abandoned for those of countries which must, sooner or later, terminate their engagements by a national bankruptcy? Not one of them, he repeated, but France, could ever hope to clear themselves in any other way, unless England continued to lend her good money to clear off old engagements, and with these in view, no more stable than the first.—It was time to do justice to all classes, by freeing them from a species of circulation which produced such consequences, and which was the means of inducing a man at one moment to consider himself worth one hundred thousand pounds, when, perhaps, before the returning season, he might find himself hardly in possession of fifty thousand. He felt the difficulty and danger attending the execution, as much as any man; but he preferred running all risks, rather than continue to suffer from the consequences of the present system (hear, hear).

Mr. T. Wilson did not rise to oppose the resolution then before the committee, for after the  
SESS. 1826.

division of last night, he deemed the question to be decided; nor to answer the speech of his hon. friend who had just sat down, so much as to inform the committee that every thing which he had stated last night had been fully confirmed by all that he had seen and heard that day in the city. The distress had increased, not diminished—the funds had fallen still lower—and failures had been openly talked of as likely to take place, which, if they did take place, would cause a distress far greater than any which they had hitherto seen or dreamt of. He therefore took the liberty, on the part of the commercial world, and with a view of allaying the ferment which prevailed in it, to ask the rt. hon. gent. whether, in case of his succeeding in his present measures, he was prepared with any measures for the relief of the existing commercial distresses? It might be that the bankers and merchants of the country had deserved all the reflections which had been cast upon them; still it ought not to be forgotten that they had been led into the speculations which had turned out so unfortunately, by the low rate of interest which had been occasioned by the measures of the Government, and that they had a right to dispose of their own funds as they thought proper. He asked whether the ministers, as ministers of a country which was purely commercial,—of a country which they had declared to be in a proud and flourishing condition,—of a country which they had announced to be enjoying a revenue so productive as to enable them to reduce the weight of its taxation, and a prosperity so general and solid as to induce them to change the narrow system on which its commerce had hitherto proceeded for a more generous and liberal system;—he asked, he said, whether the ministers of such a country were now prepared, because a change had occurred in the flattering picture they had drawn of it, to turn round and say to the merchants whom they had hitherto lauded for their activity and enterprise, “You are a parcel of fools and blockheads: instead of trusting to the delusive prospects which were spread before you, you ought to have disbelieved them; and instead of embracing them with ready confidence, ought to have had your doubts and misgivings?” Unfortunately, they had done otherwise; and he therefore came down to the house, and on behalf of the merchants of London claimed relief from the Government. He claimed it, however, not merely on behalf of the merchants of London, but on behalf of the merchants of the country, on behalf of the country itself, on behalf of the revenue, on behalf of the ministers, whom he had hitherto always felt proud and happy to support. He said hitherto: for though they had been excellent pilots during fair weather, he was afraid that they did not know how to steer the boat, in which he was embarked with them, during the raging storm. He would shortly state the mode in which, and the reasons why, he thought relief ought to be administered to the distressed part of the mercantile community. Instead of dealing in idle and superfluous words, he would found the whole of his reasoning on a single fact. Cotton, it was well known, was a staple in this country. He would admit, for the sake of argument, that the merchants of Liverpool, of Glasgow, and of London, had traded very improperly during the last few months in this article; and that they had bought for tenpence and a shilling a pound, that which in ordinary times cost no more than

fivepence or sixpence a pound. Could it be wished, he would ask, that the price of cotton should be reduced still lower than that lowest sum? Was the offering of it at that price a sin for which they ought to be punished? Why, they could not find a market for it at that price; no, nor at any price. Let them look at what had been done in the crisis of 1793, when a loan of 50 per cent. was made, by means of commissioners, to such merchants as were distressed for want of it, upon a deposit of goods or other security. Those who asked for a relief of threepence a pound on what cost sixpence a pound, were, he thought, entitled to receive it. When a man who was ready to deposit 100,000*l.* worth of goods asked for a loan of 50,000*l.* to preserve himself from being involved in bankruptcy and ruin, he was entitled to receive the protection which he asked, if not for his own sake, at least for the sake of his clerks, of his connexions, of his correspondents, of his bills, which, if they were protested, would be sent back to Glasgow, to Liverpool, and elsewhere, and create misery and disaster wherever they went. His (Mr. W.'s) situation, as one of the representatives for the city of London, might perhaps blind him to the importance of the question he had asked; but if he had any common sense whereby to judge of it, he conceived that he was fully justified in saying that there never was a crisis which more imperatively demanded from the Government the extension of some aid to relieve it.

The *Chancellor of the Exchequer* said, that though he had no reason to complain of the manner in which the hon. member who had just sat down had shaped the question which he had put to him, which was certainly neither disrespectful nor offensive in its terms, still he could not help reminding the hon. member, that if he thought his Majesty's ministers were such unskilful pilots in a storm, he ought not to have contributed to support them during the fair weather. He did not pretend to say that those who supported the measures of ministers, were responsible for the errors of those measures, in case they proved injurious instead of beneficial to the community; by no means—the responsibility was with Government, and from that responsibility neither he nor any member of it wished to shrink; but he would say, that it was a little too hard to be reproached for the weakness and impolicy of their measures, by those who had been the first to support them. Whether the present ministers were qualified to weather such a storm as now raged, it would be presumption in him to decide; but he felt himself justified in declaring, that he had endeavoured to learn something of the nature of the storm by considering its consequences, and that the measure which he had introduced to meet it was the result of the practical experience which he had acquired of its force and violence. That measure, upon general reasoning, he conceived to be just and salutary, and he was corroborated in that opinion by the view which he had lately taken of the distresses of the country. He could have no objection to answer the question which had been put to him by the hon. member. The proposition which the hon. member submitted to the consideration of his Majesty's ministers was—that they should follow the course which had been adopted in the distresses of 1793, and should issue, through certain commissioners, a quantity of exchequer bills to individuals applying for them, on the credit of their goods or other securities. Now,

in cases of this kind, the members of Government were placed in a painful predicament. They were surrounded by scenes of distress, of which the colouring was not softened by any of those who described them. They were told that it was their duty to afford instantaneous relief, and that, too, in a particular way; and if they ventured to look beyond the mere moment—if they exercised the forecast of cautious and prudent men, and if they considered not only the immediate effects of their compliance, but also the result of such compliance as a precedent, they were accused of a want of sensibility to the distresses of their countrymen, and taunted with a want of knowledge of the true interests of the nation. He did not complain of this, because it was one of the inconveniences which naturally attached to the responsibility of ministers; he thought it right to say, that it was the duty of ministers, not merely to look at the representations of distress which were forwarded to them, and at the ease which particular measures were calculated to administer to it, but also to resist the requests founded upon them, if they were convinced that a compliance with them would be productive of more harm than good to the community at large. He was of opinion that compliance with the proposition of the hon. member (Mr. Wilson), would not be productive of any material benefit. The hon. member had defended that proposition by reference to what had been done in 1793. The circumstances, however, of that case differed widely from the present. The main cause of the difficulties of those days was the external policy of the country, and the apprehended danger of internal dissensions arising out of the pressure which that external policy had occasioned to the manufacturing classes. They had something peculiar in their character, and would not afford a perpetual precedent for future advances. But in the present case, where distress arose from overtrading, which had led to the purchase of goods at high prices,—indeed at such high prices that, upon the hon. member's own shewing, they could never be repaid by the proceeds derived from the sale of them,—if they were to follow the course suggested, he (the *Chancellor of the Exchequer*) knew of no case in which they would not be drawn, by parity of reasoning, to a similar result; and then he knew not by what process of legislation they could prevent such fluctuation of prices as the country had lately witnessed from recurring almost periodically. For under such circumstances every man who was induced by his desire of gain to enter into excessive speculations would reason thus with himself—"True it is that I may fail; but then I know that I have relief in the sympathy of the public, in the feelings of Government, and in the practice of Parliament. I care not, therefore, for the consequences of my schemes: if I succeed, the gain is all my own; and if I fail, I have relief from Government." Such would be the reasoning of individuals. He therefore was bound to say that Government would not acquiesce in the proposition which the hon. member had just submitted to the house (hear, hear). If by any relief which could be administered in the money-market, Government could tender any effectual assistance, it would be found most willing to do so. If, for instance, in the absorption of the exchequer bills which were now circulating at a low rate of interest, by the purchase of them by the bank, any pressure in the money-market

could be removed, and money would find its way into those channels whereby it would reach those who were most in need of it, he should be most happy in forwarding such a measure. At the same time he would not say, nor even pretend, that this (though it might be some) would be a very effectual relief of the prevailing distress. He did not hope or pretend by small means to effect great objects (hear, hear). But if the measure was deemed expedient, and if the bank thought fit to lend itself to the purchase of those exchequer bills, he would, in the present session, bring forward a proposition for repaying the bank for whatever advances they might make for carrying the measure into effect. If Government evinced a disposition to lend itself to the furtherance of this design, he thought it was all that could be expected from it. He had learned that the conduct of Government was viewed with an unfavourable eye in the city. He could easily understand why it was so; and he had further learned, with regret, that the hon. member (Mr. Wilson) had withdrawn that confidence from his Majesty's ministers which he had hitherto placed in them. However he might regret to be deprived of that confidence, he could not, nor could his Majesty's ministers, in duty to the trust reposed in them, consent to a proposition which would establish a precedent, in its results leading to greater evils than even those we at present laboured under (hear, hear).

Mr. Robertson had listened with eager attention to the speeches of his Majesty's ministers, in which he did not discover any effectual plan for the relief of the distresses which afflicted the country. He had, from the commencement, been the person, almost the only person, who came boldly forward to blame the ministers for the situation in which the country was placed. That the country was daily declining in prosperity, and from no cause more than from the measures lately introduced by ministers, was a conviction strongly impressed upon his mind. One proof of that declining prosperity would be found in a comparison between the available capital of the country in 1812 and at the present period. According to the calculation of Mr. Colquhoun, the capital of the country amounted to three hundred and thirty millions; from this, two hundred and fifty-six millions, as appeared by the present calculation, were withdrawn in various ways, leaving little more than seventy millions to carry on the industry, and promote the prosperity of the country—a capital totally inadequate for the purpose. Now his Majesty's ministers had been mainly instrumental, by the measures they recommended, in reducing the affairs of the country to this depressed state. Nor did they do so alone by the measures they introduced themselves, but also by those which, by timely interposition, they might have arrested. When the madness of speculation was at its height last year—when so many associations, which it was not improper to term illegal associations, were forming, they might have put a stop to their formation; whereas, instead of arresting their progress, they not unfrequently encouraged them in a great degree by many of the supporters of administration becoming members of them, and by omitting in any instance to offer an effectual opposition to them. This omission on the part of ministers to oppose them, gave the people a confidence in them which they otherwise would not have had.—Another

striking instance, in which the declining prosperity of the country was apparent, was in the inability of the English merchant to compete with foreign merchants so successfully as he had formerly done. Previously, the English merchant made large profits, which enabled him to cherish manufactures; but now that wholesome, salutary connexion, which subsisted between the commercial and manufacturing interests of the country, was interrupted. Such was the nature of existing restrictions, that the property of merchants was locked up in docks, and otherwise, and they were unable to advance their capital for the relief and advantage of the manufacturers, as in better times they had been used to do. The distress which this occasioned among the manufacturing classes of the community was daily spreading; and unless something should be done effectually to arrest its progress, it would be impossible, in a short time, to apply a remedy to them at all. For this purpose, nothing appeared to him at once so simple and effectual as the advance of exchequer bills. It was clear that the commercial men could not make any thing like adequate advances to the manufacturers. The labouring class must, therefore, inevitably be deprived of employment, and the landed interest must suffer from the decreased consumption which would ensue. Nothing but the help of Government could prevent this: if they did not step forward, rents could not be paid, and before the end of the year the whole country, from one end to the other, must be reduced to the most disastrous condition. With respect to the bill before the house, he was friendly to the principle of cash payments, but he thought this was not the time for carrying it into execution.

Sir H. Parnell said, that although he approved of the measures of ministers, as far as they went, he did not believe they would have the effect of placing the banking system on a firm footing. He was disposed to attribute to the conduct of the Bank of England the distress which now prevailed, and he thought that before any thing effectual could be done to remedy it for the present, and to prevent its recurrence for the future, the exclusive privileges enjoyed by the Bank ought to be done away. In the view which he took of the conduct of the Bank, he was surprised to find that he was confirmed by gentlemen who were usually opposed to each other, but who agreed in opinion that the distress had been occasioned by the over-issues of the Bank. The hon. member (Mr. Baring), and that class of persons who were called "philosophers," used nearly the same language in speaking of this subject. He did not propose to investigate this subject at length, but he repeated that until the exclusive privilege of the Bank should be done away with, the same distress must frequently recur, from the powers possessed by the Bank of interfering with the currency. The great object they had in view must always be the interest of the proprietors; to this the interests of the country would always be secondary, and in the present state of things often subservient.—He should like to know what objection there could be now to Mr. Ricardo's plan of paying in bars of gold. Surely, during the late run, that would have been a prompt means of relieving the inconvenience which had been felt. With respect to the suggestion of the hon. member for Taunton, that a silver currency should be adopted, he

thought such a measure highly objectionable. Silver, he was aware, might be made use of with great advantage on some occasions, but without disturbing the present mint regulations. To make silver a legal tender on all occasions would be inconvenient and injurious; but he saw no reason why the Bank should not be permitted to make *bond fide* payments in silver bullion, the price being regulated by the actual value of gold. He could not refrain from expressing his surprise, that in the course of the discussion to which this subject had given rise, no mention had been made of the influence which the usury laws had had on the general distress. The effect of those laws must of necessity have been highly injurious.—Mr. Tooke stated, that in some instances property had been sold at a loss of 30 per cent., owing to the necessity the owner was under of raising money, and which those laws precluded him from doing on more advantageous terms. A banker had told him that instances had come to his knowledge in which, under similar circumstances, a loss of 90 per cent. had been incurred. There was not the shadow of a reason why these laws should be allowed to keep their place in the Statute Book; but since the opposition which had been made by the country gentlemen had been so powerful, he would suggest that the commercial world might be relieved by those laws being repealed, so far as related to discounts; leaving mortgages and other real securities to stand upon their present footing.—He concluded with stating his opinion, that for the immediate relief of the distress, three measures should be adopted—The withdrawing the exclusive privileges enjoyed by the Bank of England: The granting them permission to pay in bars of bullion: and, The repeal of the usury laws as far as regarded discounts.

Mr. Alderman *Brydges* expressed his opinion, that if the measure of issuing exchequer bills, which had been successfully resorted to in 1793, was not now again adopted, the distress which already pervaded the country would be increased. At present, a stagnation had begun in some of the most important of the national interests; and unless something was immediately done to prevent its progress, and to restore confidence, the consequences would be more dreadful than he could venture to contemplate.

Sir *F. Blake* complained that the opposition which the administration had experienced in this measure, had arisen from that spirit which existed in many, of denouncing whatever measures the Government could pursue. But let them denounce the measures of Government as the member for Grampound (Mr. Robertson) had done; he did not find fault with them. Let them go on, and seize his Majesty's ministers, and tear them to pieces (loud laughter). For his part he rose on the present occasion to thank ministers for the conduct they had pursued, and to request that they would persevere in the liberal line of policy they had adopted, notwithstanding the gloomy apprehensions which some gentlemen on his side of the house seemed to entertain. Something had been said of a combination between the two parties in the house: he knew of none; but if there were a combination, he did not know upon what grounds it could be objected to, when its end was the good of the country. He hoped that as soon as the circumstances of the country would permit, ministers would proceed to carry into active

operation the principles of free trade without any restriction whatever.

Mr. Alderman *Heygate* said, that ministers, in the opinions which they expressed, and in the conduct which they proposed to adopt, neither consulted the interests of the country, nor agreed with those persons who usually supported them. The aristocracy and the landed interest, by whom all the measures of ministers were usually upheld without any hesitation, were upon this occasion wholly at variance with them. Every body out of doors was of a different opinion from them, and every one who spoke plainly avowed that the country was sacrificed to a cold-blooded theory. Excepting only the members of the Political Economy Club, there were no persons to be found who approved of the conduct of ministers. Every body else believed that the country was on the eve of a convulsion, and that the measures proposed were calculated to aggravate and hasten it. By whom were the proceedings of ministers approved? Who supported them and cheered their statements? Not those who sat beside them, and who were usually the most vehement of their cheerers; but those who at other times were their bitterest opponents—gentlemen on the Opposition side of the house. This fact could not be disputed—that the country was reduced to a degree of unprecedented suffering. At this moment it was necessary that fine principles should be forgotten, at least for a while. Ministers might say what they would—they might carry the measures which they proposed in that house, but he defied them to carry them into effect generally. They must show some sympathy for the sufferings of the people, and do something for the substantial relief of those sufferings. Nothing could be more disgraceful than the want of a proper circulating medium. Exchequer bills were at such a discount that they could hardly be sold at all. The discount was now 20s., and to what it might fall it was not possible to guess. This fact, if it stood alone, proved the necessity of some immediate alteration, and of some measures more satisfactory than those which ministers had yet proposed.

Mr. *Hume* wished that when the worthy alderman was abusing the system of free trade, he had pointed out what particular part of the system he objected to. If the worthy alderman alluded to the measures adopted by ministers last session, for the removal of the restrictions upon trade, there could be no doubt that those measures had met with the approbation of the whole house, and of all classes throughout the country; and, therefore, the country could not possibly show such a want of good sense, as to turn round and find fault with the operation of that which they had approved of, and which had done, and was doing, so much good. The worthy alderman seemed to have very vague notions upon the subject of political economy: he would inform the worthy alderman, that political economy meant no more than that good government of public affairs, which the worthy alderman, no doubt, wished to see established in his private and domestic affairs. The worthy alderman was an advocate for every man's being allowed to do with his private concerns whatever he pleased, provided it did not annoy his neighbour, and this was the great principle of that science of political economy which the worthy alderman seemed to view with such confused

and suspicious optics.—The worthy alderman asked why the Government did not issue exchequer bills? Now, he must know, that the exchequer bills already in circulation were at a discount, and if the amount were augmented, the depreciation would be proportionately increased. The result might be that the revenue would be collected in Government paper, and ministers would thus be left without means. He should be sorry that the transactions of the Government should incur the risk of being interrupted by the issue of exchequer bills. It was hard upon ministers, in their present difficulties, that they should be taunted on the score of their liberal system of commercial policy, by persons who had no projects of their own to suggest. He understood the meaning of the Chancellor of the Exchequer in his last speech to amount to this, that Government would grant an accommodation to merchants if they could, but they had it not in their power to do so, without anticipating greater evils.

Mr. Alderman Wood said, that his Majesty's ministers, he was sorry to say, had something much better on the present occasion than what the worthy alderman (Heygate) had reproached them with not having; for, if they had felt a very grievous lack of cheers to their speeches, they had found a most plentiful supply of votes at the conclusion of the debate (loud laughter). Although the present state of affairs was certainly very distressing, it was better to let matters go on without any legislative interference. An issue of exchequer bills under present circumstances would, he thought, produce no benefit. The worthy alderman must have known, before he left the city that afternoon, that two great houses intimately connected with foreign loans had failed. Foreign stock, too, had fallen very low. Under these circumstances, relief therefore could not be given by any issue of exchequer bills. In point of fact, an issue of exchequer bills would pull down those who received them as an accommodation. Many of the private bankers had lost from sixty to eighty thousand pounds by the fall of exchequer bills, and more would be lost if more bills were issued. The worthy alderman had said, that he had driven Mr. Canning out of the house by one of his speeches (a laugh). He must confess that he had had the same effect last night upon him (Mr. Wood), for he had gone out of the house with the worthy alderman, and he was sorry to say, had found himself in a very small minority.

Mr. Attwood contended that the Bank were bound at the present moment to carry into the market all exchequer bills and other Government securities in their possession, and sell them at whatever price they would bring, and with the produce to afford assistance to merchants by discounting their bills, or lending them money on security. That was a proceeding perfectly consistent with political economy. Merchants had a right, in a commercial point of view, to call upon the Bank for relief in their distresses.

Mr. Pearce said that the Bank, within the last six weeks, had, in the most unlimited manner, assisted in relieving the distresses of the country in so far as they had been brought to their knowledge (hear, hear). They still continued to feel the same desire to assist the mercantile interest. At the present moment, the discount of merchants' paper by the Bank was going on to the utmost possible extent, provided the paper was good. But all the assist-

ance which could be afforded by the Bank was not sufficient to meet the public difficulties. There was a class of merchants possessing great property, who yet were not in a situation to present bills to be discounted. To this class accommodation might be best granted, as it had been on former occasions. He agreed with the Chancellor of the Exchequer, that the measure to which he alluded should not be too frequently adopted. It should only be resorted to in extreme cases, and not when individuals might have been induced to enter upon extravagant speculations in the hope of obtaining such assistance. He thought, however, that the difficulties of the present period would authorize the adoption of such a measure. It was notorious, that at the present moment, merchants of the highest respectability were in a state of great embarrassment, being left without the means of carrying on business. He suggested, as an immediate mode of granting accommodation to merchants, that Government should issue exchequer bills under commissioners as had been done before. He would recommend that the bills thus issued should not bear the same interest as those issued by Government, but should be delivered at the highest rate of interest—namely, five per cent. One reason he had for wishing the exchequer bills to bear that interest was, that they would then never, in all likelihood, find their way into the Bank. The bills would call forth the money which was at present locked up. Many country bankers had at present large sums in their hands unemployed. They would not discount merchants' paper, and did not like to lend money on the exchequer bills at present in circulation on account of the low rate of interest which they bore. If commissioners were authorized to issue exchequer bills of the description he had mentioned, to the amount of five millions, the measure would have the effect of restoring confidence throughout the country (hear, hear). So effectually, indeed, did he think the measure would tend to the restoration of confidence in pecuniary transactions, that he was of opinion the commissioners would not find it necessary to issue more than half the amount of bills placed at their disposal, and that half never would find their way into the Bank, but would be taken up by parties who now kept their money locked up (hear, hear).

Mr. W. Smith could not concur with the hon. member (Mr. Attwood), that the Bank were bound to sacrifice a part of their capital by selling Government securities at any price they could get, in order to assist the mercantile interest. Still he was of opinion that something might be done to alleviate the present distress. What was the state of the case? Merchants had on hand a large quantity of goods which were unsaleable, and they were driven to an extremity, from the want of money, to pay bills which, it might be, had been improvidently incurred. This state of things occasioned a great deal of public distress, which involved persons who had never embarked in any transactions which could justly be designated improvident. The Chancellor of the Exchequer said that Government could not enter upon the consideration of those questions, but were compelled to withhold their assistance, lest by affording it they should encourage unwise speculations. That argument was, in his opinion, pushed too far. No person would enter into a speculation on the assumption, that if the speculation should fail,

and the value of his stock were reduced one-half, he might obtain one-half of its remaining value by pledging it altogether to Government. To suppose that a person on embarking in speculation would calculate upon losing 3-4ths of his capital, or 75l. out of every 100l. was preposterous. He thought, therefore, that Government might advance money upon goods without the danger of encouraging speculation. As the distress was general, some means of relieving it should be immediately adopted (hear, hear).

Mr. Huskisson observed, that as the debate had been exclusively confined to that part of the house which considered itself purely practical, he would not travel out of the line which had been pursued, after the example of the hon. member (Mr. Etlice), who had entered largely into the field of speculation. He begged to call the attention of the house to the situation in which the question had been placed by the great practical authorities who had addressed themselves to the Government and the Bank as the two parties from whom they expected measures of relief to proceed. One of the members for the city (Mr. Wilson) had asked a question of the Chancellor of the Exchequer; but in putting the question, as was very often the case, he pointed out what kind of answer he wished to have. The question was, whether Government intended to issue additional Exchequer-bills, which the hon. member said would afford effectual relief to the mercantile interest. Another hon. member (Mr. Attwood), who was considered a great practical authority on questions connected with commerce and the currency, instead of recommending an additional issue of Exchequer-bills, said that the Bank ought immediately to sell all the Exchequer-bills and Government securities they had. Now he knew not what other effect such a sale would have, except to put into the coffers of the Bank the money of the purchasers;—a proposition directly opposed to that of the member for London. If it were carried into effect, the injurious consequences which would result to all the great interests of the country connected with the circulation, were so obvious that he need not point them out. He only alluded, however, to this circumstance to show that many of those practical men who were so ready to condemn the Government for not having come down to the house and proposed some efficacious remedy for the present distresses, would not themselves, if placed in a situation of similar responsibility, be agreed as to the nature of that remedy; nay, that each of them, following his peculiar theory, came to conclusions diametrically opposite from those arrived at by the others. If bills of exchange, by which the concerns of commerce were carried on, could be procured, the Bank was willing to give every facility, and to extend its aid by discounting such bills. But, unfortunately, there was such general distrust, that the bills could not be procured; and consequently the Bank was unable to afford assistance in that direction. The hon. member (Mr. Attwood) had suggested that the Bank should take goods by way of deposit: but this, the hon. member had observed, was contrary to the maxims of political economy. Whether it were contrary to political economy or not, there was a more practical objection: such a proceeding was contrary to the terms of their charter; the Bank could not deal in goods, nor lend money upon goods.—The question was, what could be done to supply a more abundant circulation? Now, if there was one

of the principles of the committee of 1819 in which all agreed, it was this—that if a circulation was furnished by Bank notes to supply the exigencies of commerce and the wants of the country, it was immaterial whether the notes were issued on one species of security or another. In other words, it was immaterial whether the number of bills of exchange or Government securities were the greater. In other respects, indeed, the difference might be important; but with respect to the circulation, it was immaterial whether the Bank supplied issues of notes, or private traders supplied bills of exchange. Now, owing to the want of confidence, bills of exchange could not be had: they were wholly withdrawn from the circulation. Then, if the Bank of England, which was not so choked up, as had been asserted, as not to be able to supply aid to the circulation,—if the Bank felt it expedient to buy Exchequer-bills in the market with their own notes, in consequence of that species of security being so much depressed, those purchases would throw a further amount of currency into the country, and thereby afford it relief. This was the foundation of the plan of his rt. hon. friend. The hon. gent. who spoke last had said, that if we created a precedent which went to allow a party who had speculated to excess to come and ask relief, it would be highly impolitic. His rt. hon. friend had admitted that men would speculate more readily if they knew that under loss they would be sure to find relief. He (Mr. Huskisson) admitted, that if we once taught the extravagant trader and the speculator, whenever they embarked in rash schemes, that should they not get out in time (for that was the object of most of the parties) they might always expect to obtain relief from Government, it was as much calculated to encourage speculation as the poor laws were calculated to encourage improvidence among the labourers, and to discourage honest industry. Therefore, if the Bank, being at liberty, and having the means, would issue an additional quantity of paper, he (Mr. Huskisson) thought it might be done with perfect safety, under the arrangements made between the Bank and his right hon. friend and the noble lord at the head of the Treasury. This plan did not exactly follow the precedent of the hon. member (Mr. T. Wilson), but it was more practicable. Difficulties had sprung up within these three or four days; and the present plan, which could be carried into effect to-morrow, was infinitely preferable to one which required the unavoidable delay attendant upon passing a bill through parliament. Ministers were, therefore, taking that course which was freest from inconvenience and danger.

Mr. Etlice was aware that the Bank could not legally advance money on goods; but he thought there was some difference between Government advancing money upon Exchequer-bills alone, and advancing it on them with the further assurance of goods; and he believed that, although the advance on Exchequer-bills might relieve the money market, and enable some stock-jobbers to carry on their speculations with greater facility, yet no relief would be afforded to those who required it quite as much, if not more, and who had no Exchequer-bills to offer as security. He did not wonder at the difficulty of procuring bills of Exchange, for, in times like these, men were as jealous of their credit as of their capital. He had never been of opinion that this relief could be ex-

tended expressly to merchants on the security of goods, but he thought the announcement, that some relief would be afforded them, would be almost in itself sufficient. He admitted that commercial men and country bankers were equally oppressed with present difficulties, and he would put a case which would clearly show the effect of the relief to be afforded. Suppose a country banker had a mortgage offered to him, and he lent money upon it, perhaps with the view of getting his notes into circulation on a good security; suppose that, after this loan, made by the country banker, times of distress like the present should arise, and he found that his London banker would advance nothing on his account, he would be unable to pay his own bills, which in a moment might be poured in upon him,—he might say, that in six months he could get in the money on this mortgage, but his affairs could not wait for relief till that time arrived: now, if he could get Exchequer-bills on this mortgage, he might go to his London banker, and on their security obtain those advances which would not only enable him to meet his own bills, but would afford the greatest relief to the country people of his neighbourhood; and neither the mortgage nor the Exchequer-bills would ever come into the market. He knew an instance of this which had occurred a few days since, and the Exchequer-bills had there been taken and locked up in a closet of the person who advanced the money. It was no longer a question who would pay his bills; for men looked at each other almost with the consciousness that they were equally incapable of meeting the demands made upon them. He saw all the difficulties which had been stated by the *rt. hon. gent.* (Mr. Huskisson), but still he thought some facility of the kind he had proposed, might be afforded. We must get through this pinch as well as we could, and, for his part, he did not believe, that if Government consented to issue five millions of Exchequer-bills, more than two millions would be asked for, and even of that number not half would ever come into the market.

Mr. T. Wilson observed, that the temporary increase of bank paper would not afford relief to all those who were in need of it; that those persons who possessed goods could obtain advances on the security of those goods; and that if ministers would now declare they would grant half the amount in the old manner, that declaration, and its publication throughout the country by the press to-morrow, would be worth double the value in Exchequer-bills. The assurance of relief was almost all that was wanted.

Mr. Attwood having adverted to the statement that the Bank of England were interdicted from dealing as merchants,

Mr. Huskisson said, that they were precluded from dealing in all commodities except gold and silver.

The first resolution\* having been read,

Mr. H. Gurney rose to move his amendment a second time, that the words "the notes of the Bank of England" be omitted. His reason for so doing was, that, under the present circumstances, there must be a great reduction of the circulating medium. In many parts where the bankers had failed, and in many others, where, for their own safety, they had withdrawn their notes from circulation, there was an absolute want of money. This want could only

be supplied, in his opinion, by the notes of the Bank of England. He had been asked what difference there was between the notes of the Bank of England and of private bankers?—and he replied, that for the former we had as a security the whole credit of the country, while for the latter we had only the responsibility of individuals. There was a further advantage also, that the Government could immediately deal with the notes of the Bank of England without disturbing any private interests, which it could not do with private banks.

Mr. E. Wodehouse was satisfied with the amendment proposed by the *hon. member* (Mr. H. Gurney). The only objection to it, he believed, grew out of the scrupulousness of hon. *gent.* as to parliamentary consistency; but, though he had as great a regard for parliamentary consistency as any man, yet he thought it was not inconsistent, in some cases, for parliament to retrace its steps. He had sat in two small minorities on the subject of Mr. Peel's Bill, and he was persuaded that measure was not completely understood. He had never yet met any person who, when the question was brought correctly before him, had understood that measure; and he thought it would be no imputation on the consistency of parliament to reconsider it. He hoped not to be understood as stating this with any view of opposing ministers; he was ready to go along with them, and give them all the support in his power, to enable them to relieve the country from its present embarrassments. But he thought Government had taken a narrow and contracted view of this important subject; and he urged them to reconsider their determination. Unless the amendment of his *hon. friend* received the concurrence of the house, he thought they could not answer for the great distress, which, in the next six months, would exist.

The amendment was then withdrawn; and the resolutions being agreed to, a bill was ordered to be brought in on the first and second\*.

### *Issue of Exchequer Bills;—Bank Advances.*

WEDNESDAY, FEB. 15.—Mr. Herries having moved, in a committee of ways and means, that the sum of 10,000,000*l.* be raised by Exchequer-bills, for the service of the year 1826,

Mr. Hume said, that great fluctuations were occasioned by the meddling of the Bank in purchasing and selling Exchequer-bills. At one day they threw half a million of them on the market, and at another they withdrew them; thus causing the most injurious fluctuations in the prices of the funds, sometimes to the amount of five or ten per cent. This was a power which no body of men should be allowed to exercise. The Bank of England, as well as the country banks, ought to be obliged to publish quarterly an account of their paper issues, by which the public would know the state of the circulation. The fluctuation in the prices of Exchequer-bills, which had been lately at 30*s.* and 40*s.* discount, was discreditable to Government, if they had the means of preventing it; and he thought a great deal of it had been caused by the transactions of the Bank in those bills.

Mr. Maberly thought there would be but little

\* See, *ante*, p. 189.

\* See, *ante*, p. 189.

security to the holders of Exchequer-bills, until the public were made somewhat better acquainted with the nature of the Bank transactions with Government, and with their dealing in those bills, than they were at present. There were instances in which the Bank had gone into the market and made purchases so as to raise the value of those bills 20s. No doubt the Bank had a right to do so if they pleased, and they had also a right to withhold the secrets of their proceedings from the public. But he trusted that the Government and the Bank would see the necessity of relaxing a little on this point.

Mr. Irving contended that the Bank were justified in their purchases of Exchequer-bills. If the circulating medium was not sufficient for the wants of the country, no injury was done by the purchase of those bills. The principle of those purchases was the same as that of the commercial discounts. What was wanted by mercantile men was discounts for short periods, and it was of little consequence whether those discounts were afforded on Exchequer-bills, or any other property.

Mr. Bright:—If the issue of Exchequer-bills in 1793 had been productive of the beneficial effects which had undoubtedly attended it, what was there to prevent a similar issue now from operating in the same way? The present situation of the country was so very peculiar, that it would afford an ample justification to Government for deviating a little from any stern principle which they might have formed for the guidance of their ordinary proceedings. It was absolutely necessary that some plan should be immediately devised for supplying the provinces with circulating medium. If 300,000*l.* were dispersed in small sums, under the direction of skilful persons, through different parts of the country, according to their respective exigencies, it would have a better effect in relieving the present distress than any other measure which could be devised.

Mr. Pearce said, that there were occasions when it was an imperative duty on the Bank to come forward and assist the public, and he considered the present one of them. He was sorry that ministers had not been prevailed upon to listen to the application which had been made to them for an advance of money; for he was sure that sooner or later the assistance applied for must be granted, and it would have operated much more beneficially if it had been conceded at once.

Mr. Hume observed, that the Bank had the power, by their traffic in Exchequer-bills, to raise or depress the property of every man in the kingdom to a alarming extent; and it appeared from the statements of many hon. gents. who had the means of being well informed on this point, that the buying and selling of Exchequer-bills by the Bank had on several occasions operated most extensively in this way. It was, no doubt, the duty of the Bank so to feed the market as to keep the exchanges favourable. He did not think the Bank were so much to blame: the fault rested with the Government. It had been justly observed by Mr. Ricardo, that it was the duty of the Bank directors to make the best bargain they could with the Government for the proprietors. If the Government had no debt, there would be no need of Exchequer-bills. It was owing to this that the rt. hon. gent., though he admitted the present disastrous situation of the country, did not dare to sanction the issuing of 5,000,000*l.*

worth of Exchequer-bills for the purpose of relieving it, lest the exchanges should be turned against us. Had the sinking fund been applied in buying up Exchequer-bills, as he himself had recommended, the evils which had arisen from the fluctuations in their value would never have occurred; what must those evils have been when these bills had, in the course of a few days, been reduced from sixty-five shillings premium to four guineas discount? In his opinion the resolution adopted by the house the other evening was calculated to increase the present distress, by causing a considerable portion of the circulating medium to be withdrawn.

Mr. Irving wished to know if Exchequer-bills were not issued how the Bank could supply the currency? In Dec. and Jan. there were plenty of mercantile bills on which to call for issues; but now there were none, and if the Exchequer-bills were taken away, from what source could issues be derived?—The plan proposed to the Government, was one which they should not have rejected. It appeared to him that that application was treated by ministers with a great deal too much levity. They should have hailed with delight the first proposition that was made to them for relieving the country, and should not have delayed a single hour the means of affording assistance.

Mr. Maberly was of opinion that if any plan was attempted for relieving the present distress which should cause the exchanges to be turned against us, the distress, instead of being diminished, would be considerably aggravated. In his opinion the Bank might accommodate the merchants by discounts at a longer date than usual, upon having goods deposited as a security.

Mr. Hume said, that when it was considered that the Bank had eighteen millions locked up in the hands of government, it could not be expected that they could be able to afford that accommodation to the public which it would otherwise have been in their power to have afforded. Government having absorbed all their capital, the Bank had only their profits, wherewith to grant discounts to the merchants: what was the amount of these profits was altogether a mystery. No such secrecy prevailed in the affairs of any other public bank.

Mr. C. Grant was astonished to hear an hon. member (Mr Irving) declare that ministers had treated any part of this momentous subject with levity. There was one consolation in the midst of all our difficulties; and it was, that even gentlemen who habitually opposed the Government, had done justice to the feelings of his right hon. friend (the Chancellor of the Exchequer), and he (Mr Grant) was persuaded that no man, who investigated the subject dispassionately, could doubt that if even the Government had acted erroneously, it at least proceeded from a want of attachment to their duty. He could bear witness to the deep anxiety of his Majesty's ministers, and he therefore deprecated the opinion that there had been any levity in their conduct. They were assailed on all sides by devices and projects for relieving the public distresses. An hon. member (Mr Bright) had said that ministers ought not to adhere to principles; but he could assure that hon. member, that if ministers hearkened to the various counsels offered them, there was nothing in principles or morals from which they must not depart—not a single principle of policy which they must not subvert. With respect to the effect of issuing Exchequer-Bills, it appeared to him to be of little importance to the public how the Bank notes

found their way into the market, so that an adequate circulating medium were procured.

*Mr. F. Wilson:*—It had been observed that the Bank should be liberal in their discounts; but the parties to whom the Bank were in the habit of granting discounts, were not the persons who now stood most in need of assistance. Those who most wanted relief were the dealers in goods. These goods must be paid for, and if they were not convertible into money (as it was well known they were not at present), much embarrassment and distress were necessarily created amongst the holders of them. In his opinion, the issue of exchequer-bills by Government, agreeable to the application made to them, instead of causing such bills to be at a discount, would have a directly contrary effect; for the issue of them would tend materially to restore confidence, the loss of which had been one of the principal causes of our present distress; neither did it follow, that because these bills were issued that they would all be brought into circulation. He must, therefore, declare it as his opinion, that ministers were acting erroneously in refusing the application which had been made to them for an issue of Exchequer-bills.

*Mr. C. Hutchinson* was desirous that justice should be done to all parties, and particularly to the Government, for their conduct in the recent transactions. Though there might be a difference of opinion as to the merits of many of the measures proposed by Government, he thought there could be no difference of opinion upon this point—that ministers had evinced every anxiety to administer relief to the existing distress. He thought, however, that the system of Government was too expensive, and that it was the duty of parliament to make them diminish it.

*Mr. Harries* said, when his hon. friend (*Mr. Irving*) had stated that Government had received lightly the representations of distress which had been made to it, he was sure that his hon. friend could not have meant what he said; for no solicitations had ever been received with greater patience and attention than those which had recently been made to Government. He would take the opportunity of saying, that if the noble lord at the head of the Treasury, and his rt. hon. friend (the Chancellor of the Exchequer) did not comply with the requests then made to them, it was not without giving them a full, patient, and elaborate discussion, nor without being convinced that they ought not for public reasons to be acceded to.

The resolution was then agreed to.

The hon. member then brought in the *Promissory Notes' bill*, which was read a first time.

### *Bank Charter and Promissory Notes Acts.*

**LORDS, THURSDAY, FEB. 16.**—This bill having been brought in, and read a first time, and the second reading ordered for to-morrow,

The *Earl of Lauderdale* now rose to state, that several noble lords had moved for such information as they thought necessary, before the second reading came on; and it was highly desirable that their lordships and the public should have every possible information on the subject before the discussion took place. The most important part of the information which had been moved for had only been delivered that day, so that it was quite impossible that

it should be printed and placed in the hands of their lordships in time for consideration to-morrow. He believed that only that part of the information which the noble earl himself (*Liverpool*) had thought necessary was yet before the house. He therefore called on the noble earl to say whether he thought it right to proceed with the measure, under these circumstances? The noble earl would surely feel that the expeditious forwarding of this measure was nothing in importance, when compared to the necessity of convincing the public mind that their lordships had carefully deliberated, and had had at least decent time to examine and digest the information before them.

The *Earl of Liverpool:*—A considerable part of the information necessary for throwing a due light on the question, had already been many days before the house, and was printed. It was certainly true that the information moved for by the noble marquis (*Lansdowne*) had only been brought up that day, and that further information moved for by another noble lord, which was of a still more extensive nature, had not yet been produced. But, with regard to all that description of information, the noble lord must be aware that it had long since become matter of notoriety. The returns made that day respecting bank notes and bankruptcies had been produced elsewhere, or were to be found in various publications. It was the same with respect to the prices of gold and the exchanges. He therefore could not think that the noble lord had suggested any ground for putting off the proceeding which had been fixed for to-morrow, and which was not the ultimate decision, but merely the opening of the measure. The second reading was the first stage of discussion, and the noble lord would have the opportunity of obtaining the information he required before the bill passed through its other stages. He was always ready to consult the personal convenience of any noble lord, if he could do so consistently with his public duty; but on the present occasion, if, as had been said, the country was disturbed by the agitation of this measure, the best thing that could be done was to settle the question as soon as possible, consistently with a full and fair discussion of the question. He could not consent to delay the second reading on the ground of mere convenience, but he had no wish to press the progress of the bill in its subsequent stages in any way which might not leave full opportunity for the most deliberate consideration which could be desired.

The *Earl of Lauderdale* had been, in the other house and their lordships', a member of Parliament for more than forty years, and he had always understood that the second reading of a bill was the time for discussing its principle. Nay, the noble lord himself had in that house often argued, that by agreeing to the second reading of a bill, their lordships became pledged to its principle. It seemed, however, that all this doctrine was now to be done away, and that the second reading of a bill was to be merely the opening of the measure. He did not plead for delay from a wish to consult any personal convenience of his own. He was as ready to go into the discussion now as he would be on Monday. But delay was surely of comparatively little importance to the public, being assured that their lordships were to proceed to the discussion with complete information, and after having been allowed full time to digest it.

*Bank Advances.*

The Marquis of Lansdowne wished to know what was the nature and extent of that important engagement into which Government had entered with the Bank of England, and in consequence of which purchases were now making in Government securities?

The Earl of Liverpool intended, on the second reading of the bill to-morrow, to state fully the grounds of the transaction to which the noble marquis had alluded; but he had not the least objection to answer now, in a general way, the question which had just been put.—There were a number of projects now afloat for relieving the present commercial distress by issues of Exchequer-bills on the part of the Government. He, however, had thought it his duty, as did the persons with whom he acted, to give a positive refusal to all applications for any measure of this description. At the same time, Government was most desirous to contribute to the removal of the existing distress by any relief which might be given, without violating the principle which had been laid down, that they should not interfere by making any advances. It was also necessary to take care that it should not be said that the Bank was hampered by any engagement which might be entered into for this object with the Government. It had, therefore, been thought advisable to state to the Bank, that if they came forward to relieve the commercial distress by taking a certain quantity of Exchequer-bills out of the market, and issuing their notes for the amount, Government would be content to aid the operation by submitting to Parliament the expediency of providing for the repayment of 2,000,000*l.* of such bills, so that the Bank would not be subject to any inconvenience.

FRIDAY, FEB. 17.—The Earl of Lauderdale wished to obtain further explanation on the subject alluded to yesterday, which was one of great importance, and which had alarmed him more than any of the proceedings now going on—he meant the proposition of Government to the Bank, not engaging to pay, but proposing to the Bank to indemnify them for Exchequer-bills to be purchased in the market. He believed that this was the first time that Government had openly proposed to purchase its own securities in a way that must have the effect of raising them in the market. He was not certain whether the transaction was legal: he doubted its legality. At all events, he thought it very improper to go into any discussion of the subject, until their lordships had before them every thing which had passed between the Government and the Bank respecting these Exchequer-bills. He therefore intended to move, first, for copies of the correspondence between Government and the Bank, relative to the late agreement for purchasing Exchequer-bills; secondly, for any correspondence which might have passed at any time between the Government and the Bank, respecting the purchase of joint securities, on a promise of afterwards submitting a proposition on the subject to Parliament.

The motions were agreed to.

*Gold Coinage.*

Lord King said, that the noble earl (Liverpool) would probably recollect, that it had

been mentioned by Mr. Mushet, before the Bank Committee, that the machinery for coining at the Mint could in forty-eight hours coin any quantity of bullion brought in, and return it to its owners. As the present distress arose chiefly from the deficiency of the currency, he wished the noble earl to consider of the propriety of taking measures to enable any persons who possessed bullion to carry it to the Mint, have it coined, and bring it back into circulation.

The Earl of Liverpool said, the practice had hitherto been to get the gold coined at the Mint, through the Bank. It was undoubtedly competent to any person to take gold to a certain amount to the mint, and require coin in return for it; but he was not aware that there would be any advantage in altering the practice.

Lord King said, that when the market price of gold was 3*l.* 17*s.*, there would be a great advantage in taking it to the Mint, and throwing it into circulation. If gold in this way was taken to the Mint, the advantage was obvious. When, in a deficient circulation, the market-price was below the Mint price, the best thing that could be done was to take it to the Bank, and fill up the circulation, until gold rose to the Mint price.

*Bank Charter and Promissory Notes Acts.*

The order of the day being moved,

The Earl of Liverpool rose to move the second reading of the bill, entitled "An act to amend an act, passed in the 39th and 40th years of the reign of his late Majesty, entitled an act for establishing an agreement with the Governor and Company of the Bank of England," &c. He believed it would be most convenient for the discussion, to call their lordships' attention to both branches of the subject, in order fully to explain the measures which ministers intended to submit in the present session. He was well aware of the difficulties opposed to any remedy which could be suggested. At the same time, he could not help thinking that, if their lordships were disposed to look the difficulties fairly in the face, they would be found less than they might at first sight appear to be.—The noble marquis (Lansdowne) had referred to what he (Lord Liverpool) had thought it right to say in the course of last session, on the subject of the speculations which were then going on. What he had then said showed that the causes of the present evils were not unforeseen by ministers. It had been said, however, that he had not pointed out all the sources of the delusion, and that in particular he did not say any thing of the country banks. Now, he would refer to the recollection of those who heard him at the time, as well as to those floating records, which, however hastily made, were for the most part substantially correct, for an account of what he said at that time. It would be found, that upon that occasion he went, as had been said, out of his way, to give notice to the persons embarked in wild speculations, of the hazard they were incurring. He then observed, that one of the reasons for his mentioning the subject was, that these speculations were not confined to the metropolis, where people might easily know what they were worth, but that they were extended throughout the country by the agency of country banks. When he made this declara-

tion, it could not be said that he gave no opinion relative to the banks; but though the question of over-trading was a separate one from that of the currency, it was impossible for any persons who directed their attention to affairs of this nature, not to see that the speculations were taking a turn which must be injurious to the country. He must say that he mainly agreed with those who attributed the present embarrassments to the extravagant speculations, which had been set afloat in consequence of the extraordinary prosperity of the country. That prosperity had induced persons to turn their attention to joint-stock companies of every description, to embark in mining projects, foreign loans, and to enter readily into the wildest and most delusive schemes. These proceedings were carried to such an extent, that two of his noble friends (Lord Lauderdale and the Lord Chancellor) were desirous of devising parliamentary measures, which might have the effect of putting a stop to these hazardous speculations. Since the South Sea bubble there had been no example of such extravagancies. But the spirit of speculation was not confined to those delusive objects he had already described. It extended to all the branches of legitimate traffic. Their lordships had on their table returns of various articles of import, all of which were articles constituting what was called fair trade. The returns of these articles, consisting of the most material imports, afforded a comparison of an average of the three preceding years with the last year; and a fairer comparison could not be made, because those three years, and more particularly the last two of them, were years of great commercial prosperity. It appeared from those returns, that in the years 1822, 1823, and 1824, the average imports of sheep's wool amounted to 20,341,076 lbs. In the last year, the amount of the same imports was 38,705,682 lbs., being an increase of 90 per cent. The average imports of cotton-wool during the three years, amounted to 161,206,751 lbs. Last year, the imports of the same article rose to 222,457,616 lbs., which was an increase of 38 per cent. The imports of indigo rose from 5,077,878 lbs., the average of the three last years, to 7,530,531 lbs., which was an increase of 48 per cent. The loads of square timber, imported in the three years, were 551,191, and they rose in the last year to 664,186, which was an increase of 20 per cent. Of deals, 41 hundreds were imported in the three years; and in the last year the imports were 58, making an increase of 42 per cent. In silk—and their lordships would remember how many complaints and petitions they had received from those who attributed the stagnation in the manufacture of that article to the intention of allowing its importation in July next, under a duty of 30 per cent.—in silk, speculation had been no less active. The imports of thrown silk, which were in the three years at an average 404,423 lbs., had risen to 800,501 lbs., being an increase of 98 per cent. A similar comparison with respect to raw silk showed an increase from 2,608,527 lbs. to 3,431,172 lbs., which was an increase of 31 per cent. The imports of wine, tallow, and several other articles, into the details of which he would not enter, had risen in a similar manner\*. It was not, then, in joint-stock companies merely,

\* See Parliamentary Paper, No. (11.) Lords, Sess. 1825.

and mining schemes, that that speculation had existed: it had been busy with every species of import; and, when such was the case, no other consequences could be expected than those which had actually occurred. Having stated thus much of the over-trading, he would now touch on the question of the currency, as connected with the present state of affairs. In a variety of works different theories were put forth, some ascribing all the commercial distress to the spirit of speculation, others attributing it entirely to the currency. He certainly did not ascribe it entirely to the currency. At the same time he would not say that it was entirely to be attributed to speculations in trade; a disposition to push speculation to such an excess could not have risen to the height it had attained, had not the state of the currency lent it its aid. The paper currency consisted of two branches—the notes of the Bank of England and the country banks. There were on the table returns, which showed the state of the Bank issues from 1819 to the present year. During the years 1821-22, the whole of 1823, and the half of the year 1824, there could be no reason to suppose that the issues were in any degree excessive. In 1823, and up to August and September in 1824, the exchanges were favourable. There was no one who did not agree that the exchanges had not then grown worse, though, from opinions previously entertained, some disputed the connexion between the currency and the exchanges. The fact, however, was, that up to August, 1824, the exchanges were favourable, but that in the month of September they took an unfavourable turn. In the latter part of that year, and the beginning of the next, the Bank, instead of contracting their issues, increased them. In March, 1825, however, they saw the necessity which was pressing on them, and they then began to reduce their paper. But in Feb. 15, and March 15 they reduced their issues 1,300,000l. Between the 15th of March and the 15th of May, they made a further reduction of 700,000l.; and by November the whole reduction amounted to 3,500,000l. He came now to the country bank circulation; but before he proceeded to notice it, he must beg leave to disclaim the charge of having cast reflections on the country bankers. What he had said in the correspondence with the Governor of the Bank of England, applied solely to the general system of country banking, and not to the persons engaged in that trade, many of whom he knew to be highly respectable. But let their lordships look to the progress that had been made in the circulation of country banks. In the years 1821, 1822, and 1823, the country bank circulation was somewhat more than 4,000,000l. The account from which he made this statement was founded upon the issues of stamps, but was sufficiently accurate for the purpose of comparison. No considerable increase had taken place until 1824. In that year the circulation of the country banks was suddenly increased, from 4,000,000l. to 6,000,000l. In 1825, it exceeded 8,000,000l.; so that between 1824 and 1826, this species of circulation had been doubled. This fact showed how the country bank circulation went on increasing, after the Bank of England had thought necessary to contract their issues. Thus when the Bank had reduced their issues, between Feb. and Nov. 1825, to the amount of 3,500,000l., the country banks had gone increasing their issues. In the first quarter of the same year ending the 5th of April, their issues

were 2,151,774l. In the second quarter, they amounted to 2,506,539l. In the third to 2,155,754l. In the fourth, there was a decrease to 1,941,204l. Thus the greater issue of country bank notes had taken place during the period to which he had referred: so that whatever reduction was made by the Bank of England, was much more than made up by the issues of the country banks. After this statement, it would be surely too much for any one to say, that the speculations in those branches of trade which he had described could be regarded as altogether independent of the paper circulation, or that those speculations had alone brought the country into its state of commercial difficulty. Their lordships would recollect that the commercial embarrassments began, first of all, in the west of England, where a great bank failed. The second failure was that of a bank in the metropolis, which was connected with more than 40 country banks. The third great failure was a bank in Yorkshire. Their lordships would find, upon inquiry, that, with one or two exceptions, the banks which failed in London were such as were chiefly connected with country banks. The first object now was to apply a remedy to this crying evil. He knew it would be said by some, that we ought to wait for quieter times: by others, that there was no need of any remedy—that it would cure itself. Those, however, who entertained the former opinion must, he apprehended, have less experience of the world than himself. He was convinced that the cure would be accomplished with much more ease and much less clamour, now, when the difficulty was felt, than after it was over. The remedy he had to propose divided itself into two branches: the first was the gradual reduction of the paper circulation of the country; the second was the opening, as far as possible, of the banking system throughout the country, on general principles. The first measure was not now before their lordships, but was in progress in the other house of parliament. Objections, however, had been stated to both measures. The first objection was one which could not be denied. He could not deny that the withdrawing the 1l. and 2l. notes in order to substitute a metallic currency, would check the supply of circulation which trade might require, and in this way increase the distress; but their lordships must see the necessity of adopting this measure after the statements he had made. They must have observed that the country might be left in a state of perfect delusion, that the country banks might go on increasing their paper circulation, when the Bank of England, aware of the state of exchanges, were taking measures to reduce their issues. If the circulation of the 1l. and 2l. notes was replaced by a metallic currency, this could not be the case. But there was another consideration of serious importance. If the country was to be exposed to a crisis of this nature, and in a great commercial country crises of such a kind were to be expected, it was necessary to provide against the evil consequences of this description of circulation to the poor man. A poor man could not refuse a one-pound bank-note, and he could not retain it in order to recover its value at another time, as others might do, for he must expend it in supplying his daily or weekly wants. Then let any body reflect upon the consequences produced under these circumstances by the failure of a great bank in a country town; and be it remembered, that no less than 70 or 80 of these banks had suspended

payment during the late panic, as was well known to their lordships. All the poor inhabitants had been able to save from their hard earnings for years past were probably lodged in that bank; even the very last payment of wages which they had received had been made in its notes; and consequently many of them were seen hawking those notes about for sale, offering them for even 5s. in the pound, to enable them to purchase the common necessities for the support of life. Now that was a situation of things which never could take place in a country in which a metallic currency alone existed (hear, hear). And this observation brought him to the next question—namely, the difficulties in the way of arriving at the substitution of a metallic for a paper currency. An objection had been made to the measures proposed by Government from the difficulties which would attend the substitution of a metallic currency. Now he (Lord Liverpool) would beg leave, in the first place, to call the attention of those who made that objection, to the actual situation of the country. In this great metropolis and its neighbourhood, a metallic currency alone was in circulation. The same observation applied to Lancashire, one of the most populous districts in England. Liverpool contained a population of 150,000 persons; Manchester 200,000; and the population of the district altogether was not less than two millions; yet in those populous towns, and throughout that whole district, there existed no other than a metallic currency. Thus in a district comprising a population equal to one-fourth of that of the whole kingdom, and of whom two-thirds might be taken to be persons of wealth, there was nothing but a metallic currency in circulation. Where, then, was the difficulty of extending that to the whole country which already existed in Manchester and its dependencies, and in London and its dependencies? An attempt had indeed been made to establish the circulation of 1l. and 2l. notes in Manchester, but, much to the credit of the inhabitants, they had rejected the proposal. Their lordships had, then, experience of the feasibility of the measure on their side. If they looked to the accounts which were, or would be, upon their table, the facts stated in them, and other facts also, would show that no difficulty whatever was to be apprehended in this respect. Taking the data from the number of stamps issued by the Stamp-office for that purpose, he was sure he did not under-rate the country bank notes, he was certain he over-rated them, at 6,000,000l. or 7,000,000l. at the utmost. Now, by the official accounts laid before their lordships, they knew that during the period from the year 1819 to the year 1826, the Mint issued in sovereigns and half sovereigns, 25,000,000l. sterling, of which, in one year—namely, the year 1821—they issued 9,500,000l. From that sum of 25,000,000l. their lordships would have to deduct the amount of the gold that had been exported from the kingdom; and this could be ascertained through the medium of the Customs, although it could not be done formerly, because then, absurdly enough, it was not permitted to export the coin of the country, but now it might be lawfully exported. From the accounts, then, furnished by the Custom-house, it appeared that the quantity of gold exported from this country since 1819, amounted 7,269,000l. During that period, as he before stated, 25,000,000l. of gold coin had issued from the Mint, which, deducting the 7,000,000l. exported through the Custom-house, left 18,000,000l. But in addition

that which passed through the Custom-house, he was aware that considerable quantities left the country through other channels—as, for instance, the sums paid to smugglers for contraband goods; and the money which the passengers on board vessels might have in their pockets. Taking, therefore, the sum of 7,000,000*l.*, which had been lawfully exported in the regular way, and adding to it the sum of 3,000,000*l.* more as the amount of the rest,—and this he knew was a most extravagant calculation\*,—their lordships would have to deduct 10,000,000*l.*, as the amount of coin exported, from the 25,000,000*l.* issued by the Mint, and there would be 15,000,000*l.* as the amount which remained in the country. Then they all knew that since the month of November, in the last year, upwards of a million had been re-imported. So that, according to this calculation, there could not be in the country at present less than sixteen millions of gold coin, to fill the place of the small note currency. Besides, circumstances had occurred which had partly anticipated, and thereby considerably facilitated, the proposed alteration. Their lordships might remember the alarm which had been created in the country some time ago, by the circumstance of a banker in Bristol refusing to pay his notes in gold; and this having been acted upon in London, the alarm soon spread throughout the kingdom, and the consequence was, that it drew a considerable quantity of gold into the country. Now, therefore, looking at the amount of the paper in circulation,—looking at the amount of the coin issued by the Mint since 1819—he did not not entertain the remotest doubt that there was quite a sufficient quantity of coin in the country to justify Government in substituting a gold for a paper circulation. They did not mean, however, that the paper currency was to be withdrawn at once; it was to be done gradually in the course of the ensuing three years, so that the country notes would still continue to circulate until (supposing even that there were not enough of coin in the country to supply their place) a sufficient quantity could be procured. However, looking at the example of Lancashire and London, all difficulties on the subject completely vanished. Why did gold circulate there?—Because they had no paper currency. Why was there no gold in other places?—Because they had a paper currency. No fact had been more clearly established by all experience on the subject than this—that gold and paper never would circulate together. These were the grounds on which he submitted his first measure to the consideration of the house. It was proposed, as the means of making the evils felt at an earlier period, whenever an unfavourable state of the exchanges took place, by which the great mass of the people would be protected from its effects. But then it would be said, “That measure of itself will be inadequate; you ought to go farther: that is doing much, but it is not doing enough.” But though he preferred a metallic to a paper currency in small transactions, still he admitted that a system of banking, established on sound principles, was attended with convenience and benefit. The measure, however, which he had to propose on this sub-

ject, he granted, was but a half measure: and why was it so? Because their lordships would recollect, they had the chartered rights of the Bank of England to contend with. This was an obstacle to their going farther at present: they ought to go farther whenever they could; but the question now was, were their lordships, although they could not go so far as they wished at present, to go as far as they could? He was surprised to hear it objected to, on no other ground than that it was calculated to do too little good. But surely if it would do some good, and no harm, that was a groundless objection. The present system of banking laws in this country he considered to be one of the most absurd that ever was invented; it was in the teeth of all sound policy or common sense. It had grown up gradually, and was not the result of any original plan. He could easily conceive one or two systems founded upon reason and good policy, which might be adopted by banks; as, for instance, let them have a system of liberty, permitting any number of partners; or let them have a system of restriction, founded on conditions of indemnity or security, so that the public had a chance of being secure. In America, one of those systems was acted upon: for instance, in the state of Massachusetts, they had 12 chartered banks, and no others were allowed; and the moment any one of them became unable to pay their notes in specie, it was discharged. The other system to which he had alluded was one of entire liberty; and they both answered the same purpose in the end; because in a certain time respectable banks would be established, composed of a number of wealthy individuals, or formed on the principle of joint-stock companies; and these would expel the weaker or less solvent banks; so that in the end it would come to the same thing. In London the only notes in circulation were those of the Bank of England; and this effect was not produced by the operation of law, for any other bank in London was at liberty to issue notes as well as the Bank of England. But the reason why the private bankers of London did not issue notes was, because the public would not take them, whilst they could get those of the Bank of England, in which they had more confidence. So if there were chartered banks in other parts of the kingdom, there could be no doubt but that they would immediately absorb the whole circulation of the country. Therefore, by either of those systems, the object of security would be attained: but what was the system in existence at present? Why, the most rotten, the most insecure, the very worst in every respect that could possibly be conceived. Any petty tradesman, any cobbler or cheesemonger, however destitute of property, might set up a bank in any place; whilst a joint stock company, however large their capital, or a number of individuals, however respectable and wealthy they might be, were precluded from so doing. Let them, then, either continue the system of restriction in point of number, but qualify it by condition; or else allow full liberty of number: so that whichever they adopted, the public might have security for their property. The beneficial consequences resulting from one of these systems was manifested by its effects in Scotland. He might be told that it was in vain for him to look to the example of that country, because they had no power of granting charters. He admitted they had not, unless the Bank of England were to give up its

\* The Chancellor of the Exchequer appears to have reckoned this sum at only 2,000,000*l.*, which makes a difference of 1,000,000*l.* in the results of his and Lord Liverpool's calculation. *Ants*, p. 185.

charter; and therefore it was that he had before said that his measure was but a half one. The Bank had, however, consented to allow the restriction as to the number of partners in country banks to be removed, and so far one object was relieved of its difficulty. In return for this, the Bank would have the privilege of establishing branch banks throughout the country. Indeed, he believed they had a right to do so at present, and he confessed he was most anxious that they should make the experiment. But he knew that even if they did not think it prudent to make that experiment themselves, they would not therefore suffer the people to wait until 1833, exposed to the consequences of the present system, but allow the crown to grant charters to country banks. He believed it would not in any respect injure them, but on the contrary, while it would be attended with the greatest advantages to the country at large, it would be beneficial also in its consequences to the Bank itself.—This, then, was the nature of the measures which he had to propose; but before he sat down, there were two or three points on which he wished to make a few observations. The circulation of these country notes had been defended, because they were convertible into coin. It was certainly true that when a paper currency could be converted into coin, this evil would cure itself. But then there was a material difference between applying a cure beforehand, and waiting until the cure was accomplished through the ruin of thousands of people. That was the great error of the doctrine to which he alluded. It was also to be recollected, that although the doctrine might be true, perhaps, in a poor country, where property consisted chiefly of land, in a great commercial country like this, where the currency was subject to greater fluctuations, it did not apply. The object of every description of currency should be to make the value of property as steady and as little variable as possible. And this reminded him of a subject on which he would give no opinion at present—he meant the corn laws. He was afraid from what he could observe in the house, that when that subject came on to be discussed, a great deal of heat and passion would be evinced on both sides. But he would recommend their lordships to look at it as one which called upon them to take a cool and dispassionate view of it; not with the consideration as to whether the rents of the landlords, or the wages of the labourers, were to be high or low; but with a view to discovering what would be most likely to produce the least violent fluctuations of property. The truth lay there, and he who solved that problem would come to the wisest conclusion. In alluding to this subject, he had gone out of his way; but he had been led to it by referring to the fluctuation of property, and he could not help intreating of their lordships, when they came to consider it, to do so coolly and dispassionately, and with reference to the whole community.—Having said so much, he now came to the question of a measure of relief, which, amongst others, was affoat. A wish had been expressed that a remedy for the present distress might be afforded by means of the issue of Exchequer-bills; and he knew that if he studied his own popularity, he could not do so more effectually than by coming down to parliament with a proposition to that effect. If he had not adopted that course, he trusted the house would give him

credit for abstaining from it, from a deep conviction that it was not likely to be attended with beneficial results. He had always thought that the precedent of 1793 in that respect was not a favourable one, and therefore ought not to be followed. But there was a great difference between that period and the present; for it could not be pretended that the commercial distress which now existed had any connexion with political events. What would be the effect of such a measure but to teach the people to look to Government for relief from the consequences of their own extravagance. It was now three or four years since the landed interest was suffering great distress; and not a month passed at that time that he was not beset with the most urgent applications for relief by the issue of Exchequer-bills, as had been previously granted during the existence of commercial distress. The applications, however, had been rejected; for there was a great difference between the two cases. Payment in the one case might be secured within a given time upon goods, but could not upon land. The landed interest, however, did not the less consider that the state ought to come forward and help them in their distresses as it had done the commercial interest; for, said they, the commercial interests had the advantage of being able to send their goods abroad; they might combine to assist each other; the landed interests could not. He admitted these reasons; and on those as well as other grounds, he could not agree to adopt a similar measure now. All that Government said upon the subject was this—if the Bank chose to go into the market and purchase Exchequer-bills for the purpose of affording relief to the public, Government would pay them two out of the six millions which they owed them, to prevent them from experiencing an inconvenience from so doing. The noble lord (Lauderdale) objected to this, that it was a species of guarantee on the part of the Government. It was only paying an acknowledged debt.—He had now stated generally the principles on which the measures which he proposed were founded, and, of course, he would be happy to afford any further explanation which might be required upon the subject. Their lordships knew, that from a given day, no new notes had been stamped, and that after the 5th of April, 1829, the issue of 11. and 21. notes was to cease altogether. The Bank of England was to be put on the same footing in this respect as the country banks. But for the convenience of the country banks, it was desirable that the Bank of England should not desist from the issue of small notes altogether, and therefore they would continue to do so until the 10th of October. With respect to Scotland and Ireland, he was quite clear that it would be expedient to put them also upon the same footing, though not immediately. This was the general nature of the measures which he had to propose, and he should conclude by moving the second reading of the bill.

The Earl of *Limerick* stated with reference to the circulation of Ireland, that in the south of that country they had no currency whatever but bank notes. Gold was not to be had there. He begged the noble earl to consider the great increase of gold which would be necessary for the currency of Ireland.

The Earl of *Lauderdale* said, that when upon a former occasion a noble lord (King) had introduced the subject of the corn laws,

he had treated his observations in a way in which they ought to have been treated—namely, by not noticing them at all. But the case was different when the noble earl (Liverpool) had thought proper to travel out of his way to allude to it, for the purpose of treating the house to an exhortation on the subject; and it was, therefore, impossible on this occasion to remain silent, as he had done on the other. The noble earl said a great deal about intemperance, and warned the house against giving way to passion. He (Lord Lauderdale) could only say, that when he had discussed the subject with the noble earl, he could not recollect having used a single argument in which he did not consider it with reference to the interests of the landed proprietors and the manufacturers combined. He had argued it on the ground of advantage to the manufacturer, to the land-owner, and to the country at large. He had always contended that a moderate remunerating price was most beneficial both to the manufacturers and the landed gentlemen; and those who had taken the trouble to examine prices since then, would perceive that whenever prices were moderate, there existed the least degree of fluctuation of property. He was surprised that the noble earl would let it go abroad to the country that those who were to argue this question were likely to do so with passion and intemperance. He would find that they would do so with temper and consideration, not seeking, as another noble lord had said, to starve the poor, in order to fill the pockets of the landowners; but with an anxious desire to arrive at that conclusion which might best promote the interests of both combined. He begged pardon for having, when he rose to address their lordships on the important subject that had come before them, taken up so much of their time in replying to observations which he only respected from the station of the noble earl who had made them, and not on their own account.—Now the question for their lordships was, whether they should adopt the measure for restraining the issue of 11. and 21. notes four years before the privilege of issuing them would expire by law. He was not called upon to say whether or not there ought to be a circulation of notes under 51.; but admitting, for a moment, the principle of the measure before the house, the question was, whether it was right to agitate that measure in the present state of the country. He thought that this was not the time for bringing it forward; at present, it could neither be discussed within doors with temper, nor with safety without. It would not, he thought, be impossible to shew that ministers were acting on a mistaken view of the existing calamities, of which this measure, beyond all others, was calculated to increase the magnitude. Before they prescribed the remedy, they ought first to ascertain the nature of the disease; otherwise they ran the risk of aggravating instead of curing it. The noble lord (Liverpool) had favoured the house with his particular view of the causes of the existing distress. The noble lord attributed the whole origin of the evil to rash and overdone speculations, which led to the secondary cause, according to that noble lord's arrangement—the excess of the paper circulation. He (Lord Lauderdale) had heard nothing to prove that an excess of paper had existed. The noble lord had read various returns of the 11. and 21. notes in circulation at particular periods, and proved to the house that they amount-

ed to so many millions: but this statement presented no proof at all of an excess. What, he would be most happy to know, was an excess of paper? How was the existence of it to be ascertained? A quantity of circulating medium which might be quite enough for the circumstances of the country in one state of its traffic, would be a great excess in another; and, on the contrary, a quantity which might be amply sufficient for one set of transactions, would be altogether defective for another. For instance, the circulation of this country would, if transported to any other country with equal limits of territory and numbers, and without our great resources, be ridiculously excessive; or if, with greater resources, ridiculously defective. They had seen the value of the three per cents. rise from 75 to 97 per cent. Land, which before had been thought to be well sold at 25 years' purchase, fetched 33 years' purchase. The same thing had occurred with all other securities. Was it possible that the same transactions could be carried on in land and stock at high prices with the same circulating medium as at low prices? The argument was equally applicable to the rise in the prices of commodities. Did the noble earl really think that augmented transactions in commodities could be carried on with the same quantity of circulation which existed before? It was utterly impossible. It was nothing, therefore, to shew that the quantity of the circulation had increased: it must be shewn also, that it exceeded its due proportion in comparison with the amount of commodities at the different periods stated. It would have been easy to ascertain the fact, had the inquiry been properly directed. The bullion committee had very properly rested on the supposition, that mankind acted uniformly on the sense of self-interest; and that should the public see that the state of the exchanges and the price of gold were running adversely to the paper circulation, they would promptly exchange whatever notes they held for cash; and by that means prevent an excessive issue of paper one time with another. In this they had merely concurred with Dr. Smith, and all the writers on political economy who were of any authority; Dr. Smith having proposed as part of the basis of a system of mixed currency, paper convertible into gold, with which he proposed to couple the agency of banks throughout the country. But, in the present instance, how was the excess of the paper circulation proved? It was said that there was a great rise in the prices of commodities. But rise of prices might proceed from an alteration in the proportion of the quantity of various commodities as compared with each other. They must go a step further: they must prove,—if it were meant to be shewn that the rise of prices manifested an excess of paper—that the value of paper was diminished in proportion to the value of commodities. Now gold was a commodity, and while paper did not decline in comparison with the price of bullion, it would be difficult to prove that paper was in excess. While a 20s. note was convertible into a sovereign, weighing 123 grains of gold and a fraction, it must be held to be an equivalent to 123 grains and a little better of gold; and therefore not depreciated, and therefore not in excess, unless it were to be attempted to be proved, that things equal to one and the same were unequal to one another. The spirit of scheming, and the excess of paper issues, had been ab-

surdly linked together. How stood the question with respect to the great eras of scheming which had marked our latter history? Was it the over-abundance of 11. and 21. notes—was it an excess of country bank paper which set going the bubble of the South Sea project? So far from it, there were no small notes in existence in this country—there was no country bank paper at all. The same might be said of other periods. It was not the excess of paper which excited the schemes of 1793, which were happily put an end to by the war. There were no allegations of the kind at the time. He could not concur with the noble earl in ascribing the spirit of scheming to an excess of paper. High prices there might be, for a time, through the influence of scheming, but his imagination could not trace how the issues of 11. and 21. notes could have called up the schemers into action. There was a whimsical contrast observable in the opinions expressed on this subject between two eminent writers of the day, Mr. Mushett and Mr. Tooke. The latter gentleman attributed to high prices the propagation of all the late joint stock companies, and wild projects of speculation. Mr. Mushett assigned low prices as the cause of the same evils. Leaving those gentlemen to reconcile as they might opinions so opposite, he did not believe that either high or low prices were enough to account for so strange an agitation as the country experienced in the course of last year. Was it, then, that he was puzzled by these phenomena, and that he had no way of solving the difficulty in his own mind? No such thing. To discover the real cause of these phenomena, he was naturally led to examine the circumstances of a few years back, and to consider the measures which had been adopted under the auspices of a noble lord (Bexley), who was then sitting in another house. He would observe, in passing, that it would be not a little surprising if that noble lord, after having brought the House of Commons to concur in a resolution that a Bank-paper not convertible into money on demand, and which was actually at a discount of 25 per cent. compared with gold, was not depreciated, should now concur with the noble earl, that paper was in excess, and therefore, by implied necessity, depreciated, though convertible at the discretion of the owner. The real cause of the late phenomena was to be found in the working of that sinking fund which had within a few years past been established on an effective footing of 5,000,000l. annually. Let their lordships observe how this operated, and if it was possible, deny that instead of 1,000,000l., the former amount of the effective sinking fund, which was scarcely felt in the money transactions of the country, the public had now to contend with an excess of capital equal to 5,000,000l. thrown in, annually, to seek employment among the other interests. The commissioners went to market, and bought three per cents. or Exchequer-bills held by dissentients to the reduction of the four per cents. or any other public securities. These securities must be held by capitalists. The commissioners succeed in persuading them to sell and pay their money. Must not that money immediately enter the markets, and seek for new employment? Must not this extraordinary supply of capital diminish its value? Here, then, was a new experiment upon the general interests. While the war lasted, the sinking fund did not in effect exist—its operation was farcical or delu-

sive—receiving 20,000,000l. with one hand and paying 20,000,000l. with the other, of course it brought no excess of capital into the market. But it was a new feature in our affairs to have 5,000,000l. brought annually into the market to seek for new employment. It showed at once the reason for the increased prices in fixed securities. This it was that had reduced the interest upon them; this had sunk the interest of the five per cents. nearly as low as the interest before paid on the  $3\frac{1}{2}$  per cents. And its effect was still going on to a further reduction. They must see how the case stood with men who had disposable capital. Mortgages undertaken at 5 per cent. were in hundreds of instances redeemed with money got at lower interest. The situation of the borrower began to be one of difficulty. He found himself narrowed in his enjoyments. He listened eagerly to projects which would be likely to retrieve his income. One successful project counteracted the experience of many which failed; as in the lottery scheme, the drawing of a 20,000l. prize spread the hope of gain far and wide beyond any possibilities even of the law of chances. In former periods the same consequences had followed the diminution of interest, though no excess of 11. and 21. notes could be alleged. When Mr. Hutchinson proposed the first sinking fund, which in 1716 was adopted by Sir Robert Walpole, the foundation of that scheme was laid in a plan for lowering the interest of the public securities. There was the same circumstance of lowering the interest of fixed securities just before the bursting out of the South Sea scheme; and the same cause had then, as lately, led to the same disposition for adventures and projects, which deluded the capitalists with the hope of obtaining more interest, and replacing their income upon the former footing. Such, he assured their lordships, not on his own dictum but on the gravest authorities, was the real cause of the recent fluctuations in interest and in capital, and then in the prices of commodities. It was impossible to circulate commodities at a constant price, while the sinking fund was constantly pouring in an increase of capital seeking for new employment. The noble earl had observed, that he (Lord Lauderdale) was not authorized in saying that the noble earl, in predicting the evil consequences of that rash and wild spirit of speculation in last session, had left out of view the operations of the country banks. The noble earl insisted that he had pointed out the transactions of the country banks even at that period, as an effective cause of the prevalence of that speculative spirit. But he put it to the house, did the noble earl then say any thing of the excessive issues of country bank paper? If the noble earl did really take that excess into consideration, what did he mean by the threat, which he very properly held out *in terrorem* against those who should advance too far in that mad career, telling them that if they got themselves into difficulties, they must not look for any commiseration from Government, as ministers had determined not to advance any thing for their assistance in the way of Exchequer-bills? Was there any man in the kingdom, who had talked or written upon the subject, from the noble lord on the woolsack down to the most petty newspaper, who did not assign as the cause of the calamity the wild and disastrous speculations and the projects of the joint-stock companies? If he was right, then the high prices had been

occasioned by 3,000,000*l.* of capital coming into the market annually as a candidate for new employment; and as its tendency was to set speculation afloat, so its operation within the last year had been to call out 17,000,000*l.* of capital, which were exhausted in foreign loans, in mining, in speculations of silk, linen, cotton, and other articles. The exhaustion of this capital had again led to a reduction of prices equal to one-fifth. The inevitable consequence was a diminution of credit, and thence came a fall of prices in the fixed securities. The 3 per cents. were before at 97, and land at 33 years' purchase; circumstances changed, and the 3 per cents. were at 80, land at not more than 30 years' purchase. It was impossible that all this could be done so suddenly without producing many stoppages. Some among the best houses were nearly crippled, while bankruptcy at once overtook the unsound dealer, who had habitually depended on accommodation.—Now for the remedies proposed by the Government. He wished to know if the administration had left the country alone, what might at this time have been the amount of the loss? He would venture to say not 2,000,000*l.* altogether. Things would rapidly have come round, and the industry of the country would by this time have been again actively engaged. But the noble lord chose to put out an alarming statement in the speech from the throne, deprecating the causes of the evil, and in the same speech, and the address voted in answer, it was clearly declared that some measures on the part of Government were absolutely necessary. He put it to the noble earl and to the house, to calculate, before that relief could possibly reach the public, what must be the loss in staying the transactions of every kind in the commerce and manufactures of so active and wealthy a community, in consequence of that alarming denunciation, and then to say if that loss was not greater than all the evils to which the new remedies were to be applied. For his (Lord Lauderdale's) part, he could not see those symptoms of a chief agency in the country banks to the production of the present evils. He saw, at the time, men of all parties in that as well as in the other house, joining in the schemes, and strengthening the opinion entertained of those schemes by the public, with the authority of their names. Why was there nothing done towards redressing this grievance as well as the over-issues of country banks? Had the Government put the Bubble Act into execution? The noble lord might say that the Bubble Act afforded no security. If so, why had he not proposed some measure which would have been effective. The noble lord was well aware that many members in most of the great offices, not excepting that of the Secretary of State, were speculators in the scheming companies, but no precautionary measures had been taken, although he (Lord Lauderdale) and others had exerted themselves to their utmost in undeceiving the country: day after day had he teased the house with prophecies which had been but too fully realized.—The noble earl had taken the amount of coin actually in circulation at 16,000,000*l.* How the noble earl got at that knowledge was beyond his ability to conceive, and so it was how the noble earl succeeded in getting any return at all, much more of the exact quantity exported, which the noble earl had put at 7,000,000*l.* Three years ago he (Lord Lauderdale) had called for that account, and he was answered, that since

1826.

the coin was allowed by law to be exported without being sworn to, no register had been kept of the amounts. He would not, however, dispute the account of the noble earl. The noble earl should remember that, in respect to the country banks, it did not require a capital of more than 1,000,000*l.* to keep up a circulation of 6,000,000*l.* of notes. While this 6,000,000*l.* might have, and was supposed to have, its security on only 1,000,000*l.* of property, the noble earl was going to make a demand on capital to the extent of 5,000,000*l.*, which the country bankers must call up. This must create a further demand for coin to the extent of 6,000,000*l.*—The noble earl talked of joint-stock companies with an increased number of partners, as one remedy. If the noble lord could find men ready to embark in those schemes in greater numbers than hitherto allowed by law, he would own himself to have greatly mistaken the subject. If at any time the noble earl could find six men or more who were ready to embark their whole property with the chance of dividing it to the last shilling in case of failure—taking into account, too, the variety of temper, and disposition of men, and the sense of risk,—it would very much confound all his previous calculations. He knew that such establishments had been attempted, and one of them had been set on foot last summer. They did him the honour of applying to him to be their governor; and stated, that as they only wished for the honour of his patronage and advice in directing their affairs, they did not mean to call upon him at all as a sharer. His reply was, that he felt the compliment which they intended for him, but, as he certainly never could be brought to embark his property in such a scheme, still less would he assist it with the sanction of his name, and make himself a decoy-duck. The increase in the number of partners would add no security to the country banks. The richest partnership ever known in any joint-stock bank in Scotland was that of Douglas, Herring, and Co., and they failed in 1772.—Amongst other things which the noble earl had not touched upon, was the effect of the Mint regulations. The seignorage on silver was too heavy, and Government would not allow any body to issue silver but itself. At a time when they appeared so anxious to withdraw the 1*l.* notes, and to let in gold, why did they not allow a free mint in silver as well as a free mint in gold? The noble lord had at one time published a book on the subject, which contained one of the most ridiculous arguments on this subject that he had ever met with. It was contended in that book, that as we were richer than any other nation in the world, we required a more valuable standard; silver might do for the people of the Continent, but gold must be our standard. It might as well be argued, that as we were in a greater degree than other people manufacturers of broad-cloth, we ought to have a longer yard to measure by. To exclude the silver standard, which was common to all Europe besides, was to the last degree absurd, when considered in detail. It was the pride of his lordship's administration that treaties of amity and commerce had been concluded with the independent states of South America. But some of the returns from South America would be made in silver ingots, which would necessarily be conveyed to the Continent, where there was a free market, while the seignorage amounted to a tax of 1½ per cent. He recollected arguing

2 K

that point fully when these hints regulations were settled. He rejoiced at the prospect of seeing something done towards carrying into effect what he considered to be quite indispensable.—Some remarks he must make with regard to the application of this plan to Scotland. He confessed he had never heard any proposition with more astonishment than the plan of extending to that country a remedy for evils which only existed in this. Bank-notes were in constant circulation in Scotland, and always had been; but never, except in one instance, had the interference of the legislature been necessary, and then it was exerted, as he admitted, in a very proper way. Certain notes had been issued which were payable, at the option of the parties, either in demand or at six months from the date, bearing interest at five per cent. These notes had been very properly abolished by an act of parliament. But for notes of £1 and £2, payable in demand, they had been in circulation in Scotland since 1696 to the present time, without any inconvenience to the public or loss to the poor, or suspicion of any excess of issues. The noble earl would see why he did not believe that joint stock companies would take here, when he had explained how they were managed in Scotland. Of thirty country banks seven were chartered or joint stock companies; the other twenty-three were common partnerships of four or five partners. Were these less secure than the chartered or joint stock banks? By no means: the notes of the one were as good as the notes of the other. But what was the nature of that security? There was no bank in Scotland, whether in Edinburgh or any other part of the kingdom, the agents of which did not meet the agents of the other banks at least twice a week, when they interchanged the notes which they held of each other's banks, and the balance was paid in gold or bullion in England. How could there ever be an over-issue; and how could they derive any profit from it, should they attempt an over-issue of their own paper, when they must immediately balance the account in cash or bullion in England? In fact, there never had been an over-issue of that paper. Thus, he knew, was contradicted by some persons who asserted to be very deeply skilled on the subject. And here he could not avoid inserting an article on this subject, which, it seemed, was to appear in the *Edinburgh Review*. But as the *Edinburgh Review* would not be published sufficiently early to instruct their brethren in the course which the writer deemed it advisable for their lordships to pursue in the parliamentary discussions on the subject now before them, the author—for such was the surprising importance that he attached to his opinions—had put into this article in a separate pamphlet, and had sent a copy to each of the members of both houses of parliament. In that article the writer advanced a most extraordinary proposition—extraordinary from its total inadmissibility in point of fact, and no less extraordinary from its total absurdity in point of argument. The writer said, "I was much amused with the paragraph which appeared in the newspapers relative to the firmness and stability of the Scotch banks during the late convulsion. I will not say that, at the period to which I refer, those establishments were on the brink of destruction, but undoubtedly they were in a situation of very great danger. If the national Bank and the British Linen Company had not stepped

forward and proffered their assistance, many of these banks, and the Fife bank amongst the number, must have stopped payment. But for this intervention, that bank could hardly have resisted the run that was made upon it, and the stoppage must have been productive of the most disastrous consequences." Now the fact was, that the Fife bank had actually stopped payment, instead of that event having been prevented by the operations of the two establishments mentioned. The £1 and £2 notes of the Fife bank were dispersed amongst the poor, and it was expected that the industrious classes would have been great sufferers. But, at that critical moment, the national Bank and the British Linen Company intervened, and averted the evil. They well knew what were the availing effects of the issue whose credit had been shaken—they were cognizant of the fact, that their concerns had been mismanaged for three years by persons who were not acquainted with the proper mode of conducting business; and, under these circumstances, they stepped forward with their assistance. These great establishments felt that there was much security as justified them in putting an end to the evil at once. But did this circumstance afford any proof that the Scotch country banks were in danger? No such thing. It showed, on the contrary, that their foundation was solid, and that they commanded general confidence throughout the country. In this instance the two establishments which he had named said, "We will take up all the notes at once, because we are quite sure we can do so with perfect safety." Was this a proof of any thing else but that those banking establishments which could command such relief were in a state of prosperity? It appeared that those who ministered their aid had the fullest possible confidence in the strength of the security offered. Looking to the proverbial caution of the people of Scotland, he was sure that no one would expect to see them going out of their way to assist their friends; no one would suppose that, in a critical moment, they would, without any attention to their own interests, study the good of their friends alone, by keeping these £1 and £2 notes in their hands, if they imagined they were likely to suffer by such a proceeding. But the fact was, that the people of Scotland were perfectly satisfied with the currency. Why, then, should the noble earl apply to that country a remedy which he found it necessary to resort to for the purpose of eradicating a disease that happened to be prevalent in this? As well might a physician who had cured one of their lordships of a painful disease by a violent medicine, prescribe it in all cases. It would be strange, if that physician, having been called in to attend one of the *re. reverend prelates* opposite, should say, "I have seen most excellent effects produced by this medicine, and, as I have appointed my lord such-a-one, I must be permitted to appoint you also" (laughter)—although the reverend prelate's age and avarice might fairly be supposed to exempt him from the necessity of using such a medication (laughter). In the course of the discussion to which the subject of the currency must give rise, he would take an opportunity of explaining fully to their lordships the calamity which an extension to Scotland of the noble earl's principle was likely to produce.—He had now done his utmost to convince their lordships—that Government had mistaken the causes of the injury, and 2d, that the remedy

would create a great degree of suffering. The disease really arose from a great extra supply of capital in the first place, and a great extra demand for it in the second; and such being its origin, it appeared to him that the measure now proposed would not remove it.

The Marquis of *Lansdowne* said, that the question before the house divided itself into two points: the one was the means adopted by Government with a view to the immediate relief of the country; the second was the proposition for administering, if not a complete, at least a powerful remedy against a future recurrence of the present ruinous disorder. These different measures were totally distinct, and rested on different grounds. One of them assumed to be founded on a recurrence to the old and wise principle of placing the credit and currency of the country on a sound and permanent foundation; while the other was admitted to be a departure from an established principle, justified by the immediate necessity of the case. He would, in the first place, call the attention of their lordships to the latter measure—that which had been adopted with respect to the Bank. That measure had been only determined on in the course of the last few days, and they had that night, for the first time, received correct information on the subject from the noble earl. Admitting that the distress of the commercial world had arrived at such a pitch as justified the Government in interfering with respect to that which was the common concern of all men, still he must disapprove of the present measure. What, then, was the evil which was to be remedied? It was not the absence of money, but the want of confidence in a certain class of individuals who required to be relieved. To correct this state of things, the Bank had been sent into the market to purchase 2,000,000*l.* of Exchequer-bills. Such a purchase must have a considerable effect on the market, namely, that of adding 2,000,000*l.* to the currency already in circulation; but it did not follow that the 2,000,000*l.* would find their way—so immediately at least as could be wished—to those parties who were the objects of relief. This issue could have no other effect at the moment, except to assist speculations in the market. It would aid the speculations of those who were in the habit of trafficking in Exchequer-bills, but would not find its way into the coffers of individuals, who, supposing their property and their different securities good and solid at any other time, were distressed, because those securities were not available at the present moment. This measure would, therefore, fail, in a great degree, in administering immediate relief. The most efficient course would have been to follow the example which had been set in 1793. In doing this, ministers would have had the benefit of experience; they would have known that the plan then adopted, however objectionable in point of principle, had been before attended with the effect which it was hoped would follow from it, and that, too, without any ultimate loss accruing from the plan.—He should now dismiss this part of the question, in order to enter on the consideration of the larger and more important topic—he meant that view of the subject which related to the cause of the evil, and which treated of a permanent remedy for it. One of the difficulties which had been urged against a noble earl (*Liverpool*) and others, who were convinced that the present state of things called for a di-

rect interference on the part of the Government, might, he conceived, be easily answered. It had been repeatedly asked, “Why should you interfere with the principle of free trade in a paper circulation more than in any other business?” Now, advocate as he was for the general principles of free trade, he could see no connexion whatever between those principles and the principles which governed the circulation. He could not maintain the principles on which free trade proceeded without admitting this exception, that, with respect to those regulations which governed the intercourse between man and man, and, of course, the property of men, it was fitting for Government, under particular circumstances, to interpose. If the legislature were allowed to alter weights and measures which were used for the ordinary purposes of the country, he conceived it to be quite clear, that it was equally within their power to interpose for the sake of giving to individuals, either coin, or that which, under peculiar circumstances, they were compelled to receive as coin, to the extent and to the full real value of that which their labour or their merchandise ought to command. They ought to receive the full real value, not a nominal and fictitious value; and the legislature certainly had a right to effect that object. Admitting the necessity of this interference—he was of opinion, in common with every enlightened person in the country, that the evil was inherent in the system as it now stood. Some individuals, however, thought that the present was not a proper moment for the discussing and setting at rest this important question. They contended that a period of greater calm and tranquillity ought to be selected for that purpose. He knew not what the noble earl felt on the subject; but if by any means the legislature could, for a period of six months or a year, suspend the wheel of currency, and put a chain and drag on it, so that, at the expiration of that time, it would be in the same situation as it was at the present moment, he would not object to the delay. But they all knew that when the wheel of circulation was out of order, it could not be made to stand still in the way which he had described; and if it were admitted, as he believed and trusted it was admitted by all, that there was an indispensable necessity for altering the system of the currency, it was for the legislature to consider whether it was not far less galling to impose those fetters when the members were contracted, rather than to select a period when they would be distended and enlarged, and when, in consequence, it would be much more difficult to impose those necessary restraints. He thought a full case had been made out for Parliament to act, and to act at once; and, when he looked to the state of disorder which prevailed, arising partly from speculation and partly from the currency (on which he would presently say a word or two with reference to what had fallen from his noble friend), he thought the legislature could not proceed with too much celerity. When such was the situation of affairs, was it matter of exaggeration to inquire, whether there had not been, in a period of profound peace—without any circumstance from abroad that could affect or alter the internal condition of the country—was it, he demanded, too much to ask, whether there had not been effected, in that time of calm and tranquillity, a greater change and convulsion in the mercantile property of Great Britain, than had been effected

in the kingdom of France in 1815, when that country was overrun and conquered, and fortified by foreigners? When he was asked, what he conceived to be the reason of this mighty change—was he wrong, if he stated in answer, that there was something fundamentally bad in the system on which the currency of this country rested, and which alone caused this convulsion? The evil which existed in the present day was not only felt amongst those whose trade was speculation, but it had found its way even to the lowest classes of life. Ought not the legislature, then, to consider what the existing law was, and to see how far the currency was affected by that law? There was a difference between the view taken by himself and that of the noble earl (Liverpool) as to the cause of the existing evil. The noble earl attributed the evil almost entirely to over speculation; but he (Lord Lansdowne) contended that the real source of the evil was to be traced to the state of the currency. The state of the currency produced speculation, which was, in fact, the secondary evil. That point, however, he did not think very material for discussion in that house. It was manifest by a reference to events which had occurred in the last two years, that between the currency and speculation there was a mutual action and re-action. No commercial country, like that in which they lived, could exist without being affected by the spirit of speculation; and it was the peculiar nature of the currency in this country, as it at present stood, to administer ample food to that speculation which was of the most mischievous and of the most unbounded description. He thought a case was fairly made out to induce their lordships to interfere, and to adopt some efficient remedy for this crying evil. His noble friend (Lord Lauderdale) had, however, found out another reason for this extensive speculation. He had stated that one of the great causes, indeed almost the sole cause, of this unusual spirit of speculation, was the application of 5,000,000*l.* annually as a sinking fund. This his noble friend looked upon as an addition to the speculating capital of the country. He argued, that if this 5,000,000*l.* were not taken from the people, it would be spent as income; but that, when applied as a sinking fund, it really became a speculating capital. He, however, could not see that the 5,000,000*l.* thus taken annually out of the pockets of the people tended more to increase the speculating capital, than if that sum were suffered to remain in their pockets. The speculation would be exactly the same in either case. There was, however, this difference—the sinking fund consisted of 5,000,000*l.* of real capital, but the evil against which they had now to contend was, that of a nominal capital and a nominal surplus, which were forced out for the moment for the purposes of speculation. Now, on looking back a little, what circumstances did he find with respect to the speculative proceedings which afterwards took place? Previous to the period of those speculations being generally undertaken, he found an issue from the Bank increasing in the ratio of 8 per cent. from 1824, and producing some unfavourable effect. He also found in 1825, after the Bank issues had increased, that the issue of country bank notes on the average of three years had been increased about 33 per cent. Gold, he perceived, in consequence, rapidly left the country. Then came a sudden demand for that metal; and then came those

failures and all those unfortunate circumstances with which their lordships were well acquainted. The increased issues of the Bank of England, in 1824, led to an extension of the issues of the country banks. This created a rise of prices in London, and goods were sent in large quantities from the country to the metropolis. The same thing occurred in the country. An opposition rise of prices, not a beneficial one, took place there also. Thus the issues of country paper were extended, and these, together with the additional issues of the Bank of England, produced that state of things which they were now called on to alter and amend. When, however, he stated this, with respect to the Bank of England, he was sure no one would suspect him of thinking that the gentlemen in the direction of that establishment were at all aware of the effect and influence of those issues. He believed they were not only not aware of the effects which they were likely to produce, but that, if they had been aware of its probable consequence, they were so hampered by their relations with Government, in consequence of issues which were placed out of their own reach, and which were made under the sanction of Government, that they could not have warded off the evil. They were not, in fact, in that free situation in which the Bank of England ought to be placed (hear, hear). The noble earl, in referring to the state of the relations between the Government and the Bank, had adverted to 6,000,000*l.* of Exchequer-bills held by that body, but was that the whole amount of the weight which the transactions with Government had pressed on the Bank? Undoubtedly this was not the only clog on the exercise of their discretion. In addition to that, they had provided for what was called "the deficiencies" in the 4 per cents.: and beyond all this, they had another charge, arising from a most extraordinary act of parliament, adopted some years ago, on the suggestion of the noble earl. That act rested on one of the most extraordinary conundrums that was ever heard of, and was most appropriately denominated "the dead weight." By that act they were called on at one and the same moment to raise taxes on the present generation, for the relief of posterity, and to raise taxes on posterity for the relief of the present generation. By this extraordinary scheme, no less a sum than 8,000,000*l.* was taken out of the hands of the Bank and completely placed beyond their control. They, in consequence, found themselves unable to act when the circulation of country bank paper had increased in the ratio of 33 per cent. They were then obliged, instead of giving that effectual relief which they otherwise might have done, to allow the evil to flow unchecked in its mischievous course. He remained, and always should remain, the firm supporter of the doctrine which held as beneficial, a paper currency convertible into cash; but it was necessary to have a sound circulation in the country, that the convertibility of paper into cash should be immediate—that the check to an improper issue of paper might be resorted to without delay. But, unhappily, such a state of things had arisen as prevented the application of that check and remedy until a great number of persons had sunk under the pressure of the times, overwhelmed by the misfortunes attendant on rash speculations. Neither Government nor parliament could do any thing at the moment to arrest the evil. It had, however, in

some degree effected its own cure, for the exchanges had at length come round. The circulation had been narrowed, the exchanges had turned in our favour, and there had been a rapid flow of gold into the country. There were other material circumstances which influenced the situation of the Bank, and which he hoped would never occur again. One of these circumstances was the advances made by the Bank (he believed at the instigation of Government) in the shape of loans on mortgages. (The Earl of Liverpool intimated that this was not the case). He (Lord Lansdowne) had heard that Government had advised the measure, but he was extremely glad to hear that it was not so, because he was convinced that it was a system of operation which it must injure any banking company to engage in. It added to that portion of the circulation which was tied up and taken out of the hands of the Bank. He saw most distinctly, the different steps by which the present system was produced. In 1824, he saw an undue issue of paper on the part of the Bank, and much of that issue placed out of the reach of their own control. He then saw a powerful effect produced on prices throughout the country by the extension of the country bank circulation, which was incidental to the state of things then existing, and the facility afforded for the issue of paper. And then, in 1825, came that heyday of prosperity which they had been taught to believe was never to have an end. Parliament was then induced to congratulate his Majesty, and his Majesty in return congratulated Parliament, on so apparently sound, permanent, and prosperous a state of affairs. Now, when he was told that the approach of all the subsequent mischief was foreseen by ministers, however much he concurred with them in the remedy which they now proposed, he could not express that concurrence without at the same time throwing some blame on the Government, for not having, if they had foreseen the evil, applied to it those measures which, at a late period, they had felt it necessary to adopt. At the very moment, however, when all this mischief was in progress—when the worst evils were afloat—when the 11. and 21. country notes were in active circulation—and when the exchanges were beginning to turn against this country, he found his Majesty, at the close of the session, thus addressing the two houses on the subject of the measures which had been adopted, for the purpose of extending our commercial relations:—"These measures, his Majesty is persuaded, will evince to his subjects in those distant possessions, the solicitude with which parliament watches over their welfare; they tend to cement and consolidate the interests of the colonies with those of the mother country; and his Majesty confidently trusts that they will contribute to promote that general and increasing prosperity on which his Majesty had the happiness of congratulating you on the opening of the present session, and which, by the blessing of Providence, continues to pervade every part of his kingdom." He (Lord Lansdowne) did not mean to contend that there was not much prosperity in the country; that there were not materials upon which solid and permanent prosperity might be founded, but he complained, that at the very moment when this Speech was made, notwithstanding the avowed knowledge of his Majesty's ministers that there was great mischief

brewing, with respect to the state of the currency, Parliament was suffered to separate, in July, 1825, without any step being taken to alter the state of the currency, so as to prevent the frightful misfortunes which had since occurred. If any step had then been taken, it would have been impossible for the evil to have reached the height which it attained in the autumn of that year. He therefore could not concur in the measures proposed, without expressing some regret that no provision was made at that time for retracing those steps which parliament had been induced to take in 1822 for the purpose of throwing into circulation that addition to the issues of the country banks which some individuals believed to be absolutely necessary. The lessons which they had received for the last three years clearly proved the great importance of placing the entire currency of the country on a broad metallic basis (hear, hear). Whenever parliament attempted to give a fictitious aid to the currency, the attempt had uniformly failed. There was no royal, there was no parliamentary road by which they could contract engagements beyond what they had the means and power of fulfilling. The attempt to bolster up a bad system of currency was always attended with extreme difficulty, and never could succeed. All those who looked to the history of past years would see that every effort to interfere with the currency, except that which had for its object the introduction of a permanent metallic circulation, proved the folly of the principle on which the attempt proceeded, and led to effects of the most mischievous character. No sooner had that famous resolution been past some years ago, ascribing to the bank note a value that did not belong to it, than the evil of such a monstrous proceeding became manifest. He adverted to that resolution with less hesitation than he would otherwise have done, because he understood it was not, as it had been supposed, the offspring of a noble friend of his (Lord Bexley), although that noble lord had taken up and adopted the bantling, and gave it existence in the journals of the other house of parliament. No sooner was that unfortunate resolution adopted by the other house, which declared that a pound note and a shilling were equal in public estimation to a guinea, than parliament was employed, and had continued to be so employed ever since, in providing against the consequences which arose from the difference that manifested itself between the value of the one pound note and the golden sovereign, in this and in every other country. He certainly approved of the measure which the noble earl proposed for removing one portion at least of the paper circulation of the country, because it would afford that security to the poorer classes which should be a primary object with the legislature. The labourer had a right to reap the full benefit of the King's prerogative; and when he demanded the reward of his labour and industry, he ought to receive it in that circulating medium which possessed a real, not a nominal, suspicious, and fluctuating value. The withdrawal of those notes would also materially alter the relation between the proportion of metallic and paper circulation; and unless it did that, he was sure that no benefit would result from the measure; and if the suppression of the 11. and 21. notes were not adequate to the accomplishment of that object, then he would recommend that

parliament should proceed still further.—With respect to the other measure which was more immediately the object of the present proceeding—the formation of a different description of country banks—he certainly was one of those who thought that in its present form that measure would not be very extensively acted upon. But he yet sincerely hoped to find the scheme placed upon a more practicable footing; and that the Bank, which professed, and no doubt felt, a deep sympathy for the distresses of the country, when it became satisfied that it could not, by establishing branch banks, afford the relief desired under its own system, would not resist such an alteration in its charter as, without at all affecting its material rights, would substitute a sound and secure system of banking for an unsound and dangerous one, in places which their own circulation could never reach. He did not doubt that upon reflection such would be the policy adopted by the Bank; and parliament, by that alteration in the Bank charter, would be enabled to license chartered banks throughout the country; the condition of whose charter of limited responsibility being the annual publication of their accounts, all persons would then have an opportunity of constant examination into the affairs of the parties whom they trusted; and the country would have, perhaps, the best system of banking which commercial security could desire.—With reference to Scotland and Ireland, where none of the same evils under which our own country was suffering at present existed, a greater space of time perhaps might be allowed for effecting the proposed change, than that which he understood the noble earl (Liverpool) to suggest; but ultimately, no doubt, he agreed with the noble earl in the propriety of bringing both those countries under the operation of the same system.—On the general question he felt no difficulty in saying, that their lordships were about to legislate on right principles. The fortune of every individual was intimately connected with the settlement of the currency on a sound metallic basis. He begged to assure their lordships, that if by obtaining temporary high prices they hoped to benefit either their friends or themselves, they would find themselves greatly mistaken (hear, hear), for such temporary rise would necessarily be followed by a dreadful and ruinous depression (hear, hear). It was not more sure that any artificial excitement must, in the body natural, subside into ultimate languor and exhaustion, than that the bubbles of speculation blown up by paper, would finally bring all articles of merchandize into the market at lower prices than they would otherwise legitimately obtain. If, therefore, on the score of justice, the parliament were not called upon to legislate, they were bound to do so in defence of their own interests, which were essentially bound up with regularity and uniformity of price.

Lord Bexley differed in opinion from those who thought the concession of the Bank not likely to be acted upon. When he looked at the number of joint stock companies, which had been formed for various purposes in different parts of the country, and which flourished, subject to the danger of unlimited responsibility, he could not help thinking that the same inclination would display itself to embark in the banking trade, which had already been manifested with respect to so many other ob-

jects. He looked to Ireland as an example of what might be anticipated in this country. Since the charter of the Bank of Ireland had expired, several banking companies had been instituted; and though the spirit of enterprise there was not equal to what existed in this country, and great distress prevailed at the time of the change, already the circulation and credit of Ireland had greatly improved.—He was desirous of giving some explanation respecting the measure of temporary relief by which the Bank of England, by the purchase of Exchequer-bills, had thrown a large and seasonable supply of money into circulation. Those who remembered the report of the committee of 1819, would be at no loss to understand the grounds on which Government now acted. Several practical witnesses who were then examined, stated their opinion distinctly, that whether the circulation was increased by extended discounts, or by the purchase of Exchequer-bills, the effect on the public was nearly the same. In a short time the money so issued would find its way into all the channels of trade. The relief by the purchase of Exchequer-bills was more speedy and immediate than by the issue of Exchequer-bills. In the latter case, it was necessary to go through the form of an inquiry by a committee, afterwards to pass acts of parliament, and in the application of the relief, to inquire into the character of each individual.—The noble marquis (Lansdowne) had done justice to the Bank of England. He (Lord Bexley), in the course of many years' experience, had found abundance of sagacity and good sense, as well as integrity and good faith, in the management of the concerns of the Bank (hear, hear). The noble marquis, however, while he did justice to the Bank, had done great injustice to Government. It was not true that the Bank had been cramped and fettered by the capital they had invested in Government securities. They had opportunities enough to relieve themselves to any extent. They might either have sold Exchequer-bills, or brought to market any part of that annuity on which the noble marquis had made reflections entirely unfounded. In the first place, the noble marquis said, that in the same year in which parliament had laid on taxes to the amount of three millions for the reduction of the national debt, and the relief of posterity, the charge of the naval and military pensions, which ought to have fallen on the present generation, was spread over a period of 45 years for their relief. The fact was, that the three millions were imposed, in pursuance of a resolution of the House of Commons, passed as long ago as 1819. But the Bank had taken no part of the annuity till 1823, four years afterwards. The plan of the annuity was not formed till 1822, when such an improvement had taken place in the finances of the country, as rendered it decidedly an advantageous measure at the time, whatever it might have been in 1819.—He then proceeded to exculpate himself and his colleagues from the imputation of having contributed, by the act of 1822, to give a longer period for the circulation of small notes. In his official capacity, he certainly had proposed that measure; and, under any circumstances, he had done so with much regret; but it would be recollected that he had proposed it, accompanied by several provisions for security, which had been rejected, but which were not very dissimilar

from those which parliament was now upon the point of adopting, and which, if passed, would greatly have limited the mischiefs that had accrued. He objected to the power of issuing small notes, on the principle that it was tantamount to the dangerous power of coining to an unlimited extent. He entirely agreed with the noble lord who had preceded him, that the present was the most suitable and advantageous period that could be selected for the change. In justice and in mercy to the country bankers themselves, parliament was bound not to lose this opportunity. If they were allowed to revert to their former circulation, the pressure would be greater when they were at any subsequent time called upon to contract it. At present, too, they would save the proportion of stamp duties they would otherwise be required to pay. The quantity of gold required to supply the place of the notes, would be small in proportion to the contraction of the circulation. Three or four millions would be all that would be called for in the course of three years to provide for the country circulation. Surely, that was not a sum which could excite any great alarm. The measures now proposed were calculated to put the currency of the country permanently on a solid foundation, and prevent for the future all ruinous fluctuations of prices.

*Lord Ellenborough*.—The measures at present proposed, as he understood them, were three; one intended to afford immediate relief, and the other two to prevent a recurrence of the evil under which the country laboured. Now the measure of relief, he thought, was insufficient. It would not relieve those classes who were most deserving of assistance. The distress of the country at this time was not peculiarly commercial, but general; and the measure of assistance would not reach those who, by the fault of others and by no speculation of their own, had become involved.—With reference to the second measure, the establishment of a new description of country banks, the noble earl (Liverpool) had seemed to regret that it was not in his power to grant charters. He (Lord Ellenborough) had not quite the same feeling; and, for the formation generally of joint stock banks, the events of the last few years had not led him to look with an eye of great favour upon joint stock establishments. As it was impossible, however, to doubt that the noble earl was in favour of a system of restriction, it was to be regretted that into the present bill, out of which joint stock banking companies might arise, a provision had not been inserted for the purpose of restricting such companies in their operations. The measure for putting an end to the circulation of small notes at the end of three years, was a measure only of justice and humanity to the poorer classes, and therefore he highly approved of it; but still approving of it entirely, as far as its operation went, it was not a measure which would reach the causes of the existing mischief; for if the noble earl looked at the papers which lay upon the table, he would find, that of 3,000,000*l.* of country bank paper, issued between last year and the year before, scarcely 1,000,000*l.* had been issued in notes under 5*l.* Therefore the truth was, that the putting an end to the circulation of 1*l.* and 2*l.* notes was not going far enough. To him it appeared merely idle to talk of the convertibility of notes into gold, while our system of

country banking remained upon its present footing. If that system were allowed to go on, his firm persuasion was, that the country banks must ruin the Bank of England. In February of the last year, their lordships might remember, that the Bank of England, seeing the foreign exchanges against us, had taken the just course to correct that mischief by reducing more than 3,000,000*l.* of their issues. What was the consequence? Why, that the country banks had immediately advanced their issues for every pound which the Bank of England had withdrawn. Under such a system, it was physically impossible for the Bank of England to prevent foreign exchanges from being against us. At present, the Bank of England was compelled to take the risk, not only of its own trading, but of the trading of all the country banks: their situation was one of great difficulty—of difficulty, which was daily increasing; and he was surprised how they had acquitted themselves so well under it. It was absolutely necessary to the safety of the country that the currency should be placed upon a solid foundation. He was quite sure that the noble earl (Liverpool) must feel deep apprehension on the subject; and, he trusted, that after the present alarm had passed away—with seven years of delay for consideration before the Bank charter would expire—that noble lord would propose some definitive scheme, which should give confidence and security for the future. The convulsions which the country had sustained under the old system, in 1811, in 1815, and at the present time, did mischief far beyond any actual loss that was sustained. A noble earl (Lauderdale) had said, that the country would lose 2,000,000*l.* by the recent failures; but the real mischief was in the derangement of property which such accidents produced. He (Lord Ellenborough) viewed the whole of this subject as of the highest importance; and, he trusted, the noble earl (Liverpool) would face the question firmly, and propose some effective plan for the arrangement of the currency.

The Earl of *Liverpool* said, that neither clamour nor the fear of incurring responsibility, would ever deter his Majesty's Government from doing that which they conceived to be their duty. As to the mode of relief to which the noble lord (Ellenborough) had objected, his opposition probably arose from his not having turned his attention to questions of that nature, and therefore not seeing the full bearing and operation of the course pursued by Government. What was the state of the country? A general want of confidence. Every man shut up his resources, and looked only to himself. Many banks had already ceased to issue notes, though they had still the power to do so; and in many other parts the public had refused to take the notes. There was a general want of confidence, and consequently a want of money. If the object of Government had been merely to relieve the holders of Exchequer-bills, it would have been highly improper; but the object was to throw two millions of money into active circulation. If the noble lord (Ellenborough) had attended to the question of the circulation, in 1819, he would have known that in the committee of that house, their lordships had obtained lights on that subject which never shone on them before. They mostly, he believed, went into the committee, thinking that the issues of the Bank for the purchase of Ex-

chequer-bills were much less beneficial to the country than the issues for discounts; but they all came out of that committee satisfied that there was no difference, in the end, as to the effect, whether the issues were in discounts or in Government securities—whether they went in the first instance to particular individuals or the public at large. The Bank, it was known, had always acted with the greatest impartiality; but he spoke on high authority when he said, that whether relief was given by one means or by the other, precisely the same effect was produced. The greatest relief that could be given in the most satisfactory and the safest way, would be given by the measure that had been adopted. The appointment of a commission to examine claims and grant assistance, would have been an operation requiring time; and though the most just and candid execution of such a trust might, no doubt, have been relied on, yet it would have been difficult, among many applicants, to say which were entitled to preference. Again, it would have been a measure of direct interference, which Government was desirous, as far as possible, to avoid, and which would be avoided by the course now suggested. This measure had been proposed as the most expeditious mode of putting money into circulation, which was what the country wanted. If that money got into circulation in the way intended, it would operate decidedly as a greater relief than any measures which could have been taken by a commission, the business of which would have been to single out particular cases of distress. The course proposed was altogether simpler, more natural, and less objectionable in point of principle.

This bill was then read a second time, and ordered to be committed on Monday.

**COMMONS.**—The *Chancellor of the Exchequer* rose to move the order of the day for the second reading of the Promissory Notes bill. Before he did so, he wished to state to the house that it was his intention in the committee to submit a proposition, not to the extent suggested by an hon. member (Mr. H. Gurney), which he thought went too far, but a modification of it. The hon. member's proposition was, that whilst the circulation of small notes should be prohibited to country bankers, it should be permanently allowed to the Bank of England: to that he (the Chancellor of the Exchequer) had a decided objection. It would be unjust to the country bankers, as well as inconsistent with the principle of the measure before the house. But it had been represented to him (the Chancellor of the Exchequer) that a limitation of that proposition, so far from impeding the measure, would promote its success. It was his intention, therefore, to propose that instead of prohibiting the Bank of England from issuing small notes dated subsequently to the 5th of February last, they should be allowed to issue such notes dated previous to the 10th of October next. The object of this proposition was, to give the country bankers facilities for preparing themselves for the effects of the bill, and the gradual withdrawal of their notes. If they were all compelled to withdraw their small notes at once, it would be productive of great inconvenience. The Bank of England would be still equally bound to withdraw its notes at the end of three years, as the country bankers.

Mr. *Ellice* protested against this proposition.

Was it for the advantage to be gained by this paltry limitation, that the old scenes were to be renewed, and men brought to the gallows as before? There had been no measure less defensible than the re-issue of these 11. and 21. notes; and the Bank directors, unless the necessity had been extreme, ought to be arraigned for it. Under pretence of a relaxation of this measure, these 11. and 21. notes had been sent into the country, and every means had been employed to get them into circulation.

Mr. *Bright* said, that they were not justified in carrying the measure into effect. He was compelled to express his disapprobation of the conduct of ministers; and he would say that the measure they had proposed was not equal to the emergency.—The details of the distress in 1793 were to be found on the table of the house, and members would do well to read them. And what did Mr. Pitt do on that occasion? He issued Exchequer-bills, and the distress of the country was cured, not only with no loss, but with benefit to the state. Why should we now adopt new expedients? Why not profit by the experience and the wisdom of our ancestors? He was no speculatist—no theorist, and disliked the fashionable philosophy of the day; and he asked the country to adopt the wise measures of Mr. Pitt.

Mr. *Huskisson*:—An Exchequer-bill would afford no relief, unless it could be converted into money. The hon. member admitted that Exchequer-bills could not be bought—for who was to buy them?—and yet he recommended an issue of them. This was a contradiction which could not easily be reconciled.—Another hon. member (Mr. *Ellice*) would have the Bank Directors impeached for issuing 11. notes.

Mr. *Ellice* explained. The hon. member should have looked to the conduct of the Bank in their circulation. When they had collected a sufficient quantity of gold, they had so little desire to circulate their notes, that they were anxious to withdraw them from circulation, and they would be glad to withdraw those they had now issued. The object was, to make the pressure of the withdrawal of the country notes as easy as possible; so that if there were danger, through apprehension or otherwise, the principle was not risked, but provision was made against any mischief which might arise from the execution of the measure.

Sir *John Wrottesley* remarked, that if any one should write a history of the origin, decline, and fall of this country, he would probably say, that at first it was a Lilliput, governed by dwarfs; it next became a Brobdingnag, governed by giants; and then a Laputa, governed by philosophers. The rt. hon. gent. (the Chancellor of the Exchequer) had deserted his own principles. He first contended for a metallic currency,—then he substituted a Bank of England note,—a note of all others the most easily forged. He (Sir J. Wrottesley) knew it to be a fact, that within fourteen miles of Birmingham forged Bank of England notes had been offered forty-eight hours after the time those notes were re-issued.—The bulk of the provincial notes came back to the country banks, upon an average, once in six weeks. Now, if the banker must bring gold from London, he would not re-issue his notes, and the country would have no circulation at all.—With respect to the metallic currency, he had been informed that ten out of fifteen sovereigns brought to the Bank were not worth 18s., being sweated down

(hear, hear). There were also a vast number of counterfeit sovereigns abroad. In this dearth of genuine circulation, ministers took away country bank notes, which were seldom forged, and suffered the issue of Bank of England notes, which were easily forged.

Mr. H. Gurney had on a former occasion stated the great distinction which he drew between the Bank of England small notes, and those of the country banks; and he could readily understand the necessity which prompted the circulation of the one after it was thought right to withdraw the other. The fact was, that the great danger was that of being left without any adequate circulating medium. With respect to the three years to be allowed for withdrawing the country bank small notes, it was obvious that this was tantamount to their being put down at once. The larger bankers would, of course, take immediate measures to call in theirs, and the smaller ones that attempted to keep any afloat, would find them return so fast, as to render any general circulation impracticable. Indeed, he knew an instance which he had heard so late as yesterday, of a banker in a manufacturing district in Yorkshire, upon whom a small note circulation of 13,000*l.* had been brought back, and paid off no less than three times within a few days. This at last so irritated the banker, that he flung them into the fire; and in the same manner would the rest of this branch of the circulation disappear from the same cause. Under these circumstances, it was of great importance that the Bank of England should have a power to replace, under proper supervision, a portion of the circulating medium so withdrawn. The arrangement for effecting this should be so devised, that the Bank circulation should not interfere with the process for recurring to a metallic currency, of which the metropolis was the centre of movement, but was rather to slide gradually and quietly into the vacuum occasioned by the withdrawing of the country notes. Now, as to the effect of this measure upon the operation of the general plan for resuming a metallic currency, he should more say, that no metallic currency could be had on a sufficient scale co-existent with the small country bank notes. The two things could not possibly exist together; and, in fact, the substantial country bankers would see, that the profit of their capacity to issue the smaller notes had been greatly exaggerated, and that their interest, as well as credit, lay in assisting as rapidly as possible in the restoration of cash payments. His opinion of the present proposition was, that its only bad effect would be the insufficient time given to the Bank of England for assisting in the execution of the plan; and, instead of its being limited to next October, he did not think twelve months would have been too long.

Mr. Cripps:—With respect to the discredit said to be thrown on the country notes by late occurrences, he thought that the hasty steps taken by some of the bankers themselves for their withdrawal were not the very wisest which circumstances required. The fact stated by the hon. member of the thrice repayment of 13,000*l.* of local notes within a few days, was too extraordinary an occurrence to happen on a general scale. He was not afraid of the probable consequences of the present measure, nor could he bring himself to the conclusion that it would affect the prices of produce in the manner

82*ss.* 1826.

that some gentlemen apprehended. At the same time, with reference to agricultural produce, he would admit it to be extraordinary if *that* could remain stationary, while the prices of all commodities were sinking. It was, however, a little hard that the Bank should be allowed to carry on their small note circulation till October, while all the country banks were prohibited from issuing theirs at once; and it was hard in this way—the country people generally preferred their own local notes, where the bankers were in good credit, because they had so often suffered from forgeries upon the Bank of England. As to the sufferings from speculations, and their connexion with the prevailing want of confidence, all he should say was, that it was not the wild and the thoughtless who alone went to ruin, but the most prudent and cautious had dreadfully suffered within the last few months, without incurring the least imputation upon their probity of character. Indeed, he knew a friend, a man of large landed property, who, having some thousands of pounds to spare, laid out 10,000*l.*; one half in Exchequer-bills, and the remainder in Consols; and yet, by the purchasing of good Government paper, this individual had lost more than he was likely to lose by dealing in any other species of securities. With respect to the late purchasing of Exchequer-bills, it was certainly calculated to afford relief; but it ought and might be carried further, if the Bank were empowered to extend their advances upon other substantial securities, which were at present unavailable in the market. This would, he had heard, be an injurious precedent. Why talk of precedents in the present crisis of the money-market, which was much more appalling than that of 1793, or any other year they had heard quoted as a season of difficulty? It was idle to tell people that they had brought all this upon themselves; but, suppose they had, ought not a great effort to be made to relieve them? Otherwise it would be like refusing the aid of a physician to those who had made themselves ill by their own imprudence.

Mr. Calcraft condemned the course pursued by Government, in extending the time for the Bank of England circulation of paper, and suddenly, and by a retrospective provision, suppressing that of country banks. Different would it be, were the latter allowed to have their notes stamped till the 10th of October, for then the concurrent operation of the two privileges would leave the people to the option of taking whichever notes they liked, without being exposed to the dangers they must now encounter from forgeries—from those forgeries, too, upon the Bank of England notes, which had been so prolific of executions, as to shock the moral feelings of the public. But had not the Chancellor of the Exchequer already departed from his avowed plan, and availed himself of the arguments of gentlemen on his (Mr. Calcraft's) side of the house, though he had at first decried them? The Government had themselves by this vacillation much increased the evil; they had added largely to the panic, by recklessly decrying the circulation of the country notes; they had just succeeded in diffusing mischief over the only existing currency the people had to depend upon; and done this without having it in their power to supply a better currency for their use (hear, hear). Ministers had shewn an utter incapacity throughout the whole of their late movements, and this imputa-

tion was cast upon them from all quarters of the country. Instead of crying down, as they had done, the remaining country banks that had ridden through the storm, they should have rather supported their credit; for it would be seen how well that stood till the Government had shaken it by their gratuitous and unfounded attacks. This would be demonstrated when the returns were made of the country failures, and the explanations of the number even of those that had resumed, or were in a condition of resuming their full payments. When the first shock had occurred, and large manufacturing establishments were crippled, the assistance afforded by the Government was, to discredit the only currency which maintained the transactions of the public out of the metropolis. All this would have been very well, if they could have supplied a metallic currency, (no doubt the best of any); but here they had no such thing, and yet they denounced its only representative. How hon. gents., who had supported the measures of Government in the principle of their immediate recourse to cash payments, could now vote with them upon their altered plan, he left to be reconciled by those who could encounter the most flagrant contradictions. He would take the sense of the house against this plan in all its stages, because he believed the Government were not only mistaken in their prospective arrangements, but perfectly ignorant of the causes of the prevailing distress. Indeed, the panic they had occasioned had so entirely removed the country notes from their local circulation, that he had a letter in his pocket from a gentleman in Yorkshire, which declared that in his part of the country they were, for want of a proper circulating medium, reduced to the custom and necessity of barbarous ages, and obliged to barter and truck with commodities, giving meat for clothes, and labour for bread. He concluded by stating that he would not pursue his triumph over Government for their vacillation and imbecility in this business, but would endeavour, in the future stages of this proceeding, to contend for the co-existent power of the country banks to issue notes, while that privilege was reserved for the Bank of England.

Mr. Tierney cordially assented to the principle upon which the contemplated measures of ministers were founded—namely, the speedy return to a metallic circulation. He knew it to be a sound principle—he thought the Government were serious, and knew what they were about, respecting it: indeed, he admired them for the apparent stoutness with which they had brought forward the measure. But what was the case now? The ministers had no sooner announced their plan, accompanied by this firm declaration of its inviolability, than they came forward with a new proposition, which, mitigate it as they would, was a material abandonment of the principle with which they had set out (hear, hear). Throughout the whole of these proceedings, indeed, he had witnessed the strangest indecision, and wandering from one point to another in their course,—at one time exhibiting more firmness than the occasion required, and at another the most compromising distrust. The Chancellor of the Exchequer and the First Lord of the Treasury had set out with what he would not call their well-considered letter to the Bank, partly because he did not think it had been well considered at all (a

laugh), and partly because (though he knew that meaning was not intended) it indulged in expressions which were liable, as they had been, to be misconstrued by their enemies, into indiscriminate reflections upon the country bankers. This letter was followed by the exposé of the two branches of the system which the Government had determined to act upon—the increase of the banking partnerships, and the wider basis, to which all good men looked forward, on which the gold currency of the kingdom was to be re-established. Who could have believed that this wholesome plan was destined hardly to be developed, when it was to be materially altered? From the 5th of February no new stamping of country small notes was to be allowed, and their gradual abolition was decreed within three years. He thought, at the time, that this process would be rather too slow than too abrupt; he thought then, as he did now, that the Government could have so arranged their resources as to make the necessary supply of gold for the withdrawn notes as rapidly and conveniently as the nature of business could have required it. But now the Bank of England was, by a new manœuvre, to have nine months longer for issuing small notes than was to be allowed to any other banking establishment; and an hon. gent. (Mr. H. Gurney) had regretted that twelve months instead of nine were not afforded for this operation. Now he (Mr. Tierney) was at a loss to understand why the nine months would not answer as well as nine years. The position of the Chancellor of the Exchequer in his former statement was, that these small bank-notes, and a metallic circulation, could not go on together. This was a very clear and irrefragable position; it was not, at all events, one of the new-fangled ones, of which they had heard so much, for it was at least 100 years old, and to be found in many good old books which had early promulgated the doctrine that a good and a bad circulation could not co-exist, for that the bad would inevitably soon send the good about its business. Yes, and it would do more—it would prevent the good from coming in to recruit even for a moment, where it was wanting. But there was another consideration:—what was to become of these 11. notes, which were to go on till the end of three years? Did ministers think they would readily give way for the gold circulation in the manner it was to be doled out? He had not seen the famous note alluded to as having been sent by Mr. Burke to Mr. Pitt; but he perfectly remembered Mr. Burke's declaration, that as long as the country kept a 11. note in circulation, they could not expect to see a guinea. Now he begged not to be understood as one of those who was panic-stricken at the prospect of affairs; on the contrary, he had a great reliance on the energy and resources of the country. He saw no cause of permanent alarm arising from recent events, neither was he impressed with a belief that this want of confidence would endure: distrust was certainly afloat,—a want of confidence, which the Government seemed by their measures rather to prolong than to mitigate. What was the origin of the alarm which had seized upon men's minds? In looking to that, it was impossible for him to exculpate the Government, or to refrain from censuring their policy. The besetting vice of this country—that which ministers were constantly doing their best to diffuse, by every exertion and energy they

could command—was the rage of keeping up prices. Every country gentleman trembled at a reduction of his rents—every merchant exclaimed against lowering the price of his goods, and all classes vied with each other in keeping things at the same level at which they had been for years back. In fact, they were all mad enough to wish to keep up war prices in a time of peace. He held the attempt to be utterly impracticable: it could not go on; it was madness to think of it; and he would lay down this as an irresistible proposition—that the basis of a metallic currency, and the maintenance of the present prices, could not be effected at one and the same time (hear, hear). He would listen to no man's nostrum that had for its object the continuance of the war prices, and the security, at the same time, of a metallic currency. The attempt had been too long encouraged to preserve such a delusion, but they were all daisy, and must fail. In 1822, the Government had made an issue of Exchequer-bills, and the Bank, in concurrence with them, entered into measures which had the effect of giving a great stimulus to public-money-matters, and of lowering the rate of interest. What the Bank had done in their share of the business was, he had always heard, done on the suggestion of the Government. The measures that were adopted on the occasion to which he alluded, were of a very unusual kind. The Bank thought it right to step out of its proper line of business, and lend money on stock, and afterwards to make advances upon mortgages at 4 per cent. These proceedings had necessarily the effect of keeping up the prices of both stock and mortgages, while, contrary to all usage, it swept down the rate of interest throughout the country. It was not alone the advances on mortgage at four per cent. that created this effect within the sphere of the particular bargains of the Bank, but its principle operated immediately from one end of the country to the other. No man would pay more than four per cent.; if more were demanded the borrower threatened to pay off the incumbrance and burrow of the Bank. The Bank at length found itself getting into a predicament, and began to waver between the influence of its two gods—its god of gold, and god of Government (a laugh). Then out went Exchequer-bills for sale into the market, and out came the issues of the Bank, which drove men into wild speculations. Oh, but it was said, it was the overtrading which had done all the mischief. Overtrading did they call it? What was the meaning of the word? It was, when a man did not succeed that he was nicknamed an overtrader; it was applied here as in the distich about treason—

"Treason doth never prosper: what's the reason?"

"Why, when it prospers, 'tis no longer treason" (a laugh).

But when the speculator succeeded, then he became the sagacious and enterprising British merchant (a laugh). But, as he had before said, the Government had, from first to last, fostered this spirit, and not foreseen its consequences. Had they last October kept their eyes upon their own system, they ought to have foreseen its re-action: then, indeed, some trifling assistance might have been afforded, and with beneficial effect. If it were said Parliament was not sitting at the time, his answer would be—convene them on purpose; for

a little if taken in time would have done what could not now be expected from much larger aid. Unfortunately that period was suffered to go by. The panic shewed itself more and more every day. At last Parliament met, and then Government proposed the measures to which he had adverted. He knew that ministers were beset on the occasion by men who were clamorous on the subject of the evils they were likely to suffer, and the purchase of Exchequer-bills by the Bank was gladly received as a means by which many of them could be relieved. This measure, however, would not answer the end proposed; nor did he think those proposed by Government would have the desired effect. At the same time he was not one of those who despaired of our situation. The distress did not arise from the want of capital so much as the want of confidence, and he was satisfied that if some measure were adopted by which that confidence could be restored, the country had the means by which its affairs would return to their former course. He thought that if an issue of Exchequer-bills were now made, it would do a great deal of good. He approved entirely of the issue of Exchequer-bills in 1793. On that occasion he was not in Parliament; but had he been, he would in all probability, like a good soldier, have fought under the banners of his party, and he believed they opposed it: but the measure was sound and good. But the purchase of Exchequer-bills by the Bank would not have the same effect. The man who, on Monday last, purchased Exchequer-bills at 22s. discount, would no doubt find it a pleasant thing to go into the market and find them at a premium, or at par; but the person who had traded, or overtraded, as it was said, would obtain no benefit. Perhaps, after all, the man who might be relieved was the last person who was entitled to relief; and the first thing he would do when he got his money and his 22s. profit, would be to go and lock it up in his chest (a laugh). Thus the relief given by the purchase of Exchequer-bills would be altogether uncertain in its effects. A part of the proposed plan went upon the assumption that the country bankers would not re-issue their small notes. He did not believe a word of it. He had no doubt that they were very much out of sorts—a little angry, and very much frightened: but let nobody suppose that they would all follow the example of the clever man they had heard of a little while ago, who threw 13,000*l.* into the fire. Men were no doubt in a state of dismay and irritation; but they might depend upon it things would come round (cheers)—aye, and he should not be surprised if that gentleman who threw his money into the fire should set about raking in the cinders, and, if he found a few stray notes, would soon put them in circulation again (much laughing). He would repeat his opinion, that all that was wanted was the restoration of confidence. That would call forth the hoards which were now left unemployed. Abundance of the precious metals would be forthcoming, if this confidence were restored. But the fact was, the country bankers were offended. There was, here and there, a strong expression of blame upon them in the late document which Government had published in their correspondence with the Bank. Perhaps those expressions were not meant to give offence; but it did unfortunately happen that they were taken offensively. Was the present new course likely to

conciliate the country bankers' feelings? On the contrary, was there any thing which could be more likely to crush those very country bankers than the distinction that was now made of allowing the Bank of England to add to their issues of small notes, while the permission was denied to the private banks? Was it not saying in direct terms—not that the Bank of England notes were so much more certain than theirs, but that theirs were not certain at all? For his own part, he wished well to the country banks, for he thought their existence would be attended with great benefit to the country, so long as their issues were on a solid basis. He would wish to see them generally on the basis of those in Lancashire and London. The evil which arose from them, was not that they had the power of lending money to a great extent, but that they should have the power of making notes for the purpose of lending (hear, hear). If they really had money to lend, they would be beneficial—as long as they could say, “here is the money to lend, provided you give us the security;” but it would in the end be no benefit to say “we will lend our notes,” if those notes did not represent real property. He would wish to see the country banks flourish on a wholesome basis. If the country knew of a good security on which to rely, there would no longer be hoards of gold. There would be large paper issues, but they would be, as they ought to be, bottomed on a metallic security (hear, hear). If he were asked what measure would be productive of much good in the present state of the country, he would say an issue of Exchequer-bills for the relief of the commercial distress. That would help many parties through their difficulties, and bring back a sound state of things. But if Government were to do any thing, let them do the right thing. He would not say what sum it might be proper to issue. If the whole sum of 5,000,000*l.*, which had been spoken of, were to be issued on proper security (as no doubt the commissioners would take care to obtain, as they had done before), it would, he was sure, have a most beneficial effect on the country. They would have then a sound state of things. They would have a large paper currency bottomed on a metallic basis, which would prevent the recurrence of many of the evils under which the country laboured (loud applause at the conclusion of this speech).

The Chancellor of the Exchequer said, he did not rise at that late hour to enter at length into the topics which the *rt. hon. gent.* (Mr. Tierney) had introduced, but he hoped on a future occasion to shew, that the principle of his deviation was not inconsistent with what he had proposed. He rose for the purpose of saying a few words as to the observations that had been made respecting the dealings of Government with the Bank. He was willing to take his share of the responsibility of what was done by the Bank, as far as it arose from any of the measures proposed by ministers; but in saying this, he would observe that ministers ought not to be made accountable for transactions by the Bank in which they had no participation, and over which they could exercise no control. The paying off the four per cents. was the measure of Government, and not of the Bank, and for the consequences of that they were willing to take the responsibility; but for some other of the measures to which the *right hon. gent.* alluded, the Bank alone were accountable. Thus, for instance,

the lending on stock had been attributed to Government. Now, he would state, that so far from that being a measure suggested by ministers, he did not know of it till it had ceased. Next, as to the lending on mortgages. That was an act entirely originating with the Bank, and of which he knew nothing until it had taken place. He would not argue whether it had been right or wrong for the Bank to take that course; but it was not necessary to shew, that if it had not been adopted the issues of the Bank would not have been so great. With respect to the dealings in Exchequer-bills, he would observe that the only part of that measure for which Government were responsible, was that which arose from dealings between the Bank and them, in which the Bank had advanced money upon them. It was not usual for the Bank to issue money on such bills to the public; but as to the selling of Exchequer-bills last summer, it was the act of the Bank themselves, and done on their own responsibility. It seemed to be the opinion of some hon. *gent.*, as he could collect from the debate of a former evening, that Government could control the proceedings of the Bank at pleasure. Government possessed no such power, nor did they wish to possess it. He had mentioned these circumstances with the intention that hon. members, in viewing the proceedings of the Bank and the Government, would give to each the blame or credit which belonged to them, and not attribute to one what solely belonged to the other.

Mr. *Ellice* said he would not divide the house, because, from the declaration of the Chancellor of the Exchequer, he did not think he was opposed to the principle of the measure recommended.

The bill was then read a second time, and ordered to be committed on Monday.

LORDS, MONDAY, FEB. 20.—The Earl of Liverpool moved the order of the day for the committal of the Bank Charter Bill.

Lord *King* said, that on hearing the speech of the noble earl (Liverpool) on Friday last, he thought the noble earl had proved to demonstration that it was impossible for 1*l.* and 2*l.* notes and sovereigns to circulate together, and to the circulation of the small notes the noble earl had attributed no small portion of our present difficulties. Nevertheless, at the very moment when he was in the heart of his demonstration, the noble earl's lieutenant in another house announced that the small notes of the Bank of England should have a preference over coin. He never could have expected to see such imbecility of conduct. It was allowed that both the Bank of England and the country banks had issued paper to excess, and that there was a general superabundance of paper. Now, however, he expected he should be told that the Bank of England was conducted on the best of all possible systems; that the country banks were managed in the most perfect manner, and that the best of all currencies was that which was formed of those miserable 1*l.* and 2*l.* notes which the other day had been so much reprobated. He was afraid that a large portion of the landed interest thought their interest concerned in keeping up this paper currency; and yet nothing was more dangerous to property of every description. For his own part, he not only desired to see gold substituted for the small notes, but even for the 5*l.* and 10*l.* notes.

The Earl of *Liverpool* said, that nothing had been done or proposed in opposition to the principles on which the measure brought before the house was founded. If the noble lord had done him the honour to attend to what he had stated, he need not have referred to what passed in another place on the subject of the power intended to be given to the Bank. He (Lord *Liverpool*) had made the very same proposition at the close of his speech on Friday last. The object of the measures now before parliament was to get rid of the small notes altogether; but as that could not be safely done at once, it was thought advisable to make the circulation of those notes finally determine at the expiration of three years from the present date. With regard to the Bank of England, however, he wished their lordships to recollect, that that body had, by a law passed in 1822, the power of issuing 11. and 21. notes. But no use had been made of this power by the Bank until December last, and then it was not exercised until after consulting with the Government. It had since been found that many of the country bankers, instead of letting their notes run out, had put an end to their circulation altogether. That, however, was far from being the intention of the framers of the present bills, who thought that the change in the circulation should be gradual. It became desirable, therefore, to meet the deficiency of circulating medium which this conduct of the country bankers might occasion, to give the Bank the power of issuing small notes for a certain time. But when the bill should come before their lordships, they might accompany it by any guards which might be considered proper. If the bill did not come up to that house in a satisfactory state, their lordships might mend it by a clause, requiring the Bank to return weekly or monthly accounts of their issues.

The Marquis of *Lansdowne* said, that if the bill before the other house should pass, unguarded by any restrictions, it would be doing nothing less than giving the Bank a power to defeat the whole measure. The noble earl had admitted the impossibility of the concurrent circulation of small notes and specie: it would, therefore, be necessary to guard against the increase of these notes, if the measures now in progress were wished to be effectual: and here it must be recollected, that their lordships had not the same means of ascertaining the quantity of small notes of the Bank of England as of the country banks, in consequence of the Bank not being under the necessity of going to the Stamp-office, but paying a composition for their stamps. Supposing then the Bank were disposed to take advantage of the power about to be given, they would have time enough between this and October to deluge the country with paper sufficient to last during the whole three years in which the small notes were to be allowed to circulate. However, he was not prepared to say that the power suggested might not be so guarded as to remove much of the objection which he had to it.

The Earl of *Liverpool* expressed his willingness, if the bill did not come up in a satisfactory shape, to concur in any amendment which their lordships might consider necessary.

The Earl of *Rosebery* agreed with those who thought that the transactions of the Bank, with regard to the military pensions and the reduction of the interest of the debt, had contributed to the present difficulties; for the circumstance

of the Bank becoming purchasers occasioned large issues of notes on inconvertible securities. It was said that the Bank had the power of re-selling: but the sale of the annuities had been previously attempted by Government without success, and it was not very clear how the sale was to become easier for the Bank.—With regard to the measure for calling in the small notes, he begged to be understood as limiting his approbation of it, exclusively as it applied to England. Every reflecting person acquainted with the state of Scotland attributed its rapid prosperity, next to the free institutions which in common with the rest of the empire it enjoyed, to its system of banking: he could not, therefore, hear, without alarm, any idea thrown out of an intention to interfere with the currency of Scotland. He doubted whether it would be proper to extend the present measure to Ireland; but that was a question upon which those who were more intimately acquainted with that country were more competent to decide. He conceived that the existence of the usury laws produced great embarrassment. If the interest of money were placed on a proper footing, it would flow where it was wanted, and carry relief with it.

The Earl of *Limeric* hoped that any measure which might be adopted with regard to Ireland would be gradual, in which expression

The Earl of *Blesington* concurred.

The Earl of *Liverpool* assured their lordships, that when a proposition for extending the measure to Ireland should be brought forward, he should endeavour to look with all possible attention to the peculiar circumstances of that country. Ireland had had its time of embarrassment two or three years ago, and was now recovering chiefly from the introduction of the system which it was the object of the Bank Charter bill to accomplish for this country—namely, that of allowing banks to be established by joint-stock companies.—It was a curious fact, that after the Bank restriction, and during the war, when not a guinea was to be seen in this country, rents were all paid in the north of Ireland with gold. This supported the view he had taken, that gold and paper could not exist together.

The Earl of *Lauderdale* said, that one cause of that curious fact, alluded by the noble lord, was this, that the Irish landlords would only take their rents in gold, so that the tenants were actually compelled to pay them in that manner. This might have satisfied the noble earl, but, had he gone further, he would have discovered a circumstance quite as curious as the fact itself; and that was, the mode in which these payments were managed. When the rent day approached, the sum of five hundred guineas was sent down to Dublin, and given to one set of tenants in exchange for their notes. They then paid the rent in gold, which, as soon as it was thus received, was handed to another set of tenants, in exchange for their notes; and this being repeated till all the tenants had paid their rents, it might be literally said that they all paid their rents in gold (a laugh). The money was then returned to Dublin, from whence it came, there to remain till another rent-day should require it to make a second journey into the country (a laugh).

The Earl of *Blesington* denied this statement, which he characterised as a mere piece of ingenious humour.

The Earl of *Limeric* supported this denial,

currency alone? Surely not. He (Mr. Hume) had seen in India the inconvenience occasioned by having nothing but a metallic currency. If half a million of money had to be transported for the use of Government from one part of India to another, it could only be done through the instrumentality of a cart and a party of Sepoys. The Supreme Government of that country had been obliged to establish a bank for the purpose of removing these difficulties. The whole of the late evils must be attributed to the Government not putting the country banks upon a good principle; until they did that, neither the resolutions of the Bullion committee, nor any new measures, would prove an effectual remedy. It was said that the present plan was adopted for the sake of protecting the poorer classes. Confidence would be established in such a currency, and the recurrence of such panics as the country had recently witnessed, would be entirely avoided. With a paper convertible into gold, that purpose would be much more effectually answered by compelling bankers to give security for their issues. It was his opinion that no banker should be allowed to issue a 1l. or 2l. note until he had deposited a security for it. A deposit should also be taken from those who issued large notes to full two-thirds of their value; and if there was ever a failure in the payment of them, the recovery of them should be effected by a summary process, similar to that granted by the 37th Geo. 3, whereby it was enacted, that if any person who issued notes should refuse to make good his payments, the holder should apply to a magistrate, who should direct a distress to be levied on the goods of the issuer within three days after the application was first made to him for payment. That bill, which had been discontinued in 1816, should be re-enacted, together with the clauses which he had already mentioned for the regulation of deposits. In the United States, they had an example of banks established on the best principles. The government there was not permitted to borrow half a million of dollars of the bank, in which it held shares, without the consent of the legislature; whereby the bad effects of government dealings with the bank were completely prevented. From an account of the manner in which the capital of one of these banks was employed, it appeared that out of 35,000,000 of dollars, 33,000,000 were employed in discounts, a liberality which formed a striking contrast with that of the Bank of England, which out of a capital of 11,000,000l. only employed 2,500,000l. in discounts. Out of 35 banks which had been established by the legislature in the state of New York, not one had failed; and that which had occurred two months ago in Scotland, had occurred 15 years ago in America; for during the distress which then prevailed in that country, all the banks voluntarily came forward to support each other. Here, from the connexion between Government and the Bank, affairs took a different course, and he (Mr. Hume) thought that the principal cause of our present situation was the measure which Government had taken to reduce the interest of money, in conjunction with the Bank and other public bodies, with whom it ought to have had no connexion whatever. The advances beyond their means required from the Bank by Government, greatly contributed to excite and encourage that spirit of speculation and gambling which both were

now ready to condemn. Besides, the degree of confidence, which these measures naturally introduced into the commercial transactions of the kingdom, led to that over-trading by which, in his opinion, the distress was mainly occasioned. In 1720, distress prevailed to an extent at least as great as that which we were now suffering; the number of bank notes was then wholly inconsiderable: the same universal spirit of speculation was felt; but although the country had then all the advantages which could be derived from a metallic currency, the very same consequences ensued which it was now attempted to ascribe to the paper issues. This instance, as well as that of 1793, which was of a similar nature, convinced him that it was altogether futile to attribute the distress to any such cause. The real cause was to be found in the pernicious system which was established between the Government and the Bank. It was too much the fashion to praise the Bank of England for what was called the liberality of their conduct on certain late occasions. Before he joined in heaping those praises on the Bank, he should like to know, whether it was true or not that they had lent large sums on the deposit of stock—whether, as had been asserted, they lent between 1,000,000l. and 2,000,000l. to Mr. Rothschild on such deposits—and whether the gold thus procured was not carried out of the country to effect some of the foreign speculations in which that gentleman was engaged. The conduct of the Bank it was, that fostered the spirit of speculation, and raised the fever to its greatest height, and at that moment they thought fit on a sudden to draw back. This occasioned the panic which seized the whole commercial world, and led to the distress which the house was now called upon to remedy. The extravagant trading was an evil, but it was not one that could not have been easily cured. It might have been gradually let down, if the conduct of ministers had not been such as to increase the difficulties. He held in his hand an account of the sums which had been raised in England in 1824 and 1825, in the shape of foreign loans, and to which, as they were the means of taking away the actual capital of the country, he was much more inclined to attribute the existing pressure than to any of those causes which had been mentioned. By these accounts it appeared that ten millions had been paid by England, in foreign loans, in 1824, and more than six millions in 1825. The total capital of foreign loans at present in the British money market amounted to 33,000,000l. The total loss accruing to the nation by the fall of price on this capital, below the contract price, 6,500,000l. Thus it would appear, that the contractors and others concerned in the foreign loans, raised in England during the last two years, were now sustaining a loss (between the price which they could now obtain in the market, and what they gave for the loans to foreign governments) of six millions and a half; and if they viewed the loss as exhibited by the high prices in the markets in the early part of 1825, compared with those which could be obtained for foreign bonds at the present moment, there was a loss sustained by one or other of the parties engaged in them of nearly ten millions. Independent of the mischiefs resulting from these extravagant loans, the calamity was heightened by the increase of importations of cotton and other articles of merchandise over former years, and over a commensurate demand

for them. This item might, in the absence of official documents, be thus estimated. The excess, from comparison of the prices current of 1824 and 1825, had been found to consist principally of wool, cotton, timber, coffee, silk, increased stock of cotton, 220,000 bales; of silk, 1,600,000 lbs.; timber, coffee, wine, &c. about the value of 1,300,000l. The total value of these articles of increased importation was about six millions. All these articles, he supposed, were locked up in warehouses, there being no suitable demand. The following then was the statement up to the present date, of the advances made on foreign loans, mining shares, and adventures, &c. which showed the total money expended, for which a market was wanting:—

|                                                                                                                                                                                                                           |              |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Advanced for Foreign Loans - - -                                                                                                                                                                                          | 8,125,700l.  |
| Ditto, Foreign Mining Schemes and Adventures - - - - -                                                                                                                                                                    | 3,097,000l.  |
| Ditto, for excess of import of Goods, valued at the present low and ruinous prices - - - - -                                                                                                                              | 6,000,000l.  |
| Ditto, for more paid for the Goods imported in 1824 and 1825, than can now be obtained, or has been obtained for them by sale, since they were imported, 10 per cent. on the total import of 1825, 36,080,000l. - - - - - | 3,600,000l.  |
| Total - - - - -                                                                                                                                                                                                           | 20,822,700l. |

Another injurious effect of the recent panic, was an actual alteration in the mode of doing business. Formerly, a merchant who exported goods to South America, could obtain money in expectation of their payment on their arrival abroad. But this was no longer done. Distress prevailed universally where confidence prevailed before, and the ordinary transactions of commerce were diverted from their accustomed course. This disorder in mercantile business, and this large abstraction of a capital of from twenty to (he doubted not) near thirty millions in value, both of which were the effect of over-trading, accounted in a much more satisfactory way for the distress under which the country laboured, than the over issue of a few millions of paper-money. As to the various gambling speculations in mining companies, to which he was disposed to pay less attention than to the loans and to the introduction of a system of over-trading, as in these speculations, property, for the most part, might be said to have only changed hands, although they greatly tended to inflame the bubble, and increase the issue of bank notes, yet the money which they had actually taken out of the country was inconsiderable compared with the nominal value of the shares. He had learned, that upon the Anglo-Mexican, the Anglo-Chilian, the Anglo-Peruvian, and other companies, the objects of which related to foreign countries, the whole amount of money paid up did not exceed 3,097,000l., and of this sum not two-thirds, scarcely one-half, had been sent out of the country in the shape of machinery or otherwise. The speculation in these shares, then, could have had no other effect than that of raising the spirit of too great confidence in the commercial world, and this to no very considerable extent. The Government, by adopting the present measure, would only prove themselves to be disciples of Mr. Cobbett; *Ses. 1826.*

they would give the most forcible confirmation to the system which that person was continually preaching up; they would echo the alarm which he was incessantly sounding, and would actually produce all the evils which he had attempted to excite, and had hitherto attempted in vain. As the law at present stood, all the advantages which could be produced by a paper currency, convertible at will into gold, might be obtained. To alter this would produce incalculable mischief, and would make it impossible to collect that immense load of taxation, with which ministers, by their extravagance, had burdened the country. To relieve the enormous expenses of our establishments, for which a sum of 27,000,000l. was annually wrung from the people, would go further towards remedying the evils than any of the measures which ministers were so ready to follow. He would, therefore, particularly recommend the latter part of Mr. Cobbett's petition to the attention of the Chancellor of the Exchequer, before he finally resolved upon the present measure.—He must make one other remark with respect to the Bank of England. He, who voted so often against the system of hanging by scores the poor wretches who were found guilty of fabricating and passing forged bank notes, could not see without great apprehension the prospect of all those horrors being renewed (hear, hear). He thought that since the Bank persisted in its obstinate practice of adhering to that clumsy and imperfect form of a note which every other banker in the kingdom had renounced, and since they refused to issue a note which it should be more difficult to counterfeit, they ought to have no such extraordinary power as that they had before possessed (hear, hear). He hoped at all events that a clause would be introduced to make the Bank liable to pay the notes which should be forged upon them, as all other bankers were (a laugh).—He concluded by stating that his opposition to the present measure was because he thought it inadequate; because the grounds alleged in support of it were not the real causes of the distress; and because it would rather aggravate than diminish the existing evils. He should therefore move as an amendment, "That a select committee be appointed to consider of the best means for placing the banking establishments of the United Kingdom on a better footing; for securing the holders of bank notes against loss; and for ensuring a metallic circulation in the country, commensurate with the wants of commerce, and the security of the country at all times."

Mr. *Ellice* seconded the motion, not because he coincided in all the opinions of his hon. friend, but because he wished to see his proposition fairly brought before the house.

Colonel *Davies* said, that the plan of Mr. Ricardo, which his hon. friend (Mr. *Hume*) had advocated, had been tried, and the result was now before the eyes of the house. Such a currency we had at this moment, and it entirely failed of its purpose. With respect to compelling bankers to make deposits by way of security for their issues, he had discussed the subject with a very intelligent country banker, from whom he learnt that the whole of the body to which he belonged expressed the greatest disinclination to such a system. He objected to allowing the Bank to continue their issues of 1l. notes, because it would enable that body to alter when they pleased, the value of every

man's property; and he should, therefore, oppose the amendment which the Chancellor of the Exchequer intended to propose for that purpose.

After a few words from Mr. Canning, as to the formality of Mr. Hume's amendment, the amendment was negatived without a division, and the house resolved itself into a committee on the bill. The first and second clauses were agreed to, with some verbal amendments.

On the third clause being read,

The Chancellor of the Exchequer rose to move an amendment to the clause, pursuant to his proposition of last night\*, for substituting the words "10th October, 1826," with regard to the small notes of the Bank of England, instead of "5th February last." As this proposition had been misunderstood, he would observe that it was not intended by the amended clause to leave the Bank of England the perpetual power of issuing 11. notes, after other establishments had ceased to do so. The Bank of England would have no power to retain their 11. notes in circulation one hour after the other banks. Its only object was to enable the Bank of England to issue notes dated subsequently to the 5th of February last, but prior to the 10th of October next, for currency during the three years in which the small notes would be allowed to circulate; whereas the notes of country bankers could not be issued if not stamped prior to the 5th of February last. The effect of this was to enable the Bank of England to supply, for a limited time, and to a limited extent, any sudden vacuum which might occur in the circulation of the country banks. No one could doubt, if this measure was suffered to annihilate the small notes at one blow, it would be a great aggravation of the difficulty of carrying the proposed change into effect (hear, hear). The principle upon which the measure went, acknowledged that a sudden destruction of the small notes would be an injury to the country, and therefore it provided a period of three years for their gradual withdrawal. Although he did not admit there were any serious difficulties in the way of the measure, yet he could not shut his eyes to the difficulties which must occur, if the country banks should be induced to stop their circulation at once. In the embarrassments of the last year, they had had experience of what must be the consequences of such an event. No man doubted that the issue of one pound notes by the Bank, although not in the abstract desirable, had been productive of beneficial effects, by augmenting a too suddenly contracted currency (hear, hear). He, therefore, could not see that this amendment, adopted for meeting a similar emergency, could be considered a departure from the principle of the bill (hear, hear). Gentlemen might very consistently differ as to the time; but those who had admitted the principle of delay, could not consistently oppose the proposition on any other ground. It had been said the Bank would deluge the country with small notes; but how was the Bank to get them out? The only way was by advancing them to country bankers, and therefore their issue must be limited by the pressure on the country bankers. Unless they were taken by these bankers, they would not be issued; the Bank would not throw their notes out of the window. The country banker would not substitute these notes for his

own, unless he wanted aid by means of that species of circulation to enable him to meet the demands upon him. If country bankers wanted this aid, especially at the commencement of the measure, the assistance would be limited by the extent, degree, and violence of its effects, and therefore a virtual control would thereby be exerted on the Bank, and a direct check upon an excessive issue; and unless the issue were excessive, it could not be inconsistent with the spirit of the bill.—For the purpose of guarding the Government and the Bank against any suspicion of being actuated by secret motives, in giving this further currency to 11. notes, he should propose a clause by which the Bank should be required to lay before the Privy Council, and publish in the *Gazette*, an account of all the small notes they should issue under this bill; which account should be laid before Parliament, if sitting.

Mr. Abercrombie confessed that he had never heard a speech less convincing than that of the rt. hon. gent.; a speech which showed that however correct in point of theory were the principles avowed by ministers, they shrank from carrying them into practice. The rt. hon. gent. had failed to show that there was any thing now to be adduced, which he might not as well have stated last Monday. Under these circumstances, the amendment could only be considered as a defeat of the measure. The rt. hon. gent. had put the question on the true issue, when he said that he should oppose the amendment, if it contravened the principle to which they were all pledged. But what was it but a question of time? Had the rt. hon. gent. forgot the speeches of the Secretary for Foreign Affairs, and of the President of the Board of Trade? Had he forgot how a modest proposition for a month's delay had been received? Ministers would not condescend to notice it. The President of the Board of Trade had said that the delay of a year would defeat the measure; and now the rt. hon. gent. had given eight months, during which the Bank might manufacture as many notes as they pleased. But, in proportion as notes were put forth, sovereigns would be driven out; and at the end of eight months the paper would once more overwhelm the gold. Was not this a defeat of the measure? Perhaps the rt. hon. gent. would say, the former arguments of his rt. hon. colleagues applied to the country bankers, his present argument to the Bank of England; and that it would be folly to suspect the Bank of England. The directors of the Bank might be most respectable men; but had there been one discussion since the bullion committee relating to this subject, in which the over-issues of the Bank had not been put in front of the battle, and on which we had not been told that they had been the prime cause of distress? And yet these were the persons in whom we were now to confide. A most important bill was in progress in another place, for allowing the establishment of branch-banks by the Bank of England. By means of these branch-banks, the Bank of England would have facility enough in getting out their 11. and 21. notes. And did the Chancellor of the Exchequer suppose that the Directors of the Bank did not understand his argument, and what he was about? If he gave them power to issue, with a measure in prospect to which they were averse, and let them know that if they did but issue far enough, they must inevitably defeat that measure, did he imagine that they would not do it (hear, hear)?

\* *Ante*, Note, p. 189.

he (Mr. Abercrombie) did not want the benefit of that argument. It was enough for him that the Bank might abuse the power which was to be given to them, to induce him to refuse it. The principle of the amendment—the house could not too strongly attend to that fact—was in the teeth of all admission and all experience. Every man who looked at the state of the currency, and of the questions connected with it, from the first period of the Bank restriction down to the present time, must see that if the evil was to be got rid of, it must be cut up root and branch; and that, leave but a seed of mischief behind, it would again grow up and flourish.—He paid no attention to the argument that the Bank “would not” take a particular course, and that ministers “meant” the measure to last only a short time; these were the same arguments which the house had heard over and over, and which over and over they had seen falsified. The original proposition of the Chancellor of the Exchequer had settled the question, or seemed to do so. Ministers had been sustained in that proposition by an overpowering majority—a majority of more than 200; and they now came down—was this consistent or reasonable?—with an amendment which entirely altered the nature of their original measure, and for which their only reason was in the teeth of every fact and every principle upon which they had relied a week ago (cheering).

Mr. J. Smith differed entirely in his view of the present proposition from the learned member who had last spoken. He was convinced that if it was not supported by the house, the original measure never could be carried into execution. He did not look, at present, to the situation of the country banks; his object was to support a higher body—the Bank of England—an establishment, of which the credit and prosperity was essential to the welfare of the country. Let the house recollect, in December last, that panic during which all private credit through the kingdom was at an end. It was admitted on all hands, that the Bank at that time had done incalculable service by its issues of 11. and 21. notes. What would have been the case if those issues could not have been made? It was quite clear that if the Bank had been called upon suddenly to advance millions in gold within a week, it would not have been in their power to have done so. Then, suppose the panic should recur, and there were circumstances which he would not mention, but which gentlemen would guess, which might lead to a renewal of it,—if that panic should recur, and the proposition now before the house was not agreed to, the Bank would not have it in its power to repeat that very measure which had produced so much benefit in the former instance. He thought gentlemen were rather too hasty in the vehement desire they attributed to the Bank to get out its 11. notes. At times there might have been indiscreet issues; but he rather believed that the Bank of England, in common with every other bank, had long ago found out that the 11. notes were a source of great trouble and vexation, and of little profit. He had no doubt that the Bank was now largely provided with specie, and would very soon be still more largely so; but circumstances, if the measure before the house were not agreed to, between the present time and the 13th of October, would need very much to lessen that provision. For the conduct of the Bank—so far as what it would do might be judged from what it had

done—he defied the whole world to produce a body of men whose integrity and honour were placed more completely above suspicion. In 1816, at the time when their large profits were said to have been made, they had made a division, it might be recollected, among their proprietary, of 25 per cent. upon their capital stock. Now, the mere knowledge that that division was about to take place might have made the fortune of every director of the establishment. What was the fact? It was found that almost the only persons connected with the Bank who had not made purchases, were those who were in the secret—the Directors.—In supporting the measure now proposed, he thought that he acted in entire consistence with the vote which he had given on a preceding evening.

Mr. Pearse said that little danger was to be apprehended from the present measure, as all notes which the Bank might issue they would be liable at once to pay in cash; and were not at all unlikely to be called upon to do so. The charges which had been made against the Bank, from many quarters, were entirely unfounded; and upon no point more completely than upon that of the over-issues of which they were accused, and the sudden subsequent withdrawal. The fact was, that the issues of the Bank were governed by the applications for money; they could not take place unless the mercantile interest applied for discounts.

Mr. Canning:—The question was not whether the Bank would have an unlimited power to issue, or should be altogether restrained from issuing a particular description of notes; but whether the latitude given to the Bank by the present amendment would conduce to the public benefit, or defeat the original measure. Now the hon. member (Mr. Abercrombie) said, that no reason had been given by ministers why a course which they had not themselves proposed, but had even resisted when proposed by an hon. member (Mr. H. Gurney) a week since, was now presented to the approval of the house? To this observation he would say, first, that the measure before the house was not that which had been negatived a week since. The resolution of Tuesday, was,—“That the notes of the Bank of England, and of provincial banks, under 51., which shall have been stamped, and were in circulation on the 5th of Feb. 1826, shall be allowed to circulate until the 5th of April, 1829, and no longer.” The amendment proposed and negatived was, to leave out the words “the notes of the Bank of England.” But the effect of that omission would have been totally different from the effect of the present amendment. The measure now proposed gave the Bank eight months more to issue their small notes, and allowed them to keep those notes in circulation for a period of three years longer: the amendment rejected left the Bank unlimited as to issue, and kept their notes in circulation until the year 1833. He should next observe that in the debate on Friday, he (Mr. Canning) had endeavoured to show the country bankers that their interest, as well as the public convenience, lay in their spreading the withdrawal of their notes over a larger space of time, and this view was supported by almost every member who took part in the discussion. But the bankers had not taken this advice. Reports were coming in from all quarters, since that debate, that the country bankers were suddenly and materially contracting their issues. Now it was the duty of Government to consider what

would be the effect of this sudden and complete withdrawal of all the 11. and 21. notes in circulation. It was clear that there was no remedy for this, unless gold could at once be found (which nobody pretended could be done) in sufficient quantity to fill up the vacuum—no remedy but that which was proposed by the present measure, namely, to allow the Bank of England to go on issuing 11. and 21. notes. It was on a minor degree the same case as that of the panic of Dec. to which the Bank 11. notes had been applied, and had at once effected a cure. As to the probable conduct of the Bank, he did not suppose that the Bank or any other establishment would act for the public interest, to the exclusion of its own. He did not look for this from the Bank; it was no part of their charter, and the public had no right to expect it from them; their real tie to the public was (and it was always the safest and the surest tie), that the interest of the public, as they were constituted, was collateral with their own. Now, when he looked to the conduct of the Bank immediately after the passing of the bill in 1819, he found that, long before they were compelled to withdraw their small notes from circulation, those notes began slowly to be withdrawn, and at length totally disappeared. He was therefore compelled to believe either that there was nothing in the circulation of the 11. and 21. notes very profitable to the Bank, or that, from an opinion that they were injurious to the public welfare, the Bank had elected to withdraw them. Although the Bank was greatly advantaged by large general issues, yet it might not be so, or very slightly so, by the issue of small notes. While they were compelled to pay in gold it would not be their interest to multiply that circulation for which gold was most likely to be demanded. It was notorious, in addition to this, that, many times within the last three years, the Bank had taken every means in their power to give a metallic circulation to the country. They had over and over sent forth flights of sovereigns; and those sovereigns had returned to them, like the dove of old to the ark, so widely was the earth overspread with the flood of paper. Considering, then, these facts, and judging, as human minds must judge from what they saw of human actions, did it seem likely that the Bank would be now anxious to force an issue of small notes more than they had been heretofore? It was not his peculiar province to communicate the fact; but the house should know that the late issue of 11. notes in Dec. was not a measure which the Bank had pressed upon the country. The Bank, at that period, had been advised to issue their 11. notes; but they said,—“Although we have the power, after having so long disused it, we are unwilling to make such an issue without the sanction of Government.” Ministers, being applied to, thought it right before they gave their answer, to draw up a memorandum of their opinions. They had not supposed such a record would ever be called for, but it had been taken; and the effect of it was—“That if, for the purpose of meeting the temporary wants occasioned by the sudden withdrawing of country bank notes, the Bank of England was disposed to avail itself of the power, which by law it had, of issuing notes of 11. and 21., the Government had no objection to such an issue, provided it was understood that the measure was to be strictly temporary; and provided the

Bank would take advantage of the present state of foreign exchanges to increase their treasure so as to provide for the country a more extensive gold circulation” (hear, hear). It was exactly with the same limitations and the same views that Government now concurred in the exception introduced by his rt. hon. friend. Their object was, that if in the first stages of the contraction of the country bank circulation, a crisis should occur at all similar to that which had happened in December, the same remedy might be adopted which had been resorted to at that period. Now, let the learned gent. (Mr. Abercrombie) who had so vehemently opposed the amendment, consider what the state of the law was, as it now stood, with a view to his own express object—that of introducing a purely metallic circulation. Before the present bill was brought in, the law allowed an unlimited issue of the country banks and the Bank of England, for seven years to come. Now could any man imagine, if this bill were thrown out, and an accumulation of those notes were suffered to go on for seven years, that at the end of that period greater facilities would be afforded for the ultimate resumption of cash payments, than would be presented by the amendment now under consideration, when introduced into the body of the present measure? This bill, it should be recollected, would extinguish all 11. and 21. notes at the end of the year 1829, being a period of only three years, instead of seven, as the law was actually constituted. At the present moment, a crisis had not occurred; but there were symptoms which shewed that a too sudden contraction might produce great mischief, within the period at which sanguine men believed a gold circulation might find its way into the country. That the introduction of a gold circulation must be gradual, every man could see; and it was to provide for that short interval, as he hoped, between the ultimate contraction of the small paper, and the circulation of a metallic currency, that the present amendment was introduced. He declared solemnly, that he would not recommend it to the house, if he did not in his conscience believe that the measure, instead of retarding the establishment of a metallic currency, would, if it were good for any thing, rather facilitate that object, by taking out of the way an impediment which would be ruinous to its operation; an impediment, which, if it occurred at all, must occur at the most critical moment—the moment when that important operation was about being carried into effect (hear, hear).

Mr. Tierney:—If he could be satisfied that the effect of this amendment would be that which the rt. hon. gent. (Mr. Canning) had stated, he would certainly agree to it. But, because he was of opinion that no such effect would follow—because he was convinced that, in 1829, the legislature and the country would be placed in just the same difficulty as they had now to contend with, he felt himself obliged to oppose the proposition. If there were no alteration in the principle of the bill, how happened it that those members who opposed it without the amendment, now avowed their intention of supporting it? How happened it that the hon. member (Mr. H. Gurney), who formerly resisted the bill as highly dangerous in principle, now discovered that his objections were removed by giving the Bank of England an unrestricted power to issue 11. notes (hear, hear)? He appealed to every gentleman at all connected with the pecuniary affairs of the

country, whether the proposed alteration did not materially change the aspect of the measure, as far as regarded paper currency? Paper currency was beginning to be at a premium—things were looking up in the paper world, in consequence of this amendment (hear, hear)—the introduction of a few simple words, which altered so materially the relative situation of the Bank of England and the country bankers, had produced a most marvellous effect on some hon. gents., who, a few nights since, pronounced the measure ruinous, and now viewed it as little short of salvation (hear, hear). The rt. hon. gent. had stated, in more moderate terms than he (Mr. T.) should have used, what, he feared, was too true, that there was a determination, on the part of country bankers, to throw impediments in the way of a return to gold circulation. The country bankers, like good soldiers, appeared to obey the word of their commanders very promptly. When they found how matters were going on, they cried out to their leaders—"If we are to mutiny, we are quite ready" (a laugh); and they had acted, it seemed, effectually; for no man could deny that the whole of this new proceeding was an admission, that the steps taken by the country bankers to stop the country circulation formed the ground, and the sole ground, for this measure (hear, hear). He complained, therefore, that the Government had not boldly faced that body. If ministers had summoned up firmness enough to face the country bankers, they would have been obliged to strike in one week. They could not long have persisted in keeping back their notes from circulation, at a loss to themselves. Notwithstanding all that had been said to the contrary, he must, with due deference, deny the assertion—common sense would not allow him to believe it (hear, hear). The rt. hon. gent. said, it would be impossible to procure a metallic circulation to fill the gap created by the removal of the country notes. (Mr. Canning—"Not on the instant.") Why not on the instant? Because the country banks were in a state of rebellion. But he believed that it would be wholly impossible if the present amendment were adopted. He knew it was difficult to speak of the Bank of England without appearing to attack them. For many of the directors he entertained a high respect; but, as a body, he entirely distrusted them; for he was convinced that the incautious manner in which they had proceeded with their discounts had added greatly to the late spirit of speculation. Oh, but then it was said, "See how handsomely they came forward afterwards to check the mischief." So they did—they issued about 8,000,000*l.* of paper in the course of a few days (hear, hear). Very true—but had the directors no interest in this issue? What were the directors? All merchants; and if others were in danger, they were not less in danger themselves. Hence the secret of their extraordinary liberality (hear, hear). So much had they imposed upon people in general, that an hon. friend of his (Mr. Grenfell), not remarkable for his partiality for the directors, had actually stepped out of his way to move a vote of thanks to them for their disinterested liberality (a laugh). Nothing could be more preposterous than for the directors to claim credit upon this score. It was like a man claiming a reward from the humane society for saving a boy from drowning, and being met by the declaration—"but it was you that pushed me into the water"

(cheers and laughter). If all the documents were read and published since the Bank restriction, one would think that the directors had had no more to do with the restriction, than any indifferent gent. in that house. They said, "It is all the fault of the Government—we don't wish to stop payment. It is the act of ministers, and on them we throw it." But, notwithstanding all this, it appeared in the inquiries before the bullion committee, that no set of men ever shewed a greater disposition to issue a 1*l.* note, and keep a guinea out of the way. Only let the house look at the situation in which the country might be, and probably would be placed, in consequence of this measure. How happened it, in 1822, that a bill passed, enabling the country bankers to renew their issues of 1*l.* and 2*l.* notes? Prices were then low, and were raised by these issues for the benefit of the country gentlemen. Suppose, at the end of three years, prices should be again reduced? If the Bank should fill up the gap, what became of the principle of the bill? The original principle was, that when the small notes were withdrawn, the gap should be occupied by a metallic currency.—It was probable that the system proposed would go on for the whole of the first year. But suppose the system was carried on through the second year, and a large number of notes was kept in circulation, what, under such circumstances, could ministers do if the country bankers stood out, six months before the stipulated period had expired, and demanded more time? How could they answer that body if they came with this appeal—"Surely you will not ruin us all, when you can prevent it by merely extending the term to four years." In his mind there was the greatest probability that this would be the case. Therefore he would contend, that in three years the legislature and the ministers would be placed in the same situation as at the present moment; only that they would not have the opportunity of acting under circumstances so favourable as those of the present day. It was impossible to imagine how the country could stand in a better posture for extending the metallic currency than at this moment: it was now impossible to keep gold out of the country, instead of its being a matter of dexterity how to bring it in; foreign exchanges were all in our favour, and foreign powers were on the most amicable footing. Who could say that these advantages would exist three years hence, or rather who might not say with tolerable certainty that they would not exist? Why, then, should the change be postponed for so long a period? If he could satisfy himself that this amendment would be "the be all and the end all" of the paper system, and that at the end of three years a wholesome metallic circulation would be introduced, he would give the measure no farther opposition. But being satisfied that this was not likely to be the case; being deeply and conscientiously convinced that much evil would result from the measure, he felt himself called on to oppose it. He sincerely wished that ministers would muster up a little more courage, and face this temporary storm. By the course they were pursuing, they were giving a vast encouragement to the country bankers. That body knew they had nothing to do, when it suited their convenience, but to withdraw a certain number of notes from circulation, so as to create some difficulty throughout the country, in order to deter ministers from acting efficiently. If they saw that

ministers could not stand such a storm as the present, they would laugh at the Government and at all the plans which they might bring forward. But he would press the subject no farther. He had stated the grounds of his objection, and on those grounds he was determined to stand.

Mr. T. Wilson said, that many parts of the country were at this time in a state of starvation, for the want of some sort of currency. In Yorkshire, they were in such distress, that the manufacturers could not pay their men, except by orders on the butcher and the baker,—an evil which called loudly for correction. If within three months of the expiration of the bill the country bankers contracted their currency to the utmost, it would certainly have a bad effect if there were no substitute; but, as there would be a substitute of Bank paper, there could be no doubt that there would be sufficient small notes for the service of the country. The amendment was a most advantageous one, and he would give it his support.

Mr. Grenfell, in reply to Mr. Tierney's allusion, said, that he never entertained any sentiments with respect to the transactions of the Bank, which he did not at present feel. The conduct which the directors had pursued in the latter end of December had tended to restore public confidence; and he, in consequence, moved a vote of thanks to that body, with this limitation—"that those thanks were voted with reference to the conduct of the Bank of England, in the late crisis of difficulty and danger to the mercantile world." This acknowledgment he thought they merited.

Mr. Peel:—The rt. hon. gent. (Mr. Tierney) said, that the whole discussion had hitherto turned on the principle of the measure; but another hon. member (Mr. Abercrombie) said that the whole question turned upon time. Here were two contradictory propositions, neither of which he thought well-founded. The measure could not be viewed with reference to time alone; for many of those who supported the motion on principle, did not concur in the propriety of the time. The rt. hon. gent. (Mr. Tierney) asserted that there was a mutiny among the country bankers. When those who owed allegiance to Government were so unwise as to assail it with mutiny, it was fit that Government should deal with them as they deserved; but these persons had done nothing but what the law allowed: and for ministers to say, "We will take no step while they are in a state of insubordination," would be a gross abandonment of the principles of good government. It would be absurd for a government to say, when novel difficulties sprang up, "We will persist in the course we have already taken, on the right or on the left," without considering which was the more expedient course. The present was an awful crisis; and that man must be possessed of more consummate wisdom than could ordinarily be expected from human nature, who could propose a measure, perfect in all its parts, to meet it. If the conduct of the country banks were productive of great local distress, then he conceived it to be a wise measure on the part of Government to provide some means to counteract that local depression (hear, hear). There was a perfect understanding on the part of the Bank, that the measure now before the house would be strictly acted upon. The conduct of the Bank in 1822 formed a fair ground of pre-

sumption, as his rt. hon. friend (Mr. Canning) had stated, that that body would not abuse the power which it was now proposed to intrust to them. If they did abuse it, the responsibility would attach as well to the Government as to the Bank. He would never have agreed to the measure, if he did not feel the strongest conviction that the principle would be fairly carried into execution.

Mr. Ellice:—The rt. hon. Secretary (Peel) had said, that not only the Bank, but the Government also, would be answerable for the abuse of the power to be granted by this clause. In what way would they be jointly answerable? He had heard of no appointment of commissioners to regulate the issue of paper. That would in reality have been one way of dividing the responsibility with the Bank, and he knew of no other which could be adopted. In his opinion, after the passing of this bill, not one single sovereign could remain in circulation. Every demand on the country bankers would be met by payment of 11. notes of the Bank of England. Let this bill once pass, and the effect of it would be to give the Bank a power which experience had shown them could not be held by any men without the certainty of its being abused. If there must be a mixed currency, the country bank-notes were preferable to those of the Bank of England. They were subject to no depreciation from forgery, and they could be cashed on the spot. What benefit had they derived from all the measures which they had hitherto adopted to restore a metallic currency, if this clause should be carried? He agreed with the rt. hon. gent. (Mr. Peel) that the Government was not, in their fondness, for a particular plan, to pursue it contrary to the public interests. But there was no case made out. Had they waited to make any trial whether the gold would come in? Was there at present no gold at the Bank? The clause was, in his conscience, nothing less than a virtual repeal of the bill brought in by the rt. hon. gent. (Mr. Peel) in 1819. It went to give the Bank a power which must be abused,—which, however desirous they might be to avoid it, it was impossible that they should not abuse.

Mr. Irving said, that there was nothing in the circulation of the Bank of England notes to prevent a return to metallic currency, because experience had proved, that those notes would circulate with gold coin, without displacing the gold coin; whereas the inevitable tendency of the country notes was to cause the coin to be withdrawn. He was, therefore, much more reconciled to the bill by the clause which was now to be added, than he could have been without it.

Mr. Baring said, that he should support the bill with the clause, though he had opposed it without the clause. In the principle of the measure he coincided. No gentleman could be more fully convinced than he was, that the circulation of 11. and 21. notes was a perfect nuisance—that with such a circulation there could be no return to a metallic currency. But his doubt on the original measure was, that they could not come at their purpose by a direct course "as the crow flies." It was true that two years would be more than enough time to attain their object in, if they could go on progressively throughout each of the four-and-twenty months. But experience proved, that the moment they cried down any portion of the

circulation, it went too fast. The speeches and papers of ministers were like the cry of "mad dog" on the country notes; and not only had the bankers themselves hastily drawn in their circulation through fear of being run down, but the whole country, as if nauseated that currency which before was found useful, threw it upon the banks in overwhelming quantities. They seemed to wish to pass from an overabundant circulation to a most straitened one; not considering that the very excess of paper which was alleged to exist, the great extent to which schemes and projects upon the resources of the country had attained, made it so much the more dangerous to return to such a state. He considered this clause, therefore, as a great mitigation of the measure itself; although he still thought they were going too fast. He felt sure that the power left to the Bank would not be abused, for the reasons mentioned by the *rt. hon. gent.* (Mr. Canning). He agreed, too, that the country banker would now have less interest in circulating his own notes, because he must realize the means to get at the Bank of England note as well as the sovereign. At present the country banker had a direct interest in endeavouring to get the sovereign out of circulation. There would be no great affection felt towards the town-made note, and as the note would be as costly to him as the gold, the effect would be to preserve gold in much larger quantities in circulation.

Sir John Newport opposed the amendment. He had advocated the measure on a former night, because it tended to restore the currency to a sound state; but the amendment would embark them in a series of similar measures to which they might see no end; whereas he thought there could be no time more favourable than the present to carry the measure into execution.

Lord Folkestone said, that he should vote against the amendment. When he saw ministers in the act of yielding, and yielding, too, upon a point which they had always declared to be mainly important, he had no hope that they would be able to resist the external pressure of circumstances on another occasion, and really get rid of the 1*l.* notes. Their firmness had been tried already upon this very subject. The house was now in a committee on a bill to put an end to 1*l.* notes at the end of three years; and only four years ago, from the pressure of circumstances, they were induced to pass the very bill which this was meant to repeal; and now there was a clause proposed which in effect wholly prevented that repeal. What reason had they to hope that they could ever arrive at a metallic currency, after so many experiments and failures? He had objected to the small-note bill at the time, because it prevented the country from recurring to that standard; and now the house were rushing upon a measure which was introduced to prevent the repeal of that act from being carried into effect.

Mr. Mosck said that the Bank of England note was the worst of all, from its liability to forgery. Parliament and the public were anxious to return to a metallic currency, and they were told that there was a scarcity of gold. If gold was so scarce, silver was not. What objection could there be to allow bankers to pay in either as it suited them? That there were too many notes in circulation would prove but an awkward confession; it would prove

that those who had issued them were not entitled to public confidence.

Mr. Brougham could not vote for the clause consistently with the principles which he had supported. The arguments in favour of the amendment had been fairly put in issue by his hon. friend (Mr. Baring), who agreed that a metallic was the only sound currency, and that the only question at present was a question of time. His hon. friend objected that the original measure was brought forward too soon; that things should be left to themselves for some time longer; and that the remedy should be postponed for a year. Now his (Mr. Brougham's) answer to this was, that if the Bank were told that such a measure would be adopted at the end of a year, if they received a year's notice to prepare for the measure, they would delay their preparations, they would not set their house in order, but would go on to the end of the year in hopes that something would turn up, which would call paper again into circulation; that Government would once more lend its sanction to the measure, and the country would again have small notes to as great an extent as ever. He (Mr. Brougham) therefore, would not give the Bank of England till the 10th of October, on the same principle that he had contended against giving all the banks twelve months. An argument had been urged in favour of the clause from the limited state of the circulation at present, and the distress caused by the small notes having been withdrawn. But out of that suffering one benefit arose, and that was, that the measure which at other times might have been followed by dreadful effects, might now be safely applied, when four or five-sixths of the paper currency was withdrawn, and gold coming into circulation. Now, therefore, he would say, was the very time for carrying the measure: by postponing it, they would only force out paper again, and prevent the gold from flowing in. That was his argument: but he was met by this ill-omened clause to enable the Bank of England to fill up that very vacuum in the paper circulation, by other paper. The defence of this clause,—the necessity for it,—all which the *rt. hon. gent.* (Mr. Canning) hoped to effect by it, was to fill up this void by allowing the Bank of England to issue its notes: it was only to issue its notes till the void was filled: but would the Bank of England stop there? What security was there that the Bank would not go on stamping and stamping, and signing and signing, till it had circulated as much as it could desire? Not only would their issues fill up the channels of a proper paper circulation, but they would also fill up the spaces which, but for this clause, were just about to be filled up by the gold. He earnestly wished that the house would avert that evil. The house must be aware that bank paper and gold could not long exist together,—at least, experience had clearly demonstrated that it was impossible for 1*l.* notes to circulate with gold. Notes to a large amount might circulate with the metallic currency: a 10*l.* note and a 100*l.* note might pass in company with sovereigns; but it was impossible that 1*l.* and 2*l.* notes could do so. They could no more circulate together than bad sovereigns could circulate with good. He had always maintained, that it was desirable that paper and gold should exist together; but he had never denied or doubted that they could not exist together. There had been no modifi-

cation of his opinions, but experience had taught him a little more. He still was of opinion, that that currency was the best which consisted partly of paper, convertible at pleasure into gold, and partly gold; but further experience had taught him, that a law making paper convertible into gold, was not sufficient to keep down the paper to a proper level, and to ensure the country at all times against its running into excess. Private paper might become excessive, although convertible, and metal was not a security against an over-issue of notes; for, within certain limits, there might be an excess of paper, notwithstanding its convertibility into cash. His hon. friend (Mr. Baring) had said, that a difficulty existed in the circulation of country bank-notes with coin; and that, whilst the Bank of England notes would keep in circulation with the metallic currency, the country bank-notes would not. His (Mr. Brougham's) opinion was, that although there might be greater facility in keeping up a joint circulation between Bank of England notes and coin than between coin and country notes, yet the joint circulation of the latter could not be maintained; for the paper would remain, and the gold would vanish. It was quite consistent with our experience on the subject, that so long as bank-notes were available, they would be preferred to gold. The convenience of transfer, and the capability of sending notes from one end of the kingdom to the other, would always give them a certain advantage. But the miseries of a paper circulation we had too well experienced; and it behoved the house and the Government to beware how they suffered even a limited continuance of that pernicious system.—He had been told that a certain bill was about to pass elsewhere, for the purpose of establishing branch banks of the Bank of England. The establishment of branch banks would operate as a restriction on country banks, which would lead to wholesome effects, and as such would meet with the approval of the country. The establishment of branch banks would no doubt prevent individuals from embarking in the banking business without means or experience to conduct their concerns; but Government should take care that these branch banks did not produce some of the very mischiefs, for which the country banks were deemed objectionable. Poor persons who got hold of 11. Bank of England notes would keep them in their possession in the same way as they would keep the notes of country bankers; but could they turn these notes into cash with a like facility? Would each branch bank be prepared to give cash for all Bank of England notes which might be presented there, or was it to be understood, that every branch bank was only to be accountable for its own issues? He felt the more anxious on this point, because he understood that in Ireland, where the system of branch banks was in operation, the question had been tried, and the result had been that the branch banks in that country did not pay notes on demand, excepting such as they had respectively issued. Now this was a great grievance. Notes should be made payable, not only at the particular places at which they might be issued, but at every place where branches were established. The hardship would be severe on poor persons who might have to go twenty or perhaps forty miles before they could get cash for their notes; and its effect naturally would be to keep a large

quantity of paper in circulation, notwithstanding its convertibility into gold. These were points which, he hoped, would be attended to. As to any clamour against the principle of these measures, the rt. hon. gent. (the Chancellor of the Exchequer) stood pledged to the house that they should not be qualified by any steps which might be taken without the walls of parliament. Enough, too much, had already been conceded; and he hoped and trusted that no further concessions would be made, as they would only have the effect of exposing the weakness of the Government, and of encouraging doubt and alarm.—One of the greatest blessings that would have attended the introduction of the measures, as originally proposed, and for which he gave his hearty vote, would be, that by the withdrawing of 11. and 21. notes, the crime of forgery would be deprived of one of its principal facilities; but who could question, that the moment the 11. and 21. notes of the Bank of England again appeared, we should witness the renewal of those scenes of horror from which the mind involuntarily shrank? He had himself seen, in the course of his professional avocations, 20, 25, and even 30 persons tried for forgery at one assizes; and what security would be offered that those heart-rending scenes would not be revived?—He had now candidly stated the grounds on which, although it was not his intention to oppose the bill, or to withdraw his support from it, he felt it his duty to oppose this clause.

Mr. Huskisson said, that he should not have risen but to correct an apprehension of the learned gent. (Mr. Brougham) that the Bank of England had not the same interest with the country banks in regulating their issues. A country bank issued notes for the supply of the district in which it carried on its operations. It wrote to the Bank of England for gold whenever it had occasion for gold to pay its demands. But the Bank of England was obliged to pay all its notes on demand in gold itself. For this reason the Bank of England had not the same motives for over-issues that country banks had. When the exchanges enabled the Bank to accumulate a quantity of gold, they were, therefore, anxious to withdraw their notes.—With reference to the measure under consideration, it had been observed that there appeared to be at present a great disposition to withdraw country notes from circulation; but if they were withdrawn, how was the vacuum to be supplied? For himself he never desired to see any more one-pound notes in circulation after the prohibition by which notes were forbidden to be stamped should take effect; but they were bound not to be unprepared for an emergency; and who could tell but there might be at a very remote period an occasion to call for that aid which it was the duty of Government to keep in reserve?—He agreed with the learned gent. that the Bank ought not to be allowed to establish branch banks unless upon the principle of making payments in gold (bear, bear). The country bank notes of one-pound were payable in gold on demand; but all such notes of above one pound in value, were not payable on demand in the country, but only payable on demand in London (no, no, from the opposition). At least this statement had been made by the hon. member for Staffordshire; and if it were the case, to what a state might not the country be reduced? Suppose that all 11. notes were withdrawn from circulation, country

bankers might refuse to pay their 5l. notes. Therefore, it became doubly necessary for the Government to provide against this danger, by having a substitute at hand, by which it could be averted.—The Bank only seconded the wishes of the Government to have a power within its reach of providing against pressure and calamity, if such should unfortunately visit us again.

The committee then divided:—

For the amendment, 187.—Against it, 24.—Majority, 163.

(The announcement of this majority was loudly cheered in the committee.)

The Chancellor of the Exchequer asked whether the hon. gent. (Mr. Maberly) meant to press a division upon some of the points that he had alluded to in the early part of the evening?

Mr. Maberly replied, that undoubtedly he would press for a monthly return of the Bank issues so long as they were empowered to make them. With reference to the rate of the exchanges, and the accounts of imports and exports from the Treasury, a longer time might be allowed—say three months,—from the greater difficulty of making up such returns; but the Bank ought to be ready with monthly statements of its own issues.

Mr. Hume hoped that similar returns would be called for from the country bankers.—He said that by the act of 1797, a summary process was given against banks, in case of non-payment, under particular circumstances, after the lapse of three days. By some unaccountable error, this clause was omitted in the act of 1816, though it had gone through all the acts since 1797, up to that year. He meant to propose the revival of the original clause.

The Chancellor of the Exchequer wished the hon. member would let him have a copy of the clause, and a day for consideration.

Mr. Hume consented:—and then asked whether it was intended in this bill to compel deposits for the issue of the 1l. and 2l. notes, and to empower the commissioners who had the control of such deposits to convert into money such portion of them as should be called for, in default of immediate payments in cash? He was also anxious to know whether the Bank were to be compelled to pay their notes in cash when called upon in country districts, instead of the holders being obliged to have recourse to London, where these notes were alone formally payable.

Mr. H. Gurney said it was impossible that any notes could be issued, were all these restrictions to be imposed.

Mr. Brogden then brought up the report of the bill, which was ordered to be printed, and taken into further consideration on Thursday next.

### *Bank Purchase of Exchequer Bills.*

LORDS, THURSDAY, FEB. 23.—The Earl of Lauderdale, referring to the correspondence between the Government and the Bank\*, said, that

\* A copy of the correspondence betwixt Government and the Bank on the subject of the Purchase of Exchequer Bills to the extent of two millions.

At a Court of Directors at the Bank, on Thursday, the 16th Feb. 1826, the Governor

Sess. 1826.

he wished to be informed about the meaning of the letter addressed to the noble lord (Liverpool), and the Chancellor of the Exchequer, to the Bank. In that letter it was stated, that under all the circumstances of the commercial distress, it appeared that it would be advantageous if the Bank were to give directions for the purchase of 2,000,000l. of Exchequer-bills, and that it would be recommended to Parliament to make provision for the repayment of the same. Now this was very equivocal. He (Lord Lauderdale) had at first thought that 2,000,000l. were to be thrown into circulation; and this would be the case if the Bank were to purchase to that extent, and Government to repay the sum so expended: but if the meaning were, that the Bank was only to purchase Exchequer-bills in the market until they rose to par, and then stop, it might be that 300,000l. or 350,000l. would accomplish that object, and so the whole amount of the relief which this measure would afford would be, to increase the circulation about 350,000l. The reason of the thing might tell him what the meaning should be, but as there was so much ambiguity in the passage, he wished for a distinct explanation. Was the Bank only to purchase till the Exchequer bills rose to par, or were they to extend their purchases to 2,000,000l.?

The Earl of Liverpool:—Whatever ambiguity there might be in the sentence quoted, he should endeavour to clear up, not by explaining the words, but by simply stating the fact. The intention was to recommend the repayment of 2,000,000l. of Exchequer-bills to the Bank, on the understanding that the Bank should make purchases at par, not above it.

The Earl of Lauderdale:—Then this, instead of being a measure for the relief of the merchants, has really been only a scheme to raise the value of Exchequer-bills.

The Earl of Liverpool would only say for the present that if the noble lord were acquainted with all the circumstances which had taken place with respect to the purchase of these Exchequer-bills, he would find reason to be of a different opinion.

laid before the Court the following letter from the First Lord of the Treasury and the Chancellor of the Exchequer, viz:—

*"Fife-house, Feb. 14.*

*"Gentlemen,*

*"Under all the circumstances of the present distress in the city and country, it appears to us that it would be advantageous, with a view to public and private credit, if the Bank were to give directions for the purchase of Exchequer-bills to the amount of two millions. If the Bank shall agree to this proposal, we engage to submit to Parliament the necessary measures for the repayment of the same between this period and the 14th of June next.—We have the honour to be, &c.*

*"LIVERPOOL.*

*"FREDERICK JOHN ROBINSON,*

*"To the Governor and Deputy-Governor of the Bank of England."*

Resolved,—That the Governor be authorized to purchase Exchequer-bills to an amount not exceeding two millions, on condition that the repayment be made within four months.

Bank of England, Feb. 20. R. BEST, Sec.

2 N

*Issue of Exchequer Bills;—Bank Advances.*

COMMONS.—Mr. T. Wilson presented a petition from the merchants, traders, and others connected with the commerce of London, for relief. After stating the pain he felt in opposing those ministers, who, however much he might disapprove of the course they were now pursuing as to the state of the country, were no doubt acting honourably, openly, and manfully in the discharge of what they considered to be their duty, said, that it would not be denied that at this moment the great pressure of commercial embarrassments was felt, not alone in London, but throughout the mercantile world. In this state of difficulty, application was made to Government for an issue of Exchequer-bills, as loans to the commercial world. To this application ministers gave a decided negative. For his own part, as a practical man, he would say, that as such a measure had been found effectual in former emergencies, he thought it should be resorted to in the present (hear, hear). Ministers, however, resisted the application, on the ground that it would be inexpedient, as establishing a bad precedent; and having found out that the Bank of England, by its charter, was empowered to lend money on goods, they said to the applicants, "The doors of the Bank are open—they have the power to make the advances you require,—why do you not apply to them?" The answer to this was, that the two modes of obtaining relief were different. When advances were made on Exchequer-bills, they were made by commissioners especially appointed for that purpose, and sworn to secrecy (hear, hear), and the applicant for advances to those commissioners could be certain that the knowledge of his having made such application would be confined to himself and to them (hear, hear). The merchant whose affairs required an advance of those bills could apply to the commissioners, and if he had fair security to offer, he obtained that assistance which recovered him from his difficulties. If a man were in credit, his bills would be discounted by the Bank in the ordinary way; but a man who would have no objection to go to the Bank with his bills, would have insuperable ones to go there with his goods (hear, hear). He might with great safety apply to the commissioners for an advance on goods, but he could not make a similar application to the Bank, without incurring a slur on his credit (hear, hear), which no merchant could incur without increasing the difficulty he wished to remedy.—There were other circumstances to which it would be necessary to advert, in order to meet the objections to the prayer of the commercial body. From statements made in that house and elsewhere, it was said that most, if not all, of the present distress was attributable to the system of over-trading—to the extent of the late speculations in public companies. The bankers, merchants, and manufacturers were included in one sweeping condemnation as embarked in those delusive schemes: they were described as a set of wicked or profligate speculators, who had ventured their own property and that of others in schemes and companies of the most delusive and ridiculous description; and it was said that they were now suffering the consequence of this ruinous system, that such a system ought to be allowed to find its own level, and that it would be highly improper for Government to interfere.

When he had mentioned this subject in the house before, he had said, that even in case where a man had over-traded, as it was called, and thus involved himself in difficulties, he was entitled to the consideration of Government. He now repeated, that the man who speculated with his own property, and had lost half of it, and who came now to solicit assistance in order to be enabled to preserve the other half, was worth saving (hear, hear). He did not say that such a man was entitled to this attention solely on his own account, but for the sake of his connexions, who were in the same situation, and who would be involved in his ruin. There were thousands in the country thus circumstanced; and he must say, that as the first step which led to their present difficulty was partly occasioned by the conduct of ministers themselves, Government was bound to pay attention to the application for relief. As to the charge of over-trading itself, which had been brought against the merchants, he would observe that it was not possible to know what was over-trading, until the result had proved it. A merchant who was going to export goods from one port could not tell what quantity of similar goods would be exported from another. With respect to the mining speculations in South America, which had afforded such a frequent theme for declamation and invective, he would make no scruple in saying, that in his opinion they were by no means unfair or improvident adventures. That such an employment of capital might, owing to the change which had recently taken place, have now become inconvenient, was no proof that they were not prudent and legitimate adventures at the time when they were undertaken. He certainly did not mean to approve of the conduct of those persons who had purchased shares in these concerns for the mere purpose of selling them again; but it was very justly observed by an hon. member (Mr. Hume), that the sums which had been lost by this species of gambling had not made the country one farthing the poorer: the money still remained in the country, it had only changed hands. Besides, it was no fair reasoning that the adventure itself was bad, because this abuse had grown out of and fastened upon it.—Another cause of the present distress had been sought in the excess of imports. But the same answer which he had given to the charge of excessive exportation, equally applied to that of excessive importation.—He did not apply for assistance for those who had been dealers in bubbles, or for those who had been in the habit of carrying on their business by bills at long and unmercantile dates, but for those who had goods of ample value in their warehouses to offer as a security for any assistance they might require, and whose exigencies had arisen solely from the general suppression of trade, owing to the want of some circulating medium wherewith it might be carried on, and the destruction of confidence. These causes had produced a scene of misery amongst this class of individuals which it was quite out of his power to describe. Since the failure of the house of Goldschmidt, the consternation had spread in every direction. That house was deemed, like others, to have dealt too largely in foreign securities, and to have been concerned too deeply in over-trading. But what was the fact? They had no longer ago than last summer, through one of the partners then abroad, laid out 50,000*l.* in the stocks of the United States, in order to obtain greater

on the money than they could procure investment in this country. They had indeed an establishment at Leeds, in or-  
 assist the manufacturers of this country, the time when the house stopped pay-  
 they had made advances to the extent of on the manufactured goods under their  
 The course they pursued was this: If  
 ds were sold, the advance was repaid;  
 t sold within a certain period, the goods  
 out to such part of Brazil or South  
 as the manufacturer chose to point  
 Of the 45,000*l.* advanced, 12,000*l.* had  
 this manner repaid. A communication  
 d the other day from the head of the  
 at Leeds, stated, that he could not  
 00*l.* to support the credit of the estab-  
 nt. Four days previous to the stoppage  
 house, doubts having been expressed  
 stability, communications to that effect  
 patched to Paris and Amsterdam. The  
 produced there by this intelligence was  
 ve. Advice had been sent over from  
 the cities, stating, that the mischief that  
 flow this event on the two exchanges,  
 be incalculable, and would ultimately  
 upon the merchants of London. In this  
 distress, great as it was, would be ag-  
 d by every fresh failure (hear, hear).  
 was the truth of the old proverb more  
 st—that delays were dangerous. Gen-  
 who were acquainted with the city,  
 that frightful reports were in circulation  
 yesterday, respecting establishments of  
 est respectability, and of known pro-  
 Yet these mere rumours had driven  
 e price of the English funds 2 or 3 per  
 d the Foreign funds 4 or 5 per cent.—  
 the inconveniences pointed out as likely  
 it from the granting of relief, was the  
 an excessive issue of Exchequer-bills.  
 t, he admitted, he attended with incon-  
 e under present circumstances to Go-  
 st, or the Bank, if Exchequer-bills were,  
 great extent, brought into the market;  
 treble the amount asked for would, un-  
 re favourable circumstances, produce  
 chievous effect. If Government sym-  
 l with the mercantile classes, all would  
 (hear, hear), but not while they said—  
 "of you have done what you ought not,  
 e cannot discriminate between you, all  
 fer alike" (hear, hear). This was hard  
 it from a Government which depended  
 on trade for the means of supporting its  
 navy, and its other great establish-  
 -Among the many painful feelings he  
 on this occasion, one of the most pain-  
 that arising from the necessity of re-  
 from the bench on which he had sat  
 much satisfaction so many years, to  
 t of neutral ground on which he was  
 [The hon. gent. spoke from the mid-  
 dles under the gallery: his usual seat  
 y was behind the Treasury bench.] He  
 ged it more advisable to take up that  
 than to go at once over to the Opposi-  
 here, possibly, he might have been  
 upon as a spy or deserter (a laugh).—  
 hon. gent. (Mr. Huskisson) had said,  
 balance of trade should be kept in  
 the merchant, in order to regulate his  
 ags. But he (Mr. Wilson) was one of  
 school, of which it was a doctrine that  
 ace could be defined only by the re-  
 se state of our foreign trade was now

greatly altered. When our imports were  
 chiefly from, and our exports to the continent,  
 the balance of trade was easily adjusted. But  
 now the supplies received by this country from  
 the continent were much greater, and they  
 would necessarily increase in consequence of  
 the relaxation that had taken place in our  
 Navigation laws. The exports to the continent  
 last year had been cramped by restrictions, but  
 the great dependence of the country as to ex-  
 ports was on the trade with India, Brazil, and  
 South America generally; and the returns in  
 that trade could not be calculated until after  
 12, 18, or 24 months. As to the doctrine of li-  
 miting discounts in order to force up the ex-  
 changes, he regarded it as one of the absurd-  
 ities of the day. To say that the Bank directors  
 should be compelled to watch the exchanges,  
 and drive them up by contracting their dis-  
 counts, was to inculcate a doctrine wholly at  
 variance with the sound principles of trade.  
 If it were to be acted on, he would say, "Good  
 by to the consequence, importance, and respec-  
 tability of the mercantile establishments of this  
 country." A favourite notion afloat at the  
 present time was, the necessity of putting the  
 currency and trade of the country into a whole-  
 some state. He readily admitted that no ob-  
 ject could be more desirable; but if parliament  
 was to begin this intended course of improve-  
 ment by ruining some of the existing banking  
 establishments, and inducing the rest, in self-  
 defence, to shut up their shops, they would in-  
 flict calamities on the country which they could  
 not foresee. The rt. hon. gent. (the Chancellor  
 of the Exchequer) might now pay all the com-  
 pliments he could invent to the country bankers,  
 but he could not remove the stigma which was  
 at the opening of the session fixed upon them  
 all. On the part of the public there would be  
 runs, and on the part of the bankers distrust.  
 —There were yet two subjects on which he  
 begged leave to say a few words, mainly con-  
 nected, as they were, with the causes of com-  
 mercial distress—the Corn laws and the Silk  
 trade. If, at this period, Government persisted  
 in their intention of unhinging so many impor-  
 tant interests, they would, in his opinion, adopt  
 a dangerous system of legislation, which he  
 trusted parliament would not tolerate (hear,  
 hear). If the principles of free trade were to  
 be introduced, Government should at least  
 pause till they knew what were the feelings of  
 the landed interest as to the proposed alteration  
 of the Corn laws. The landed interest after  
 all would probably turn round upon them and  
 defeat the grand design. What a state of con-  
 fusion would there then be between wholesome  
 and unwholesome principles jumbled together  
 into a system, if it might be so called, which  
 no man could pretend to understand. For the  
 consolation of ministers, and the country at  
 large, he felt it his duty to say, that he believed  
 the country was never possessed of more ele-  
 ments of prosperity, or a greater mass of sub-  
 stantial riches, notwithstanding the extraordi-  
 nary, unnatural, and fearful situation, in which  
 it was placed by measures pursued and by  
 measures not adopted. There was property  
 enough to answer every demand. All that  
 was wanted was the restoration of confidence.  
 The city, however, had sent memorials and de-  
 putations in vain. Government, it appeared,  
 had made up their minds to give no relief, and  
 therefore the merchants were compelled to lay  
 the statement of their condition before the house,

and pray for redress from parliament.—Before he sat down, he gave notice of his intention, on Tuesday next, to move for a Select Committee to inquire into the present Distress of the Commercial World (hear, hear).

*The Chancellor of the Exchequer:*—When the hon. gent. the other evening asked, whether it was the intention of Government to submit any proposition to parliament, after the example of two former occasions, he (the Chancellor of the Exchequer) felt it his duty at once, distinctly and unequivocally, to state, that, in the opinion of Government, it would be highly dangerous, if not fatal to the permanent interests of the country, on the present occasion, to imitate. He knew that he was rendering himself liable to be taunted with departing from the example which had been set him on a similar exigency by a great man, and one of whose general line of policy he most cordially approved. But he much lamented that that example had ever been set—the first step should have been avoided. It had been urged in support of this application, that the state of the country now was precisely similar to what it was when this species of assistance was granted before: but this very argument had upon his mind a most decisive effect against the application; for it convinced him, that if it were to be listened to now, Government would hereafter be continually called upon to interfere on similar occasions. It also appeared to him, that the attending to the application would be holding out a bonus to extravagant speculators. What were the cases to which the hon. gent. had referred? He had told the house of enormous speculations in cotton, wool, and other commodities, which, followed by excessive importations, had produced a dreadful depression of prices. If that were to be the ground of the relief on the present occasion, what hope was the house to have that prudence would ever operate on the affairs of men? What was the description given by the hon. gent. of the great house of Goldschmidt? According to the shewing of the hon. gent. himself, surely, if ever there was a case of excessive speculation, that was the very case. They had locked up their disposable capital in the stocks of a foreign government. The establishment at Leeds was not to execute orders in the ordinary way of business, but to speculate in commissions. Their whole establishment was conducted on a principle which was the essence of speculation. But ministers were guilty of injustice; they were charged with attacking characters, and endangering the credit of stable and respectable houses, because they had expressed themselves freely as to the evils of the present state of things. It was the very nature and evil of speculation, that the mischiefs it produced were not confined to the individuals who embarked in it. But was it to be laid down as a principle, that whenever general distress was produced by excessive speculation, Government was to step forward and administer relief? On all occasions was this to be the rule (hear, hear)? If, indeed, he could believe that this was the last time on which relief would be called for, his view might be somewhat changed, but he foresaw clearly, that if it were now granted, another demand of a similar nature could not be far distant. This would continue to be the case as long as Parliament, on every fresh occasion, supplied fresh fuel for the fire of speculation (hear, hear). The hon. gent. had referred

to the power of the Bank of England to afford relief, by lending money on goods, and had expressed his opinion that that was an improper measure to resort to. It might not be desirable, perhaps, to have recourse to it: many reasons might induce the Bank to abstain from that course, but why was a new law to be passed, creating the Government and people into a sort of new Bank for the purpose, when there was already an existing law, and an existing Bank competent to do the identical thing for which a new law and a new bank were called for (cheers)? He recollected well, that on the discussion of the law of merchant and factor, the argument used by the hon. gent. in favour of the amendment of the law—and a pinching argument it was, which nobody could evade or resist—was, that as the law formerly stood it was impossible for any banker to advance money on goods. Parliament was convinced by this argument, and felt compelled to alter the law especially for the purpose of enabling advances to be safely made on goods. If this amendment of the law was desirable, in order that bankers might have the power of making these advances, on what principle could Parliament be now told that it was unjustifiable to refer the merchants to the Bank of England for the relief which, by its charter, it was competent to give, and which the amended law rendered it perfectly safe to administer? He could not comprehend why Government was to place itself in the situation of a public banker, for a purpose that any existing banking establishment might effect. He had heard with the greatest dismay, an argument used by the hon. gent. on the subject of the currency and the exchanges, namely, that the Bank of England ought not to look to the state of the exchanges to regulate its issues (hear, hear), but only to what was termed the effective demand of the mercantile interest (hear, hear). If that principle was sanctioned by Parliament, all that had been done to restore a wholesome state of the currency would be rendered completely abortive. Nothing in that case could prevent the recurrence of the desperate evils which had overwhelmed the country with all the calamities, from which no man knew how to escape, and which, he feared, it was destined for some time yet to feel (hear, hear).—He besought the pardon of the house; he had, perhaps, expressed himself with more warmth than he ought to have done—certainly with less self-possession than the question required—but he hoped that the house would do him the justice to believe, that any observations he might have uttered, to which any gent. might object, or any omissions of which he had been guilty, had not arisen from any want of sympathy for the unfortunate distresses which at present existed, or from neglecting to exercise the best energies of his own mind, or to avail himself of the wisdom of the powerful minds of others (universal cheers). He had endeavoured to express, to the utmost of his ability, the considerations which, in his mind, rendered it impolitic to adopt the course which the hon. gent. had proposed. [The hon. gent. resumed his seat, evidently much affected.]

Mr. A. Baring assured the house, that no man amongst them was more impressed than he was, with an entire conviction, that the sentiments of his right hon. friend had been dictated by the most perfect sincerity (loud cheers). He felt too high a respect for the feelings of his rt. hon.

, to doubt, for a moment, his deep sympathy with the calamities which impended over country: nor did he believe there was a man in the house who did not concur with him on this subject (cheers). But he must say, the speech of his rt. hon. friend convinced him that his rt. hon. friend was not sensible of the extent of the existing distresses (cheers); on this important subject, which was one of understanding than of feeling, he trusted his hon. friend would not be led away by the ear of the manner, or the perfect good faith of character of his rt. hon. friend (cheers). respect to the mad speculations, of which he had heard much, it was a great mistake to see they were the mere production of the wits of London; for more of these schemes were generated in the neighbourhood of the court, by some cunning attorney, or some land-agent, than by any of the commercial classes of London (hear, hear). Many of them originated in the west end of the town, when gentlemen from St. James's-street put their schemes upon the Royal Exchange; they had no right to say that the merchants of London alone were blameable. As to consequences which had ensued, he had, at any time, hesitated to express his opinion that such must be the case; but because he had ventured to predict that such consequences would follow, he would not be justified in turning round, like the noble lord (Lindley), who, because he had predicted, and would take warning, was for leaving the issue to its fate, because people had not acted against the consequences (cheers). This was not a question that affected individuals merely—it regarded the whole country, its revenue—its character—its prosperity; and the rt. hon. gent. had assigned no reason why the Government should now be from pursuing a measure which had often tried—which had been applied by the greatest man that ever managed the civil internal affairs of this country (Mr. Pitt), had been applied with success (cheers). In cases of distress that had ever occurred, the Government did not amount to the complicated difficulty in which the affairs of the country were placed at the present moment (hear, hear), arising partly from natural causes, grievously aggravated by the measures which ministers had pursued (cheers). At a time when the West India interests were depressed, Exchequer-bills were issued; when the most important branch of the national industry was affected, Exchequer-bills were issued; the reason then was there for withholding any assistance now, when it was well known that difficulties did not arise from any want of real property, but from the cessation of the medium of commercial intercourse (hear, hear), from the abstraction of the circulation, which disturbed the dealings between man and man, the destruction of that mutual confidence which our commerce depended on? There was an abundance of wealth in the country, but there was no sign or representation of that wealth, and yet the Government refused to do anything that sign or representation when they were in their power. Exchequer-bills, for instance, might be mere waste paper, whereas a bank-note was substantial; but the one would circulate, the other would not (hear, hear). There never, therefore, was a period when the issue of Exchequer-bills could be pro-

ductive of such benefit as the present, owing to the peculiar circumstances of the country; and there never was a period when it would be so unwise in the Government to retire behind rigid forms and strict principles (hear, hear). All the experience of practical men was disregarded, and nothing attended to but abstract theories, and the opinions of those advocates of purism, who conceived it would be a false principle of trade to extend the required relief (hear, hear). No one demanded this relief as a permanent principle; it was only sought as a palliation for present evils. It was merely calling for the same remedy which was frequently applied to the disorders of our political system. They had suspended the *Habeas Corpus* act; but no man would say that was a sound system, or one under which Englishmen would wish to live; but then it had been suffered for the purpose of meeting pressing emergencies. It was just the same with the mode of relief now sought for the necessities of the country. Nothing could be more objectionable than that the Bank should deal in merchandize, and this must appear particularly objectionable to gentlemen who were fond of pure principles. It might be that there was nothing in the Bank charter to prevent them from so doing, but as the privilege had remained unexercised, and almost unknown, until some antiquarian had discovered it, it must be clear that it was not considered a wholesome system (hear, hear). It had been said, let the Bank interfere if they thought proper; but if they were to do so now, they would be applied to on every trifling occurrence, and the result would be a constant interference on the part of the Bank in the commercial affairs of the country. But the case was different in an application to Parliament in a formal manner; for the very notoriety of the transaction rendered it impossible that the measure could be resorted to on improper occasions, and prevented the possibility of its becoming a constant practice (hear, hear). It might be very well for the Treasury to say they would get rid of the matter altogether, and throw the blame on the Bank; but in this there was more of indolence than of principle. It was not a question affecting merely the city of London; its influence extended to all parts of the British empire. Of all the occasions on which a similar measure had been resorted to, there never was one so appropriate as the present; there never was one when the issue of Exchequer-bills was more likely to restore confidence, and there was no instance in which the country had lost sixpence by such a measure (hear, hear). His hon. friend (Mr. Wilson) had done no more than what was due to his constituents; and if on this occasion he had taken, what in military language might be called an imposing position on the flank of the ministers, it was a situation in which he (Mr. Baring) could not stand, for he had done his worst long ago (cheers).

Mr. John Smith said, that he did not remember, nor could any man living remember, times of such universal pressure. Did any man recollect a period at which six London bankers and an immense number of country bankers had broken?—when distress like that which now prevailed was felt at the same time in London and at Manchester, Leicester, Derby, Nottingham, and many other towns of the highest importance in the mercantile interests of the country? It was very true that an absurd

desire for speculation had existed throughout all conditions of people. It had unfortunately happened that the consequences of that calamity had extended themselves far beyond the persons who had been instrumental in originating and spreading the mania for speculating. Many most deserving individuals had been involved in its ruinous effects, which, if they had been confined to those who really deserved to suffer from them, no man would have had now to regret. Among those whom he had alluded to, the persons engaged in the silk trade were in the most unmerited and alarming state of suffering. There were many of them who had stocks of silk, for which they had been obliged to pay, but which they found it impossible to turn to any profitable account. Greater speculators, and men in the higher spheres of the mercantile world, excited much less interest in his mind; but these people, who, like all those in the middle ranks, formed the strength and sinews of society, had a powerful claim to attention, because they had done nothing to deserve what they were now suffering. Day after day their bills were dishonoured, and they could see no limits to this time of pressure and dismay. A man of this description, who was possessed of 40,000*l.* worth of silk and silken goods, had come to him (Mr. J. Smith) that day, and said, "I have in my possession this property, but I cannot go on, unless you will lend me some money." He (Mr. J. Smith), and those with whom he was connected, did so, and would continue to do so, as far as they could; but it must be obvious that no prudent man in these times could do this to any great extent. He approved of the manner in which his right hon. friend (Mr. Huskisson) had resisted the attempts which had been made against the law which he had been the means of introducing on the subject of the silk-trade; but he wished that it might be put into immediate operation, rather than wait till July next. He believed, that so far from that measure having (as some gentlemen thought it would have) any injurious effect, it would, on the contrary, be a means of relieving the public mind.—There could be no question that the Bank had a right to lend money on the deposit of merchandises. But although that was a measure which, under some circumstances, he thought highly proper and expedient, he did not think that it could be adopted so as to be universally useful on the present occasion. He preferred, on every account, the issue of Exchequer-bills, because the relief which they would afford must be prompt; and it was in the promptness of the relief at this critical moment, that its efficacy must consist. He could imagine no reasonable grounds on which ministers ought to refuse the request that was now made to them. It was true, there were other modes in which relief might be afforded; but to adopt them would require time, and while the grass was growing the steed would starve. Without touching further upon this point, he would have the house to remember that hungry men would not easily listen to advice, or obey the rules by which in times of less excitement, they were peacefully governed. Some two or three years ago, unless his memory deceived him, a noble lord (Liverpool) in a speech which he had made, appeared disposed to believe that even in a case of absolute famine it was the duty of Government not to interfere, lest they should destroy that caution which the people ought always to

exercise for their own protection and preservation. He could by no means concur in so general a proposition. He thought, on the contrary, that the conduct of Government on this and on all other occasions should be regulated on the grounds of public utility. They were bound to ascertain, in cases where a request like the present was made to them, whether greater evils were likely to ensue from their refusing than from their granting it. If, on this occasion, they could show that greater evils would ensue from their granting than from their withholding it, they should have his full concurrence. So wholly different, however, was his present impression upon the subject, that he was seriously apprehensive of the greatest evils, unless the relief prayed for should be granted without delay. He trusted, therefore, that the Government, either by themselves or by their influence with the Bank, would afford relief; and he hoped that the house would do him the justice to believe, that he would not have used the language nor have uttered the sentiments which had been drawn from him on this occasion, but from a perfect conviction that they were such as the exigency demanded (cheers).

Mr. *Pearse* said, that he wished to explain the grounds on which the Bank conceived that they would not be justified in interfering with the present distresses. The Bank directors thought, that a much better course might be pursued, and had been advised, which would be free from all the objections to which the former was exposed, and which seemed so calculated to meet the evil, that they were persuaded the wisest plan would be, that an advance should be made by the ministers (cheers). There was no place of importance which did not feel its full share of calamity, and in the appointment of the commission which had been so urgently, and he thought so wisely recommended to the adoption of the house, the same method of forming it should be pursued as in that of 1793, when persons were inserted to represent every part of the kingdom. One gentleman from Scotland, who was well acquainted with the interests of that country, which then had its share of suffering, was placed upon the commission, in order that its interests and wants might be ascertained and provided for. The same rule was observed with respect to other parts of the kingdom. The great advantage of this plan, when the distress was, as in the present instance, diffused generally, was too obvious to need any comment. The habits and knowledge of the Bank directors were necessarily confined to London, while the commission would have the best possible information respecting all the country. Another advantage to be gained by the commission, would be its great notoriety. It would convince the people that the legislature was interested in their distresses, and that they had busied themselves in the attempt to remove them (hear, hear). In this point of view more than in any other, he thought the commission would be highly advisable, and that it would produce the most satisfactory and valuable results (hear, hear). No issue from the Bank, to whatever amount, would have the effect that this measure would immediately occasion; because it would restore that public confidence which, although it had originated with the actual distress, had made distress infinitely more dangerous and universal. The Bank certainly possessed the power of lending money upon the deposit of goods; but that was a permissive

friend, to doubt, for a moment, his deep sympathy with the calamities which impended over the country: nor did he believe there was a man in the house who did not concur with him on the subject (cheers). But he must say, the whole speech of his rt. hon. friend convinced him that his rt. hon. friend was not sensible of the extent of the existing distresses (cheers); and on this important subject, which was one more of understanding than of feeling, he trusted the house would not be led away by the earnestness of the manner, or the perfect good faith of the character of his rt. hon. friend (cheers). With respect to the mad speculations, of which they had heard much, it was a great mistake to suppose they were the mere production of the merchants of London; for more of these schemes had been generated in the neighbourhood of the inns of court, by some cunning attorney, or scheming land-agent, than by any of the commercial classes of London (hear, hear). Many of them originated in the west end of the town, and when gentlemen from St. James's-street brought their schemes upon the Royal Exchange, they had no right to say that the merchants of London alone were blameable. As to the consequences which had ensued, he had never, at any time, hesitated to express his opinions that such must be the case; but because he had ventured to predict that such consequences would follow, he would not be justified in turning round, like the noble lord (Liverpool), who, because he had predicted, and no one would take warning, was for leaving the country to its fate, because people had not guarded against the consequences (cheers). But this was not a question that affected individuals merely—it regarded the whole country, as respected its revenue—its character—its prosperity; and the rt. hon. gent. had assigned no good reason why the Government should now abstain from pursuing a measure which had been often tried—which had been applied by the greatest man that ever managed the civil and internal affairs of this country (Mr. Pitt), and had been applied with success (cheers). All the cases of distress that had ever occurred, combined, did not amount to the complicated mass of difficulty in which the affairs of the country were placed at the present moment (hear, hear), arising partly from natural causes, but grievously aggravated by the measures which ministers had pursued (cheers). At a period when the West India interests were depressed, Exchequer-bills were issued; when another important branch of the national industry was affected, Exchequer-bills were issued; what reason then was there for withholding similar assistance now, when it was well known the difficulties did not arise from any want of substantial property, but from the cessation of a medium of commercial intercourse (hear, hear), from the abstraction of the circulation, to facilitate the dealings between man and man, and the destruction of that mutual confidence upon which our commerce depended? There was abundance of wealth in the country, but there was no sign or representation of that wealth, and yet the Government refused to supply that sign or representation when they had it in their power. Exchequer-bills, for instance, might be mere waste paper, whereas merchandize was substantial; but the one would circulate, the other would not (hear, hear). There never, therefore, was a period when the issue of Exchequer-bills could be pro-

ductive of such benefit as the present, owing to the peculiar circumstances of the country; and there never was a period when it would be so unwise in the Government to retire behind rigid forms and strict principles (hear, hear). All the experience of practical men was disregarded, and nothing attended to but abstract theories, and the opinions of those advocates of purism, who conceived it would be a false principle of trade to extend the required relief (hear, hear). No one demanded this relief as a permanent principle; it was only sought as a palliation for present evils. It was merely calling for the same remedy which was frequently applied to the disorders of our political system. They had suspended the *Habeas Corpus* act; but no man would say that was a sound system, or one under which Englishmen would wish to live; but then it had been suffered for the purpose of meeting pressing emergencies. It was just the same with the mode of relief now sought for the necessities of the country. Nothing could be more objectionable than that the Bank should deal in merchandize, and this must appear particularly objectionable to gentlemen who were fond of pure principles. It might be that there was nothing in the Bank charter to prevent them from so doing, but as the privilege had remained unexercised, and almost unknown, until some antiquarian had discovered it, it must be clear that it was not considered a wholesome system (hear, hear). It had been said, let the Bank interfere if they thought proper; but if they were to do so now, they would be applied to on every trifling occurrence, and the result would be a constant interference on the part of the Bank in the commercial affairs of the country. But the case was different in an application to Parliament in a formal manner; for the very notoriety of the transaction rendered it impossible that the measure could be resorted to on improper occasions, and prevented the possibility of its becoming a constant practice (hear, hear). It might be very well for the Treasury to say they would get rid of the matter altogether, and throw the blame on the Bank; but in this there was more of indolence than of principle. It was not a question affecting merely the city of London; its influence extended to all parts of the British empire. Of all the occasions on which a similar measure had been resorted to, there never was one so appropriate as the present; there never was one when the issue of Exchequer-bills was more likely to restore confidence, and there was no instance in which the country had lost sixpence by such a measure (hear, hear). His hon. friend (Mr. Wilson) had done no more than what was due to his constituents; and if on this occasion he had taken, what in military language might be called an imposing position on the flank of the ministers, it was a situation in which he (Mr. Baring) could not stand, for he had done his worst long ago (cheers).

Mr. John Smith said, that he did not remember, nor could any man living remember, times of such universal pressure. Did any man recollect a period at which six London bankers and an immense number of country bankers had broken?—when distress like that which now prevailed was felt at the same time in London and at Manchester, Leicester, Derby, Nottingham, and many other towns of the highest importance in the mercantile interests of the country? It was very true that an absurd

hon. Bank Director (Mr. Manning) who preceded me, and argued so strongly on the subject of precedent, that it is not by any means desirable to prolong the discussion upon the present occasion; but I cannot suffer the speeches of the hon. Bank Director, and of the hon. gent. (Mr. Bright), who spoke before him, couched, as those speeches were, in a tone of mingled authority and admonition, to be passed by without some statement from a member of that Government whose conduct they profess to direct. And first, I would say, that the charge which has been so frequently thrown out against the Government, not only in the present discussion, but upon several other occasions, of an insensibility to those distresses, which on every side, I grieve to say, meet our eyes, is one which, of all others, whether in crimination or recrimination, ought not to have been made. I say, unless those who prefer this charge are prepared to maintain, that whoever is sensible to the distresses of the country is bound to adopt, without examination and against conviction, whatever remedies any man may propose for the redress of those grievances, it is most unfair to infer from the hesitation of ministers to adopt a particular measure, either that they are insensible to the existing distresses, or unwilling to adopt a remedy. For myself and my colleagues, I disdain to answer the imputation (hear, hear). I impute to no man an insensibility to the distresses which so unhappily surround us (hear, hear). But I entreat those who listen to me, to consider what must be the cares and anxieties of those to whom, from the nature of their office, the sufferers very properly turn for assistance or redress; and if, in addition to those feelings, they give them credit for common sympathies as men and fellow-subjects, I ask, if those who happen to be so situated can possibly have any want of feeling for the miseries they witness, or be ignorant of the severity of the evils which they are called upon to relieve? Sir, I say, the state of my rt. hon. friend (the Chancellor of the Exchequer) is a most afflicting one; but, while the question is not, whether those laws exist, or whether those distresses are real, but whether the remedies which some hon. gents. would apply to them be safe, fitting, and practicable; I say, that if my rt. hon. friend cannot consent to apply those remedies without doing a violence to his judgment, it is his bounden duty, and the equally bounden duty of those who support him, to give a determined resistance to any measure which would be thus thrust upon them contrary to their conviction. Let any man, sir, consider how easy it would have been for my rt. hon. friend to have yielded to the general cry. If popularity was his object, how easy to have obtained it! If he had sought for an opportunity of deserting the firm and unyielding principles which he had declared that Government were determined to maintain, could any circumstances have been more favourable to such a purpose? If he had been disposed to abandon that principle which he conceived was most likely to give an unchanging security to the credit, the commerce, and the resources of the country, he might have become, without the slightest apparent dereliction of duty, and upon pretexts honourable to humanity, one of the most popular Chancellors of the Exchequer who ever filled the situation; but he would, in thus sacrificing to popularity, have deserted a duty which his conscientious conviction bound

him inviolably to fulfil. As an individual member of Parliament, called upon only to discharge the ordinary responsibilities of his situation, he might, perhaps, with the same conviction, have yielded to the urgent necessities of the case, and abandoned what he conceived to be the strict line of his duty, when assailed by the strongest sense of misery, supported with all the eloquence of distress; and he might so have yielded without any reflection upon the justice or propriety of that course which the circumstances of their situation had forced him to adopt. But, as a responsible minister of the Crown, called upon to bring forward a proposition of relief—to bear it through this house—to adopt it as one of the measures of his policy—to fight for it now and hereafter against all the objections which may be brought against it (hear, hear), I say, sir, that if his judgment is not convinced of the thorough propriety of the course which has been recommended, it is his duty to waive every other consideration—to persevere in his determination, and leave Parliament to adopt such measures as to them may seem expedient, and to place the execution of those measures in whatever hands they may conceive most fit to execute them (hear, hear). In our opinion, there is but one remedy for the distress; I say plainly and openly, but one, and that is the exercise of the power vested by charter in the Bank to make advances upon the security of property or merchandize to those who require them (hear, hear). The Bank Directors, however, say, that the power is in an imperfect degree—that it is not sufficient for security,—and that, in short, it is not an imperative, but only a permissive power. And yet, sir, the Bank of England—I hope the hon. Director will admit that—lends money on mortgages, on gold and silver, and makes advances upon Bills of Exchange, and other like securities. Will it then be said, that the power of lending on all these, is not a power which extends to other commodities capable of sale? Why, sir, the act of William and Mary expressly mentions merchandize as one of those things upon which the Bank was required to make advances, when it obtained its charter; and there remains not a shadow of doubt upon my mind, that the power to make advances upon that kind of security, is no more a power exclusively permissive than the power to lend money upon the security of bullion. The words of the act are,—“Provided always that nothing contained herein shall be considered to hinder the corporation from dealing in bills of exchange, or buying or selling bullion, gold or silver, or selling any goods, wares, or merchandizes whatsoever, which shall really and bona fide be left or deposited with the said corporation for money lent or advanced thereon, &c.”—Can it then be denied for a moment, that the power here mentioned is as much an imperative as a permissive power (hear, hear)—that the power is precisely the same as that upon which the Bank makes its issues upon any other description of property, and that the making advances upon merchandize is as much in the discretion and power of the Directors, as upon mortgages, or upon bullion? Undoubtedly, it is in the power of the Directors of that Company to say they will not, and they have said they will not. They have refused to make advances upon those deposits which may be offered to them, and have called to-night upon ministers to supply that assistance to the coun-

then they refuse, upon grounds, of which he said, *et pro ratione voluntas*, but I contend, they have full power to do it is required. We have considered it to deny the assistance claimed from it will remain now to be determined means are left to meet the exigencies situation. It has been said, not only hon. Bank Director, but by almost he who has taken a part in the debate, application on this occasion is supported ties of precedents, commencing with the 33. But, sir, I would draw a distinction, between our present situation and the 33, but between it and all the others; and is, that we were then called upon to advances to the distressed in a time of id during the existence of the Bank Re-act. The distinction, sir, is always to n—not that on no possible occasion the ment should again lend money to ree distresses of the commercial interests, t when they are called upon to do so, ould be the same union of political con- es, which on that occasion formed both on and the justification for so extraor- a departure from general policy. But, man seems to consider the strange con- h which the country was unexpectedly in passing from a state of peace to that at the time of the precedent alluded to, autumn of 1792, when Mr. Pitt brought his Budget, no language could be icific than that which he then addressed ament; and yet, in a short time after, the slightest warning, without any nsion on the part of those engaged in mercial transactions, we were engaged tended war. I do not mean to cast the reflection upon the reputation of that statesman; no man respected his cha- when living, or venerates his memory, an I do; but I wish to shew how little istry was prepared for such a transition, e engaged in its commerce could have foresight of the events which were e them in distress, and that the great expected changes and reverses which e place, were the result of circum- totally different, and gave rise to essentially more imperative upon the tion and assistance of the Government, e, however lamentable or extensive y be, which have been created in the peace, the most profound which the is witnessed for nearly half a century. ring to past transactions, and to what en regarded as precedents parallel to od of distress, I do so only with a view iving the effect of these precedents as le to the present time. If the course w adopted, of giving the relief required ay in which it is sought from Govern- every case of future emergency, and eature of distress (even of less general y distress than the present), this course e pleaded as a precedent; and if such ould occur in five or six years hence, ould be no reasonable ground left to re- portunities of those who may require it not be supposed that relief is pre- by Government not acceding to the now recommended to its adoption. k has the power of administering re- be way that has been pointed out, and 1826.

its power to do so stands upon the same footing as the discharge of any other of its functions. They may act as they think proper, and there is no person to call them to account. It is said, that although this power is vested in the Bank, yet that merchants are not disposed to go to the Bank for assistance. Why not? For the life of me I cannot see why such a disinclination should exist. What is the ordinary course of proceeding between the merchants and the Bank? It is usual for the Bank, in ordinary cases, to discount the bills of merchants; these bills are the connecting link between the Bank and them; they are "the visible and outward signs of property," on which the advances are made. But now a period has arrived when a chasm has occurred—a chasm between property and the advances made upon it. It is true, that as the Bank has the power of making advances, it has also a discretion to exercise, in the manner in which it makes them. But I am at a loss to know what objection there can be—why there should be any shyness on the part of merchants in taking their bills of parcels or their invoices to the Bank, which would be a substantial foundation of property, and on exhibiting which, advances may with propriety and safety be made upon them. There is one facility in effecting the measure at the present time, which did not formerly exist. Heretofore, the goods on which the advances were made, were scattered all over the face of the metropolis, and of the country; so that it would have been almost necessary for the Bank to have had an establishment in order to keep an eye upon them. But there is this facility in the transaction at present, that these goods on which advances would now be required, are warehoused; they are under the King's lock and key, and it only requires to turn the key in the door to effect a transfer of them. Under these circumstances, I own I can see no reason why the advances should not be made by the Bank, and required by the merchants.—There is one point to which, as it is a personal one, I wish to advert before I conclude. It was stated by an hon. Bank director, that during the pressure of severe distress his Majesty's ministers were out of town. It was stated, that in the month of December they were absent. Now I can only say, on the part of my rt. hon. friends (Mr. Peel, Mr. Huskisson, and the Chancellor of the Exchequer), that they were then in town (hear, hear), and that we sat day and night in constant and anxious consideration of the distresses of the country. We were then in town, when the hon. gent. was in the country (a laugh); at least, if he were in town, we did not see him on any of those occasions that we had the pleasure of seeing his brother directors; and I can appeal confidently to one of those gents. (Mr. Pearce), who, I am sure, will be ready to bear testimony to the anxious solicitude then evinced by his Majesty's ministers,—I can appeal to him to testify that there was no want of disposition—no want of zeal on our parts to render whatever assistance was in our power, nor were we backward in rendering those acknowledgments which were thought were due to the conduct of the Bank at that trying crisis" (loud cries of hear, hear).

Mr. Alderman *Brydges* and Mr. *Curtis* made a few observations in support of the proposal.

The petition was then ordered to lie upon the table.

*Mr. Cobbett's Second Petition.*

Colonel Johnson presented a petition from Mr. Cobbett, which stated—That the petitioner viewed with alarm that part of the Promissory Note bill which allowed the Bank of England to issue 11. and 21. notes for a longer period than was at first intended; a measure fraught with danger, and which would have the effect of preventing a return to a metallic currency. In illustration of the justice of this opinion, the petitioner adverted to two instances in which the holder of notes of a Norwich bank, to the amount of 1301., tendered them at that bank, and demanded gold. The demand was refused, but the party was offered Bank of England paper. Not satisfied with this, he went and got the notes changed for those of another bank in Norwich, to which he made a similar application, and met with a similar refusal; and on persisting in his demand, was threatened with being given into the custody of a constable. The petitioner prayed that in the bill before the house some summary process might be introduced, by which a banker should be compelled to pay in gold within 24 hours after the demand. He (Col. Johnson) would mention another circumstance, which took place at Birmingham; where a person presenting the notes of a bank of that place, and demanding gold, was refused. On stating that the notes were those of that bank, and that they had promised to pay on demand, he was told to look at the notes and he would find that the gold was payable on the notes only in London. This, he was sorry to say, was a matter of more frequent occurrence than persons were generally aware of; and he hoped that some clause would be introduced to prevent the inconvenience in future.

Mr. Hume requested the attention of the Chancellor of the Exchequer to the facts now stated, which were a practical proof of the necessity of adopting such a clause as that to which he had adverted on a former occasion. If some such clause were not introduced, it would be impossible to prevent an over-circulation from the country banks; and he was persuaded, that without some such check, the bankers would still go on to derive large profits from over-issues, to the great injury of the country.

The petition was ordered to be printed.

*Promissory Note Bill.*

Mr. Calcraft gave notice that he should propose that the country banks should have the same privilege of stamping their small notes until the 10th October, as that granted to the Bank of England. In consequence of the reflections cast upon country bankers in the course of the late discussions, a feeling was raised against them in the country, and they no longer enjoyed its confidence; the blame of which was mainly to be attributed to ministers. He had seen a letter from a country banker, which said, "that but for the measures of Government, every thing would have been well, and the country would now be in a state of comparative tranquillity."

The Speaker having left the chair, the house went into a committee on the bill, whereupon much conversation took place relative to the wording of the clauses, and some verbal alterations were suggested.

On the clause being read, which directed that the Bank should make returns every month to the Treasury, of the amount of its small notes in circulation, since the preceding month,

Mr. Maberly said, he thought it important that the country should know, not only the amount of the small notes, but also the whole amount of all the issues of the Bank since the preceding month. It appeared by the paper laid before the house, that in six days the issues of the Bank had increased by 6,000,000l. The Bank might issue a million per diem if it pleased; but though circumstances might require such an issue, still it could not be denied that property would be affected by it. No doubt if the Bank issued too much, the over-issue would come back on itself; but that would not hinder the over issue from causing a fluctuation in property, which would be injurious to the public. If their issues were regulated by proper motives, they could not object to have the amount known; but if by improper motives, that would be a strong reason why the return should be made. He would therefore move, that to the words of the clause there be added,—“and also an account of the amount of all notes in circulation since the last day of the preceding month.” At present, they would be obliged by this bill to send on or before the 15th of each month an account of only the 11. and 21. notes in circulation in the previous month, which were to be published in the *Gazette* within three days after.

Mr. Huskisson observed, that the house might as well call for the publication of all the other proceedings of the Bank, as for the account proposed. He had always contended, that the amount of Bank notes in circulation was not a fair criterion of their being in excess or otherwise, and the very fact to which the hon. member (Mr. Maberly) alluded was a proof of this; because if they saw the Bank circulation increased by 6,000,000l. in the course of a few days, and found, by the arrival of every foreign post, that it made no difference in the exchanges, was it not a proof that their existed no necessary connexion between the circulation and the rate of those exchanges? He mentioned this to shew that the public would gain no information by an account of the amount of Bank notes in circulation, by which they could judge of the state of the exchanges. He objected, therefore, to this amendment, because its adoption by the house would be giving countenance to a fallacy. The Bank were the best judges of the amount of their issues. No doubt, if those issues were very great, and they found that the notes came on them, and that their treasure was sent abroad in large quantities, they would feel it necessary to contract their issues; and thus the over-issue, if there had been one, would be corrected. He therefore objected to the amendment.

Mr. Pease thought it might be convenient that the extent of accommodation which the public required as to 11. or 21. notes, should be from time to time made known, though it might be of very pernicious consequence that the whole amount of Bank issues should be published. Peculiar circumstances might occasionally make it prudent for the Bank either to increase or contract their issues to a very great extent, and if the public were to be made acquainted with the mere fact of such increase or contraction without at the same time being told the particular

for it, a considerable degree of agitation and alarm would be created.

Maberly said, the very opposition of the Government to this amendment would lead him to urge its adoption. The Bank on several occasions, acted with great impudence, for when the exchanges were against them they had not contracted their issues: their issues were published, the country was aware of such imprudence on the part of the Bank.

On some further conversation,

Chancellor of the Exchequer consented to join the discussion, whereupon

Chairman reported progress, and asked to sit again on Monday.

### *of Exchequer Bills;—Bank Advances.*

LONDON, MONDAY, FEB. 27.—The Marquis of Londonderry expressed his regret at the application of ministers to the Bank, to make advances on the security of goods. It was admitted on all sides, that the proper course was to leave the Bank, in its transactions with the country, in as free and unembarrassed a state as possible; because they would then be able to regulate their issues according to the rise or fall of the foreign exchanges. Now, with reference to the exchanges, nothing was more likely to tie up and embarrass the Bank than making advances to a great extent on deposits of goods. At the time of the commercial crisis in 1793, this subject had been forced on the consideration of the legislature; and both the late Lord Melville were determined against any proposition for advances on which were then unsaleable. Mr. Pitt said, "that from the nature of the business, the Bank had declined interfering, because the security to be given was not such as the Bank had been accustomed to receive. The measure now proposed was of a temporary nature; the practice of the Bank upon deposits was permanent. The Bank took security for the business they transacted in this way for two months. The security to be given was not determinable at that time, and the measure was of a nature which the Bank had been accustomed to act upon." What Lord Melville said upon the subject was still more important, as his speech was the cause of the distress of that period, similar to that attributed to the distress of the present time, since he connected it with the Bank. He said, that he "begged leave to make his protest against any declaration that would create embarrassment of the merchants and bankers as the effect of the poverty of the country. He considered it as precisely the reverse, and would maintain, however odd it might sound, that it was occasioned by the unprosperity of the nation—a prosperity which had induced some individuals to push speculations beyond the extent of their private capitals, but by no means beyond the capital of the nation. To call upon the Bank of England to deviate from that line of conduct which it had proposed to itself, and which it had flourished, he deemed by no means prudent. The Bank discounted upon securities; but discounted on the principle of having its returns in two months. The measure now proposed admitted of a more extended period for repayment, and was entirely

different from what was the usage of that corporation." Now, if there were reason then for not inducing the Bank to deviate from its usual practice of discounts, how much more did not all those considerations on which that opinion was founded apply now, when it was agreed, by common consent, that it was to the state of the exchanges the Bank had to look for the regulation of their issues. Any diminution which the Bank might have to make in the currency on account of the state of the exchanges, must be made in the ordinary discounts to persons in trade, and thus the whole mischief of the measure would be thrown on that part of the community which was most immediately affected by a decrease in the circulating medium. If any artificial interference with the trade of the country was really called for, a direct issue of Exchequer-bills, in the manner in which that object was accomplished in 1793, would be preferable to the plan now proposed. Indeed, if that were true which was asserted,—and if it were not true, the measures adopted could do no good,—namely, that it was not money but confidence that was wanted by the merchants, nothing could answer the purpose better than Exchequer-bills; for those bills would serve to create the confidence which was wanted, and would create it without adding to the currency; whereas, by the intended course, every sum advanced would make an addition to the currency, and that in the most dangerous way, without reference to the state of the exchanges. The Bank, he supposed, must have already brought the currency up as far as the state of the exchanges authorized it to be carried: he would, therefore, request their lordships to consider how great the risk must be of inviting the Bank to issue great additional sums, which could not fail to place the exchanges in an unfavourable state. Then all the principles upon which they had been legislating, with respect to the circulation, would be counteracted, and the difficulty of bringing back the country to a metallic standard would, by the unfavourable situation of the exchanges, be augmented in a most alarming degree. He considered it, therefore, equally the interest of the Bank and the public that the plan should not be adopted.

The Earl of Liverpool said, that the Bank had a legal right, under their charter, to make advances on deposits of goods. It certainly did not follow, that because the right existed, it should therefore be exercised; but if the circumstances of the country were such as to make special relief to the commercial part of the community indispensable, then he thought that it ought to be granted through the Bank. This course was obviously preferable to the converting the Government into a Bank, and inducing the merchants not to look to themselves, or to the banks of the country for assistance, which they otherwise would naturally do. He thought that nothing justified the interference of the Government in mercantile embarrassments, unless the distress was occasioned by some great public calamity—some misfortune inflicted by the hand of God, or some political event of a very extraordinary nature. He must say then, that at present it was the Bank which ought to be looked to by the merchants, and not the Government, since the distress had not been brought about by any political events whatever, or by any public calamity, but by over-trading and other causes, respecting the nature of which there was a pretty

general agreement of opinion. He readily admitted that there was a degree of evil in the course proposed; but all the objections which could be made against advances by the Bank on goods, applied with greater force to an issue of Exchequer-bills. Unless the Bank were to cash the Exchequer-bills, there could be no relief. But the Bank could not render those bills available like goods. There was a material difference between advances on goods which must be repaid in three months, and on Exchequer-bills, which might be out a year, or even several years. The Exchequer-bills of 1793 were not paid off within the year, and there was afterwards another concern of Exchequer-bills, which had not been wound up for 22 years from the date of the issues. The plan proposed, therefore, left the Bank in a much fuller possession of its resources than any other mode of relief which had been suggested.

The Marquis of Lansdowne said, that the noble lord proceeded on the presumption that at the expiration of two or three months, goods for which no purchasers could at present be found, would be saleable. If the goods could not be sold, the Bank would have to renew the advances on them, and so run the same risk as if their issues were on Exchequer-bills; but if the Bank did not choose to renew the advances, then at the end of the three months the distress now experienced would recur. Did not this amount to locking up the resources of the Bank until a revolution in the state of commercial affairs should take place? And would not the Bank be thus placed in a situation which would render it impossible to make that reduction in the currency which the state of the Exchanges might call for?

The Earl of Liverpool said, that since the bonding and warehousing system had been brought to its present state, and merchandise was placed under the King's lock, the inconvenience of advances on deposits were in a great degree removed, and issues on goods might now stand on nearly the same footing as issues on the discount of bills. The money advanced, it might be presumed, would be but a portion of the value of the merchandise deposited, and thus the return of the loan made upon the goods could always be commanded. The noble marquis doubted whether an advance for two or three months would be of any use, but the limitation of the period was not a well-founded objection. He (Lord Liverpool) had conversed with many persons from different parts of the country, intimately acquainted with the present state of commercial embarrassment, all of whom agreed that advances for the short period he had mentioned would be of the greatest advantage; because they considered that there was no want of money in the country, and that the cause of the continuance of distress was the money being locked up in consequence of the want of confidence.

The Earl of Lauderdale complained that the noble earl had taught the country to believe, by his measures, that the present distress was caused by the state of the currency: and how did he attempt to amend it? Why, by teaching the country that the whole of our Banking system was unsound. What could tend so much to prevent all confidence, what to promote that want of confidence which the noble earl himself admitted was the cause of the prevailing evil? Many country banks had weathered the storm—they had come out of the ordeal uninjured and

purified—their credit was untouched, or it was confirmed—confidence in them was returning—when the noble earl told the country the whole system of our currency was erroneous. He charged much, if not all the want of confidence which now existed, to the measures before their lordships. If the noble earl had put into his Majesty's Speech some sentiments of deep regret for the temporary distress; if he had talked of relying on the growing prosperity of the country to retrieve it; if he had flattered the country into a belief that the temporary panic would not be followed by permanent distress; yet the project for improving the currency had converted that temporary panic into general distrust. The Government had receded—Government itself said so—and the country heard it in silent distrust. If any measure of relief were given, he was of opinion that an issue of Exchequer-bills would be much better than the measure proposed. An issue of Exchequer-bills had been advantageous in 1793, in 1811, and 1814, and similar good effects to those which then ensued, would, no doubt, have followed, at present, had this mode been adopted.

The Earl of Liverpool then moved the order of the day for bringing up the report of the committee on the

### *Bank Charter Bill.*

Upon its being read,

The Earl of Liverpool moved the introduction of his clause respecting the discretionary power to be vested in the branch banks.

The Marquis of Lansdowne moved that a proviso be added to the clause, compelling the Bank of England to pay its notes in coin in any part of the country in which it had been issued through the medium of its branch banks. He moved this in consequence of what had taken place in Ireland. After that arrangement had been made in pursuance of which the Bank of Ireland had established branch banks in different parts of the country, a number of their notes were presented at one of those branch houses for payment in coin, but the demand was refused on the ground that they were only payable in Dublin. The party making the demand, resorted to legal proceedings, for the purpose of compelling the Bank to pay in coin where the notes had been issued; but after the suit had gone on for some time, the Bank put an end to the proceedings, after consulting their counsel, who very properly represented to them, that, their notes being in the nature of a general contract, they ought to be paid wherever they had agents. Since, then, however, the Bank of Ireland had made an alteration in their notes, by the introduction of the words "in Dublin;" in consequence of which a party who took those notes in the country—no matter how remote the place—was now compelled to repair to Dublin, before he could obtain payment in coin. He had also been informed that the country banks in this country had so altered their notes as to make them payable in London, and no where else.

The Earl of Lauderdale agreed with the principle stated by the noble marquis, but the difficulty appeared to him, in the manner in which that object was to be carried into effect. If all these notes of the branch banks were to be made payable at the Bank of England, it would entail on that Bank the necessity of keeping a store of cash equal in amount to the number of notes issued for 7 or 8 different

places. On the other hand too, it was equally necessary to protect the branch banks from the effects of a run, which might be produced on them by any person demanding from them payment of a very large amount of notes issued by the Bank of England—notes which he might have brought down from London.

The Earl of *Liverpool* agreed that this proviso was one of some difficulty; but still he thought it was founded on good principles. It would, he admitted, compel the Bank to adopt notes of different forms; but so far from that being an objection, he thought it would be an advantage; for if, as it had been said, the Bank of England notes from their general currency were more liable to be forged than local notes, this measure, by confining the payment of the notes issued by the branch banks to the particular places where they had been so issued, and thus rendering their circulation local, would operate as a check to forgery. The measure would, moreover, afford a check upon the issues of paper.

The clause, together with the proviso, having been adopted, the report was agreed to.

### *Promissory Notes Bill.*

COMMONS.—On the order of the day for the house resolving itself into a committee on the Promissory Notes bill,

Mr. *Hume* said, that the rt. hon. gent. (Mr. *Huskisson*) and the supporters of this bill, were guilty of retracting the principle so ably set forth in the report of the bullion-committee, that the best system of currency was a paper one, convertible at pleasure into gold. One of the arguments which he had heard urged in favour of this bill was, that the issuing of 11. and 21. notes was interfering with the prerogative of the Crown; but if this argument were to have any weight at all, it must hold good to its full extent; and then it would prevent the issue of all notes. Some other supporters of the bill had endeavoured to recommend it, by describing the lamentable situation in which the working classes might be placed, who happened to be holders of these 11. and 21. notes; but he believed the loss on these notes had fallen much more considerably on petty tradesmen than on the working classes, though, be this as it might, the present bill could not prevent a recurrence of the evil. The holders of the 51. and 101. notes would still be continually exposed to the risk of bank failures, and the loss of 51. or 101. might quite as much distress petty tradesmen as the loss of 11. or 21. would a labouring mechanic. He must protest against any bank-notes of any kind being driven from circulation, because they must be replaced by a much more expensive currency, which would have to be purchased by substantial capital, and must, consequently, withdraw so much of it from being applied in advancing the trade and manufactures of the country. It had been recommended in his Majesty's speech that the banking system should be placed on a sure basis: it was the duty of ministers to see that this should be effected, and if any country bank should fail between the present period and 1829 in his opinion ministers ought to be held responsible to the community for any loss it might sustain by such failure, unless they required deposits to be lodged by the country bankers. Bank notes

might be suffered to remain in circulation without any evil consequences, if the issuers were required to lodge deposits, and there would be no great difficulty in effecting this. Commissioners might be appointed, and some office established at the Exchequer, or elsewhere, for receiving deposits of stock or Exchequer-bills from country bankers, of course accounting to such bankers for the interest which might accrue on their respective deposits. If any note should be presented for payment, and dishonoured, upon its being so certified by a magistrate, it should be competent for the commissioners of deposits to transfer a portion of stock sufficient to discharge the amount of the dishonoured note, to the holder; but this would be a case which would scarcely ever occur in practice, for the credit which the country banks would derive from its being generally known that they had lodged deposits equal to the amount of their notes in circulation, would be so great as altogether to prevent any runs upon them; and thus, without any risk, there would be realized a saving of from 23,000,000l. to 24,000,000l. of gold to the capital of the country. —Another provision which he wished to have introduced into the bill was, that all notes should be payable on demand at the place where they were issued; for he had been told that it had been the practice with some bankers not to make their notes convertible into gold, except at some place from two to three hundred miles distant from the place where they were originally issued.—He also wished that both the Bank of England and all other banks, should be required, on the 15th of every month, to publish an account of the amount of their notes in circulation.—He expected that he should be told that his plan was a mere theory, which never could be reduced to practice; but he would remind the house, that during the last year there had been an increase of 2,000,000l. in the paper circulation of Ireland, and still that country had not met with similar disasters in its banking establishments as had befallen this kingdom. Scotland had also escaped; indeed it was scarcely possible that any loss could arise from the chartered banks there. America also afforded an instance of the good effects of adopting the system of banking he had proposed. In the State of New York there were 35 chartered banks, and no private bankers whatsoever. It was invariably required, that all the capital should be paid up before they were allowed to issue a single note; they were all required to furnish an annual account of their issues, and indeed of all their transactions, to the Government; and if there appeared the least suspicion as to the solvency of any of them, a commission was immediately appointed to examine into, and report on the matter. Such were the good effects of this system, that since the year 1816, only one failure had taken place amongst these chartered banks, and that arose from its being connected with a private bank in another province. In Massachusetts and New Hampshire there were both chartered and private banks; with the chartered banks the non-payment on demand *ipso facto* amounted to a forfeiture of their charters; and it certainly was worthy of remark, that whilst almost all the private banks were obliged to suspend their payments on account of the great depression which took place during the war, every one of the chartered banks continued to pay in specie all the time; and

whilst other paper circulation was depressed from 15 to 25 per cent. the paper issues of the chartered banks were not depressed a farthing.

—The hon. member concluded by moving, that "it be an instruction to the committee on the bill, to provide for requiring from banks and banking establishments deposits (to be lodged in the Exchequer or other proper office,) equal in amount to the amount of promissory notes payable on demand, issued by them respectively."

The Chancellor of the Exchequer said, that this bill was of a mere temporary nature, and it would be a very inconvenient, not to say a very clumsy, mode of proceeding, to introduce into it measures of a permanent nature, and of such great moment in themselves as those suggested by the hon. member. The house had already come to a decision that these 11. and 21. notes, which the hon. member considered so innocent, and indeed so useful, were most pernicious; and the present bill was founded on the principle that it was desirable to effect their gradual extinction: whereas the provisions which the hon. member wished to introduce into the bill proceeded on different grounds, and professed to prevent a recurrence of the late disasters, by quite a different mode from that pursued by the bill. Of all the powers which could be vested in the Treasury, that proposed by the hon. member appeared to be one of the most objectionable. It would be dangerous to intrust Government with the knowledge of the amount of property which every man had vested in a country bank. It was a power that the Treasury might use with partiality and injustice, and he should therefore be averse to see it vested in those who had the direction of it. It appeared to him that the hon. member had completely forgotten that there were two species of creditors to every country bank,—namely, those who held their notes, and those who had deposited money with them. Now the security which the hon. member wished to exact from the country banks would be giving a preference to the first description of creditors over the latter. Indeed, the hon. members's plan would prevent the country banks from being any longer banks of deposit, and would thus destroy one of the chief advantages arising from the present banking system. The measure of gradually extinguishing the circulation of 11. and 21. notes appeared to him to be a more convenient and salutary method of checking the proceedings of country bankers; and as the hon. member proposed his scheme as a substitute for that measure, he (the Chancellor of the Exchequer) felt bound to oppose its being given as an instruction to the committee.

Mr. Hobhouse:—Unless a blow were struck at the root of the present system of country banking, the country would be continually involved in such dangers as those in which it was now struggling. The real cause of the calamity might be traced to the augmentation and contraction of the paper currency, not only of the Bank of England, but also of the country banks. It was the currency that determined the value of every species of property in the country. Those who held the issues, held the property of the country in their hands; and it, therefore, became the duty of parliament to adopt some measures to control them in those issues, if it wished to guard the country from the recurrence of such distresses as those under which it was now suffering. So long as they

allowed 800 country banks to trade in the currency without giving security for their issues, so long must they be exposed to these disasters. The bankers whose property was vested in those establishments were, generally speaking, men of education and respectability; though the system on which they acted was most pernicious. On this point he might avail himself of the opinion of the late Mr. Ricardo, who had declared his belief that in the major part of the failures of country banks, the parties might be fairly charged with something more than want of prudence; and had recommended as a remedy against future mischief, that they should be compelled to deposit with Government security in proportion to their issues. This opinion was the more valuable, as it came from a person who was thought to have carried his notions on the subject of free trade too far, and who had, in consequence, been branded with the title of theorist and visionary. The rt. hon. gent. had said that he did not like this plan, because it would render the Government acquainted with all the concerns of private bankers. Could not the securities be vested in the funds by means of commissioners? With respect to the deposit banks to which the rt. hon. gent. had alluded, his hon. friend did not intend to interfere with them; he interfered only with those who usurped the prerogative of manufacturing money for the country. If some measure were not taken to check the proceedings of country bankers, the next step that the house would be called upon to take, would be to destroy the country banks altogether,—a consummation which he, for one, should not be sorry to see effected.

Mr. Huskisson:—What he had said upon a former occasion had been strangely misrepresented by the hon. member (Mr. Hume). He had said that the issuing of 11. notes was an interference with the prerogative; but he had not attributed the same character to the circulation of a banker's capital. He had complained that the putting into circulation that which was equivalent to a sovereign was an infringement on the functions of royalty, and had stated that such a currency could not exist together with a metallic standard. In so doing he believed that he had stated a very clear and rational doctrine. He had never been guilty, he never could have been guilty, of such an absurdity as the hon. member had ventured to put into his mouth—that the paying away a bill for 201. was an interference with the prerogative! The hon. member (Mr. Hobhouse) had said, that he would not interfere with the banks of deposit. But how would a country bank be enabled to go on, if it were not a bank of deposit also? Then, if country banks were banks of deposit, what would be the effect of the hon. member's proposal? If it were to be carried, the effect of it would be to withdraw these deposits from them in almost every instance; and for this reason, that the vote of the house would be telling every man who at present had confidence in a country bank, that the circulation of the bank was guaranteed by the deposits required from it, but that the deposits of its customers were only to be satisfied when all its other debts were paid (hear, hear). He believed that if they could ascertain the amount of the notes which the country banks had in circulation, and also the amount of the sums deposited with them previously to the commencement of the late panic, it would be found that the deposits exceeded the notes in the proportion of five or six

places. On the other hand too, it was equally necessary to protect the branch banks from the effects of a run, which might be produced on them by any person demanding from them payment of a very large amount of notes issued by the Bank of England—notes which he might have brought down from London.

The Earl of *Liverpool* agreed that this proviso was one of some difficulty; but still he thought it was founded on good principles. It would, he admitted, compel the Bank to adopt notes of different forms; but so far from that being an objection, he thought it would be an advantage; for if, as it had been said, the Bank of England notes from their general currency were more liable to be forged than local notes, this measure, by confining the payment of the notes issued by the branch banks to the particular places where they had been so issued, and thus rendering their circulation local, would operate as a check to forgery. The measure would, moreover, afford a check upon the issues of paper.

The clause, together with the proviso, having been adopted, the report was agreed to.

### *Promissory Notes Bill.*

COMMONS.—On the order of the day for the house resolving itself into a committee on the *Promissory Notes bill*,

Mr. *Hume* said, that the *rt. hon. gent.* (Mr. *Haskisson*) and the supporters of this bill, were guilty of retracting the principle so ably set forth in the report of the bullion-committee, that the best system of currency was a paper one, convertible at pleasure into gold. One of the arguments which he had heard urged in favour of this bill was, that the issuing of 1*l.* and 2*l.* notes was interfering with the prerogative of the Crown; but if this argument were to have any weight at all, it must hold good to its full extent; and then it would prevent the issue of all notes. Some other supporters of the bill had endeavoured to recommend it, by describing the lamentable situation in which the working classes might be placed, who happened to be holders of these 1*l.* and 2*l.* notes; but he believed the loss on these notes had fallen much more considerably on petty tradesmen than on the working classes, though, be this as it might, the present bill could not prevent a recurrence of the evil. The holders of the 5*l.* and 10*l.* notes would still be continually exposed to the risk of bank failures, and the loss of 5*l.* or 10*l.* might quite as much distress petty tradesmen as the loss of 1*l.* or 2*l.* would a labouring mechanic. He must protest against any bank-notes of any kind being driven from circulation, because they must be replaced by a much more expensive currency, which would have to be purchased by substantial capital, and must, consequently, withdraw so much of it from being applied in advancing the trade and manufactures of the country. It had been recommended in his Majesty's speech that the banking system should be placed on a sure basis; it was the duty of ministers to see that this should be effected, and if any country bank should fail between the present period and 1829 in his opinion ministers ought to be held responsible to the community for any loss it might sustain by such failure, unless they required deposits to be lodged by the country bankers. Bank notes

might be suffered to remain in circulation without any evil consequences, if the issuers were required to lodge deposits, and there would be no great difficulty in effecting this. Commissioners might be appointed, and some office established at the Exchequer, or elsewhere, for receiving deposits of stock or Exchequer-bills from country bankers, of course accounting to such bankers for the interest which might accrue on their respective deposits. If any note should be presented for payment, and dishonoured, upon its being so certified by a magistrate, it should be competent for the commissioners of deposits to transfer a portion of stock sufficient to discharge the amount of the dishonoured note, to the holder; but this would be a case which would scarcely ever occur in practice, for the credit which the country banks would derive from its being generally known that they had lodged deposits equal to the amount of their notes in circulation, would be so great as altogether to prevent any runs upon them; and thus, without any risk, there would be realized a saving of from 23,000,000*l.* to 24,000,000*l.* of gold to the capital of the country. —Another provision which he wished to have introduced into the bill was, that all notes should be payable on demand at the place where they were issued; for he had been told that it had been the practice with some bankers not to make their notes convertible into gold, except at some place from two to three hundred miles distant from the place where they were originally issued.—He also wished that both the Bank of England and all other banks, should be required, on the 15th of every month, to publish an account of the amount of their notes in circulation.—He expected that he should be told that his plan was a mere theory, which never could be reduced to practice; but he would remind the house, that during the last year there had been an increase of 2,000,000*l.* in the paper circulation of Ireland, and still that country had not met with similar disasters in its banking establishments as had befallen this kingdom. Scotland had also escaped; indeed it was scarcely possible that any loss could arise from the chartered banks there. America also afforded an instance of the good effects of adopting the system of banking he had proposed. In the State of New York there were 35 chartered banks, and no private bankers whatsoever. It was invariably required, that all the capital should be paid up before they were allowed to issue a single note; they were all required to furnish an annual account of their issues, and indeed of all their transactions, to the Government; and if there appeared the least suspicion as to the solvency of any of them, a commission was immediately appointed to examine into, and report on the matter. Such were the good effects of this system, that since the year 1816, only one failure had taken place amongst these chartered banks, and that arose from its being connected with a private bank in another province. In Massachusetts and New Hampshire there were both chartered and private banks; with the chartered banks the non-payment on demand *ipso facto* amounted to a forfeiture of their charters; and it certainly was worthy of remark, that whilst almost all the private banks were obliged to suspend their payments on account of the great depression which took place during the war, every one of the chartered banks continued to pay in specie all the time; and

whilst other paper circulation was depressed from 15 to 25 per cent. the paper issues of the chartered banks were not depressed a farthing.

—The hon. member concluded by moving, that "it be an instruction to the committee on the bill, to provide for requiring from banks and banking establishments deposits (to be lodged in the Exchequer or other proper office,) equal in amount to the amount of promissory notes payable on demand, issued by them respectively."

The Chancellor of the Exchequer said, that this bill was of a mere temporary nature, and it would be a very inconvenient, not to say a very clumsy, mode of proceeding, to introduce into it measures of a permanent nature, and of such great moment in themselves as those suggested by the hon. member. The house had already come to a decision that there 11. and 21. notes, which the hon. member considered so innocent, and indeed so useful, were most pernicious; and the present bill was founded on the principle that it was desirable to effect their gradual extinction: whereas the provisions which the hon. member wished to introduce into the bill proceeded on different grounds, and professed to prevent a recurrence of the late disasters, by quite a different mode from that pursued by the bill. Of all the powers which could be vested in the Treasury, that proposed by the hon. member appeared to be one of the most objectionable. It would be dangerous to intrust Government with the knowledge of the amount of property which every man had vested in a country bank. It was a power that the Treasury might use with partiality and injustice, and he should therefore be averse to see it vested in those who had the direction of it. It appeared to him that the hon. member had completely forgotten that there were two species of creditors to every country bank,—namely, those who held their notes, and those who had deposited money with them. Now the security which the hon. member wished to exact from the country banks would be giving a preference to the first description of creditors over the latter. Indeed, the hon. members's plan would prevent the country banks from being any longer banks of deposit, and would thus destroy one of the chief advantages arising from the present banking system. The measure of gradually extinguishing the circulation of 11. and 21. notes appeared to him to be a more convenient and salutary method of checking the proceedings of country bankers; and as the hon. member proposed his scheme as a substitute for that measure, he (the Chancellor of the Exchequer) felt bound to oppose its being given as an instruction to the committee.

Mr. Hobhouse:—Unless a blow were struck at the root of the present system of country banking, the country would be continually involved in such dangers as those in which it was now struggling. The real cause of the calamity might be traced to the augmentation and contraction of the paper currency, not only of the Bank of England, but also of the country banks. It was the currency that determined the value of every species of property in the country. Those who held the issues, held the property of the country in their hands; and it, therefore, became the duty of parliament to adopt some measures to control them in those issues, if it wished to guard the country from the recurrence of such distresses as those under which it was now suffering. So long as they

allowed 800 country banks to trade in the currency without giving security for their issues, so long must they be exposed to these disasters. The bankers whose property was vested in those establishments were, generally speaking, men of education and respectability; though the system on which they acted was most pernicious. On this point he might avail himself of the opinion of the late Mr. Ricardo, who had declared his belief that in the major part of the failures of country banks, the parties might be fairly charged with something more than want of prudence; and had recommended as a remedy against future mischief, that they should be compelled to deposit with Government security in proportion to their issues. This opinion was the more valuable, as it came from a person who was thought to have carried his notions on the subject of free trade too far, and who had, in consequence, been branded with the title of theorist and visionary. The rt. hon. gent. had said that he did not like this plan, because it would render the Government acquainted with all the concerns of private bankers. Could not the securities be vested in the funds by means of commissioners? With respect to the deposit banks to which the rt. hon. gent. had alluded, his hon. friend did not intend to interfere with them; he interfered only with those who usurped the prerogative of manufacturing money for the country. If some measure were not taken to check the proceedings of country bankers, the next step that the house would be called upon to take, would be to destroy the country banks altogether,—a consummation which he, for one, should not be sorry to see effected.

Mr. Huskisson:—What he had said upon a former occasion had been strangely misrepresented by the hon. member (Mr. Hume). He had said that the issuing of 11. notes was an interference with the prerogative; but he had not attributed the same character to the circulation of a banker's capital. He had complained that the putting into circulation that which was equivalent to a sovereign was an infringement on the functions of royalty, and had stated that such a currency could not exist together with a metallic standard. In so doing he believed that he had stated a very clear and rational doctrine. He had never been guilty, he never could have been guilty, of such an absurdity as the hon. member had ventured to put into his mouth—that the paying away a bill for 201. was an interference with the prerogative! The hon. member (Mr. Hobhouse) had said, that he would not interfere with the banks of deposit. But how would a country bank be enabled to go on, if it were not a bank of deposit also? Then, if country banks were banks of deposit, what would be the effect of the hon. member's proposal? If it were to be carried, the effect of it would be to withdraw these deposits from them in almost every instance; and for this reason, that the vote of the house would be telling every man who at present had confidence in a country bank, that the circulation of the bank was guaranteed by the deposits required from it, but that the deposits of its customers were only to be satisfied when all its other debts were paid (hear, hear). He believed that if they could ascertain the amount of the notes which the country banks had in circulation, and also the amount of the sums deposited with them previously to the commencement of the late panic, it would be found that the deposits exceeded the notes in the proportion of five or six

one; and yet it was now gravely proposed to relieve the existing distress by telling the depositors that they were not to have as good security for their money as the holders of the notes (hear, hear). If it were consistent with the permission which they had recently obtained from the Bank of England, to erect chartered banks, with a limited responsibility, the house could have a right,—nay, more, it would be its duty,—to impose upon them some obligation of this kind. But did the hon. member expect that any bank could be formed in consequence of his resolution, in which the parties engaging with unlimited responsibility were liable to be called upon for securities such as the hon. member had mentioned? To introduce such a regulation as was proposed by the hon. member, into the banking-system at present, would be a great hardship on those whose interests would be affected by it. If this instruction were given to the committee, it would greatly enhance the difficulties of the country; and such being his opinion, he felt it to be his bounden duty to give his strenuous opposition to the motion of the hon. member (hear, hear).

Mr. Robertson said, that the circulation of France was 85,000,000*l.*, and its population 33,000,000. The population of the British empire was 22,000,000, and that would require, if taken on the same scale with that of France, a circulation of 50 or 60,000,000*l.* He believed, however, that the circulation of England, on account of the greater dearth of all the necessities of life, might be taken at as great an amount as that of France; and if so, how was it to be supplied, when once this bill was carried into execution? The commercial population of the country would be fettered by it, and impeded in all their transactions. He therefore deprecated the passing of this bill, until the house had investigated more closely into the causes which were alleged as an excuse for it.

Mr. Leicester trusted that nothing would induce the rt. hon. gent. (the Chancellor of the Exchequer) to deviate from the course he had proposed; and that no opposition, either in that house or elsewhere, would induce him to relax the firmness of principles which, however they might be assailed by clamour, or the *civium ordo prava jumentum*, were the real means of preserving the prosperity of the country.

Mr. Monck said, that money, and not money's worth, was the basis of a well-regulated currency, and whenever this principle should be departed from, the consequences must be highly detrimental. If bankers were again allowed to issue notes under 20*s.*, every silver coin in the country would be driven out by their worse than useless paper.—By adopting the present proposition, there was an opportunity of putting a stop, for ever, to the mischiefs of the system of country-banking, and if ministers did not avail themselves of this opportunity, they would incur a heavy responsibility, and would have themselves alone to blame for the disastrous consequences which must ensue.

Mr. Maberly said, he thought his hon. friend (Mr. Hume) had not applied his usual discrimination to this subject. The security which he proposed must be incomplete, because, although it would protect the holders of the notes, the persons depositing their money with the bankers would be left without any security whatever.

The house divided, when the numbers appeared to be—

For the motion, 9—Against it, 120—Majority, 111.

The house then went into a committee on the bill.

Mr. Brogden read the clause enacting that the Bank of England should every month make a return of all its 1*l.* and 2*l.* notes in circulation since the preceding month, and the amendment moved by Mr. Maberly on Friday last, “and also an account of the amount of all the notes in circulation since the last day of the preceding month.” On the motion for the amendment being put,

Mr. Maberly repeated the arguments which he had advanced on Monday\*, which he supported by reading the following extract from Mr. Tooke's pamphlet on the Currency:—“Next to the administration of the state, there is no administration of any office so immediately and extensively affecting the interests of the community, as that which is intrusted to the persons who are invested with the privilege of issuing paper-money, and who, by the manner in which they exercise that privilege, have it in their power to produce great changes in the property and condition of every individual in the kingdom. No man, nor set of men, ought in my opinion to be intrusted with that privilege: but being so intrusted, their exercise of it ought to be subjected to the constant control and correction of public opinion. Such publicity would enforce a steady and consistent adherence to some settled rule, the uniform operation of which the mercantile world might understand and be prepared for. There is no reason whatever why the accounts of the Bank of England should not be published with as much fulness of detail, as is exhibited in the accounts published half-yearly by the Bank of France.”

Mr. Herries said that the amendment had nothing to do with the measure before the house. Nothing was proposed by that but to regulate the issues of 1*l.* and 2*l.* notes. If the amendment of the hon. gent. should be introduced, there was no other subject relating to the Bank of England that might not with equal propriety be engrafted upon it. There was another objection to it which he thought even stronger than this—the actual amount of notes in circulation was never any criterion either of the superabundance or deficiency of money; and he could conceive nothing more likely to produce confusion than the publication of such amount. Suppose, for example, it should appear by the monthly account that a large issue of bank-notes had taken place, and at the same time, from some other cause wholly unconnected with that, a fall had happened in the rate of exchanges, the inference would undoubtedly be, that the one was the cause of the other, and the greatest alarm and inconvenience would immediately be experienced. There were many other objections; but he mentioned this alone as sufficient to show the inexpediency of the amendment.

Mr. Calcraft:—The bill contained a provision that an account, like that called for by the amendment, should be furnished with respect to the 1*l.* and 2*l.* notes. If, then, the principle was recognized in this instance, and was acknowledged to be beneficial as to the smaller notes, how much greater would be the benefit

\* *Ante*, p. 263.

and security to the public, by having an account of that which formed the more important circulation of the Bank.

The *Chancellor of the Exchequer* said, that his hon. friend (Mr. Herries) had put a case in which great inconvenience might arise from the proposed amendment. Suppose, moreover, the converse of that case to happen, and a rise in the exchange to appear to be the result of the Bank issues, instead of the alarm which the other circumstances would occasion, a confidence as unfounded, and in the end much more mischievous, would immediately be created, and the distresses under which the country was now unhappily labouring would be renewed. But then the hon. gent. (Mr. Calcraft) said, that if the plan were good with regard to the small notes, it must also be a good one as to the greater circulation of the Bank. But the hon. gent. forgot that these two things were in themselves entirely different. The regulation was applied to the small notes because the Bank was permitted to issue those notes until October. In all other respects the Bank of England was on the same footing as to the issue of notes as any other banking establishment in the country.

Mr. *Pearse* :—If parliament had called for such an account of the Bank issues, as was now asked for, during the continuance of the Bank restriction, there would have been some plea for doing so; but now that cash payments were resumed, the Bank stood in precisely the same situation as any other banking establishment. He was of opinion that if a weekly account of the Bank issues was to be published, it would give rise to all sorts of rash speculation, and particularly with respect to the exchanges.

Mr. *Maberly* considered the check which it was the object of his amendment to impose upon the conduct of the Bank, indispensably necessary. The Bank had departed from all the true principles of banking, as appeared from their own statements. When he spoke of the statements of the Bank, he did not allude to any public document, but to those detached portions of information which from time to time escaped from gentlemen connected with the Bank. It was admitted that the Bank had contracted to pay 13,000,000*l.* on account of the dead weight. Would they have dared to do that if they had been compelled to give a weekly account of their proceedings? The Bank had lent all its capital to the Government, and that had occasioned an extensive issue of paper. The time would come when it would be necessary to contract their circulation, and then, if the exchanges should be adverse, the prices of commodities would be reduced more than 10 per cent. One of the Bank directors had stated before the Bullion committee, that the Bank acted as trustees for the public. Could he venture to say that, now, when the Bank had engaged its capital to Government to the extent of 25,500,000*l.*? Independently of their engagements with Government, the Bank had thought proper to lock up a portion of their capital in mortgages. Ministers had assigned no reason for not agreeing to the amendment, except that the present was not the time for proposing it; but they had not stated why the time was not suitable.

Mr. *Pearse* observed, that the proprietors of Bank stock, who were chiefly merchants of the highest character and talents, though naturally anxious to obtain a knowledge of the concerns

of the establishment with which they were connected, were nevertheless so satisfied of the abuse which might be made in the commercial world of the information which the member for Abingdon desired to have made public, that they had constantly resisted every endeavour which particular individuals had made to procure its production.

After some further observations from Mr. *Ireing*, the amendment was negatived.

On a succeeding clause being put,

Mr. *Hume* observed, that in preceding acts, a clause had been introduced which provided, that if any banker should refuse to pay gold for his notes on demand within a limited period, either three or seven days, a distress should be levied upon his property. This clause had been omitted in the last act; so that at present the holder of a note was obliged to bring an action against the banker, and incur six months' delay. Poor persons, therefore, who could not afford to bring an action, were altogether debarred from remedy. He would therefore propose an amendment, restoring the summary process.

The *Chancellor of the Exchequer* observed, that the purport of this bill was to replace the currency in the state it was in prior to the Bank restriction act, at which period no clause like this existed. He thought the proposal liable to serious objection, and that it was almost impossible for country bankers to carry on business if it were adopted. Creditors of a country banker, holding promissory notes, would by this means have a better hold upon him than other creditors. He had never understood that before the Bank restriction act, any practical inconvenience had been felt for want of this remedy.

Mr. *Warre* :—With reference to the remark of the rt. hon. gent., as to the injustice of placing the holder of a promissory note of a banker in a better situation than his other creditors, he (Mr. Warre) did think that the claim of a person who had received that note as currency entitled him to be so placed. It might be said that poor people need not take these notes; but they must take them: he therefore thought they were entitled to some preference. Although he would not go the full length of the amendment proposed, he thought some remedy should be applied.

After much desultory conversation, the house divided, when the numbers were—For the clause, 19—Against it, 163—Majority, 144.

Mr. *Hume* proposed a clause that, in future, all promissory notes of 5*l.* and upwards should be made payable at the places where they were issued.

Mr. *Huskisson* said, that he intended to move a clause (but by some mistake had not brought it down with him) that it should not be lawful to issue any note under 20*l.* unless payable at the place where it was issued—not restraining the banker from also making it payable at any other place which he might judge convenient.

After much conversation, the clause proposed by Mr. *Huskisson* was read. It set forth, that, after the 5th Feb. 1829, every promissory note, for any sum under 20*l.* issued by any banker, should be made payable at the bank or place from which the same was issued; and also at such other place or places as might be mentioned in such promissory note.—The clause was agreed to.

Mr. *Monck* moved a clause, providing that

for the employment of the poor, by the commissioners appointed under the acts 57 Geo. III. c. 34 & 124, and 3 Geo. IV. c. 86; specifying the purpose and time for which each loan was granted, the parties to whom granted, the nature of the security, rate of interest, any repayments hitherto made, and the amount now due and outstanding, and when payable: also of Exchequer-bills undisposed of and still applicable under the provisions of the said acts."

Mr. Tierney:—"Sir, I hope I may not be considered out of order in making a few observations upon the question which has just been disposed of; connected as that question must be considered with the one immediately before us, and having the pretence of the same object—an attempt to apply relief to the prevailing distress. When I came down to the house this evening, for the purpose of being present at the discussion which was anticipated upon the motion of the hon. member (Mr. T. Wilson), I certainly expected to have heard some reason assigned for the rejection of that method of alleviating our commercial difficulties, which had been pressed upon the attention of Government by many gentlemen on this side of the house, as well as myself, and which was so fully justified and supported by the precedent of 1793. We have been told, it is true, that the precedent of 1793 was founded upon transactions totally different, when the country was involved suddenly in a war, after the most profound tranquillity; and that the Bank of England had, by its charter, the exclusive title to make such advances as might be required from them. Certainly the Bank of England owes a very great obligation to the rt. hon. gent. for the discovery; but I would take leave to say, that while I acknowledge as fully as any man the force of the objection taken by a right hon. gent. (the Chancellor of the Exchequer) in a former debate, that any interference of the Government in the mercantile transactions of the country is wrong, and ought always to be avoided; yet I think that a case may be made out strong enough to warrant that interference upon the present occasion, and I wish the adoption of the measure then recommended had been pressed more strongly upon the attention of the Government, or, at all events, not abandoned without a greater struggle. The question is simply, whether there is at the present moment such a wide spread distress—such an alarming crisis of embarrassment and want of confidence, as would justify a departure from all general principles, and warrant such an extraordinary application of the power of the Government of the country as had proved so beneficial in the period of 1793? I have been told by the rt. hon. gent. (the Secretary for Foreign Affairs and the Chancellor of the Exchequer) that the distress of that period grew out of the acts of the Government; that it was created by the necessity which they felt of altering the condition of this country with regard to other nations, at a time when they had led the commercial interests to believe the very contrary; and that, therefore, the distress of the present period was in no way to be compared to 1793, either as regarding the act of the Government or the situation of individuals. But, sir, when gentlemen talk of the acts of the Government producing peculiar circumstances, I ask what was there in the peculiar circumstances created by the Government

then, more than in those which have been created by the Government now? It is the fashion, sir, both in this house and out of it, to talk of the extravagant speculations and delusive enterprises and egregious follies, which have reduced our mercantile classes to their present situation. How far those charges may be true, I, for one, cannot speak positively. My knowledge on the subject is gleaned from the newspapers, out of which, I fear, many take their opinions, without giving them due consideration; but I ask, even if it be as it is stated, if mercantile men have been guilty of the extravagancies laid to their charge, how do we stand at present? Who are those who have led our merchants and the country into these follies? Why, the ministers. Did not they tell us, in speeches from the Throne, and in speeches to this house—did not they remind us, at all times and on all occasions, that our strength and our resources had become equal to any enterprise (hear, hear)? Did not they assure us that our prosperity was of a nature so permanent as to be safe from the effect of any contingency, of any disaster (hear, hear)? Was it not the rt. hon. gent., in conjunction with the Bank of England—for I cannot separate them upon the question—who gave rise to this opinion, that our power and our resources would be perpetual—and have they not, by the whole of their operations for the last two years, acted up to the very utmost extent of that opinion? Yet in how short a period have we run our race of prosperity! And were those who trusted to these professions of the Government—to be told, that because they have believed them, therefore the Government won't assist them (hear, hear)? Taking out of consideration all other measures which may have emanated from this shew of prosperity—for I will not even dwell upon the issue which has been permitted of country bank notes, nor upon the issue of the Bank of England, nor even upon the measure of the dead-weight, to which, I say, the rt. hon. gent. (the Chancellor of the Exchequer) gave his assent, although he did not, perhaps, suggest it—nor upon the lendings of the Bank of England upon mortgage; a measure to which, if he did not give his approval, he at all events yielded a concurrence in compliance with the wishes and the votes of great numbers of highly respectable gentlemen of the landed interest in this house; but I say, sir, independent of all these things, did not Government lead the way in that race of profligacy and folly which has brought us to our present condition? Look but at the state of the holders of the 4 per cents.—are they not deprived of the eighth of their income for ever, by this very excess of confidence in the Government? And then let us go farther, and look at the holder of the new stock, which he possesses in place of what he held before. What is his situation? Why, he has lost still further 14 cent. upon even that reduction in the space of nine months; and what imprudence has he been guilty of? The most sensible man in the world might have been subjected to such a charge, and will it not be admitted that he has some right to complain of the conduct of the Government? To be sure, it may be said, that the risk was their own; that they knew the hazard; that they had notice of being paid off, and might have taken advantage of such a permission. Undoubtedly that was true; but who was it produced the artificial rise in the funds,

which gave the power to effect these changes? Was it not, I ask, solely the effect of the operations carried on in the stock market between the Government and the Bank (hear, hear)? Every holder might, I am aware I can be told, have taken advantage of the permission to sell out and realize his profits; but, I ask, what was the fate of those who held as trustees under settlements, as executors or agents for the benefit of children or minors? They could not, if they were ever so desirous, have adopted the course pointed out to them, and they have therefore been sufferers to the extent I have mentioned beyond all possibility of redress. No issue of Bank-notes or Exchequer-bills, or any other measure of relief which we may adopt, can restore to these classes the sums they have been deprived of from the changes produced by Government in the last two years. If ever the commercial interests, or any other class, had fair claims upon the protection and support of Government, I contend, sir, it is at the present moment, when they have been reduced by the acts of that Government to that very state from which they seek relief. The rt. hon. gent., however, says, that they are not entitled to relief, because they might have foreseen what would happen. Did he foresee it (hear, hear)? If he did, then the measures he adopted were the most culpable which have ever been attempted or executed by any men since the commencement of our history, and they were entitled to relief as an expiation for the errors of Government. If he did not foresee it, then, I say, neither could they; and, therefore, they are the more entitled to that relief they pray from Government, as it was from their reliance on the wisdom of their measures, that they have been led into the errors which produced their misfortunes. In either case, therefore, I say, sir, Government should do what they ask; and I cannot but think it rather extraordinary that the rt. hon. gent., or any of his colleagues, should turn round and seek to free themselves from their claims by declaring they had themselves been the authors of their own misfortunes. I say that, under the circumstances, there never were any set of men complaining of suffering, who approached the Government with a better title to relief, or to the active interference of this house in their behalf. There never was an occasion when such a relief held out a better prospect of benefit to those who think their situation imperatively requires it. For I repeat what I said on a former occasion, that there is nothing in our situation to create dismay, even at present,—nothing to excite any alarm as to the future. We are in a condition of extensive pressure, of considerable embarrassment, of a terrific panic—but not of permanent difficulty. And what has created that panic? Why, was it nothing that men should see the 3 per cents. they purchased at above 90, go down 20 per cent.; and that the holder, at the former price, should see himself plunged from such a height without any ostensible cause? That was panic, aye, and reason enough too, without any other of the various sources which have been pointed to as the cause of universal distrust. But was not that very fall the act of Government in producing an unnatural rise, and is not the consequence of this rise a reason why the Government should interfere, and restore that confidence they themselves have assisted to destroy? And, sir, I say that it is confidence,

and nothing but confidence, that we want (hear). No man views his neighbour at except with distrust; but let Government interfere—let them shew that they listen to statements which have been made to them, that they are desirous to restore what they assisted to destroy, and confidence will itself. What, however, does the Government say?—"Oh, your distress is your own; we cannot interfere; it would be establish an unwise principle, and lead to future calamities of the same description; but I will tell you what you can do; there is a gentleman who lives not far from hence—we know he can commodate you (laughter), and we will give you a letter of introduction, which we doubt will procure you a favourable result (great laughter)." But what says the man to whom the letter is directed?—"Sir, it is quite a mistake; really there is no error on the part of your friends (laughter). We don't deal in such commodities (laughter). We never advance money on pledges. You must apply to your friends; they can assist you themselves." The loan-seeker returns with this answer to his former friends, the Government. "Oh, they, indeed our friends the Bank of England, to whom we referred you, are very mistaken. We have just been reading their charter—they are all wrong (laughter). It is a matter of power, and they have the power, and they will do exactly the men to suit you. As to what we say of us, we beg to tell you it is quite our line" (great laughter); and thus the man bandied about the unfortunate sufferer from one to the other, instead of coming forward with that relief which becomes more necessary. The rt. hon. gent. (Mr. Canning) says the Government are a proper body to grant the aid required; the Bank Directors, on the contrary, maintain they are the only proper persons, and assert the Bank may have, by their charter, a power but certainly not an imperative power during the whole course of my experience have certainly never known any such power adopted by the Bank of England. The sec. retorted upon me in a manner which I cannot but acknowledge convincing, as the argument went, proving from their charter that they had precisely the same power with respect to advances upon merchandize as gold, silver, or bills. But, while I acknowledge that, I must say, that I do not consider that part of the charter of the Bank of England was ever meant to be acted upon; I know the Bank, like other public bodies, have taken advantage of the wants of the Government obtained all they could; but, although I have no doubt that such words are contained in their charter,—at least, I do not doubt it, if I have not had the opportunity of perusing it (a laugh)—yet I conceive that it was never the intention of the legislature to give that portion of the issues of the Bank an imperative power. The Bank, we see, has the power to lend money upon mortgage, and, of course, they have the power to sell securities as may be the produce of lands which they have got into their hands. Now, I would beg to ask how the landed interests would look at the construction of that part of the charter which would make that great body become the buyers and sellers of grain, and all those articles which are raised from their estates (hear, I

believe such a construction was never contemplated; and, however it may be proposed to apply it now, I think it was never meant that the Bank should exercise any power of the kind. The Bank directors have contended, I think with some success, that the assistance rendered by them will be much less effective than that which could be bestowed by Government. In that I fully agree. We have had persons from all parts of the country, calling upon us to extend to them the same relief which we propose to give the merchants of the metropolis. Now, by what means are the Bank issues upon goods to reach all parts of the country? What security have they against deception? How are they to distinguish between those who really want assistance and those who may be merely about to procure the means of engaging in other speculations, probably more ruinous than those under which they suffer at present? I ask whether they have power to administer an oath for the purpose of coming at the true state of an applicant's affairs? No. Such a power could only be conferred by a bill like to that under which the commissioners acted in 1793. The Bank could do nothing of that kind; all their power was the mere issuing of money to those who might apply for it under the pretence of possessing certain commodities not at this moment saleable; but would that alone restore that confidence, the want of which was the source of their present misery? I have experience for saying it will not. It has been tried already; the Government have embarked a sum in that adventure, and returned with a total loss (hear, hear). They have issued two millions of Exchequer-bills, not one sixpence of which has found its way into the pockets of those who really suffer, or promoted the sale of one farthing's worth of goods. Could any further advances produce any better effects in that way? An ignorant man upon such subjects, like myself, possessing very limited means of judging, but looking to the effect of experience, would say decidedly, that they could not. The two millions of Exchequer-bills have been converted into Bank notes, which were, by this means, disseminated through the country; and yet there was no perceptible diminution of the distress, nor would there be, if they advanced three millions more. If, then, no such extraordinary effects flowed from the two millions, what encouragement had they to persevere in the same course, when the house was about to grant three millions, to be applied much in the same manner? But we have been told, that the directors were not without a hope, that the intelligent and hon. gents. of the country, would form themselves into commissioners, for the purpose of investigating the claims of the petitioners, and aiding in the distribution of the money, in the shape of co-operating committees. Is that, too, in the charter of the Bank? Are they, by that charter, entitled to appoint commissioners to pry into the private affairs of any men who may want assistance in this season of depression? I should be glad to know who these commissioners are to be: I should be glad to see their names, and be able to ascertain whether they were selected with that peculiar regard to the integrity of life and honourable character, and knowledge of business, which so peculiarly distinguished the commissioners under the act of 1793. They were selected without regard to party distinction, or any other consideration, but their thorough knowledge of

business, and their determination to make the assistance as general, impartial, and useful as it possibly could be, under the circumstances; but how are these commissioners, without even the power to administer an oath, how are they to keep such a careful guard as not to relieve the least deserving, and the least necessitous, perhaps? This, I say, will be the consequence; improper persons will receive the money, and no good will be produced by the efforts of the Bank. I think that would not have been the case with an issue of Exchequer-bills through the commissioners of the Government; not only because I think these bills would not have been sold, but because I also think there would be more judgment and discrimination in the selection of the objects of relief. If I get relief in Bank notes, it is ten to one but I pass them, and throw them into circulation, without gaining any confidence in my resources; but the possession of Exchequer-bills is different. Suppose I go to my banker, and say I have a large quantity of goods, for which I cannot find a market; but if you will accommodate me with an advance for a short time, I shall be able both to wait for a market and an improvement in prices. The banker, affected, very justly, by the present posture of affairs, probably replies that it is quite out of his power—that the total want of confidence among all mercantile men, prohibits his extending his engagements—and that he is very sorry, but he really cannot assist me. Now, what would be the difference, if I obtain, suppose 5000*l.* worth of Exchequer-bills from Government, and go with those bills in my hand to the banker, and tell him I will lodge them as a security for temporary accommodation, in the ordinary way of business? What is the consequence? The banker, who will not have any thing to do with my unsaleable goods, willingly obliges me upon the faith of a convertible security like Exchequer-bills. He renews his discounts—he restores his advances—confidence revives naturally, from the effect of such appearances—and affairs, as they did in a similar manner in 1793, right themselves, without the necessity of any further operations. The fair trader, the person we mean to assist, thus receives a stimulus and an aid in his exertions. The hoards which have been locked up, as I contend still they are, for the capital in the country is abundant, are thus called out into service. The money which has lain dormant in the hands of the timid and the cautious, once more makes its appearance, and thus we reach, without any effort, and by the mere action of natural causes, that confidence, which is all, I say, that is wanted to restore us to our former state of activity and prosperity. Why is it that such confidence has not been restored already, after all the exertions of the Bank and the Government? Purely because ministers do nothing to restore that confidence, with a single exception in the latter end of a speech of the *rt. hon. Secretary for Foreign Affairs*—a speech, in many respects, as brilliant as any we have ever heard from him—there has not been one cheering expression from the lip of any one member of Government, who addressed us upon the subject of our present distresses. All has been doubt, gloom, and hesitation; although nothing was actually required but the language of confidence from them, to restore confidence among the people. It is not by the appointment of a mock commission, for I can call it by no other name, that we can hope to gain the

benefits which arose from the commission of 1793. I may say, with a decided tone, benefits, for they are not a matter of rumour or hearsay, but of history. We have the report of their success upon the table, and by it we find that a sum of not more than two millions, advanced in Exchequer-bills, not only restored confidence, and relieved all distress, at a time as fearful as the present, but actually left in the pockets of the Government a profit of 4000l. Suppose that the Bank had refused, as they were quite justified by their charter in doing, to grant any relief, and that Government had continued to maintain these principles, what would have been the consequence to the mercantile world? Why, despair, and certain destruction to all hopes of reviving our fallen credit. If the Bank is to grant the relief which may be required, I can see no reason why they should not have the full credit of their exertions; but I confess that, to hear those who are in a great degree responsible for our misfortunes, say they have nothing to do with them, requires a greater degree of temper than I can boast of. I still say, however, that if any thing is to be done, it should be done in a solemn manner, as an act of the legislature. Does the house see, however, what will be the inevitable consequence of this measure—and how immeasurably the Bank will be raised, by thus making it the sole depository of relief? You say men will be guarded against any future imprudences, such as we have witnessed, by the difficulty which they have found in procuring relief from their distresses. But is an order on the Bank of England no immediate relief? Under other circumstances, they would have had to come before parliament to have proved a case, to have made out a claim for relief, and parliament would have had an opportunity of judging how far they might be entitled to it. Now you tell them all that is unnecessary—that the Bank of England alone have the power to make advances to their necessities, and that they are bound to comply with their demands. What is that but an encouragement to such speculations, when they know that on any future occasion they have but to apply for a cheque upon the Bank of England, upon the security of any goods they may possess? Does the house see, likewise, the extravagant power that is thus given to the Bank, and the strange effect such power must have, when the question of the renewal of their charter again comes under its consideration? Country gentlemen will take good care how they give their votes—not that I mean to say country gentlemen don't vote very properly on all questions (a laugh); but they will take care, in common prudence, not to displease a body who possess such a power of obliging them, in the moment of distress. Those, perhaps, were all minor considerations, and should be postponed at this hour. The distress, it is evident, is hourly increasing, and nothing but some check, interposed speedily and decisively, can prevent the most alarming consequences. The Bank, we are told, are willing to do what they can. The Government will do nothing. I don't mean it as a reproach upon that body, who have opened their coffers, on every occasion, with a liberality beyond all praise, when I say, that, even after the full extent of the assistance you propose, you will leave a something still behind, and that some want of confidence will still be felt, which I contend is the main source of all the evils which afflict the commercial world. I can easily con-

ceive that there are many persons, to whom an issue of money will, at the present moment, be very convenient. But what I want to see is something that will remove distrust, restore confidence, and bring again into circulation those masses of money which must still be in the country. For if it is not in this country, whither is it gone? We have none now carried away by foreign loans—very little by the love of spending in foreign countries—none of our great capitalists have removed themselves from the kingdom. The exchanges are not against us, and in fact, sir, there is no possible conclusion to which any man of common sense can come, but that there is an abundance of gold in the country—that all we want is a something to draw it out; and I must say that the proposition of making the Bank issue three millions of their notes as a remedy for that purpose is mere milk and water proceeding compared to the plan of 1793, which the genius of Mr. Pitt prepared and matured for the public benefit, and although I am told by one and another that this will be sufficient for the purpose of restoring confidence and relieving distress, I would say, that there is not one man of any judgment in the city, if the question was put to him whether he would have three millions of money from commissioners appointed by the Bank, or three millions of Exchequer-bills from commissioners under an act of Parliament, who would not answer that he would prefer the Exchequer bills under the authority of Parliament. Ministers have, in fact, sheltered themselves under a very dexterous kind of doctrine—a something of a special plea, by thus thrusting forward the charter of the Bank; and I do not feel at all surprised that the Bank, however unwilling they may be to carry such a measure into execution, have granted their consent, rather than see, living as they do in the middle of the city, all their own friends and connexions mouldering to pieces around them, for want of the aid which the Government alone should have afforded them. No person could be more adverse to the principle of interference, than the part of the Government, than the Chancellor of the Exchequer; and whilst the country was plunged in distress, the Bank was leaving the responsibility of relief upon the Government, and the Government again threw it back upon the Bank; and the result was, the projection of a plan, which, I believe, will be ineffectual, and the precise nature of which no person professes to understand. The measure which I recommend, belongs more to the politics of the hon. gent. than they do to mine. It is the measure of Mr. Pitt. As to Mr. Pitt, whatever differences may have existed between us—and that he is in his grave, they are forgotten. But this I will say of him, Mr. Pitt was a great man—no man had a more sound mind, or was more capable of embracing a large, correct, and comprehensive view of the financial concerns of this country. This was his measure—it was an useful and effectual measure at the time, and in recommending its adoption I am more of a Pittite than the rt. hon. gents. will resist it (laughter and cheers). Yet, although I closely adhere to the course marked out by Mr. Pitt, I am visited with the epithet of Jacobin, or philosopher, or some such name, intended to convey opprobrium. The rt. hon. gent. say that the country has no claims upon them for relief—and that if it be encompassed with embarrassments, it brought itself into those difficulties. But I reply to ministers, that if

country was deluded into that course by their representations. I do not mean, however, to impute blame to Government for all the rash and idle speculations which have been entered into during the last two years. There were many of those rash schemes, at which I am satisfied ministers were deeply and justly indignant; such, for instance, as many of the foreign loans. But what I am apprehensive of now, and against what I see no precaution, is, that much of the three millions now proposed to be issued by the Bank, on the security of goods, may get into the hands of some of those rash speculators (hear, hear). I do not see how this measure is to operate; whether money is to be advanced on the security of goods alone, or whether it is to be advanced on other security. In 1793, money was not only lent on the security of goods, but also on the security of individuals—on persons of established credit becoming responsible for their neighbours. More, indeed, was lent in this way than on the security of goods. As to the alarm that is said to prevail from one end to the other of the country, I beg again to repeat, I by no means participate in it; I do think that there has been a great deal of unnecessary exasperation, although perhaps some part of it has been produced by the recent measures of the *rt. hon. gents.*, which they have adopted to prevent the recurrence of the evil. I do not blame them for these measures; on the contrary, they have my hearty thanks for them, particularly the withdrawing of the 11. and 21. notes from circulation. It is a measure that I approve of, and should myself recommend. As long as the *rt. hon. gents.* stand by me, they will find me good soldier enough to stand by them. But at the same time that they adopted this measure, they did not, perhaps, foresee that the sudden withdrawing of these small notes would have had the lamentable effect that it has had in augmenting the present distress. Another ground which appears to me has tended in no small degree to keep alive alarm and distress, was the unwillingness of Government to come forward and relieve the country from its embarrassments, whilst it evinced the greatest anxiety to place the Bank in the situation it ought itself to occupy. Any man who was placed in circumstances of distress, and who was only separated by a narrow line from bankruptcy, would doubtless prefer the relief in the way of Exchequer-bills, to that of a Bank note; as in the former case he would have increased reliance in the security of Government. It is, besides, a more desirable mode of relief in point of convenience, and upon every other ground on which I can regard it. I would, therefore, earnestly request the *rt. hon. gent.* (the Chancellor of the Exchequer) to reconsider the measure, and the reconsideration of it will, I trust, yet lead him to its adoption.—Why, then, do I prefer the issue of Exchequer-bills to that of advances on goods by the Bank of England? Briefly, because looking to what has been done, I have the benefit of experience to shew me, that the former was tried, and that it was found to be an efficient measure; and because the country ought, in its present difficulties, to look rather to the Parliament and the Government for relief, than to the Bank of England—because the Bank of England is not an establishment constituted for the purpose of affording such relief; and because it proposes to place an invidious and extravagant power in the hands of

the Bank, the exercise of which may be materially inconsistent with its own interests, and place them in jeopardy (hear, hear). Now the conduct of the Bank does not merit that it should be treated in this way by the Parliament and the Government. It is proposed, I am aware, to introduce some measure which will secure the Bank against embarrassments attendant upon this advance, but it is not quite so clear that this will guarantee them against the losses which they may experience in the event of the exchanges which are now in our favour turning against us—an event which may be consequent on the large and unnatural issue which it is proposed the Bank should now make. There are many persons who would be ready to take advantage of any slip that the Bank may make, and turn it to their own account. In every view that the subject presents itself, I can only regard it as one unlikely and inadequate to meet the end proposed by it; whereas there are many worthy persons whose affairs are now in jeopardy, and who would be relieved by that measure, which has been proved to be a sound and good measure, but whom the present will probably never reach. I am sure the *rt. hon. gent.* would deeply regret, should he hereafter have an occasion to reproach himself, that such persons were in distress, that something might have been done to relieve them, and that he had had an opportunity, but neglected to do it" (hear, hear).

The *Chancellor of the Exchequer* said, that if any consideration of this subject could induce him to think that the course recommended by the *rt. hon. gent.* was preferable to that pointed out, and determined upon by ministers—if any length of deliberation or process of reasoning could convince him that that measure was the most advisable measure to adopt; no unwillingness to abandon an opinion he had previously formed—no fear of reproach for want of firmness and resolution, would influence him in withholding his assent to its adoption. If he were satisfied that the interests of the country required it, he would readily forego his previously formed opinions—but the more consideration he bestowed upon the subject, the more was he convinced that the proposition of the *rt. hon. gent.* (Mr. Tierney) was not so well adapted as the proposed advances by the Bank to afford effectual relief to the distresses of the country—the end which it was the common object of them all to effect. The *rt. hon. gent.* had stated his case with the most perfect fairness—he had mixed not an atom of asperity with any of his observations; and though he had felt it his duty to comment on the conduct of Government, and to blame them for the course which they had taken, he had done so in a manner of which no one had a right to complain, and indeed, as far as he (the Chancellor) was concerned, he felt personally beholden to him. The *rt. hon. gent.*, however, said that Government was called upon to take the particular course which he recommended, because in his view the conduct which they had previously held, and the language which they had previously used, had contributed in some degree at least to produce that state of things to which it was now desirable to apply a remedy. The circumstances stated by the *rt. hon. gent.* might make it incumbent on Government to apply a remedy; but not any particular remedy, unless it could be clearly shown that the benefit to be derived from that parti-
